Information released from laboratories during the year provides an interesting glimpse into future possibilities in the illumination field. These include: an electric heat lamp, which looks like a sealedbeam headlight but contains a 750-watt bulb and gives off heat enough to dry new paint on military vehicles in three minutes—enough heat to enable bacon and eggs to be cooked on it; sterilizing lamps, which will be so simple to use that they can be used in conjunction with toothbrush racks. shoe-trees, et cetera, to kill and control germs and fungi; shatter-proof light bulbs with extra strong filaments and lacquer coating that will stand dropping without breaking; a compact new sunlamp, combining the warming infra-red rays and the tanning ultra-violet rays, requiring no reflector and capable of being plugged into any electric outlet; a 10,000-watt mercury vapor lamp (water-cooled), the surface light intensity of which is rated as onefifth the intensity of the sun's surface, which suggests itself for large halls and athletic fields. A demonstration display wherein commercial fluorescent lights, brilliantly lighted without any direct electrical connection, and while being carried around the room by individuals, gives rise again to thoughts of power by radio. The radio-frequency power for this demonstration was provided by a physician's ordinary diathermy set, the high-frequency emanations from which activated the fluorescent materials in the lamp. Although this demionstration admittedly was a stunt, and although electric power by wireless is still only a dream as far as any practical application is concerned, it is understood that the Federal Communications Commission already is planning to reserve part of the postwar radio spectrum for wireless heating and cooking for the future. See ELECTRIC LIGHT AND Power.

G. Ross Henninger.

IMMIGRATION, EMIGRATION, AND NATURALIZATION. The Immigration and Naturalization Service of the U.S. Department of Justice administers the Federal immigration and nationality laws.

Immigration and Emigration. During the fiscal year which ended June 30, 1943, 23,725 persons, comparatively few of whom had been here before, left their homes in foreign countries and were admitted to the United States for permanent residence. This represents a marked decrease from the number admitted for permanent residence during former years, which aggregated 28,781 in 1942, 51,776 in 1941, 70,756 in 1940, and 82,998 in 1939. Aliens admitted for temporary stay or after a brief sojourn abroad, chiefly visitors, persons in transit, and returning residents, totaled 81,117, a decrease of 1.6 per cent from the 82,457 admitted in 1942. While this does not include cruise passengers, travelers between Continental United States and outlying possessions, and persons habitually crossing and recrossing the international land boundaries, it is thus clear that the number of aliens being admitted into the United

Note 1.—The number of immigrants given above as admitted include not only quota immigrants but nonquota immigrants, being wives of citizens, husbands who married citizen wives prior to July 1, 1932, children of citizens, etc. It will also be noted that this table is based on the country of last residence of the immigrant. These figures do not, therefore, agree accurately with the immigrant out figures because the quota under which any immigrant is admitted is that of the country of his birth, not that of the country of his last residence. Note 2.—Immigrants admitted from the "barred zone" of Asia are mainly persons of the white race.

States from abroad is relatively small. However, wartime conditions have made it imperative that the qualifications and credentials of all aliens coming to the United States be examined with even more thoroughness than heretofore.

The greatest volume of movement into and out of the United States takes place across the land borders. During fiscal year 1943 there were 40,717,372 of such entries (including each crossing of the border by any traveling alien or United States citizen), of which 20,378,438 were by aliens and 20,338,934 were by citizens. The total number of admissions of all classes into the United States, after inspection by officers of the U.S. Immigration and Naturalization Service was 41,848,384.

The admissions of aliens who commenced their permanent residence in the United States and the departures of aliens for permanent residence in other countries are shown in the accompanying table.

Quota immigration to the United States for 1943 was 9,045 as compared with 14,597 in 1942, a decrease of 5,552 or 38 per cent. The permissible annual quota for the year was 153,774.

but only one of the national quotas was filled, because of war conditions. The number of aliens debarred at ports of entry during 1943 was 1,495. Of these rejections 464 occurred on the Mexican Border, 880 on the Canadian Border, 45 at New

York, 31 at New Orleans, and 75 at other seaports.

Repatriations and Deportations. The Immigration and Naturalization Service is authorized to remove to other countries at government expense aliens who have fallen into distress or need public aid from causes arising after their entry and who want to be so removed. During the year five aliens were returned to their native lands at their own request. During the fiscal year 4,207 aliens were deported under warrants of deportation and 11,-947 deportable aliens were allowed to depart at their own expense without warrants of deportation. The total of enforced departures was 16,154, as compared with 10,613 during the previous year.

The principal classes of aliens deported under warrants were, in order, "entered without valid visa," "criminals," "previously debarred or deported," and "remained longer than authorized." Of those deported, 2,905 or 69 per cent were returned to Mexico, 464 or 11 per cent were returned to Canada, and 247 or 6 per cent to

Great Britain.

The Border Patrol. Unsettled international conditions increase the responsibilities of the Border Patrol. The average size of the force of Border Patrol officers and employees of all grades of duty during the fiscal year 1943 was 1,400. During the fiscal year, officers patroled 10,276,454 miles and questioned 24,598,186 persons. They apprehended 16,330 law violators, 63 of whom were smugglers of aliens, 11,175 illegal entrants, and 5,092 persons wanted for other law violations.

Aliens and Alien Registration. Under the Alien Registration Act of 1940 (see Year Book for 1940), the Immigration and Naturalization Service was required to register and fingerprint, through post offices, all aliens in the United States, except foreign government officials and members of their families. At the end of the fiscal year 1943 there were 4,593,537 aliens, exclusive of alien seamen, registered with the Service. See FEDERAL BU-

REAU OF INVESTIGATION. Naturalization. The year 1943 was marked by increased naturalization activity. There were 317,-508 aliens naturalized during the year, an increase of 17.4 per cent over 1942 and of 109.1 per cent as compared with the average for the years 1931 to 1940. In the fiscal year 1943, 115,664 declarations of intention were filed, the lowest number since 1934, and just 52 per cent of the number filed in 1942. Petitions for naturalization aggregated 375,700, and 318,933 certificates of naturalization were issued.

Aliens admitted to citizenship during 1943 formerly owed allegiance to the following countries: British Empire, 93,827; Italy, 36,118; Poland, 42,-077; Germany, 17,774; Soviet Russia, 25,444; Czechoslovakia, 12,979; Sweden, 9,448; Hungary, 4,792; Jugoslavia, 8,471; Greece, 6,938; all other

countries, 59,640.

An abbreviated judicial naturalization process was provided by Title X of the Second War Powers Act, approved Mar. 27, 1942, for those non-citizens serving in the armed forces of the United States who are residing within the jurisdiction of a naturalization court and an administrative natalization process for those serving abroad with the armed forces. During the fiscal year ended June 30, 1943, 36,049 members of the military

and naval forces were admitted to citizenship on the basis of petitions filed under section 701 of the Nationality Act of 1940 (Title X, Second War Powers Act). Of this total 35,416 were granted citizenship while residing in continental United States or Alaska, 586 while on duty in Hawaii, and 47 during service in Puerto Rico or the Virgin Islands of the United States.

In addition a total of 1,425 persons serving abroad with the armed forces of the United States were admitted to citizenship under the administrative naturalization procedure authorized by Section 702 of the Nationality Act of 1940. Naturalization was granted in such cases by designated representatives of the Immigration and Naturali-

zation Service.

Alien Enemies. Under the Nationality Act of 1940 alien enemies include natives, citizens, denizens, and subjects of the countries against whom the United States has declared war. At present these countries are Japan, Germany, Italy, Hungary, Rumania, and Bulgaria. By authority of Presidential Proclamations of Dec. 7 and 8, 1941, and Jan. 14, 1942, a series of regulations was promulgated by the Department of Justice affecting the conduct of citizens or subjects of Japan, Germany, and Italy, fourteen years or older. On Oct. 12, 1942, aliens of Italian nationality, except those already interned or under parole, were excepted from the regulations for alien enemies by order of the Attorney General.

Although citizens or subjects of enemy countries other than Germany and Japan are not required to observe any of the regulations prescribed for alien enemies, they are subject to arrest and detention as "alien enemies" if, at any time, the apprehension of any of them is deemed necessary to maintain national security.

Alien enemies considered potentially dangerous may be interned for the duration of the war, by order of the Attorney General, in internment camps which are operated by the Immigration and Naturalization Service. At the end of the fiscal year, 9,220 alien enemies were in the custody of the Service, of whom 5,988 were from the continental United States or Puerto Rico, 2,349 from Latin America, and 883 from Alaska, Hawaii, and other Pacific islands. Sixteen detention stations were in operation at the end of the year. One of the internment camps, at Crystal City, Texas, is used solely for the internment of tamilies of enemy nationalities and at the end of the fiscal year 1,282 individuals were interned there, consisting of 367 men, 358 women, and 557 children.

During the fiscal year 5,323 aliens were apprehended under Presidential warrants of arrests. Of this number 2,311 were paroled upon formal orders of the Attorney General, including 979 Japanese, 895 Germans, 484 Italians, and 3 of miscellaneous nationality; and 266 Japanese, 294 Germans, 170 Italians, and 12 of miscellaneous nationality were unconditionally released. Those paroled were required to make regular reports to civilian sponsors and to district parole officers of the Immigration and Naturalization Service, who conducted periodic investigations in each such

The law permits the naturalization of aliens of enemy nationality under prescribed safeguards. A thorough investigation is conducted in connection with each petition for naturalization filed by an alien enemy, and only those cases in which the loyalty of the petitioner is established without question are recommended to the courts for favorable action.

New Legislation. During the last year several important laws affecting aliens were considered by Congress. The most important of these was the enactment of legislation repealing the Chinese Exclusion laws, which had been on the statute books for 61 years. The new legislation, approved Dec. 17, 1943, also removed the previously established bars against naturalization of persons of the Chinese race as American citizens, and established an annual immigration quota permitting admission of approximately 105 Chinese into the United States.

The following laws were also enacted during the past year: The Act of July 13, 1943, which authorized the deportation of an alien, under certain conditions, to the country where his recognized government-in-exile is located, or to a country proximate to the one of which he is a citizen or subject, or, with the consent of the country of which he is a citizen or subject, to any other country; the Act of Apr. 29, 1943, which permitted the entry of native-born agricultural workers from any country of the Western Hemisphere under certain exemptions and conditions; the Act of Dec. 8, 1942, which, under certain conditions, extends the exemptions which make it possible for persons living abroad to retain their United States citizenship. Affected by this Act are husbands, wives, or children under 21 years of age, residing abroad for the purpose of being with a spouse or parent, who is an American citizen by birth. See Federal Burreau of Investigation; Palestine under History.

INDIA. A dependency of the British Empire, consisting of British India, or the territories subject to British law, and the Indian States, ruled by native princes but under the indirect control of the British Parliament. Capital, New Delhi. Summer seat of government (April to October), Simla.

Area and Population. The area and population of India at the censuses of 1931 and of Mar. 1, 1941, are shown in the accompanying table, by British Provinces and Indian States and Agencies. The

Area and Population. The area and population of India at the censuses of 1931 and of Mar. 1, 1941, are shown in the accompanying table, by British Provinces and Indian States and Agencies. The areas are those for 1941 and show a number of changes from the 1931 census. For purposes of comparison, population figures of the 1931 census have been adjusted to conform with the 1941 territorial area of the 1941 territorial ar

ritorial arrangements.

The total 1941 census population was made up of 201,025,726 males and 187,972,229 females. The population increased by 50,878,801, or 15 per cent, between 1931 and 1941 as compared with a 10.6 per cent increase between 1921 and 1931. The largest percentage increases in the British Provinces during 1931–41 were: Delhi, 44.3; Northwest Frontier Province, 25.3; Punjab, 20.5; and Bengal, 20.3; and in the States and Agencies: Punjab, 22.4; Travancore, 19.1; and Cochin and Rajputana, 18.1 each. Calcutta, with a population of 2,108,891 in 1941 (excluding suburbs) showed an increase of 945,120, or nearly 85 per cent, for the decade. Populations of the other chief cities in 1941, with 1931 figures in

parentheses, were: Bombay, 1,489,883 (1,161,-383); Madras, 777,481 (647,230); Hyderábád, 739,159 (466,394); Lahore, 671,659 (429,747); Ahmedábád, 591,267 (310,000); Delhi, 521,849 (347,539); Cawnpore, 487,324 (243,755); Amritsar, 391,010 (264,840); Lucknow, 387,177 (274,-659).

The rural population in 1941 was 339,301,902, or 87.2 per cent of the total; urban population, 49,696,053, or 12.8 per cent. The rural population lived in 655,892 villages. In all India the birth rate per thousand inhabitants increased from 31.3 in 1931 to 34.1 in 1938, while the death rate fell from 24.9 to 24.3.

Education and Religion. The number of literate persons increased from 28,138,856 at the 1931 census to 47,322,700 in 1941; of the latter, 37,016,200 were in the British Provinces and 10,306,500 in the States and Agencies. Of the total population of India, 12.2 per cent were literate in 1941 as against 6.9 per cent in 1931. The 1941 male population was 18 per cent literate; female, 5. Literacy in British India increased from 7.1 per cent in 1931 to 12.5 per cent in 1941; in the States and Agencies, from 6.6 to 11.1 per cent. Of the Provinces, Bombay showed the highest 1941 literacy rate with 19.5 per cent. Among the States, Travancore had a literacy rate of 47.7 per cent; Cochin, 35.4; Baroda, 23.0.

35.4; Baroda, 23.0.

There were in British India in 1940–41 a total of 213,927 "recognized" educational institutions with 15,179,323 pupils, and 18,862 "unrecognized"

or indigenous institutions with 590,567 pupils. Institutions for general education included 15 universities with 12,622 students, 325 arts and science colleges with 114,104 students, 14,711 secondary schools with 2,754,239 pupils, and 187,164 primary schools with 11,797,849 pupils. For special education there were 85 professional colleges with 26,236 students, 612 training schools with 31,331 pupils, and 11,015 special schools with 442,942 pupils. Educational expenditures for recognized institutions in 1940–41 were 298,403,205 rupees. Following is the division of the 1941 population according to the principal religious communities:

Following is the division of the 1941 population according to the principal religious communities: Hindus, 254,930,506, including 48,813,180 members of the depressed classes; Moslems, 92,058,096; tribal communities, 25,441,489, predominantly Hindus, with only 7,630,000 professing tribal religions; Christians, 6,316,549; Sikhs, 5,691,447; Jains, 1,449,286; Parsees, 114,890; Buddhists, 232,-

003; Jews, 22,480.

Production. Agriculture is the main support of the population. Recent yields of the principal crops for all India were: Rice (estimated), 24,533,000 tons in 1942–43; cotton, 4,454,000 bales (of 400 lb.) in 1942–43; wheat, 10,070,000 metric tons in 1941–42; sugar cane, about 4,431,840 short tons in 1941–42; tea (estimated), 555,000,000 lb. in 1942–43 (export quota for 1943–44, 421,567,207 lb.); jute, 5,474,015 bales (of 400 lb.) in 1941–42 for India and Nepal; linseed, 432,000 tons in 1940–41; rapeseed and mustard, 1,094,000 tons in 1940–41; sesamum, 433,000 tons in 1940–41; groundnuts, 3,702,000 tons in 1940–41; tubber, 35,530,400 lb. in 1940–41; corn, 2,196,000 tons in 1940–41; barley, 2,263,000 tons in 1940–41; tobacco, 468,000 tons in 1940–41. The output of sugar in 1941–42 was 871,472 short tons; of molasses, 328,048 short tons. The 1942 lac yield was 213,000 maunds (of 82,28 lb.). India has nearly one-third of the world's cattle population. The 1940 livestock census for British India (exclusive of United Provinces and Orissa) showed 87,674,765 cattle, 22,415,493 buffaloes, 25,183,062 sheep, 30,212,044 goats, 1,000,965 horses and ponies, 40,270 mules, 1,157,459 donkeys, and 428,563 camels. The wool clip averages about 86,000,000 lb. annually. Timber production increased from 242,000 tons in 1940–41 to 396,000 tons in 1941–42.

Mineral and metallurgical production was (metric tons): Crude petroleum, 325,000 in 1940; coal (British Provinces), 26,496,000 in 1940; manganese ore (metal content), 430,000 in 1939; iron ore (metal content), 1,994,000 in 1939; steel ingots and castings, 1,365,000 in 1940; pig iron, 2,000,000 in 1940; copper (smelter), 6,800 in 1939; chrome ore (metal content), 25,000 in 1939. Gold output (1941) was about 285,162 fine oz. The principal manufacturing industries are cotton spinning and weaving, the milling of jute and rice, sugar refining, iron and steel smelting and fabrication, cotton ginning and pressing, railway and tramway workshops, general engineering. Production of arms, munitions, and military supplies rapidly expanded after the outbreak of the World War in 1939. More than 30,000 men were employed in naval shipbuilding and repair yards in April, 1942. In 1943 there were estimated to be more than 11,000 industrial enterprises in operation, employing

over 2,000,000 persons.

Foreign Trade. For the year ended Mar. 31, 1942, imports were equivalent to \$519,900,000 (\$470,-910,000 in 1941-42) and exports of Indian merchandise to \$711,660,000 (\$560,700,000 in 1940-41). Exports of foreign merchandise were \$45,-

990,000 in 1941–42 and \$35,430,000 in 1940–41. The chief 1941–42 import items were: Vehicles, \$18,660,000; raw cotton, \$17,730,000; food and tobacco, \$12,090,000; machinery, \$5,700,000; nonferrous metals, \$3,990,000; oils, \$2,460,000. Leading exports: Cotton manufactures, \$58,740,000; tea, \$34,470,000; jute goods, \$25,170,000; grain and pulse, \$13,530,000; gums and resins, \$8,790,000; raw jute, \$7,890,000; raw hides and skins, \$4,920,000; and wool, \$2,880,000. The United Kingdom took 32.5 per cent of India's 1941–42 exports and supplied 21 per cent of the imports. The rest of the British Empire took 26 per cent of the exports and furnished nearly 40 per cent of the imports; United States, 20 per cent of both exports and imports.

Finance. Preliminary budget estimates for the fiscal year ended Mar. 31, 1944, placed expenditures of the Central Government at 2,595,900,000 rupees (1,828,100,000 for defense and 767,800,000 for civil needs). On the basis of existing taxation, revenue for 1943–44 was estimated at 1,993,000,000 rupees. Revised budget estimates for 1942–43: Revenues, 1,787,600,000 rupees; expenditures, 2,734,200,000. Finally revised closed accounts for 1941–42: Revenues, 1,737,000,000; expenditures,

1,863,900,000.

The estimated interest-bearing obligations of the Government of India totaled 12,471 million rupees (about \$389,107,680 at the average 1942 exchange rate) on Mar. 31, 1942. The sterling debt, which at the outbreak of World War II was equivalent to \$1,440,000,000, was reduced to \$264,000,000 on Jan. 5, 1943, and was expected to decline to \$49,000,000 by the end of 1943. Meanwhile India's sterling securities and cash had increased from a prewar figure of \$323,000,000 to \$1,148,000,000. Thus the war had changed India from a debtor to a creditor country. This change was due mainly to the agreement of 1939 under which the British Government undertook to meet all expenses of Indian troops sent outside of India's borders, including equipment and supplies sent from India for their use. This expense amounted to \$160,000,000 in 1940–41 and \$1,160,000,000 in 1942–43. Average exchange value of the rupee: \$0.3014 in 1941 and \$0.3012 in 1942.

Transportation. India in 1943 had 41,000 miles of railway lines, of which 33,000 were directly owned and managed by the Central Government and about 7,131 miles by the Indian States. The Government on Jan. 1, 1943, took over two private railway systems, with 2,344 miles of line. Operating statistics of the State railways for 1941–42, with 1940–41 figures in parentheses, were: Passengers, 623,100,000 (575,700,000); freight, 96,997,000 tons (92,780,000); gross traffic receipts, 1,351,700,000 rupees (1,175,800,000); net surplus, 280,800,000 rupees, of which 201,700,000 rupees were placed to the credit of the general revenues of the Central Government. Military traffic in 1943–44 was estimated at 15,000,000 tons com-

pared with 500,000 tons in peacetime.

Highways in the British Provinces extended 319,131 miles in 1940. Air transportation was provided by local air systems and by the British and Dutch international trunk lines. The principal ports are Bombay, Calcutta, Karachi, and Madras. In 1938–39 a total of 7,440 vessels of 19,091,691 tons entered and cleared with cargoes at ports in the British Provinces.

Government. The King of Great Britain and Northern Ireland also bears the title of Emperor of India. The Constitution, known as the Government of India Act, 1935, provided for an Indian

federation and provincial autonomy. Provincial autonomy went into effect Apr. 1, 1937, when elective legislative assemblies with responsible ministries were established in the 11 Governors' Provinces under direct British rule. In October–November, 1939, the All-India Congress ministries in seven of the 11 provinces resigned and on Nov. 5, 1939, the Governor General utilized his emergency powers to restore all governing powers in these provinces to the appointive British governors (see 1939 Year Book, p. 360). Parliamentary government was retained in the other four provinces and on Nov. 24, 1941, was restored in one additional province.

The federation scheme provided for the union under a central government of the 11 Governors' Provinces and the 584 Native States ruled by Princes owing suzerainty to the British Crown. For different and often contradictory reasons federation was opposed by most of the politically vocal elements in India (see preceding Year Books). Following the outbreak of World War II, the Governor General announced Sept. 11, 1939, that no further steps toward federation would be taken

until peace was concluded.

In the meantime executive powers were concentrated in the hands of the Governor General, or Viceroy, who is appointed by the Crown, usually for five years, and assisted by an appointive Executive Council, composed of 15 high officials (in 1943, 10 Indians and 4 British with one post vacant) responsible for the various administrative departments. The Governor General also holds the separate office of Crown Representative (established Apr. 1, 1937) through which he performs the functions of the Crown in relation to the Native States. Pending the federation of the Governors' Provinces and Native States, the Governor General remained under the direction of the Secretary of State for India in the British Cabinet, and the Central Legislature of British India, established in 1921, continued in existence. The Legislature consisted of a Council of State of 34 elected and 26 nominated members (serving five years) and a Legislative Assembly of 105 elected and 40 nominated members (serving three years). The Central Legislature's actions are not binding on the Governor General and his Cabinet.

The All-India Congress, the most powerful Indian political party, captured 57 of the 102 elective seats in the Legislative Assembly in the 1934 elections. Due to delay in putting the federation scheme into effect, the Governor General extended the life of the 1934 Legislative Assembly by successive acts. Governor General and Crown Representative, Field Marshal Sir Archibald P. Wavell, who was appointed June 18, 1943, to succeed the Marquess of Linlithgow. For political and other developments during 1943, see below.

### HISTORY

Political Deadlock Unbroken. The main political development of 1943 was the continuance of the deadlock between the British authorities, the All-India Congress, the Moslem League, and other communal minorities over the issue of the form and extent of the next step toward Indian self-government (see preceding Year Books for background of this involved controversy).

The deadlock had been tightened in 1942 through the rejection of the Cripps proposals by all Indian factions and the failure of the All-India Congress's "non-violent" revolt against British rule, instigated and led by Gandhi. Gandhi's civil disobedience campaign, launched when Britain's war

crisis was most acute and when a Japanese invasion seemed imminent, had largely evaporated by the beginning of 1943. Yet Gandhi refused British demands that he call it off. The British, in turn, declined to release the All-India Congress leaders and other participants in the revolt until they formally renounced the civil disobedience resolution of Aug. 8, 1942. According to New Delhi authorities, a total of 8,120 persons were detained in connection with the uprising.

Gandhi's Fast. In an effort to force the British to release him and his Congress associates, Gandhi on February 10 began a three-weeks' hunger strike, during which he subsisted on citrus fruit juice mixed with water. The fast quickly centered the world's attention upon the frail 73-year-old leader of the independence movement. It was widely feared that the fast would cause his death, and Herbert L. Matthews, New York Times correspondent in India, predicted that his death would provoke "a profound emotional upheaval that will almost certainly take violent form." As the fast continued, appeals for Gandhi's release came from many sources in India and the other United Nations.

The Government of India stood firmly upon the position taken by the Viceroy in an exchange of letters with Gandhi before the latter began his hunger strike. The Viceroy offered to release Gandhi from his place of confinement in the palace of the Aga Khan at Poona for the duration of the fast, but declared that the Government "had no intention . . . of allowing the fast to deflect their policy" and would accept no responsibility for the consequences to Gandhi's health. Gandhi insisted that only unconditional release, without any renunciation on his part of the civil disobedience movement, would induce him to abandon his fort

On February 22 the Government of India issued a White Paper charging Gandhi with responsibility for the revolutionary disturbances of the previous autumn. Two days later Prime Minister Churchill, rejecting an appeal for Gandhi's release from a committee of prominent Indian liberals, upheld the Viceroy's policy. When Gandhi ended his fast on March 3, at the end of the allotted three weeks, the special privileges accorded him by the Government during the ordeal were withdrawn. He returned once more to the status of an ordinary political prisoner. Apparently his fast served to deepen the breach between Congress sympathizers and the British authorities. It led to the resignation on February 17 of three Indian members of the Viceroy's Council, but they were replaced on May 2, leaving the Council with 10 Indian and four British members. Tactically, the fast was an admitted failure. It left the Government stronger and the Congress Party weaker than before

and the Congress Party weaker than before.

Efforts at Compromise. Throughout the remainder of the year various groups in India and abroad made repeated efforts to break the deadlock and bring about a renewal of the political negotiations interrupted by the Congress Party's civil disobedience resolution. But Gandhi and his followers refused to annul the resolution, and the Viceroy, supported by the Churchill Government, declined to permit the imprisoned Congress leaders to receive visitors and carry on political negotiations so long as they endorsed civil disobedience. British authorities reiterated that the Cripps offer of Indian self-government was still open if the Indian factions wished to avail themselves of it.

The Federal Court at New Delhi on April 22 declared invalid the defense regulation under

which the Congress leaders were held without trial. This placed the Government in a dilemma, which the Viceroy ended on April 28 with a decree permitting the arrest and detention without trial of persons deemed likely to interfere with the prosecution of the war or to cause other trouble in wartime. Habeas corpus petitions challenging the new ordinance were dismissed by Bombay's High Court on May 8 and by the Federal Court at New Delhi on August 31. However the latter court strongly condemned the methods of enforcement of the ordinance employed in Bengal. Meanwhile a limited number of the imprisoned Congress members had been released by provincial authorities.

Holding rigidly to the policy adopted toward the imprisoned Congress leaders in 1942, the Viceroy in April rejected a request from William Philips, President Roosevelt's special envoy to India, to see Gandhi and Pandit Jawaharlal Nehru. He also on May 27 denied Gandhi's request for facilities to communicate by letter with Mohammed Ali Jinnah, leader of the Moslem league, who had challenged the Hindu leader to initiate negotiations, if he was sincere in wishing to end the disagreement between the Congress Party and the Moslem League. The uncompromising attitude displayed by both the Government and Gandhi profoundly discouraged those Indians working for a compromise settlement that would align all Indian factions actively with the cause of the United Nations against the Axis powers. On August 9, anniversary of Gandhi's arrest, there were minor disorders in Bombay, Ahmedabad, and Poona by followers demanding his release.

Growth of Pakistan Idea. Meanwhile Jinnah's demand for an autonomous Moslem state (Pakistan) was steadily gaining support among India's 90 million Moslems. While the All-India Congress leaders languished in jail and their supporters clung to non-cooperation with the British, the Moslem League gained control of additional provincial governments. In May a Ministry under Moslem League auspices was formed for the first time in the Northwest Frontier province, giving the League control of five of the 11 provinces of British India which were granted autonomy under the 1935 Constitution. In the other six provinces the boycott by the All-India Congress left power exclusively in the hands of the British Governors.

At the annual Moslem League convention at New Delhi in April Jinnah accused the All-India Congress of obstructing Indian unity and independence by its refusal to concede Pakistan. Atacking the Government for its "shabby treatment of Moslem India and the Moslem League," he offered to help the war effort in return for a promise of Pakistan. A resolution passed by the conference warned the Government that if it attempted to impose a federal constitution upon India, strife and bloodshed would result. At another conference attended by 50,000 Moslem League delegates in Karachi in December, Jinnah charged that the British Government had rejected his offer of Moslem cooperation in winning the war because of his demand for Pakistan and a share in India's government.

Hur Chief Executed. The Government's determination to take a firmer and more aggressive line in dealing with Indian problems was indicated by various other developments. On March 20 the Pir of Pagara, leader of the fanatical Moslem Hur sect in Sind Province, was executed. He had been convicted by a court-martial of conspiring with his followers to "wage war against the King-Emperor"

by wholesale killings, brigandage, and sabotage during 1941 and 1942. Martial law in the Hur country, proclaimed in the spring of 1942, was abolished on June 1.

Fischer's Writings Censored. An order issued under the Defense of India regulations on June 5 required that the writings on India by Louis Fischer, American author and correspondent, must be submitted to censorship before publication in India. The Home member of the Viceroy's Executive Council explained to the Legislative Assembly at New Delhi August 3 that Fischer's writings and speeches on India were considered of a prejudicial and inaccurate nature calculated to cause disaffection against the Government and to harm relations between the United Nations. On the other hand British officials joined with liberal Hindus in seeking to press a bill for the further emancipation of Hindu women through the Central Legislature.

Small States Amalgamated. The long toleration by the British Raj of administrative inefficiency and other abuses in some of the smaller Indian States appeared to have ended. Steps were taken to amalgamate small States with some of the larger native States to improve standards of administrative efficiency notwithstanding the protests of the small States' rulers. However this program struck a legal snag on December 9 when a special New Delhi court ruled that Britain lacked authority over the officers of a State.

Wavell Named Viceroy. Announcement of the appointment of Field Marshal Sir Archibald P. Wavell, British commander-in-chief in India, to succeed Lord Linlithgow as Viceroy was made in London June 18. Sir Archibald, after being raised to the peerage, was sworn in at New Delhi October 20 as the 19th British Viceroy and Governor-General. He was replaced as commander-in-chief in India by Gen. Sir Claude J. E. Auchinleck. The latter was relieved of responsibility for the conduct of operations against Japan through the appointment late in August of Adm. Lord Louis Mountbatten as head of the new Allied East Asia Command.

Lord Linlithgow was installed as Viceroy in April, 1936, to place in operation the far-reaching constitutional reforms of 1935, which he had helped to frame as chairman of the Joint Select Committee of Parliament entrusted with that task. He instituted the system of provincial autonomy in British India but his efforts to establish the Indian federation provided for in the Constitution were blocked by the opposition and factional bickering of the Indian Princes, the All-India Congress, and other political and communal groups until the outbreak of the World War interrupted the application of the program of constitutional reform. Before concluding his unprecedentedly long term of 7½ years, Lord Linlithgow in a farewell address before the Legislative Assembly on August 8 declared that only Indians themselves could remove the obstacles blocking solution of the Indian political problem. "Lack of trust and lack of readiness to accept the legitimate claims of minorities stand in the way," he declared, urging Indian leaders to get together without delay to end the political deadlock.

The appointment of Field Marshal Wavell, generally criticized by Indian nationalists, was taken as an indication that the British Government believed military considerations of paramount importance and contemplated no fundamental change in the political situation in India until after the defeat of Japan. When Wavell was sworn in, Lord Mountbatten was already at work preparing to

use the large Allied forces built up in India and Ceylon for the reconquest of Burma and British

Malaya.

The Famine. The new Viceroy assumed office as one of the worst famines in 70 years was ravaging Bengal Province and other food-importing areas of India. A food shortage developed early in the year mainly as a result of general price and monetary inflation, which stimulated hoarding and speculating in food grains. As the months passed the food crisis was accentuated by the decline in Bengal's rice crop from the normal 9,000,000 to 7,000,000 tons as a result of the cyclone and tidal wave of October, 1942; the loss of India's normal import of 1,500,000 tons of rice from Burma; the use of Indian-produced food to feed Indian armed forces at home and abroad and to sustain thousands of refugees from Burma; the shortage of transport facilities; the unwillingness of provincial governments with surplus grain supplies to make part of them available to Bengal and other deficit areas; and the partial failure of the Central Government to increase food production, curb speculation and profiteering, and force an equitable distribution of existing grain stocks. Another important contributing factor was the tremendous growth of the Indian population during the preceding decades (see above under Area and Population).

The famine struck Bengal in earnest in August, and steadily worsened. By the end of October deaths from starvation in that province alone were unofficially estimated at 100,000 weekly. Half a dozen other provinces in east and south India, with a total population of some 100,000,000 were affected, though not so seriously as Bengal. There thousands of hungry peasants crowded into the teeming metropolis of Calcutta only to die on the streets or in overcrowded hospitals. There were reports of food riots and of the spread of cholera and other epidemics in the wake of the famine.

On October 13 the Government of India decided to take control of the food situation away from the provincial governments, wherever necessary, and to stop further exports of grain. Immediately after his installation as the new Viceroy, Viscount Wavell made a three-day tour of the famine districts in Bengal and initiated more vigorous relief measures. The Indian Army was called upon to establish rest camps in the suburban areas of Calcutta, where food and medical attention was given destitute persons until they were able to return to their villages. An Indian Army supply officer was lent to the Indian Government to improve the distribution of food. Army equipment and resources were utilized for the movement of food stores, provision of shelter and medical aid, etc. Deliveries of food to starvation districts of Bengal were soon doubled.

By December 18 the Secretary of the India Food Department was able to report that both the famine and the acute food shortage had ended in Bengal. Meanwhile the Central Government on December 13 succeeded in imposing rationing and the control of food prices in the Punjab, the major food-producing area of India. In his first major speech as Viceroy delivered December 21 in Calcutta, Viscount Wavell indicated his intention to postpone action on India's political problem in order to concentrate on the war, an increase in food production, and reconstruction measures.

New Bengal Governor. An unfortunate aspect of the Bengal famine was its adverse effect upon Allied military preparations in northeast India for the invasion of Burma. The need of a more energetic and efficient administrator in this crucial area was filled December 24 with the appointment to the Governorship of Bengal of Richard Gardiner Casey, former Australian Ambassador to Washington, who had been serving since mid-1942 as British Minister of State in the Middle East with War Cabinet rank.

War Preparations. While limited military and air operations continued along the Burmese-Indian frontier (see BURMA under History; WORLD WAR), work progressed steadily during 1943 on the bases and installations needed for the coming Allied offensive. Indian, British, and Chinese armies and Anglo-American air forces were built up and trained for the grim work ahead (see China under History for the role of the Chinese forces in India). Many new airdromes, camps, roads, a gasoline pipeline, and communications systems were constructed, including a huge U.S. Army bomber base. The Indian Army by 1948 had well over 1,200,000 enlisted men serving at home and over 250,000 overseas. The British Government, under an agreement signed in 1939, bore the cost of defense installations in India and of maintaining Indian forces outside of India. U.S. lend-lease aid delivered to India during the two years ended in March, 1943, totaled \$295,501,494.

Japanese air raids on Calcutta and other Indian cities were suspended early in 1943 after inflicting total civilian casualities of 816 killed and 878 wounded. On December 5 Japanese bombers reappeared in their first daylight raid on Calcutta, in which 334 civilians were killed and a lesser

number injured.

Indian Pupper Regime. The Japanese meanwhile continued their propaganda broadcasts designed to stir rebellion, sabotage, and non-cooperation with the British among the Indian peoples. As a part of this propaganda offensive the Japanese radio on Jume 19 announced the arrival in Tokyo of Subhas Chandra Bose, former president of the All-India National Congress, who escaped to Berlin following his arrest for violating wartime regulations in India in 1940. (The 1942 report that Bose had been killed in an airplane crash was apparently erroneous.) Early in July Tokyo announced that Bose had been elected leader of "The Indian Independence League" at a meeting in Singapore and had organized an "Indian national army of liberation."

These moves were followed on October 20 by a Tokyo announcement that Bose had set up a "provisional government of India" in Singapore, and that the puppet government's first act would be to declare war on Britain and the United States. On November 7 the Japanese said they had granted control of the Japanese-occupied Andaman and Nicobar Islands in the Bay of Bengal to Bose's "provisional government." Representatives of the Bose regime attended a conference of "leading representatives of the Axis powers" in Tokyo on November 16, according to Japanese broadcasts. The Government of India at New Delhi announced October 6 the execution of four Indian civilian residents of Malaya, who were caught after being landed in India from a Japanese submarine and convicted of accepting Japanese money to carry out traitorous activities. Also see Japan under History.

Dispute with South Africa. Despite the urgency of internal and war problems, the Government and press of India devoted much attention and protest to the extension by the Parliament of the Union of South Africa of restrictive and discriminatory legislation against the Indian population of Transvaal and Natal provinces. This legislation, designed

to check Indian economic penetration in those provinces, was denounced in India as "repugnant, unnecessary, and inopportune."

INSECT PESTS AND PLANT QUARANTINES. Entomologists throughout the country have coordinated their efforts to meet the many vital problems brought about by the war. Cooperative projects with the military establishment have done much to alleviate diseases that are spread by insects. The work on control of insects that affect the food and fiber crops has been intensified. Orderly distribution of insecticide materials also needed in other military production has been aided by detailed surveys of insect abundance. New materials of less restricted availability have been and are being developed as substitutes for the more critical insecticides.

Mosquitoes. Mosquitoes are the most unbearable insects in many areas where troops are concentrated, but, far more important than the annoyance they cause, these insects are the only known carriers of such dread diseases as yellow fever and malaria. The use of an aerosol bomb containing insecticides under pressure which when released atomizes these as a fine mist, promptly rids any room or other enclosure of pestiferous insects. Three good mosquito repellents and a new anopheline larvicide that gives promise of greater value than any previously known have been discovered. In strongly saline water with heavy vegetation, 30 gallons of fuel oil per acre controlled the breeding of saltmarsh mosquitoes. Under similar conditions 100 gallons of newly developed fresh-water oil emulsion per acre gave 86 per cent control and 150 gal-lons gave 97 per cent control in four hours.

Body Lice. Body lice, or cooties, are the bane of the soldier's existence, but here again the transmission of typhus fever and several other diseases overshadows their annoyance. Investigations on the fumigation of body lice in clothing and equipment conducted for the Army resulted in the adoption of vault fumigation for delousing large quantities of clothing and individual bag fumigation for small quantities. Effective louse powders for individual use and means of louse-proofing soldiers' clothing

have been developed.

Cattle Grubs. Cattle grubs reduce the meat supply and destroy the leather so sorely needed to keep the Army on its feet. A saving of 25 per cent or more on ground derris or cube root for use on cattle grubs has been effected when dusts were employed by using pyrophyllite or tripoli earth as diluents in-stead of talc or sulfur. The two former diluents carry the rotenone dust down into the hair of the heavy-coated animals of Wyoming and Montana, but the talc and sulfur do not.

Screwworm. An extensive outbreak of the screwworm occurred in 1943. From two points of heavy infestation, southern Texas and Florida, the insect spread until by the end of the season it occurred from the southeastern corner of South Carolina to the Pacific and as far north as Iowa, Illinois, and Indiana. The new remedy, Smear 62, was very ef-

fective in control.

Stablefly. The stablefly reduces milk supply and materially reduces meat production, as well as being a vicious biter of man. Studies in connection with the stablefly demonstrated that in some areas the grass deposited on the beaches by the tides stimulated intensive egg-laying only when fer-mented. Treatment of the grasses with creosote oil and salt water was effective in killing the immature stages. This remedy was used on an extensive scale to protect military personnel along the coast. One of the mosquito repellents was effective in protecting dogs and horses from these flies.

Hessian Fly. The hessian fly destroys an average

of over seventeen million bushels of wheat annually. Infestations of the hessian fly at harvest time in 1943 were low generally; however, there were menacing populations in local areas throughout the winter-wheat belt. As a result of cooperative work of the Bureau of Entomology and Plant Quarantine with the Bureau of Plant Industry, Soils, and Agricultural Engineering, and the California Agricultural Experiment Station, club-types of wheat considerably resistant to the attack of the hessian fly were released to California growers in 1942. Other varieties of wheat possessing resistance to diseases as well as to the hessian fly, are soon to be ready for use in Kansas and Indiana.

European Corn Borer. The European corn borer was more abundant and destructive in 1943 than in any year since its introduction into the country. It was found to have extended its range to the west and northwest to include northeastern Missouri, east-central Iowa, and southeastern Minnesota. Commercial-scale trials of derris spray and of dual-fixed nicotine dust reduced infestation on sweet corn and increased the yield netting a profit of \$400

per acre.

Grasshoppers and Mormon Crickets. Damage by grasshoppers in 1943 continued in its downward trend. The adult survey conducted by the Bureau of Entomology and Plant Quarantine and cooperating States showed a build-up of populations in northeastern Washington and Oregon and from eastern Montana through the Dakotas into east-central Nebraska. There are also threatening populations in western Kansas and eastern Colorado. Damage by the Mormon cricket was in general less than last year. Threatening populations, however, were disclosed by the adult survey in northeastern Nevada, northeastern Idaho, north-central Wyoming, and northwestern Colorado. The use of cottonseed hulls and sawdust with mill-run bran as substitutes for more expensive material gave satisfactory results. The use of steam-rolled wheat and low-grade flour were found as effective as high-priced bran for use in bait.

priced bran for use in bait.

White-fringed Beetle. Infestations were discovered in 1943 in four additional counties in North Carolina, and in localities near known infestations in Alabama, Florida, Louisiana, and Mississippi. More efficient methods of fumigation and cultural and cropping practices conducive to reduction of populations have been developed. Improvements in spray machinery and nursery barriers and the development of an airplane hopper for insecticide distribution have advanced the progress of control

work.

Stored-grain Insects. Even before the war, storedgrain insects and other stored-product insects destroyed an average of over \$300,000,000 worth of materials already harvested and stored. The procedure of fumigation when first placed in storage, and periodical fumigations, protects the grain from insect damage. Experiments with hydrocyanic acid, methyl bromide, and other commonly recommended fumigants, applied in standard concentrations, indicated that none was harmful to the vitamin B1 (Thiamin chloride) in enriched flour; methyl bromide, chloropicrin, and carbon disulfide, when applied in ordinarily recommended concentrations materially reduced the germination of wheat having a moisture content of over 12 per cent. A general fumigation of flour mills followed by fumigation of conveyors every three weeks and veekly removal of stock from elevator boots kept nsect populations down.

Black-stem Rust. This disease during the past 28 rears has resulted in an average loss of 36 million rushels of wheat. In areas in Pennsylvania where parberries have been kept suppressed, normal yields

of grain have been produced annually, while in the barberry-infested areas local outbreaks of stem rust of wheat and the accompanying crop failures continue to occur.

Codling Moth. Codling moth annually destroys an average of nineteen million bushels of apples. The codling moth caused more injury than usual in 1943 over most of the eastern part of the country. Heavy populations entered hibernation. It was found that phenothiazine could be substituted for lead arsenate in early cover sprays, and in the Pacific Northwest improved stickers resulted in control by the use of one-half the amount of phenothiazine that had been used previously.

Oriental Fruit Moth. Following its discovery for the first time in southern California in the fall of 1942, a cooperative Federal and State survey in the western half of the country was made in 1943. The survey disclosed newly infested areas extending from northeastern Texas through Oklahoma, eastern and east-central Kansas, and southeastern Nebraska

into southern Iowa.

Japanese Beetle. The Japanese beetle infestation in the older infested areas continued generally low, whereas in the comparatively newly infested territory around the edge it was very heavy. No important spread of infestation was noted in 1943. The milky disease which has been cultured and distributed in certain areas continued to give control of the grubs. The development of two new methods of treating nursery stock was of special importance: one, the use of ethylene dichloride dip for the treatment of plants with root masses or soil balls, and the other, the treatment of growing nursery stock in the field with a dilute solution of methyl bromide. Two new treating schedules, providing for lower temperatures with methyl bromide fumigation of potted plants, were authorized.

Western Bark Beetles. Bark beetles destroy on an average five billion board feet of lumber annually. There was a marked decrease in the amount of timber destroyed by western bark beetles in 1942 compared with previous years. The reduction was due to increased efforts to control incipient outbreaks and to build up resistance of forests as well as to natural causes. Trees intended as camouflage for army camps were injured when the camps were being erected, resulting in bark beetle and borer attack. Army officials were instructed on tree-maintenance rules and large numbers of trees were

saved

Ambrosia Beetles. Owing to the scarcity of highgrade Sitka spruce suitable for airplanes, it is important that damage to the sapwood by ambrosia beetles be prevented. Studies were made on the period of time within which logs must be removed from the woods to avoid attack and the maximum allowable before serious damage results.

Gypsy Moth. Defoliation by the gypsy moth was the lowest recorded since 1924. Populations were reduced by the cold weather of 1942-43, when most of the eggs above the snow line were killed. Methyl bromide fumigation as a basis for certification of some classes of restricted articles was intro-

duced for the first time.

Dutch Elm Disease. First-record infections of the Dutch elm disease were reported from 44 localities, 9 of which were in Connecticut, 1 in New Jersey, 7 in New York, 4 in Massachusetts, 17 in Pennsylvania, 5 in Ohio, and 1 in West Virginia. Women scouts were used for the first time in this work; they were employed in the Wilkes-Barre, Pa., district

White Pine Blister Rust. White pines infected with white pine blister rust were found for the first time

in one county in Wisconsin and in three counties in Michigan, and Ribes infection was reported for the first time in one county in Minnesota and 11 counties in Iowa. These localities are within the area where the disease has been found on its alternate hosts, currants and gooseberries. There was no important extension in 1942 of the area where the disease is known to occur.

Truck Crop and Garden Insects. Recent research shows that a dinitro compound may be substituted for pyrethrum in the control of the potato leafhopper on potato and beans, and that basic copper arsenate is as effective, on the basis of laboratory or small-scale tests, as calcium arsenate against the tomato fruitworm, the Mexican bean beetle, and the Colorado potato beetle. The new materials, phthalonitrile and 2-fluorylamine, proved to be the most promising substitutes for lead arsenate in the control of the tobacco flea beetle and the hornworms. A nicotine-rotenone-sulfur combination, with the rotenone content reduced, was effective in controlling the pea aphid. Experiments with carriers and diluents show that pyrophyllite increases the efficiency of rotenone dust mixtures and that in general the tales are superior to the clays. Work in Maine has shown that aphid infestation can be greatly reduced by rotenone-soybean oil and nico-

tine-rotenone sprays.

Boll Weevil. Cotton is our basic fiber crop; in an average year the boll weevil destroys the equivalent of 1,800,000 bales of cotton. In the summer of 1943 boll weevil activity was checked by weather in Texas, Oklahoma, and Arkansas, and damage was much less than anticipated. Infestation in the Southeastern States was about normal.

Bollworm and Cotton Leafworm. Considerable infestation by the cotton leafworm occurred in Texas, Oklahoma, Missouri, Louisiana, Mississippi, and Alabama. Injury by the bollworm in 1943 over the Gulf region was light, with heavy local damage in Texas and Georgia and also in Arizona.

Fink Bollworm. Infestation by pink bollworm was found during the course of 1943 to occur in certain counties of the Gulf coast of Texas and southwestern Louisiana. At the invitation of the Mexican Government, the Bureau of Entomology and Plant Quarantine established headquarters in Mexico in order that the cooperative work between the two countries on the pink bollworm may be more effective.

Bee Culture. In the studies of resistance of honeybees to American foulbrood, 575 queens of experimental stock were reared, of which 270 were distributed to State agencies for testing and observation. Considerable increase in the number of colonies without disease has been shown by two lines of stock now in the fifth generation.

Insect Identification. Service activities directly associated with the war included identification of many lots of insect material from military sources and personal instruction to officers of the Army, Navy, and Public Health Service in identification and classification of mosquitoes and other insects affecting human health. Data on disease-carrying insects from the countries bordering on the Mediterranean, Australia, New Zealand, and the South Pacific Islands was furnished to the Office of the Surgeon General, War Department.

Foreign Parasite Introduction. This work has been limited to the introduction of parasites from South America, especially Brazil, Argentina, and Peru. Forty-one consignments were forwarded to the United States and 13 to Puerto Rico. Arrangements were made for the importation of Plaesius javanus Erichson from Fiji, a consignment of adults being

forwarded to Honduras for release against stemfeeding grubs. Cooperative work with the Mexican Department of Agriculture was conducted on the biological control of the citrus blackfly on the west coast of that country. An effective parasite, *Eretmocerus serius* Silv., originally imported from Malaya, was sent from the Canal Zone.

Insecticide Investigations. The search for possible domestic sources of rotenone has been continued. Studies were continued on synergists for pyrethrum and three piperonylamides and piperine were found to be useful against house flies and five materials were found that increased the effectiveness of pyrethrum dusts against leaf-feeding beetles.

Foreign Plant Quarantines. More than 13,000 airplanes from foreign countries were inspected upon arrival, an increase of 51 per cent, and of this number 3,219 were found to carry prohibited plant material. The use of ballast consisting in part of surface soil by vessels arriving at Atlantic ports presented a problem of pest introduction. Other complications resulting from the war included the discharge of cargoes at ports in areas where such landing is ordinarily not permitted.

landing is ordinarily not permitted.

Mexican Border Service. There was a 26 per cent increase in the number of freight cars from Mexico inspected. In order to meet the requirements of entry needed to safeguard against pest risk, it was necessary to fumigate approximately one-fifth of the number inspected, an increase of about 200 per cent over last year. Nearly five million other vehicles and more than 350,000 pieces of baggage were examined through cooperation with the customs officials.

INSULAR EMERGENCY COUNCIL. See PUERTO RICO under *History*.
INSULATION. See Asbestos; Talc.

INSURANCE. The year 1942 brought to the insurance world problems which were the direct result of America's change from peace to war. From a managerial and underwriting angle, 1943 simply accentuated these problems. Personnel problems became more acute because of the loss of married men with families, many having been in the more important executive positions. Administration costs increased materially. And for the first time in many years, companies found themselves competing with war plants in their desire to hold valuable employees and in hiring new employees. Taxation attained a sizeable share of each premium dollar. Investment problems were difficult; they were of greater seriousness than claims, although the latter gave the companies concern from the personnel angle, for it is here that the companies have what is sometimes their only direct contact with the policy holder. Outside of the life insurance field, there was a great tendency to reduce the cost of insurance or broaden the

coverage.

"A little group of serious thinkers" started a movement toward the entry of the Government into the insurance field. In this regard, Kenneth Spencer, executive head of the Royal-Liverpool Group of Casualty Companies said: "The American voter does not prefer bureaucratic service and will not sanction such interference with private business unless he cannot obtain what he wants elsewhere or believes he is being unfairly treated or overcharged. He is willing to pay a profit for good wares or good service." The cynical may attribute this move in the direction of Government insurance as the reason for increased interest by

the insurance group in 1943 in the subject of Public Relations.

The War Damage Corporation (see Recon-STRUCTION FINANCE CORPORATION) completed its first year of operation on July 1, 1943, and announced that it had insured more than \$124,000,-000,000 of property values against the possibility of enemy attack. Total premiums received in its first year amounted to \$130,000,000 against which claims amounted to \$63,000,000—the result of damage in the Philippines and at Pearl Harbor. All other claims amounted to less than \$100,000. Renewals were not materially affected by the general feeling that we would not see air attacks in this country, the bulk of the policies being re-

Life Insurance. The record for 1943 is a tribute to the public's confidence in life insurance companies as well as a tribute to the reduced force of field men and women directly responsible for the sale of insurance. The record is almost fantastic for it must be remembered that the ranks of prospects were also depleted by the large number of individuals who entered military and naval service. In spite of these reductions, there was a general increase in new life insurance sales, the chief reasons being (a) expanded sale of group life insurance; (b) pension trust sales; (c) more "retirement income" sales to men and women; (d) more business life insurance sold; (e) the possibility of inflation being indicated by the upward swing in the cost of living, and the realization on the part of the public that larger amounts of life insurance will probably be needed.

In 1943, citizens purchased from U.S. legal reserve companies approximately \$12,700,000,000 of new paid-for life insurance, not including policy revivals, increases and dividend additions. This is 5 per cent above the 1942 volume of \$12,-097,000,000. At the end of 1943, life policies owned by 68,000,000 Americans totaled \$139,-000,000,000 of insurance, nearly 7 per cent greater than the amount outstanding at the end of 1942. Payments and credits to policy holders and beneficiaries by all companies during the year reached an estimated total of \$2,400,000,000. Of this amount approximately \$1,100,000,000 or 46 per cent was disbursed to beneficiaries of deceased policy holders and about \$1,300,000,000 to living policy holders as matured endowments, annuities, surrender values, dividends, and disability benefits. Annual volume of these disbursements in the last ten years has averaged about \$2,500,000,000.

The investment of life insurance funds is of cardinal importance in the effectiveness of life insurance service. Of admitted assets, now estimated at \$37,675,000,000, \$12,600,000,000 has been loaned the Federal Government, \$2,250,-000,000 has been invested in Government bonds, and \$10,775,000,000 has been invested in corporate securities of enterprises such as railroads, power, steel, petroleum, water, tires, etc. About \$6,450,000,000 is invested in real estate mortgages or business, industrial, or residential properties. Only 6 per cent of the assets represented policy loans, and 9 per cent represented real estate, cash, and collateral loans.

Marine Insurance. With the reduction of U-boat activity and consequent reduced losses, there was a lowering of rates generally. Due to the maintenance of an efficient ocean patrol, the rates have shown far less fluctuation than heretofore. See

Fire Insurance. There was an increase of fire losses in 1943 (see Fire Protection) and a tend-

ency to broaden coverage generally, witness the extension of policies covering household property while elsewhere or while temporarily at other locations, with limits as to amount, but without extra premium charges for the clause. Quite a few States streamlined and simplified the fire policies, providing great economy of text and obviating the necessity of special clauses and riders.

Suretyship. With the continuation through 1943 of a manpower shortage throughout business generally, firms sought the protection afforded by the broad fidelity policies now available. There was a general increase in solicitation of this type of insurance, and hence the 1943 totals show a marked increase in premium volume, in spite of the reduced rates at which these bonds are written

today.

Casualty. During 1943, a strong tendency was displayed, upon the part of all companies, to broaden and generally liberalize the policies on the market. Some of these changes will be men-tioned here. Also, in anticipation of a brisk postwar market for insurance, many companies have made plans to enter new fields. Some of these plans have already become realities, as is evidenced by the action of Fidelity & Deposit Company of Maryland, which heretofore wrote only Surety, Plate Glass, and Burglary and which now writes Comprehensive Liability coverage. It is felt that this Company's unexpected entry into the liability field, shows the handwriting on the wall.

Early in the year, the Comprehensive Personal Liability policy was announced, including all haz-ards formerly embraced in residence, golf, sports, and personal liability policies. All personal activi-ties of the insured and his family, including place of residence and covering away from the premises, golf, dogs, saddle animals, and excluding auto-

mobiles, are covered.

The Non-Occupational Accident Policy was announced, for the benefit of all workers, whether or not in jobs carrying great hazards. This insurance is naturally written at greatly reduced rates, since the problem of occupational accident fre-

quency does not enter.

Workmen's Compensation business was a major premium producer in 1943 and production reflected the increased payrolls of industrial plants engaged in war work. Most industrial accidents showed an upward trend. In this field, too, there was a new development in the new "Disease Endorsement for Compensation Policies." Heretofore these policies did not cover the legal liability for sickness of employees unless caused by accident. Sickness may now be included for a premium charge of one cent per \$100 of payroll for the low limits of liability and higher limits for a small additional premium.

Automobile insurance was naturally "off." The drop in registrations (see Motor Vehicles) had its reflection in car insurance, and accounts for the drop in premium income on Collision, Liabil-

ity, and Property Damage totals for the year.

A new residence and "outside theft" policy was issued in April, 1943, granting insurance "away from the premises" and broadening generally some of the more restrictive clauses. In most localities there was no increase in the premium, although in some metropolitan centers, an additional \$5 charge was made per year. As the result of this new feature, the demand for burglary insurance increased toward the end of the year. And, as was to be expected, all companies were experiencing a marked increase in the number of claims, although most of the claims falling under the "outside theft" section, were small in amount. The anticipated change in Personal Effects Floaters resulting from the new "Outside Theft" clause in burglary policies occurred. Underwriters felt that the burglary men were intruding. As a result, a rider was introduced for insertion in Personal Effects Floaters, which granted a 50 per cent reduction in the rate if the policy owner agreed that no claim would be made for any type of loss actually covered under other policies of insurance.

Finally, and in general, insurance companies in all fields are satisfied with the year just passed. With reduced clerical personnel, with accentuated investment problems, but more particularly, with reduced number of producers, the anticipated poor showing in all fields did not materialize. The general feeling on the part of most company executives was one of great satisfaction that the war had not harmed the industry more severely.

INTERIOR, U.S. Department of A Department of the U.S. Government which in 1943 consisted of the following principal branches:

General Land Office
Bureau of Reclamation
Geological Survey (q.v.)
Grazing Service
Bureau of Mines (q.v.)
Office of Indian Affairs
National Park Service (see NATIONAL PARKS)
Fish and Wildlife Service (q.v.)
Office of Fishery Coordination
Petroleum Conservation Division
Solid Fuels Administration for War

Division of Power
Division of Territories and Island Possessions
Puerto Rico Reconstruction Administration
Office of Land Utilization
Bituminous Coal Division
Office of the Solicitor
Office of the Chief Clerk
Division of Information
U.S. Board on Geographical Names
Bonneville Power Administration
Division of Personnel Supervision and Management
Division of Classification

Secretary of the Interior in 1948: Harold L. Ickes. Under Secretary, Abe Fortas. The Office of the Petroleum Coordinator for War was abolished by Executive order on Dec. 2, 1942, and its functions were transferred to a new independent agency, the Petroleum Administration for War (q.v.).

INTERNAL REVENUE, Bureau of. A division of the U.S. Department of the Treasury, created in 1862, which supervises the determination, assessment, and collection of all internal revenue taxes and enforces the internal revenue laws. In addition it is charged with the administration of certain salary increases or decreases under the President's salary stabilization order. Major divisions are the Income Tax Unit, the Alcohol Tax Unit, the Miscellaneous Tax Unit, the Accounts and Collections Unit, and the Field Service. Commissioner in 1943: Guy. T. Helvering.

INTERNATIONAL CLEARING UNION. See POSTWAR PLANNING under International.

INTERNATIONAL LABOR ORGANIZATION (ILO). The International Labor Organization is an association of nations which seeks by international action the improvement of conditions of labor, the raising of living standards, and the furtherance of economic and social stability. Its membership in 1943 comprised the following countries: Abyssinia, Afghanistan, United States of America, Argentine Republic, Australia, Belgium, Bolivia, Brazil, Bulgaria, Canada, Chile, China, Colombia, Costa Rica, Cuba, Czechoslovakia, Denmark, Dominican Republic, Ecuador, Egypt, Finland, France, Greece Haiti Hungary, India Iran Iran Irang Irangan Greece, Haiti, Hungary, India, Iran, Iraq, Ireland, Liberia, Luxembourg, Mexico, Netherlands, New Zealand, Norway, Panama, Peru, Poland, Union of South Africa, Sweden, Switzerland, Turkey, Uruguay, Venezuela, Yugoslavia. The membership status of certain other countries is doubtful. For organization, see 1943 Year Book. The United States Government representative, Mr. Carter Goodrich, is Chairman of the Governing Body, while a United States employer, Mr. Henry I. Harriman, and a United States worker, Mr. Robert J. Watt, are members representing their respective groups.

The Governing Body has delegated to an Emergency Committee (selected from among its members) its duties in case wartime conditions prevent it from holding regular meetings. Although the official seat of the Office remains in Geneva, Switzerland, working headquarters have been situated since the autumn of 1940 at 3480 University Street, Montreal, Canada. In agreement with the Canadian Government and at the invitation of McGill University, an important part of the staff is established there under Mr. Edward J. Phelan, the Acting Director. A network of branch offices and national correspondents is maintained. The Branch Office in the United States is situated at 734 Jackson Place, Washington, D.C.

In October-November, 1941, a Conference of the Organization was held in New York City, attended

by delegations from thirty-four Member States, which gave the Organization a mandate to continue and intensify its wartime activities and to begin at once the study of (1) "measures of reconstruction," and (2) "emergency measures to deal with unemployment," and to direct its program of work so that it would be in a position to "give authoritative expression to the social objectives confided to it."

The work of the Organization in 1943 continued to be directed toward putting into effect this enlarged mandate. Integrated in its program were its normal constitutional activities, its work on wartime problems, and its study of postwar questions. Its activities have included the holding of meetings on particular subjects; the furnishing of advice to a number of governments in connection with the development of social insurance legislation, housing policy, labor relations, improvement and standardization of labor statistics, development of labor supply policy, and the formulation of national reconstruction programs; and the publication of a series of research studies, as well as a full series of periodical and special publications.

The series of tripartite meetings between the United States and Canada, which was begun in 1941, was continued during 1943, with a view to assisting both countries in the formulation of their labor supply policies. In July, 1943, authors of social security plans and social security administrators from a number of American countries and Great Britain met in Montreal at the invitation of the Office. During this consultation, a number of members and supporters of the Inter-American Committee on Social Security met and outlined a series of recommendations to the Committee, which was established in 1942 and which works in concert with the International Labor Office. At a meeting of the Office's Governing Body in December, it was decided to convene the next session of the International Labor Conference on Apr. 20, 1944, in the United States.

During the year the Office complied with numerous requests from Governments for expert advice. Typical of this form of service was the appointment of an official to assist the Joint Bolivian-United States Commission which investigated labor conditions in the Bolivian mines. At the request of the National War Labor Board of Canada, the Office submitted a brief during the Board's inquiry into labor relations. An official of the Office assisted the Mexican Government in the formulation of measures to apply that country's new social insurance legislation. In the field of social insurance the Office complied with requests which were received from the Governments of Chile, Costa Rica, Ecua-

dor, Venezuela, and Paraguay.

The research and publications program of the Office during 1943 was directed toward meeting both its wartime and postwar responsibilities. The International Labor Review, which was increased in size in 1942, continued to be published monthly in English, French, and Spanish. The Industrial Safety Survey, the Legislative Series and the Cooperative Bulletin appeared regularly, as did the Yearbook of Labor Statistics. The record of the proceedings of the Twelfth Session of the Joint Maritime Commission was published under the title Maritime Commission was published under the title of Merchant Seamen and the War. Studies of special interest published during the year include The Displacement of Population in Europe, The International Standardization of Labor Statistics, and also Intergovernmental Commodity Control Agree-

INTERSTATE COMMERCE COMMISSION (ICC). An independent establishment of the U.S. Government empowered to regulate, in the public interest, common carriers engaged in transportation in interstate commerce. (For details, see YEAR BOOK for 1940.) Part IV of the Interstate Commerce Act, approved May 16, 1942, conferred upon the Commission jurisdiction over freight forwarders. Many times during the present war the Commission has exercised emergency powers under which it may direct that certain traffic have preference or priority in transportation. Chairman: J. Haden Alldredge.

IOWA. A west north central State. Area: 56,280 sq. mi. Population: 2,538,268 (1940 census); 2,294,-

184 (1943 nonmilitary estimate).

Statistics. Statistical information pertaining to each of the 48 States and the District of Columbia has been assembled in comparative tables which appear in the following articles. Agriculture; Mineral Production; Roads and Streets; Schools; Social Security Board; Taxation; Universities; and Vital Statistics. The census of manufactures has been suspended for the time being; for the latest information, see 1941 YEAR Воок, р. 430.

Elections. See the article Elections in the UNITED STATES; also, for incumbents, House of Representatives and Senate.

Legislation. See the separate article on STATE LEGISLATION.

Officers. The Governor is Bourke B. Hickenlooper (Rep.), inaugurated in January, 1943, for a twoyear term; Lieutenant Governor, Robert Blue; Secretary of State, Wayne M. Ropes; Attorney General, John M. Ranckin.

IRAN (PERSIA). A kingdom of southwestern Asia, the southern and northern districts of which were occupied by British and Russian forces in 1941. Capital, Tehran (Teheran); ruler, Mohammed Riza Pahlevi, who ascended the throne upon the abdication of his father, Riza Shah Pahlevi, on Sept. 16,

Area and Population. Area, about 628,000 square miles; population, estimated at 15,000,000, including besides the dominant Iranians large minorities of Turks, Kurds, Leks, Baluchis, and Cipsies. There are about 3,000,000 nomads. Populations of the chief cities as officially estimated Mar. 1, 1940, were: Tehran and district, 540,087; Tabriz, 219,000; Meshed, 189,000; Shiraz, 119,000; Isfahan, 100,000; Hamadan, 99,000; Resht, 89,000; Kermanshah, 70,000; Kazvin, 60,000; Kerman, 59,000; Sultanabad, 55,000; Abadan, 40,000.

Education and Religion. Despite rapid extension of educational facilities in recent years, the population remains largely illiterate. There were 4,939 schools with 273,680 pupils in 1937. Tehran has a university. The people are mainly Moslems of the Shiite sect; there are also about 50,000 Armenians, 40,000 Jews, 30,000 Nestorians, and some native Christians, Bahaists, and others.

Defense. Iran in 1942 was reported to have a fairly well equipped army of about 100,000 men; an air force of 150 machines, mainly of British origin; and a small fleet in the Persian Gulf. At the request of the Iranian Government, Col. H. Norman Schwarzkopf, former superintendent of the New Jersey State Police, was sent to Iran in 1942 to re-

organize the national police.

**Production.** Agriculture and stock raising are the main occupations, supporting 80 per cent of the population, but the oil industry is the chief source of government revenue. Production of the chief crops in 1941–42 was reported as follows, in metric tons: Wheat, 1,400,000 (about 1,200,000 in 1942– 43); barley, 600,000; rice, 320,000; almonds, 5,000 (6,000 in 1942–43); raisins, 20,000 in 1942–43; cotton, 50,000 in 1940. Sugar beets, tobacco, sesamum and raw silk are other crops. The sheep population is placed at 16,000,000; the 1942–43 wool clip was about 12,000 metric tons.

Iran ranked fourth among the oil producing countries in 1941, with an output of 6,708,000 metric tons (8,748,000 in 1940). The oil industry is British-controlled (see *History* for profits of Anglo-Iranian Oil Co. in 1942). Some coal and copper are mined. Carpet making is the chief manufacturing industry. Recently erected government plants produce cement, matches, cotton and woolen yarns and fabrics, refined sugar, silk textiles, and

iron and steel.

Foreign Trade. For the year ended Mar. 20, 1942, imports totaled 791,095,650 rials (1,018,713,830 in 1940-41). Commercial exports were valued at 811,-910,560 rials (925,381,010 in 1940-41) and shipments of the Anglo-Iranian Oil Co. at 1,011,336,870 rials (1,313,591,268). Over half the kingdom's trade is normally with the British Empire. Imports from the United States in 1941-42 were 160,301,-080 rials (72,505,370 in 1940-41); exports to the United States, 166,988,640 rials (124,135,360 in

Finance. Actual budget returns have not been published for some years. For the 1942–43 fiscal year receipts were estimated at 3,137,822,940 rials (3,613,768,720 in 1941–42) and expenditures at 8,137,695,050 rials (4,323,911,680). Paper currency in circulation rose from 1,585,000,000 rials on Dec. 20, 1941, to about 2,988,000,000 rials on Oct. 20, 1942. The rial was pegged at 17.1 to the U.S. dollar on Dec. 21, 1939, at 35 to the dollar on Sept. 21, 1941, and at 32.5 to the dollar on May 13, 1942. Average official exchange rate of the rial: \$0.05092 in 1941, \$0.02902 in 1942, and \$0.03077 in January-March, 1943. Dr. Arthur C. Millspaugh, former American financial adviser to the government, was appointed Administrator-General of Finances in November, 1942.

Transportation. Following the Anglo-Russian occupation of Iran in 1941, the country was developed during 1942 and 1943 into an important route for the transportation of British and American war supplies to Russia. See 1943 Year Book for 1942 developments, and below under History for those of 1943. The principal transportation features are the 866-mile Trans-Iranian Railway from Bandar Shahpur on the Persian Gulf to Bandar Shah on the Caspian Sea via Tehran (with branch lines to Tabriz, terminus of the Russian Caucasus rail net-work; Meshed; and Khorram Shahr, the new port opened in 1942 in the Shatt-el-Arab); the highway

network of 15,043 miles in 1940 (subsequently greatly improved and extended to handle war traf-fic); and the British air line connecting Tehran with Kermanshah and Baghdad. The U.S. Army's air transport command operated an important transport and plane ferry service into Southern Iran.

Government. As a result of the Anglo-Russian

intervention in 1941 and the forced abdication of Riza Shah Pahlevi, a constitutional monarchy was formally proclaimed by the new Shah, Mohammed Riza Pahlevi, on Sept. 20, 1941 (see 1942 Year Book, p. 289–290). Legislative powers were vested in the Mediliss (legislature) of 136 members elected for two years and executive powers in the Shah and his Cabinet, which is responsible to the Medjliss. The pro-Ally Cabinet formed Aug. 3, 1942, was headed by Premier Ahmad Qavam Sultaneh. By the treaty of alliance signed by Iran with Britain and Russia on Jan. 29, 1942, the latter powers obtained the right to control Iran's communication However they pledged themselves to "respect the territorial integrity, sovereignty, and political independence of Iran" and to withdraw all their forces within six months after the end of hostilities with Germany and her associates. For 1943 developments, see below.

### HISTORY

Movement of Supplies. The movement of war and other supplies from the United States and the British Empire to the Soviet Union across Iran assumed huge proportions during 1943 as new roads and connecting railways were completed and additional railway and highway transportation equipment placed in service (see above under *Transportation*). Early in March the first all-American truck convoys from Persian Gulf ports began to reach Kazvin in the Soviet-controlled zone of northern Iran, where supplies were transferred to Russian trucks. In the autumn the American truck convoys commenced to carry supplies all the way from the Persian Gulf to the port of Pahlevi on the Caspian Sea.

The first all-American train carrying U.S. war supplies to Russia via the Trans-Iranian Railway steamed into Tehran from the Persian Gulf on March 30. From Tehran the goods were sent northward in Russian-controlled trains. By autumn the Persian Gulf Service Command of the U.S. Army had more than 150 American locomotives and over 3,000 freight cars in operation. Nearly 6,000 tons of supplies were being unloaded daily from three Persian Gulf ports for shipment north by rail. A steady stream of American planes were being flown to Russian-held airports in northern

Iran for delivery to the Red Army.

Meanwhile the United Kingdom Commercial Corporation (q.v.) speeded the parallel flow of supplies to Russia from ports and railheads in southern Iran, India, and Iraq. Completion of a new 800-mile highway in eastern Iran to facilitate delivery of Indian military and civilian supplies to the Soviet Union was announced in New Delhi December 5. Over a thousand trucks were engaged in transporting supplies over this one route. Anglo-American shipments were said to be piling up in northern Iran faster than the Russians could

Political Difficulties. With the removal of the threat of German invasion of Iran, political tension grew between the Iranians and the occupying powers (Britain and Russia), and among the Russians, British, and Americans. The Russians were said to have isolated the three northern provinces of the kingdom, ousted the Shah's tax collectors, and barred Persian, British, and American travelers alike from that region. Differences arose between the Iranian and Soviet Governments in connection with the negotiation of a clearing and exchange agreement. Moreover the Russians were said to have moved troops southward into the Britishcontrolled zone without consulting their allies. In some quarters it was feared that they planned to stay in Iran.

The Russians, on the other hand, were reported to have viewed with uneasiness the expansion of U.S. armed forces in Iran as well as British influence in Tehran. Apparently they, too, suspected that the U.S. and British forces might not withdraw at the end of the war. At Marshal Stalin's request, the issue was said to have been discussed at the Moscow Conference of the Anglo-American-Soviet Foreign Ministers late in October. These discussions paved the way for the Declaration on Iran issued by Stalin, President Roosevelt, and Prime Minister Churchill on December 1 following their historic conference at Tehran (see United NATIONS). The declaration asserted that the three Governments were "at one with the Government of Iran in their desire for the maintenance of the independence, sovereignty, and territorial integrity of Iran." They pledged continuance of all possible economic assistance to Iran and said they counted upon Iran's participation "in the establishment of international peace, security, and prosperity after the war, in accordance with the principles of the Atlantic Charter."

This accord helped to clear the atmosphere. It was reported from Tehran December 10 that American, British, and Russian representatives were busily at work on a treaty or agreement with the Iranian Government effectuating the Tehran Declaration, but no agreement was announced up

to the end of the year.

Other Developments. The Ministry formed by Ahmad Qavam Sultaneh in August, 1942, resigned in mid-February, 1943, for reasons not disclosed in the press announcement. Sultaneh's predecessor, Ali Soheily, formed a new Cabinet on February 15. Before receiving a strong vote of confidence from the Mediliss on February 22, he assured the Deputies that "there is no reason to be alarmed because the Americans came to execute works to help their Allies." This would indicate that some members of the Medjliss were also fearful of U.S. intentions

Meanwhile U.S. lend-lease aid, promised on May 2, 1942, began to reach Iran. Among the deliveries were 700 motor trucks. A U.S.-Iranian trade agreement signed on Apr. 8, 1943, reduced the American tariff on Persian rugs and other products in return for reciprocal concessions. On September 1 the Medjliss authorized the War Department to purchase war material worth \$1,500,000 from the United States. On September 9 the Iranian Government declared war on Germany and adhered to the United Nations Declaration of Jan. 1, 1942. At the request of the Iranian Government, the United States on November 27 contracted to send a military mission to Iran for two years (from Oct. 2, 1942) to assist in reorganizing the Iranian Gendarmerie (national police). The agreement merely formalized an existing arrangement.

A reorganization of the Soheily Government in mid-December was attributed to the influence of the Tehran Conference. At the same time the Iranian Government began to press Britain and Russia for the withdrawal of their armies of oc-

cupation—but not of the military units engaged in the transportation of supplies. The young Shah in an interview on December 31 urged that the Iranian army be permitted to "cooperate much more with the Allies." The Shah also outlined a postwar program of internal development calling for improved housing, sufficient food for everyone, and free and obligatory public education and public health facilities.

Economic conditions remained extremely difficult in 1943 as a result of acute shortages of food and of imported manufactures which caused serious price inflation. In accordance with the food agreement made with Iran Dec. 4, 1942, the British and American Governments shipped in some 65,000 tons of grain during the year ended in August, 1943. The British assisted the Iranian Government in reclaiming some 10,000 acres of land in southern Iran and planting it to wheat and barley. Agricultural machinery from the United States was brought in to expand this scheme. The 1943 harvests were better than in 1942 but the large numbers of Allied troops in the kingdom continued to create a food scarcity. As a price stabilization measure, the Government on May 23 established an import monopoly over cotton products and many other staple commodities.

In January it was announced that over 100,000 Poles had arrived in Iran from Russia to join Polish forces in the Near East. A typhus outbreak of limited proportions was reported in April, with some hundreds of cases involved. The chairman of the Anglo-Iranian Oil Co., Ltd., stated in September that the firm's trading profits rose from £6,032,347 in 1941 to £12,418,616 in 1942, making possible a dividend of 20 per cent after setting aside £2,000,000 for extra depreciation and placing £1,000,000 to a war contingency and de-

ferred repairs account.

See Great Britain under History; Ports and HARBORS; UNITED NATIONS; WORLD WAR.

IRAQ (IRAK). An Arab kingdom occupying the basin of the Tigris and Euphrates Rivers in Mesopotamia. Capital, Baghdad, King, Feisal II, who succeeded to the throne Apr. 4, 1939.

Area and Population. Area, 116,600 square miles; population, estimated at 3,700,000 on Jan. 1, 1940 (about 80 per cent Arabs and 16 per cent Kurds). Chief cities, with estimated populations (1938): Baghdad, 340,000; Mosul, 98,000; Basra, the chief

port, 62,000. Language, Arabic.

Education and Religion. Despite free primary education, illiteracy remains high. State school statistics for 1939-40: Infant, 34 schools, 5,174 pupils; primary, 669 schools, 85,792 pupils; intermediate, 42 schools, 11,697 pupils; secondary, 14 schools, 2,312 pupils; vocational and normal, 12 schools, 2,477 pupils. Private elementary schools numbered 72 with 17,495 pupils. There were also colleges of medicine, pharmacy, law and military science, and a higher normal school, all coeducational except the Military College. In 1935 there were 3,136,632

Moslems, 101,375 Christians, and 90,970 Jews.

Production. The principal occupations are agriculture, stock raising, and petroleum mining. Most of the petroleum output goes from Kirkuk, Iraq, by pipeline to Haifa, Palestine. The other pipeline to Tripoli, Syria, was closed in 1940. Petroleum production declined from 4,116,000 metric tons in 1939 to 3,240,000 in 1940 and 1,680,000 in 1941. Estimated yields of the chief crops in 1942 were (in tons): Wheat, 400,000; barley, 600,000; rice, 350,000; giant millet, 70,000; millet, 20,000; corn, 10,000. Iraq's date exports (143,000 tons in 1941)

normally account for 80 per cent of the world's total. Cotton (25,142 bales in 1942) and tobacco are other crops. The 1942 wool clip was about 5,000 metric tons. Several large irrigation projects are expanding the area under cultivation.

Foreign Trade. Including reexports, but not goods imported for British military forces, imports in 1942 were valued at 11,568,000 dinars (6,948,000 in 1941). Exports, excluding reexports and crude petroleum exported by pipeline, amounted to 4,476,000 dinars (3,906,000 in 1941). For the chief import and export items and the distribution of trade by countries, see preceding Year Book. Iraq's transit trade approaches the foreign trade in value and importance. In 1941 the incoming transit trade totaled 7,400,000 dinars and the outgoing trade an equal amount.

Finance. For the year ended Mar. 31, 1943, actual ordinary budget receipts were 9,814,000 dinars (6,700,000 in 1941-42) and ordinary expenditures 10,350,000 dinars (7,500,000 in 1941-42). Ordinary defense costs were 3,018,000 dinars in 1942-43 (2,300,000 in 1941–42). Capital revenues (mostly oil royalties) were 2,190,000 dinars and expenditures 887,000 dinars in 1942–43 (3,200,000 and 900,000 respectively in 1941–42). Ordinary budget estimates for 1943–44: Revenues, 9,283,000 dinars; expenditures, 12,298,000. Capital works estimates: Revenues, 3,524,000 dinars; expenditures, 1,521,000. The public debt on Jan. 1, 1940, was unofficially estimated at 5,752,000 dinars. The dinar, which is pegged to the pound sterling, exchanged at \$4.032 in 1941 and \$4.035 in 1942 (official rate).

Transportation. The route mileage of railways open in 1940 was 947 miles; sidings, 168 miles. Completion in 1940 of the Baiji-Mosul railway link gave Basra and Baghdad rail connections with Mosul and the railway networks of Syria and Turkey. Highways of all descriptions extended 6,543 miles in 1940. The surfaced military road between Haifa (Palestine) and Baghdad was reported completed in 1942. A 550-mile surfaced highway between Baghdad and Damascus (Syria) was completed early in 1943. Air services were maintained by British planes during 1943 from Baghdad to India, Iran, Palestine, Syria, and Egypt. Planes of the U.S. Army's air transport command carried a large volume of freight and passenger traffic into Iraq during 1943. A total of 173 steamers of a gross registered tonnage of 818,393 entered the port of Basra during 1940-41. Improvements were made to the port subsequently to handle greatly increased military traffic.

Government. Following conclusion of an Anglo-Iraqi alliance on June 30, 1930, the League of Nations mandate for Iraq held by Great Britain was abolished and Iraq was admitted into the League as an independent kingdom on Oct. 3, 1932. The constitution of Mar. 21, 1925, made Iraq a constitutional hereditary monarchy with a parliamentary form of government. There is a Senate of 20 members nominated by the King for eight years and a Chamber of 115 elected Deputies. Feisal II, born May 2, 1935, the grandson of Feisal I, inherited the throne Apr. 4, 1939. Emir Abdul Ilah, uncle of the boy King, was elected Regent by Parliament. The Regent was driven out of Iraq by the anti-British coup of Apr. 4, 1941, but was restored to power through British military intervention the following May 24 (see 1942 YEAR BOOK, p. 292). British military forces obtained control of all vital communication and transportation facilities, to-gether with the right to enter Iraq freely and to build strategic roads for its defense.

History. The declaration of war by the Iraq Government against Germany, Italy, and Japan as from midnight of Jan. 16–17, 1943, was not unexpected. It had been clearly foreshadowed by the developments of 1942 (see 1943 Year Book, p. 333). Nevertheless Irag's action was important. It was the first independent Moslem state to enter the conflict. Moreover the proclamation of a state of war assisted the Regent and Premier Nuri es-Said in rooting out anti-Government elements from the army and public service and in fighting the pro-Axis propaganda broadcast to Iraq from Berlin and Rome by the exiled Grand Mufti of Jerusalem and ex-Premier Rashid Ali Al-Gailani.

Iraq armed forces were placed at the disposal of the British in guarding against sabotage of the Iraq oilfields and pipelines. On January 22 the Iraq Government adhered to the United Nations Declaration of Jan. 1, 1942, and on March 7 it granted American and other United Nations forces in Iraq the same legal and financial immunities as those enjoyed by British forces under the Anglo-Iraqi alliance of 1930.

The boy King, Feisal II, celebrated his eighth birthday on May 2 by broadcasting a message in English over the B.B.C. for the first time. His uncle, the Regent, who with the pro-British Pre-mier Nuri es-Said was the actual ruler of Iraq, was reported in an unconfirmed Berlin broadcast of June 4 to have narrowly escaped assassination by a group of nationalists. According to this report, several officers accompanying the Regent were killed. A state of siege was then said to have been proclaimed in Baghdad and 40 students and numerous officers and civilian officials arrested. On November 4 the Regent arrived in London on his first visit to England.

Iraq's entrance into the war strengthened Premier Nuri Pasha's hands in his subsequent parleys with other Arab and Moslem leaders looking toward the establishment of an Arab federation (see EGYPT under History) and in his opposition to Zionist aims in Palestine (q.v.). The Iraqi Government also strongly supported Lebanese officials in their dispute with the French High Commissional Parasital Description sioner at Beyrouth in November. On November 13 the Premier informed the Iraqi Parliament that his Government had asked for the removal of French authority in Lebanon until the end of the war and the settlement of the Lebanese Republic's status at a peace conference. Negotiations for the establishment of diplomatic relations between Iraq and the Soviet Union were reported under way at the year's end.

Price inflation and the scarcity of consumer commodities were reported more serious in Iraq than in most of the other countries of the Middle East. A rent control law was enacted March 21 but failed to check rising rentals. The Government was forced to grant cost-of-living allowances to most of its employees and to issue them margarine, soap, sugar, flour, etc., at moderate prices. The £1,000,000 loan raised in London in 1937 was redeemed on July 5.

See Archaeology; Egypt under History; World

IRELAND. See Great Britain; Eire; Ireland, NORTHERN.

IRELAND, Northern. An area, largely coextensive with the region of Ulster, in the north of Ireland; consisting of six counties and two parliamentary boroughs, it is integrally united with Great Britain. Capital, Belfast.

Area and Population. The area is 5,237 square miles and the estimated population on Jan. 1, 1940, was 1,300,000 (1,279,745 at the Feb. 28, 1937, census). Live birth rate in 1942, 23.0 per 1,000 inhabitants (20.8 in 1941); death rate, 13.4 in 1942 (15.2 in 1941). The population of Belfast in 1937 was 438,086; of Londonderry, 47,813. The 1937 census showed 428,290 Roman Catholics, 390,931 Presbyterians, 345,474 Episcopalians, 55,135 Methodists, and 59,915 of other faiths. As of Jan. 1, 1942, there were 1,681 public elementary schools with 183,786 pupils, 75 secondary schools with 14,447 pupils, 108 technical schools with 20,526 students, and one university (at Belfast) with 1,604

Production. Agriculture and manufacturing are the chief occupations. The area under crops increased from 919,701 acres in 1938 to well over 1,000,000 in 1942; there were nearly 100,000 acres under flax in the latter year against 20,000 acres in 1938. Livestock, meat, milk, eggs, poultry, and bacon are shipped to Great Britain. At the beginning of 1939, livestock included 700,564 cattle, 551,262 sheep, 565,726 swine, and 6,038,000 poultry. Some 70,000 persons are engaged in linen manufacture alone. Other industrial products are tanks, arms of all kinds, military supplies, ships, cotton textiles, preserves, canned foods, machinery, airplanes, furniture, clothing, tobacco products, leather goods, etc. Herring fishing is an important summer industry. About 2,000 persons are employed in mines and quarries.

Finance. For the fiscal year ended Mar. 31, 1943, budget estimates placed net receipts of the Northern Ireland Government at £17,500,000 and expenditures at £17,416,000, as against actual returns of £16,263,092 and £16,220,618 respectively. tively in 1941-42. These totals were exclusive of Northern Ireland's contribution to the cost of Imperial Services, which totaled £11,750,000 in 1941-42.

Transportation. In 1942 Northern Ireland had about 717 miles of main-line railways, 180 miles of canals, and over 13,200 miles of roads. Air services linked Belfast with the principal cities of Great Britain. The chief seaports are Belfast, London-

derry, Newry, Larne, and Coleraine.

Government. Although an integral part of the United Kingdom and represented by 13 members in the British House of Commons, Northern Ireland exercises a degree of local autonomy, through a Parliament of its own and a cabinet responsible thereto. The Senate of this Parliament has 24 elected and 2 ex-officio members; the House of Commons has 52 members, all elected. The composition of the House of Commons elected Feb. 9, 1938, was: Unionists, 39; Nationalists, 8; Independent Unionists, 2; Labor, 2; Independents, 1. The chief permanent officer is a Governor (since 1922, the Duke of Abercorn). The head of the cabinet is a Prime Minister (Sir Basil Brooke since May 6, 1943). For developments in 1943, see below.

History. Rising opposition within the Unionist party to the alleged "lack of ginger" in Prime Minister J. M. Andrews' leadership led to the resignaremier Sir Basil Brooke and Attorney General James MacDermott, on April 24. This forced Andrews' retirement at the end of April and led to the formation on May 6 of a new Government headed by Sir Basil Brooke as Prime Minister and Minister of Commerce. The other new Cabinet members were: Finance, J. M. Sinclair; Home Affairs, W. Lowry; Labor, William Grant; Education, the Rev. Professor R. Cortey; Agriculture, the Rev. R. Moore; Public Security, H. C. Midgley (Labor). The Cabinet contained two Presbyterian ministers and the first Labor representative ever to win a seat on the Northern Ireland Government.

The policy of the new Government, as outlined by Prime Minister Brooke, called for vigorous prosecution of the war and permanent union of Northern Ireland with Great Britain. In an interview in London on May 14 he said there was an irreconcilable conflict of loyalties between the people of northern and southern Ireland, but that Northern Ireland and Eire could be good neighbors "provided Eire ceases to interfere in our affairs."

See Erre under History.

After serving two months of a 15-year sentence for treason, Hugh McAteer, 25-year-old chief of staff of the illegal Irish Republican Army, escaped from Belfast prison with three associates on January 15. A reward of £3,000 was posted for information leading to his recapture. On April 24 he appeared with a number of heavily armed associates in a Belfast theater in the nationalist district and held a brief memorial service for Irish patriots killed in the 1916 Easter rebellion in Dublin. Before disappearing he read a statement protesting the presence of American soldiers in Northern Ireland as an "invasion of our rights" and warned that they would become involved in "a resumption of hostilities between the Irish Republic and Great Britain." However the police rounded up one of McAteer's chief lieutenants, James Steele, on May 29 and captured the I.R.A. leader himself on November 20.

Early in March the police made a series of raids in search of I.R.A. arms caches and hideouts and interned a number of suspects. This brought a protest from the Bishop of Down and Connor, which was read in all Belfast Roman Catholic churches on March 7. Attorney General McDermott announced on March 11 that captured documents disclosed an I.R.A. plot to assassinate policemen and initiate other measures to disorganize the war industries, civil defense services, and transport facilities of Northern Ireland. For the illegal possession of firearms and ammunition, two youths were sentenced to 10 years' penal servitude and a flogging by a Belfast court on April 20.

It was announced in August that a huge plant for the repair, modification, and assembly of American-built planes was in operation in Northern Ire-land. It was operated by the Lockheed Overseas Corporation under the Service Command of the

U.S. Eighth Air Force.

### IRIDIUM. See PLATINUM.

IRON AND STEEL. Production of steel in the United States in 1943 exceeded previous records and came within a few million tons of equaling the total steel output of the balance of the world.

At the beginning of the year, steel mills were

accelerating production by every possible means in order to meet unprecedented requirements of war industries. War needs averaged more than 3,750,-000 tons of finished steel per month, about three quarters of production. At the end of the year cutbacks in war programs caused the steel industry to tread heavily on the brakes, to curtail further expansion wherever possible, to reduce operating rates, and even to look for customers for some products.

Alloy steels, which throughout 1942 had been so scarce as to be ranked almost as precious, were the first to pass from scarcity into plenty. This may be explained by the heavy requirements for alloys in the manufacture of basic production machinery. As war plants neared the end of their tooling up programs, demand for alloys naturally became less. Carbon steel, the bread and butter of industry's production diet, remained scarce in most products almost until the end of the year. From October 28 until December 24, the War Production Board ordered that certain alloy steels be produced only in electric furnaces in order to free open hearth furnaces for the larger and less costly production of carbon steel. By mid-December, however, open hearths in some districts were being shut down for lack of business, and it was apparent that carbon steel in its raw, unfinished form exceeded the capacity of mills to roll it into such vitally needed finished products as plates for ships and landing craft. About the same time, pig iron, which with scrap enters into the production of steel, became sufficiently plentiful to be removed from allocation commencing February, 1944.

Blast furnaces turned out more pig iron than ever before, about 62,800,000 net tons (including ferro-alloys), compared to 60,903,304 net tons in 1942, 56,686,604 net tons in 1941, and from 43 million to 44 million net tons during 1916, 1917, and 1918. Some of this pig iron went to foundries to produce iron castings. The balance was converted by open hearth, bessemer, and even electric furnaces, with scrap steel added to the charge, into 88,872,598 tons of ingots and raw metal for steel castings. This so-called "raw steel" was rolled, drawn, or forged into 67,278,221 tons of finished steel products, the difference in tonage being returned to the steel furnaces as scrap. In all these categories new production records were set. In 1942, 86,092,209 net tons of ingots were produced; in 1941, 82,836,946 net tons; in 1918, 48,882,299 net tons. In 1942, 63,728,056 tons of finished steel were produced; in 1941, 62,-324,187 tons; in 1917, 37,035,824 net tons.

About 20 per cent of finished steel was plates,

reflecting the shipbuilding program. Actual plate production exceeded rated capacity by nearly 40 per cent, this overload being achieved by the conversion of continuous strip mills to the rolling of plates. At the end of 1943, delivery on many types of alloy steels, carbon steel bars, and structural steel could be made immediately or within a few weeks' time. Orders placed for plates and other flat rolled products could not be delivered until well into 1944, however. About 80 per cent of the plates produced went to the Army, Navy, or Maritime Commission. New records were made during the year in the rolling not only of plates, but hot rolled and cold finished bars, both carbon and alloy steel, and seamless steel pipe and tubing. Shipments of alloy steel bars and cold finished carbon bars exceeded 1942 by about 40 per cent. About one quarter of the record breaking steel output went to such civilian industries as petro-leum and mining, public utilities, railroad equipment manufacturers, and container makers. In 1940 those industries consumed nearly 40 per cent of the steel then produced. Not all of the steel being shipped to war plants was being consumed immediately, however. It was estimated that the end of the war would find from 10 million to 30 million tons in the inventories of these plants, much of it special steel not fitted for other use.

Concerted drives inaugurated in 1942 to draw scrap iron and steel from homes, farms, stores, and factories, were continued in 1943. The 1942 collections represented accumulations of years by many homes and farms, however, and not as much

was forthcoming from these sources in 1943. Factories and railroads "generated" scrap in proportion to their activities, and it was reported that 2,500,000 automobiles had been junked by auto wreckers in two years' time. At the end of the year stocks amounted to about 6,500,000 tons, enough to carry through the winter by a close squeeze provided incoming shipments met expectations. Although cast iron scrap was almost nonexistent, and carbon steel scrap relatively scarce, alloy steel scrap was produced at the rate of 100,000 tons per month above consumption in the latter part of the year. The WPB hoped to decrease this surplus by increasing the proportion of alloy steel scrap used in furnaces producing alloy steel. Average consumption in December was about 41 per cent of the total charge in open hearth furnaces, about 37.5 per cent in electric furnaces producing alloy steel. See WAR PRODUCTION BOARD under Bal-

anced Production and Salvage.

Distribution of steel among consumers in 1943 was under the Controlled Materials Plan inaugurated by War Production Board (q.v.). Under this plan, each consumer estimated his requirements for each type of steel. These estimates then were compared with total amounts available, and allotments were made only for as great a proportion of the estimated requirements as could be provided. This plan replaced the former Production Requirements Plan, under which top priority consumers were practically enabled to take as much as they wished, leaving none for many less

important, but essential plants.

As output began to pass demand, the government's expansion program became something of an embarrassment. With more electric furnace-produced steel available than could be used, and with electric furnaces idle, the expansion program was 93 per cent complete at the end of December, 1943, and scheduled to be finished in February, 1944. With open hearths shut down at the end of 1943 for lack of business, and with more pig iron available than could be used, the open hearth and blast furnace programs were 85 per cent complete. The open hearth program was not scheduled to be finished until April, 1944, the blast furnace program until June.

On the Pacific Coast, where steel plants previously had operated by melting scrap exclusively, pig iron was produced from local ores, converted to steel, and rolled into plates by the Kaiser Co. mill at Fontana, Calif. The much larger fully integrated mill of Geneva Steel Co., United States Steel Corp., subsidiary, at Geneva, Utah, was scheduled for completion in early 1944, indicating that for the first time in history the far west would be self-sufficient for some types of steel products.

Upon completion of new plants now under construction, Latin American nations will have a combined capacity for production of approximately 1,400,000 tons of steel ingots and castings, somewhat less than the size of the steel industry of prewar Poland and somewhat more than that in Sweden. This new capacity will enable Latin America to produce about 50 per cent of total consumption at the 1936 rate, although many types of products still will have to be imported. Canada failed to reach its goal of three million tons of ingots, with supply and demand closely paralleling (on a smaller scale) the United States throughout the year.

Finished steel prices were constant throughout the year, the composite price compiled by *The Iron Age* (weighted upon the basis of expected sales of steel bars, beams, tank plates, wire, rails, black pipe, hot and cold rolled sheets, and strip) remaining upon a revised basis of 2.25513 cents a lb. throughout. Upon the revised weighted basis, reflecting proportionate sales during 1942, the composite for that year was 2.26190 cents per lb. For prices of other products see 1943 Year Book.

A brief walkout occurred in the steel industry in December, collaterally with the threatened railway strike, as a result of lack of a new contract on the part of the United Steelworkers (C.I.O.). Assurances by the National War Labor Board (q.v.) that any wage adjustments made within the existing stabilization policy would be retroactive to the expiration of old contracts prompted Philip Murray, United Steelworkers head, to call the 170,000 idle workers back to their posts after being out one day beyond the weekend. For hours of work in the industry, see Labor Conditions.

See Iron Ore; also, Bentonite, Chromium, Molydenum, Nickel, and other minerals and metals. See Bridges, Electrical Industries, Machine Building, and other industries employing steel. For research, see Chemistry.

CHARLES T. POST.

IRON ORE. Iron ore production in the United States in 1943 amounted to 113,554,000 net tons, as estimated by the U.S. Bureau of Mines. This was a decrease of 4 per cent from the record total of 118,189,336 tons in 1942. Of the 1943 total, the Lake Superior district produced 96,646,000 tons.

Iron ore shipments on the Great Lakes started late and ended late in 1943. The shipping season started late in April, more than a month behind the 1942 opening, but it was not until the week of December 12 that the final boat docked at lower lake ports. The War Production Board was forced to trim its quota for lake iron ore shipments from 95 million gross tons to 94 million gross tons, then to 91 million gross tons, and finally to 86,500,000 gross tons. When the final boat had docked, 84,-404,852 gross tons had been transported by lake from the Superior district, and another two million tons by rail. Despite the failure to meet original estimates, the season was officially reported by the Office of Defense Transportation to have been "very successful." It was pointed out that the shipments would have been considerably larger had not the War Production Board authorized the shift of some ore boats to the grain trade in order to move an added tonnage of seed grain to the eastern United States. The ore tonnage moved was considered sufficient to assure all steel plants using Lake Superior ore at least a 50 day stockpile as of Apr. 1, 1944. That would be adequate for requirements until May 20, by which time a new supply would be assured, since navigation normally commences by April 20.

Lake shipments for other recent years were as follows:

| Year | Gross tons | Year | Gross tons |
|------|------------|------|------------|
| 1942 | 92,076,781 | 1938 | 19,263,011 |
| 1941 | 80,116,360 | 1937 | 62,598,836 |
| 1940 | 63,712,902 | 1936 | 44,822,023 |
| 1939 | 45,073,052 | 1935 | 28,362,368 |

Meanwhile, the steel industry (see Iron and Steel) developed an unprecedented appetite. Iron ore consumption reached 89,027,689 gross tons, compared with the previous record of 86,225,460 tons consumed in 1942.

On December 16, the ceiling price for standard Mesabi non-Bessemer iron ore produced in the Lake Superior district was raised to \$4.45 per gross ton from \$4.30 per gross ton, at which it

had been frozen since the shipping season of 1941. The increase, according to the Office of Price Administration, was necessitated by rising production costs, particularly higher labor expenses. The new price applied to all ore shipped down the Great Lakes during the 1943 season, on which accounts are settled at the season's close. On the basis of customary differentials, ceiling prices for other standard ores were set as follows: Old Range non-Bessemer, \$4.60 per gross ton, delivered at lower lake ports; Mesabi Bessemer, \$4.60; Old Range Bessemer, \$4.75; and High Phosphorus, \$4.35. In the last war, standard Mesabi non-Bessemer ore rose from \$2.85 per gross ton in 1914, to \$5.75 in 1918, or more than 101 per cent.

Controversy over the life expectancy of Lake Superior iron ore reserves continued, the National Industrial Conference Board, Inc., finally concluding that "it is generally agreed that with proper advance planning sufficient ore can at all times be produced to take care of all needs likely to arise. Costs are expected to be higher than today, however."

Ore deposits located close to the coasts of the United States found a new use during the year. Ore high in iron, thus affording maximum weight per cubic foot, was mined, crushed, mixed with cement, and cast into blocks for use as ballast in newly constructed vessels. Ore used in this manner was a minor part of over-all national production, probably amounting to 100,000 tons for the year.

Ore mined along the West Coast was made into pig iron for the first time in 30 years. The plant of the Kaiser Company, Inc., at Fontana, Calif., used ore mined in the California desert near Kelso.

used ore mined in the California desert near Kelso. See Geological Survey; Ports and Harbors; Waterways, Inland.

ISLE OF MAN. See Great Britain under Area and Population.

ITABIRA IRON MINES. See Brazil under History.

ITALIAN AEGEAN ISLANDS. The islands in the Aegean near Turkey in Asia. They include the Dodecanese group with Rhodes and Castelrosso. Their area and population together with their Italian names in parentheses are given in the accompanying table.

| Island                 | Sq. mi.              | Pop. (1936) |
|------------------------|----------------------|-------------|
| Astropalia (Stampalia) | 44                   | 2,006       |
| Casos (Caso)           | 27                   | 1,890       |
| Castelrosso            | 4                    | 2,238       |
| Cos (Coo)              | 111                  | 19,731      |
| Kalymnos (Calino)      | 49                   | 15.247      |
| Karchi (Calchi)        | 12                   | 1.461       |
| Karpathos (Scarpanto)  | 118                  | 7,770       |
| Leros (Lero)           | 28                   | 13,657      |
| Lipso (Lisso)          | 7                    | 977         |
| Nisyros (Nisiro)       | 18                   | 3,391       |
| Patmos (Patmo)         | $\tilde{2}\tilde{2}$ | 3,184       |
| Rhodes (Rodi)          | $5\overline{45}$     | 61.886      |
| Symi (Simi)            | 25                   | 6.195       |
| Tilos (Piscopi)        | 25                   | 1.215       |
| 2200 (2200ps)          |                      |             |
| Total                  | 1,035                | 140,848     |

The total population in 1936 (140,848) comprised 85 per cent native, 12 per cent Italian, and 3 per cent foreign. On Jan. 1, 1940, the total population was 122,000. Chief towns (1936 populations): Rhodes (capital) 27,466, Kalymnos 15,-247, Cos 9,852, Symi 6,195.

Production, etc. The principal agricultural prod-

ucts consist of grapes, olives, tobacco, oranges, and vegetables. Livestock (1938): 62,735 goats, 51,907 sheep, 6,460 horses, mules, and donkeys, 4,710 oxen, 2,656 swine. Sponge fishing, and the manufacture of artistic pottery and tiles, tobacco, wine, olive oil, and oriental carpets are the chief industries. Trade (1938): imports 157,421,000 lire; exports 21,851,000 lire (lira was worth \$0.0526 for 1938). Roads (1940): 391 miles.

History. The collapse of the Fascist regime in Rome on July 25, 1943, and the subsequent capitulation of the Badoglio Government to the Allies led to confusion and division among the Italian officials and garrisons of the Aegean Islands. In the ensuing race between British and German forces to gain control, the Germans seized Rhodes and most of the other important islands, while the British took possession of Leros, Cos, Castelrosso and others. In November the Germans attacked the British garrisons on the latter islands, and captured them one by one. See Italy under History; WORLD WAR.

ITALIAN EAST AFRICA. An Italian colony in East Africa established by the decree of June 1, 1936, which merged the old Italian colonies of Eritrea (area, 45,754 sq. mi.; pop., about 650,000 in 1936) and Italian Somaliland (area, 194,000 sq. mi.; pop., 1,010,815 in 1931) with the newly conquered Empire of Ethiopia (area, about 347,500 sq. mi.; pop., estimated at 10,000,000 to 12,000,000). Capital, Addis Ababa.

Italian East Africa was conquered during 1941 by British Empire forces, aided by Allied troops and Ethiopian irregulars. Ethiopia's independence was then restored, while Eritrea and Italian Somaliland passed under direct British control pending postwar determination of their status. See ERITREA, ETHIOPIA, and ITALIAN SOMALILAND.

ITALIAN SOMALILAND. A former Italian colony in East Africa. It was incorporated in Italian East Africa (q.v.) by Mussolini's decree of June 1, 1936, but came under direct British control following the conquest of Italian East Africa by British Empire and allied troops in 1941. Capital, Mogadiscio.

Area and Population. The original Italian colony had an area of some 194,000 square miles and a population at the 1931 census of 1,021,572 (including 1,631 Italians). When it became a province of Italian East Africa adjoining Ethiopian districts were annexed, making a total area of about 270,972 square miles with an estimated population of 1,150,000 in May, 1939. With the liberation of Ethiopia, the original boundaries of Italian Somaliland were restored. The principal cities are Mogadiscio, with an estimated population of 21,000, and Chisimaio, a port near the mouth of the Juba River. The natives are Somalis by race and Moslems by religion.

Production, etc. Stock-raising and agriculture are the principal occupations. There are European rlantations and large native cultivations near the luba River in the southern part of the colony. The latest available crop figures are (in metric tons): Corn, 25,000 in 1938–39; cotton-seed, 700 in 1935–36; sesamum, 1,300 in 1936–37; groundnuts, 1,500 in 1936–37; cane sugar, 4,500 in 1932–33. In 1938 imports were valued at about \$7,800,000 (in old U.S. gold dollars) and exports at \$2,600,000.

U.S. gold dollars) and exports at \$2,600,000.

Transportation. The only railway line extends from Mogadiscio 70 miles inland to Vil. Duca degli Abruzzi. A network of Italian-built highways connects all the ports and settlements in the interior

and extends into Ethiopia. Previous to the British conquest, steamship services were maintained on the Juba and Webi Shebeli Rivers. Mogadiscio formerly served as the chief Italian port and naval base on the Indian Ocean.

Government. Italian Somaliland remained throughout 1943 under the direct control of the British Army's East African Command. An experienced British colonial official assisted in its administration.

ITALY. A kingdom of southern Europe, upon which a Fascist dictatorship was superimposed from Oct. 22, 1922 to July 25, 1943. Capital, Rome. Sovereign, King Victor Emmanuel III, who as-

cended the throne July 29, 1900.

Area and Population. Excluding Libya, Albania, and newly annexed Yugoslav territories, Italy had an area of 119,764 square miles and a population estimated at 45,611,000 on Sept. 30, 1942 (42,444,588 at the 1936 census, which did not include 528,542 workers and soldiers in Africa). The four Libyan provinces of Tripoli, Misurata, Bengasi, and Derna (area, 213,876 sq. mi.; pop., 66,287 in 1936) were incorporated in Italy's national territory by the decree of Jan. 9, 1939. See Libya. Following the Italian invasion of Albania (q.v.) beginning Apr. 7, 1939, the two countries were joined in a personal union under the Italian King, Apr. 13, 1939. By the decrees of May 3 and May 20, 1941, Italy annexed from Yugoslavia 4,319 square miles with a population of 707,135. These territories were divided into the provinces of Lubiana (area, 1,800,sq. mi.; pop., 305,000) and Dalmatia (area, 2,500 sq. mi.; pop., 402,000). The 1936 census showed 31,735,027 urban and 11,258,575 rural residents. Emigrants in 1940 numbered 67,063. Forpared with an estimated 9,600,000 Italians residing abroad. The Italian live birth rate declined from 23.7 per 1,000 inhabitants in 1938 to 20.2 in 1942; the death rate (including war losses) increased from 13.4 per 1,000 in 1939 to 14.1 in 1942. In 1941 births numbered 937,546; deaths, 621,735.

The city of Rome had an estimated population of 1,327,126 on Jan. 1, 1940. Other chief cities with the estimated populations on Jan. 1, 1939 (not including workmen and soldiers absent in Africa and the Dodecanese), were: Milan, 1,205,542; Naples, 920,460; Turin, 690,015; Genoa, 654,211; Palermo, 431,666; Florence, 351,055; Bologna, 315,158; Venice, 283,926; Trieste, 258,612; Catania, 251,978; Bari, 210,777; Messina, 202,375; Verona, 166,315; Padua, 150,203; Taranto, 151,150; Leghorn, 134,545; Brescia, 134,340; Ferrara, 122,913; Reggio di Calabria, 121,876; Cagliari, 119,934; La Spezia, 119,067.

Colonial Empire. When Italy entered World War II, it had an overseas empire (including Albania and Libya) of 1,279,589 square miles with an estimated population of about 14,186,400. By the end of 1943, the Italians had lost effective control of the whole of their overseas empire. British and Allied forces occupied Eritrea, Ethiopia, and Italian Somaliland in 1941 and Libya in 1942–43. During 1943 Albania and the Italian Aegean Islands as well as the territories annexed from Yugoslavia were occupied by either Allied or German troops. See below under History and WORLD WAR.

Education and Religion. School enrollment in 1937–38 was: Elementary, 5,051,306; secondary (including technical and art), 613,588; higher education (1938–39), 77,429. One out of every five adults is illiterate. According to the census of 1931 there were 41,014,096 Roman Catholics (99.6 per cent), 83,618 Protestants, and 47,825 Jews.

Production. About 46.3 per cent of the working population was engaged in agriculture and fishing in 1939, 30.4 per cent in mining, quarrying, and industry, 8.3 per cent in commerce, and 4.6 per cent in transportation. The wheat harvest was estimated at 7,150,000 metric tons in 1941 (7,110,200 in 1940). Estimated output of other crops in 1940 was: Rice, 1,853,850,000 lb.; rye, 5,998,000 bu.; barley, 10,056,000 bu.; cats, 39,318,000 bu.; corn, 135,000,000 bu.; potatoes, 121,211,000 bu.; tomatoes, 2,444,813,000 lb.; sugar beets, 5,200,000 metric tons. Beet sugar output in 1940–41 was 546,500 metric tons; wine in 1940, 30,319,000 hectoliters (of 26.42 U.S. gal.). Other crops in 1940 were (in metric tons): Linseed, 15,300; olive oil, 145,000; ginned cotton, 10,600; flax, 6,900; raw silk, 3,500.

Mineral and metallurgical production, in metric tons, in 1939 (except where otherwise specified) was: Crude petroleum, 12,000; coal, including some lignite, 2,025,000; pyrites, 978,000; sulphur, 376,000; iron ore (metal content), 490,000; pig iron and ferro-alloys, 1,101,000; steel (including that from scrap), 2,321,000; lead, 38,800; zinc, 33,600; bauxite, 484,000; aluminum, 40,000 in 1940; quicksilver, 2,315; silver, 27.4. There were in 1940 a total of 3,825,542 industrial workers, of whom 1,532,675 were employed in plants with more than 250 workers. Textiles, rayon (52,754 metric tons in 1940), chemicals, refined sugar, cheese, and macaroni are leading industrial products. The output of electric current increased from 10 billion kilowatthours in 1930 to about 21 billion in 1941.

Foreign Trade. Publication of official trade statistics was suspended after Italy entered the war. However, unofficial figures indicated that imports in 1940 totaled 12,908,000,000 lire (9,938,000,000 in 1939) and exports 9,244,000,000 lire (8,160,000,000 in 1939). These figures exclude trade with

the Italian colonies.

Finance. For the six fiscal years ended June 30, 1940, the aggregate budget deficit was more than 82,000,000,000 lire. Excluding war costs, the original budget estimates for 1941-42 were: Receipts, 32,728,100,000 lire; expenditures, 41,936,400,000 (35,424,000,000 and 43,825,000,000, respectively, for 1942-43). In a statement issued Nov. 2, 1941, the Minister of Finance placed war expenditure for the period July 1, 1940, to Oct. 8, 1941, at 76,000,-000,000 lire, covered mainly by the proceeds of loans. The public debt rose from 107,268,600,000 lire on June 30, 1935, to an estimated 315,000,-000,000 lire on June 30, 1942. Average nominal exchange value of the lira: \$0.0504 in 1940 and \$0.0507 in the first half of 1941.

Transportation. In 1941–42 Italy had about 14,448 miles of railway lines. The Italian State Railways operated 10,664 miles of line, which carried 285,000,000 passengers and 73,000,000 tons of freight. There were about 126,830 miles of highways. The merchant marine on June 30, 1939, comprised 1,350 steam and motor ships of 1,989,482 tons. A large proportion of this fleet was sunk by enemy action, captured, requisitioned, or interned in neutral ports after Italy entered the World War.

tral ports after Italy entered the World War.

Government. With the overthrow of the Fascist dictatorship on July 25, 1943, Italy reverted to the status of a constitutional monarchy as established by the Constitution of Mar. 4, 1848 (see the 1943 Year Book for the principal features of the Fascist regime). That part of Italy under Anglo-American control was temporarily administered by the AMG (Allied Military Government of Occupied Territory) with the assistance of the King and the constitutional Badoglio Government, while the German-held areas were ruled by German military

authorities with the aid of an Italian Fascist puppet regime (see below under *History*).

On June 10, 1940, the Italian Government declared Italy at war with France and Great Britain, effective the following day. An armistice with the Vichy Government of France was signed the following June 24. Italy attacked Greece without a declaration of war (Oct. 28, 1940), and joined Germany in the invasion of Yugoslavia (Apr. 6, 1941) and of Russia (June 22, 1941) and in declaring a state of war with the United States (Dec. 11, 1941). For war declarations against Italy, see table under WORLD WAR.

#### HISTORY

Course of the War. The Italian people at the beginning of 1943 had good reason for the apprehension and alarm with which they viewed the future (see 1943 Year Book). This gloomy view was more than justified by the spectacular and terrible events of the ensuing year. The humiliating military defeats of previous years were followed by the loss of Tripoli and the remainder of Libya in January, the rout of many Italian divisions with serious losses in the Russian winter offensive, and the debacle of the large Axis forces in Tunisia in May. Then came the Anglo-American invasion of Sicily in July and of the Italian mainland in September. They toppled the Fascist state in ruins, forced the Italian Government to capitulate, and converted the whole of Italy into a battleground of both international and civil war.

The third anniversary of Mussolini's entrance into the war on June 10, 1940, found the Italian empire completely liquidated, except for a tenuous hold on Albania. Battle casualties of 633,251 were officially admitted. The cities of Naples, Genoa, Palermo, Messina, Turin, and Milan had been devastated by Allied air attacks from British and North African bases. Hordes of refugees flocked into Rome and other cities and districts hitherto untouched by war, clogging transportation lines, disrupting war production, spreading defeatism and demoralization. The economic crisis was intensified. There were acute shortages of food, coal, and manpower. A flight of capital was initiated by the soaring debt, inflation, and the growing certainty of defeat. Corruption in all walks of life became even more rampant. These events paved the way for the overthrow of Premier Mussolini, after nearly 23 years of dictatorial rule, by a coup within the Fascist hierarchy on July 25.

Attempts to Save Fascism. The movement to unseat Mussolini had been gaining strength for months as Italy moved from disaster to disaster under his leadership, meanwhile becoming hopelessly enmeshed in Hitler's net. Although ill with chronic ulcers of the stomach, Il Duce sought to arrest the tide of ill fortune by repeated shake-ups of his Cabinet and the army high command, new purges of disloyal elements within the Fascist party, harsher repression of anti-Fascist movements, and repeated

appeals to Hitler for greater German aid.

On February 5 Mussolini dismissed 12 of the most important members of his Government, including his son-in-law, Count Galeazzo Ciano, and announced that he was assuming "the entire burden for the conduct of political and military operations in this delicate phase of the conflict." Ciano on February 7 was named Ambassador to the Vatican, arousing expectation of another peace offer. Eight more under-secretaries were dropped from the Cabinet February 12–13. At the same time Mussolini decreed all able-bodied men between 14 and 70 years of age and women 14 to 60 years old

subject to conscription for work in war factories. In talks with Foreign Minister Joachim von Ribbentrop in Rome at the end of February and with Hitler at the latter's headquarters early in April Mussolini attempted to obtain more arms and vital commodities from the Reich in exchange for the additional labor, troops, and foodstuffs demanded by the Germans. Hitler was reported to have insisted on sending more Elite Guard troops into Italy instead of the anti-aircraft guns and other arms requested by Mussolini. This tightened the German hold on the kingdom.

Scorza Named Secretary-General. Dismissal of more leading Fascist officials during the latter half of April reflected further friction within the party and opposition to Mussolini's pro-German policies. Aldo Vidussoni was replaced as Secretary General of the party by Carlo Scorza at a meeting of the Fascist directorate (provincial secretaries) in Rome on April 17. Count Giuseppe Volpi, head of the Fascist Chamber of Manufacturers, was one of a num-

ber of high officials ousted at that time.

With the collapse of Axis armies in Tunisia, Mussolini on May 8 ordered the Fascist militia and police strengthened and instructed them "to crush relentlessly any attempt to cause disorder or trouble." The toe of Italy was put in a state of alert. On May 13 a Council of Defense was created, consisting of four newly appointed Marshals—Enrico Caviglia, Rodolfo Graziani, Ugo Cavallero, and Emilio de Bono. This quadrumvirate reportedly took over direction of the defense of Italy. They immediately ordered "fuller mobilization" for front-line service and established a zone of military operations including Calabria, Sicily, and Sardinia. Thereafter the King displayed an increasingly independent attitude toward Mussolini and there were signs of a growing rift between the monarchy and the Fascist party.

and the Fascist party.

Beginning in the middle of May, Secretary-General Scorza began another persistent and far-reaching purge of defeatist and anti-German elements in the Fascist party. A central disciplinary court was created. Party leaders were mobilized on a 24-hour basis for "emergency service." Ensuing weeks saw scores of dismissals and arrests and repeated new shake-ups of the party leadership and the Cabinet. Mussolini replaced Gen. Ezio Rossi, Chief of Staff, with Gen. Mario Roatta, former commander of the Second Army in the Balkans, on June 1 and placed Rossi in charge of Italian defenses in Sicily and Sardinia. On June 10 he ousted 19 prefects and

transferred six others.

Mussolini Censured. However all efforts to reinvigorate the Fascist party, strengthen military defenses, and restore the national morale were nullified by the inexorable Allied air offensive. The fall of Fantelleria on June 11 led the Premier to convoke a three-day session of the Fascist directorate on June 12–14. Under Scorza's leadership the directorate made a thinly veiled attack upon the conduct of the war by Mussolini and his Cabinet. They submitted a nine-point memorandum calling for more vigorous and more ruthless measures to stamp out defeatism, malingering, speculation, black market operations, and the evasion of compulsory labor service. When Il Duce failed to act, Scorza a few days later began to issue decrees for the total mobilization of hitherto exempt students and to institute other measures called for in the nine-point program.

Mussolini now agreed to these demands. After another meeting of the party's directorate on June 24, it was announced that he had ordered another wholesale purge of party members "who do not

serve the country and the Fascist regime with a religious fervor . . ." According to a statement by Scorza, the party membership had fallen to  $4\frac{1}{2}$  millions. The secret police, in a nation-wide roundup of "fifth columnists," arrested some 11,000 anti-Fascists late in June. But labor was becoming increasingly unruly. Despite the use of police and troops to suppress them, strikes spread in the armament industries of northern Italy.

Bombing of Rome. Six days after the Allied invasion of Sicily, President Roosevelt and Prime Minister Churchill on July 16 addressed a joint message to the people of Italy urging their capitulation to avoid greater devastation and warning that they would suffer the consequences if they continued to tolerate "the Fascist regime which serves the evil power of the Nazis." The warning was followed up by heavy Allied air raids on Naples but was scornfully rejected by Carlo Scorza "in the name of the Blackshirt militia" in a radio address to the nation

July 18

The next day Allied planes dropped leaflets over Rome stating that "military objectives in the vicinity of Rome are liable to be bombed by the Allied air force" but giving assurance that every care would be taken to avoid destruction of civilian buildings and cultural monuments. About noon of the same day some 500 Allied bombers, mostly American, made a devastating raid on the San Lorenzo and Littorio railway freight yards, on war factories, and on the Ciampino airfield in and near Rome. According to Rome reports, some of the bombs missed the targets and landed in adjacent residential areas. The Italian High Command in a preliminary report placed the dead at 166 and wounded at 1,659. The Vatican radio announced that the basilica of San Lorenzo was seriously damaged. The Pope voiced his protest in a letter to the Vicar General of the Diocese of Rome.

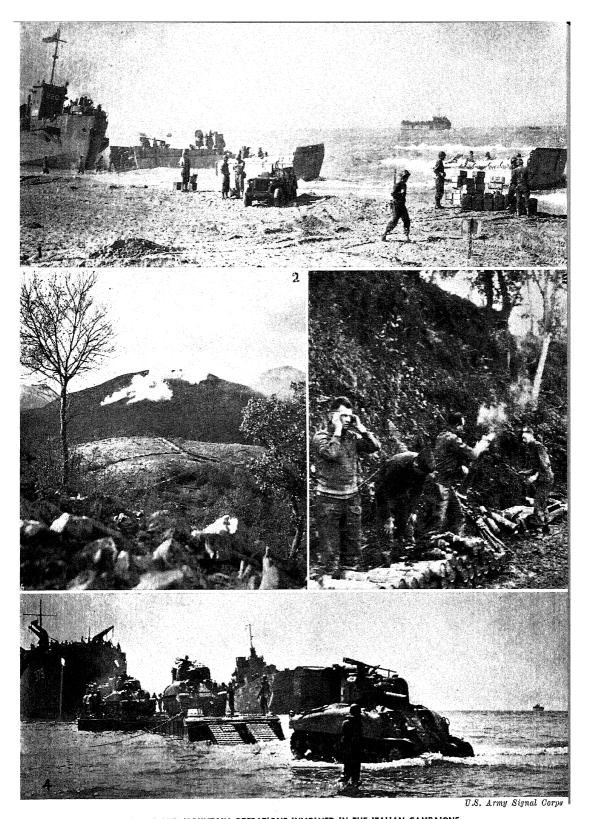

Fall of Mussolini. The bombing of Rome precipitated a large-scale exodus of the Roman population and brought the political crisis in Italy to a climax. It touched off peace demonstrations in many cities and a new wave of strikes and sabotage. On July 23 the Government ordered the mobilization by August 15 of all men born between 1907

and 1922 inclusive.

During the Allied raid on Rome Mussolini was engaged in conferences with Hitler at Verona on measures to meet the next phase of the Allied invasion of Italy. According to several sources, Mussolini assented to a German plan for a gradual withdrawal from Sicily and from southern and central Italy to a defense line running through the southern limits of Tuscany. Rome was to be abandoned. The plan called for stripping the evacuated regions of all food stores, harvests, and rolling stock in order to force the incoming Allies to feed and sustain

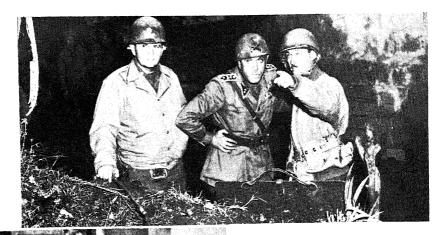

the population.

Upon Mussolini's return to Rome he was met with a demand for the convening of the Fascist Grand Council to consider the German military plan and the general situation. At this meeting on July 24 the opposition to Mussolini within the higher ranks of fascism came out into the open under the leadership of Count Dino Grandi, former Ambassador to Great Britain. Aligned with Grandi were Count Ciano, Marshal de Bono, Count Cesare de Vecchi, Giuseppe Bottai, and Senator Luigi Federzoni. Scorza, Gaetano Polverelli, Roberto Farinacci, and Lieut. Gen. Enzo Galbiati at first supported Mussolini, but Scorza and Farinacci were reported to have turned against him as a result of the violent debate that lasted far into the night. It ended when a vote was taken on an order of the

SHORE AND MOUNTAIN OPERATIONS INVOLVED IN THE ITALIAN CAMPAIGNS

day expressing lack of confidence in Mussolini as Head of the Government. The vote was against

him by a majority of 19 to 5.

The next morning (July 25) Mussolini presented the German defense plan to his key defense Ministries. At the insistence of the Under-Secretaries of War, Air and Navy, the full Cabinet was then called in session and it was decided, after heated debate, to submit the whole question to the King. Victor Emmanuel flatly rejected the German plan, declaring that Italy would stand or fall together. He reportedly forced the resignation of Mussolini and his Government and called in Marshal Badoglio to form a new Ministry. The fallen leader and some of his lieutenants were placed under arrest. Marshal Badoglio, who apparently had been forewarned of the crisis, sent regular army units into Rome prepared for action. Some of the Fascist militia forces prepared to resist but quickly gave in when advised that they had been incorporated into the army and were now subject to military discipline.

Badoglio Forms Government. Before these sensational developments were made public, Marshal Badoglio reportedly informed the Germans that all Italy must be defended or else Italy would with-draw from the conflict. The Germans then agreed to aid in the defense of the entire peninsula. After these preliminaries the Rome radio announced at 11 p.m. that the King had accepted Mussolini's resignation and designated Badoglio as his successor. A proclamation was read from the King, announc-A procuamation was read from the King, announcing that he was assuming command of all armed forces, and another from Badoglio stating that he was taking over "the military government of the country with full powers," that the war would go on, and that "attempts to disturb public order will be inexorably hit." He appealed to the nation to tighten ranks "behind the King-Emperor."

On July 28 Badoglio presented his Cabinet list

On July 26 Badoglio presented his Cabinet list to the King. It contained only two Ministers from Mussolini's last Cabinet—the Under-Secretary of War and the Minister of War Production. But other ers, such as the new Foreign Minister, Raffaele Guariglia, Mussolini's Ambassador to Turkey, were more or less closely affiliated with the Fascist regime. Immediately afterwards the Premier declared nation-wide martial law and instituted a dusk-todawn curfew and other rigid measures against agi-

tation and disorders.

On July 28 the new Cabinet decreed the dissolution of the Fascist party, the Fascist Grand Council, and the special Fascist tribunals for the defense of the state. The elimination of all other Fascist organizations and institutions followed. The whole edifice of fascism collapsed with amazing ease. Before the tide of long-suppressed popular hostility, the organization disappeared like chaff before the wind. Some leaders committed suicide. Others went into hiding or sought to flee into Switzerland. Many were arrested. A small fraction of the movement apparently went underground, but the rank and file repudiated the party which had led Italy into such desperate straits.

Demand for Peace. The population greeted the

overthrow of Mussolini with what Badoglio later described as "an indescribable explosion of joy." There was wild rejoicing in the streets of Rome and the other larger cities that continued throughout July 26 and quickly took on the aspect of peace manifestations. In Milan a crowd stormed and burned the newspaper office in which Mussolini began the Fascist movement after World War I, but German troops quickly intervened to restore order. Strikes and disorders spread, especially in

the industrial areas of northern Italy. Demands for peace were coupled with a demand for termination of martial law, the restoration of constitutional government and liberties, and punishment of the re-

sponsible leaders of the Fascist regime.

Government's Dilemma. During the tumultuous 50 days that intervened between the overthrow of Mussolini and the capitulation of the Badoglio Govemment to the Allies, the Government struggled to extricate itself and Italy from an extremely pre-carious position. German troops were scattered throughout the country. The Gestapo had spread its tentacles widely. The King and Premier Badoglio, in order to forestall a German occupation and the arrest of all Italian governmental leaders, gave repeated assurances that Italy would continue in the war to the end. They publicly rejected the Roosevelt-Churchill demand for unconditional sur-render, hoping both to allay German suspicions and obtain better terms from the Allies.

The Allies continued their advance in Sicily, and after waiting a few days for Badoglio to act, addressed repeated warnings to the Italian people by radio that Badoglio's temporizing was assisting the Germans to strengthen their hold on Italy. Prime Minister Churchill on July 27 offered Italy the choice of breaking off the German alliance or being "seared and scarred and blackened" from end to end. On July 29 Gen. Dwight D. Eisenhower, the Allied commander-in-chief, offered the Italians "peace under honorable conditions" and a "mild and beneficent" occupation if they ended their assistance to German forces in Italy. During subsequent days, Allied broadcasts warned that the air offensive against Italy would be reopened soon in earnest unless her Government surrendered. On August 2 Naples and other cities were bombed. Meanwhile the Germans took advantage of the Government's irresolution and inaction to pour ad-

ditional troops into Italy and to complete preparations to meet both an Allied invasion and Italian

capitulation. The Government's policy puzzled most of the Italian people, who had expected peace to follow immediately after Mussolini's overthrow. Early in August great new peace demonstrations occurred in northern Italy, where thousands of striking workers demanded the ousting of both Badoglio and the King. The Government's efforts to obtain Allied recognition of Rome's status as an open city only added to the resentment of residents of the oftbombed cities of northern and southern Italy. The rising resistance to the Badoglio regime was reflected in the resignation of the Minister of Interior on August 10 in protest against the continuance of martial law and in preparations by anti-war and pro-democratic elements for a general strike. By the end of August the internal situation in Italy

Peace Negotiations. Early in August the Badoglio Government made two separate and secret peace overtures to British officials. They were rejected with the demand for unconditional surrender. Negotiations were opened secretly again on August 15 when an Italian general with full authority from Premier Badoglio arrived in Lisbon. He carried the Italian Government's offer to join the Allies against Germany when the Allied invasion of the mainland

again approached a crisis.

At the direction of Roosevelt and Churchill, who were then at Quebec, General Eisenhower sent British and American staff officers to Lisbon to carry on the negotiations on the basis of unconditional surrender. Parleys were continued at Algiers and at Syracuse in Sicily and finally concluded at the latter spot on the night of September 3 after Eisenhower had given Badoglio 24 hours to agree to all terms or suffer the full weight of Allied air power. (For an official account of these negotiations, see the text of Prime Minister Churchill's speech of September 21 before the British Parliament, published in *The New York Times* of September 22.)

The Armistice. The armistice was signed on the same day the British Eighth Army began the invasion of Calabria. But the Italian capitulation was kept secret at General Eisenhower's insistence and did not go into effect until Eisenhower personally broadcast the announcement on September 8. Stating that hostilities with Italian forces were ended, he declared that "all Italians who now act to help eject the German aggressor from Italian soil will have the assistance and the support of the United

Natións."

An hour and a quarter later Premier Badoglio confirmed the armistice over the Rome radio. "The Italian forces," he said, "will therefore cease all acts of hostility against the Anglo-American forces wherever they may be met. They will, however, oppose attack from any other quarter." While the Italian people for the most part went wild with joy at what they conceived to be the end of the war for Italy, Badoglio sent telegrams to Hitler and the chiefs of the other Axis powers explaining that all hope of resistance, much less of victory, had vanished and that to avoid "total ruin" his Government had been obliged to ask for an armistice. This was the first open step in Italy's dramatic turnabout from an ally to a foe of the Reich.

The terms of the armistice, first made public in summary form on September 12, called for: (1) Immediate cessation of hostilities, (2) Italian denial to the Germans, so far as possible, of facilities that might be used against the United Nations, (3) immediate delivery of all United Nations prisoners or internees to the Allies, (4) transfer of the Italian fleet and aircraft to points designated by the Allied commander, (5) Allied requisitioning of Italian merchant shipping, (6) immediate surrender to the Allies of Corsica and all Italian territory, (7) immediate and free Allied use of all airfields and naval ports in Italian territory, with the Italian armed forces guaranteeing their protection until taken over by Allied forces, (8) immediate withdrawal of Italian armed forces from all participation in the war, (9) employment by the Italian Government of all available armed forces to insure prompt and exact compliance with the armistice provisions, (10) Italian acquiescence in an Allied Military Government controlling such parts of Italian territory as the Allied commander might deem necessary, as well as in any other action the Allied commander might consider necessary for the protection and interests of Allied forces and for the prosecution of the war, (11) Italian acceptance of any measures of disarmament, demobilization, and demilitarization imposed by the Allied commander, (12) compliance with "other conditions of a political, economic, and financial nature to be transmitted later," and (13) nonpublication of the conditions of the armistice without prior approval by the Allied commander.

It was stressed by the Allies that in concluding the armistice they had not obligated themselves in any way to maintain Premier Badoglio and King Victor Emmanuel in power. Yet in subsequent months the Anglo-American Governments and military commanders made an obvious effort to strengthen the position and authority of the Badoglio Government as the agency most likely to enlist Italian support for the United Nations against Germany.

Allied-German Race. General Eisenhower's announcement of the armistice started a furious race between the Allies and the Germans for possession of the territories, bases, arms and supplies, communications and other war facilities formerly under Italian occupation or control. Later the same day a large Anglo-American amphibious force landed on the Salerno beaches just south of Naples, hoping to drive inland and trap the German forces facing the British Eighth Army farther south. British forces were admitted to the Italian naval base of Taranto inside the heel of the Italian boot, and began a drive up the east coast of the peninsula, while other British units advanced from Calabria up the west coast.

However the Germans were prepared for the emergency and reacted vigorously. They attacked and held the invasion force at Salerno until German units in southern Italy could retire. They seized the cities and strategic centers of northern and central Italy, disarmed all Italian troops except those under friendly commanders, and rounded up thousands of suspected enemies among Italian officials and civilians. On September 10 the Germans attacked and seized Rome, from which the King, Premier Badoglio, and some members of the Cabinet and military staffs had fled on September 8 to Allied Heart town in the south of Italy.

Allied-held territory in the south of Italy.

Two Italian divisions helped to drive German air squadrons from their bases in Sardinia, and the Italian garrison in Corsica gave some assistance to Allied and guerrilla forces in ousting the Germans from that French possession (see Corsica). But in general Allied appeals for Italian aid in driving the Germans from Italian soil were largely ignored.

Germans from Italian soil were largely ignored.

It was much the same story in Greece, Yugoslavia, and the Italian Aegean Islands. On September 8 Lieut. Gen. Sir Henry Maitland Wilson, Allied commander in the Middle East, broadcast an order of the day to Italian forces in the Balkans and the Aegean Islands informing them of the armistice. He ordered them to resist all German efforts to disarm them or to take over their positions. Italian ships and aircraft in the region were told to

proceed to Allied-held territories. However the Germans, with the connivance of the principal Italian commanders, succeeded in disarming the Italian forces and seizing the areas under Italian control without undue difficulty. Except for some forces under pro-Axis officers, who rejected the armistice and continued to fight the Allies, most of the Italian units surrendered their arms without resistance. Some units turned over their arms to Greek or Yugoslav guerrillas before surrendering to the Germans, and a few troops such as the Venezia Division joined the guerrillas outright. Only in a few of the less important Aegean islands did the Italians retain control until the arrival of Allied reinforcements. And these islands-Samos, Leros, Kos, and a few others—were impossible to hold against a subsequent German attack due to the failure of the Italians to retain possession of the key island of Rhodes.

Italian Fleet Surrenders. The Allies fared much better in the race for control of the still powerful Italian fleet and for the remnants of the merchant shipping. In response to a message broadcast by Sir Andrew Browne Cunningham, Allied naval commander in the Mediterranean, on September 8 virtually all seaworthy Italian warships left their bases at La Spezia and other Italian-held ports to surrender to the Allies in accordance with the armistice terms. One group of vessels was heavily

attacked by German bombers off the coast of Corsica and the 35,000-ton battleship Roma was sunk by a single bomb. But over 80 Italian naval vessels reached Malta and other Allied-held ports, including 5 battleships, 8 cruisers, 27 destroyers, 19 submarines, and most of the other major units of the Italian Navy. Seven other naval vessels took refuge in Spanish ports and were interned. About 80,000 tons of Italian merchant shipping also went over to the Allies, but the Germans seized about 300,000 tons of shipping including the luxury liners Rex and Conte di Savoia.

Post-armistice Political Events. The foregoing events left Italy in a state approaching political chaos. Bitter factional divisions deepened as the struggle to determine the form and leadership of Italy's postwar government developed. Within the ranks of the former Fascist party, the July split between supporters and opponents of Mussolini and his pro-German policy had left savage animosity. Although the Badoglio Government and the King had abolished the Fascist system, they had been more or less closely linked with Mussolini's Fascist dicta-

torship for over two decades.

Moreover Badoglio and Victor Emmanuel had aroused the suspicion and hostility of pro-democratic and anti-Fascist elements by their attempts to continue the war on the side of Germany and the imposition of martial law during the 50-day interregnum between the overthrow of Mussolini and the armistice. The King had surrounded himself with army generals, members of the aristocracy. churchmen, and representatives of other groups who were hostile or indifferent to popular government. By switching to the Allied side at the eleventh hour, the King and his followers hoped to enlist Allied support in salvaging the monarchy.

Puppet Fascist Regime. Meanwhile the Germans sought to retain the support of pro-Fascist and anti-Allied Italians by announcing on September 9 that a "Fascist National Government" had been set up in Italy in opposition to the Badoglio Government and was functioning "in the name of Benito Mussolini." An alleged proclamation of this "government" broadcast in Italian from Berlin asserted that "this Badoglio betrayal will not be perpetrated. The Fascist National Government will

punish traitors pitilessly.

Mussolini Freed. Mussolini was imprisoned by the Badoglio Government from July 25 to September 12. After being confined in several different prisons, including a villa on the Island of Ponza and the fortress of Maddalena in Sardinia, he was transferred to Gran Sasso, in Arruzzi, near Rome. There German parachute troops, Elite Guards, and Gestapo agents rescued him from Badoglio's jailors by a surprise attack on September 12. This balked Badoglio's promise to deliver the deposed Premier to the Allies and enabled the Germans to use him

for their political purposes.

In an order of the day broadcast by a Germancontrolled radio station in Italy on September 15, Mussolini was stated to have: (1) "again assumed the supreme leadership of fascism in Italy," (2) appointed Alessandro Pavolini as "provisional secretary of the Fascist National party, which from today will be known as the Republican Fascist party," (3) decreed the immediate reinstatement of all officials and officers of the former Fascist Government who were dismissed by Badoglio, (4) decreed the immediate reestablishment of all Fascist party organizations, and ordered them to actively assist German forces "fighting the common enemy on Italian soil" and also to "inflict exemplary punishment on cowards and traitors," and (5) decreed

the reestablishment of the Fascist militia or Black Shirt formations.

In a radio address from an undisclosed place on September 18 Mussolini urged all "loyal Italians" to observe the foregoing orders, and take up arms again on the side of Germany and Japan. He denounced the Badoglio Government for yielding to the "hardest armistice terms known in history, charged the King with preparing and carrying out the July 25 coup against him, and demanded that Victor Emmanuel be called immediately to account. He declared he had been arrested on the steps of the King's private house and spirited away in a Red Cross car.

Republican Fascist Regime. The German radio on September 23 announced the formation by Mussolini of a new Cabinet of 12 members (all Fascists), with Marshal Graziani as Minister of Defense. The new "government" was temporarily established in southern Germany, then moved to Rome, and on October 8 was transferred to a city in northern Italy. Subsequently Graziani and other members of the new regime spoke over German-controlled radio stations. They charged the House of Savoy and Badoglio with dishonor and treachery and sought to rally the Italian people behind the Axis.

Another proclamation by Mussolini broadcast on September 29 announced that he would "exercise the functions of chief of the new Republican Fascist State" pending the convening of a "constitutional national assembly." Meanwhile the puppet regime had been recognized by all of the remaining Axis powers under pressure from Berlin. It proceeded to collaborate with the Germans in conscripting Italian workers for labor service, crushing all opposition elements, punishing those who acclaimed Mussolini's downfall in July, initiating a reign of terror against the Jews, and seeking to recruit Italians to fight alongside the Germans against the Allica the Allies.

According to the Berlin radio, the Republican Fascist regime on October 31 demanded the death penalty for the King, Badoglio, the generals and admirals supporting them, and all 19 members of the Fascist Grand Council who voted for Musso-lini's ouster. A number of those threatened with death were in German hands at the end of 1943, including Count Ciano and Marshal de Bono. Post-ponement of their "trial" until early in 1944 was

announced December 23. Opposition in North Italy. All reports from northern Italy during the latter months of the year indicated widespread opposition to German and Republican Fascist rule. This took the form of underground and guerrilla warfare, assassinations, strikes, sabotage, and passive resistance. The Germans and their Fascist collaborators retaliated with wholesale arrests, the taking of hostages, numerous executions, pillaging, and general terrorism. In mid-October numerous Catholic priests were rounded up by the Germans for preaching "anti-German propaganda." On December 22 German authorities published a list of 160 Fascist Republicans and 20 German soldiers killed by anti-Fascists in northern Italy during the preceding week. For this the Germans announced that they had executed 210 hostages and that another 1,590 would be executed unless the attacks stopped.

Badoglio and the Allies. The flight of Premier Badoglio and the King to southern Italy presented the British and American Governments with the same dilemma they had faced at the time of the invasion of French North Africa. They wanted to use Premier Badoglio and the King to enlist the aid of the Italian people against the Germans without committing themselves to the postwar perpetuation of the monarchy. They therefore permitted the establishment of the Badoglio Government in Apulia, permitted Italian armed forces and officials loyal to that Government to retain their arms, positions, and functions in Sardinia and the three Apulian provinces of Brindisi, Bari, and Taranto, and sent an Allied Military Mission to insure the military cooperation of the Badoglio forces. The Allied Military Government (AMG) administered Sicily and the rest of the Allied-occupied territory on the Italian mainland. The political policies followed by the AMG and Allied military commanders in Italy were made subject to the control of the Mediterranean Commission, later transformed into the Advisory Council on Italy in accordance with the decisions of the Moscow Conference (see United NATIONS).

Badoglio Declares War. Allied policy was successful in bringing the Badoglio Government into the war on the side of the United Nations. This was achieved by successive steps, for which German actions in central and northern Italy afforded jus-

tification.

On September 11 the King and Badoglio broadcast a call to the Italian people to defend their nation "against German aggression." A proclamation by Premier Badoglio on September 20 went further. It urged the Italian people to take up arms against the Germans in active cooperation with the United Nations. Continued negotiations between Premier Badoglio and Allied representatives achieved the following results. Late in September the Premier agreed to broaden the base of his Government. On September 29 he signed the nonmilitary terms of the armistice, embodied in 40 clauses of an economic, political, and financial nature. Finally, on October 13, he declared war on the Reich in the name of the King "in the face of the repeated and intensified acts of war committed against the Italians by the armed forces of Ger-

The declaration of war was accompanied by a joint statement by President Roosevelt, Prime Minister Churchill, and Premier Stalin accepting "the active cooperation of the Italian nation and armed forces as a co-belligerent in the war against Germany." They acknowledged "the Italian Government's pledge to submit to the will of the Italian people after the Germans have been driven from Italy" and added that "nothing can detract from the absolute and untrammeled right of the people of Italy by constitutional means to decide on the democratic form of government they will eventually have." However they said that Italy's new relationship to the United Nations did not affect the terms of the armistice, which could only be adjusted "in the light of the assistance which the Italian Government may be able to afford to the

United Nations' cause.

Allied Control Commission. The first fruit of Italian co-belligerency was General Eisenhower's announcement of November 10 that the Allied Military Mission had been replaced by an Allied Control Commission for Italy. The Control Commission's function was to see that all Italian economic resources and manpower were utilized in the struggle with Germany. Eisenhower's statement added that "in all areas behind the combat zones Allied Military Government of enemy territory will gradually be replaced by Italian administration exercised under supervision of the Control Commission. We look to the Italian Government to broaden its political composition and strengthen its administrative structure, and the transfer from AMG to Italian

administration will keep pace with this development." The Advisory Council for Italy, established in conjunction with the work of the Allied Control Commission, would, the statement said, "deal with day-to-day questions other than military preparations and will make recommendations to coordinate

Allied policy with regard to Italy.

Advisory Council Meets. The Advisory Council for Italy held its first meeting in Algiers November 30. It consisted of Harold Macmillan (Britain), René Massigli (French Committee of National Liberation), Robert D. Murphy (United States), and Andrey Y. Vishinsky (U.S.S.R.). Representatives of

Greece and Yugoslavia were to be added later.
King Blocks Reorganization. In line with the pledges made to the Allies and to the Italian people upon declaring war on the Reich, Premier Badoglio undertook to reorganize his Government on a broader basis pending the Allied occupation of Rome. During the latter part of October he sought to induce leaders of the various anti-German political groups to enter his Cabinet. He conferred with Count Carlo Sforza, former Italian Foreign Minister, who had just returned to Italy after living in voluntary exile for nearly 15 years, and with leaders of six political parties disbanded by Mussolini, which had united to form a National Liberation

Following these conferences Badoglio informed the King on November 1 that he could not form a representative Government unless the monarch abdicated. The National Liberation Front leaders demanded a republic, but Count Sforza and other liberal leaders indicated that while they would not collaborate with Victor Emmanuel or Crown Prince Humbert, they would accept a regency for the Prince of Naples, Humbert's 6-year-old son, with

Badoglio as regent.

The King, however, flatly refused to abdicate and Badoglio declined any part in the move to oust him. As a temporary solution the Premier on No-vember 13 organized a "technical" government of nonparty under-secretaries and experts to carry on the actual business of government. At the same time Badoglio announced that he would resign and retire completely from politics when Rome was liberated and a "new political government formed by the King.

Opposition by the six old-line political parties to the King's participation in the new government to be formed at Rome was the basis of the serious tension that developed in southern Italy during November and December. Badoglio placed the responsibility for his new Cabinet upon the Allies, who were accused by Sforza and the National Liberation Front leaders of maintaining the King in power and protecting the anti-democratic elements

in his entourage.

Allied policy had been based upon the subordination of politics until the Germans were ousted from all Italy and the whole Italian people could determine their future form of government. It became increasingly difficult to maintain this policy Yet the Allies saw that to oust the King would probably impair the cooperation of Italian army and navy officers and other strongly pro-monarchist elements, and possibly prejudice future prospects for a republic. Consequently the Allied Control Commission and AMG contented themselves with pressing the Badoglio regime to carry out a purge of anti-democratic methods and elements, called for under the Declaration on Italy adopted at the Moscow Conference. On December 17 they turned over to Italian civil administration all occupied territory in Italy south of the northern boundaries of Salerno, Potenza, and Bari provinces, including Sicily.

Gen. Mario Roatta, Badoglio's Chief of Staff, who was on the Yugoslav war criminal list, was dropped on November 12. His successor, Marshal Giovanni Messe, promised to eliminate incompetent and "politically dangerous" officers from the army. A Socialist, Prof. Guido Pazzi, was named Badoglio's Minister of Information November 25. On November 30 the Cabinet deprived Victor Emmanuel of the titles of King of Albania and Emperor of Ethiopia, bestowed upon him by Mussolini, and announced the inauguration of measures to eliminate Fascist elements from the administration. Units of the Italian army reorganized under Badoglio took over a section of the Allied front in Italy on December 8 and fought well in several engagements.

Meanwhile the political debate between the opponents and supporters of the King in southern Italy became increasingly violent, with both sides protesting against the interference of the Allied Control Commission and AMG. On November 29 the Committee of National Liberation voted nonconfidence in the Badoglio Government, called on Victor Emmanuel to abdicate, and demanded that Crown Prince Humbert renounce his rights to the throne. By mid-December the situation had become so explosive that AMG representatives banned a meeting of anti-monarchist political committees

scheduled for December 20 in Naples.

RONALD STUART KAIN.

IVORY COAST. See FRENCH WEST AFRICA.

JACKSON HOLE NATIONAL MONUMENT. See NATIONAL PARKS AND MONUMENTS.

JALUIT. The chief island (169° 42′ E. and 5° 48′ N.) in the Marshall group of the Japanese Pacific Islands (q.v.). Area, 8 square miles. Civil population (1938), 10,546 (10,038 natives and 504 Japanese). The island was the administrative center of the Marshall Islands and was reported to be strongly fortified. Copra was the principal export.

JAMAICA. A British West Indian colony. Area, 4,450 square miles. Population (Jan. 1, 1942 estimate), 1,241,420, including 19,693 East Indians. Dependencies of Jamaica: Cayman Islands (104 sq. mi.; 6,975 inhabitants), Turks and Caicos Islands (166 sq. mi.; 5,300 inhabitants), Morant Cays, Pedro Cays (Guano Islands). Chief towns: Kingston (capital) and suburbs had 120,000 inhabitants, Spanish Town, Port Antonio, Montego Bay, and Falmouth. Vital statistics (1941): 37,829 births, 17,317 deaths, and 5,612 marriages. Education (1941–42): 667 public elementary schools and 163,803 students enrolled. There are vocational, secondary, and industrial schools, and training colleges for men and women.

Production and Trade. The chief agricultural products included sugar (166,630 long tons, 1941–42), bananas (1,347,324 stems shipped, 1942), coffee, rum, coconuts, pimento, grapefruit, cacao, ginger, oranges, essential oils, tobacco, and logwood. Livestock (1940–41): 128,270 cattle, 10,390 sheep, 24,312 horses, mules, and donkeys. Trade (1941): imports £6,517,435; exports £3,966,853. The

chief exports were sugar, bananas, rum, pimento, coconuts, ginger, cocoa, and coffee. Foodstuffs, and cotton piece goods were the main imports.

Communications. During the fiscal year ended Mar. 31, 1942, there were 214 miles of railway open to traffic; receipts totaled £298,543. Roads (1940): 6,914 miles. In 1941 there were 1,628 miles of telegraph line and 3,927 miles of telephone line. Air services link Jamaica with Miami (United States), Aruba, Curaçao, Haiti, and Cuba.

States), Aruba, Curação, Haiti, and Cuba.

Government. Budget (1942-43): revenue £3,718,-120; expenditure £4,050,260. Actual (1941-42): revenue £4,167,185; expenditure £3,822,654; public debt £6,533,161. The Government is headed by a governor, assisted by a privy council. There is a legislative council comprising 30 members (the Governor as president, 5 official, 10 nominated, and 14 elected). A census of the population was to be taken in order to facilitate certain constitutional changes recommended by the West India Royal Commission. For particulars of the military and naval bases leased to the United States, see the 1942 Year Book, p. 302. Captain General and Governor in Chief, Sir John Huggins (appointed July 6, 1943).

History. On Feb. 10, 1943, the British Secretary of State for Colonies announced his acceptance of most of the proposals for constitutional reform submitted to him on behalf of the people of Jamaica. The proposals accepted called for a bicameral legislature, consisting of a House of Assembly elected on a universal suffrage basis and a nominated Legislative Council; an Executive Committee of 10 members (five elected by the House of Assembly and five nominated by the Governor), presided over by the Governor; and the election by the two legislative bodies of the Speaker of the House and President of the Legislative Council respectively. The Colonial Secretary proposed that this new Constitution be tried out for a full electoral period of five years. This offer was well received in Jamaica, but the new Constitution had not been proclaimed by the end of the year.

In connection with its efforts to reduce unemployment, the Government early in April concluded an agreement with Washington officials for the temporary importation of up to 10,000 Jamaican agricultural workers into the United States to relieve farm-labor shortages in certain areas. The agreement was negotiated under the auspices of the Anglo-American Caribbean Commission. It provided for the return of the Jamaicans to the island upon expiration of their work contracts.

## JAMES FOUNDATION. See PHILANTHROPY.

JAN MAYEN. An arctic island between Greenland and northern Norway, 220 miles north-northeast of Iceland. Area, 144 square miles. It is mountainous, Mt. Beerenberg in the north being 8,350 feet high. A meterological station was established on the island by Norwegians in 1921. The island was formally annexed by Norway on Feb. 27, 1930.

JAPAN. A Far Eastern empire, comprising (1) Japan proper, or the five main islands of Honshu, Kyushu, Shikoku, Hokkaido, and Ryukyu, with some 600 smaller islands; (2) Formosa (Taiwan); (3) Korea (Chosen); (4) Karafuto (southern Sakhalin); and (5) Pescadores (Bokoto) Islands. In addition Japan controlled the leased territory of Kwantung and the South Manchuria Railway Zone in Manchuria and mandated territories (Marianne, Caroline, and Marshall Islands) in the North Pacific. Capital, Tokyo; Emperor, Hirohito,

who ascended the throne Dec. 25, 1926. See separate articles on Formosa, Korea, Karafuto, Japanese Pacific Islands, Kwantung.

Area and Population. The area and population of the empire at the censuses of 1935 and Oct. 1, 1940, are shown in the accompanying table.

JAPANESE EMPIRE: AREA AND POPULATION

|   | Area      | Population, | Population, |
|---|-----------|-------------|-------------|
|   | sq. miles | 1935 census | 1940 census |
| Japan proper                              | 147,593   | 69,254,148  | 73,114,308  |
| Korea                                     | 85,228    | 22,899,038  | 24,326,327  |
| Formosa <sup>a</sup>                      | 13,889    | 5,212,426   | 5,872,084   |

|   | 830       | 102,537     | 131,157     |
| Japanese Empire                           | 262,912   | 99,456,818  | 105,226,101 |

<sup>a</sup> Including Pescadores (Bokoto) Islands; area, 49 square iles. <sup>b</sup> Including South Manchuria Railway Zone.

According to the 1940 census, there were in the empire 52,896,862 males and 52,329,239 females. The population of Japan proper increased 5.6 per cent during the inter-censal period 1935-40 as against 7.5 per cent during 1930-35. The increase for the empire as a whole was 6.4 per cent for 1935-40 and 8.2 per cent for 1930-35.

Living births in 1941 were reported at 2,210,-000 (29.9 per 1,000); deaths, 1,140,000 (15.4 per 1,000). In 1939 the birth rate was 26.3 per 1,000 and the death rate 17.6. The populations of the chief cities at the 1940 census were: Tokyo, 7,778,-804; Osaka, 8,252,340; Nagoya, 1,328,084; Kyoto, 1,089,726; Yokohama, 968,091; Kobe, 967,234; Hiroshima, 343,968; Fukuoka, 306,763; Kawasaki, 300,777; Yawata, 261,309.

Recent Conquests. Beginning a new period of expansion by its invasion of Manchuria in 1931, the Japanese armed forces had brought the territories listed in the accompanying table under their occupation and control by June 30, 1942. See separate article on each territory.

NEWLY CONQUERED TERRITORIES

| Territory         | Date of occupation | Area,<br>sq. miles | Estimated population |
|-------------------|--------------------|--------------------|----------------------|
| Manchoukuo a      | 1931-33            | 503,000            | 39,454,000           |

<sup>a</sup> Comprising Manchuria, Jehol Province, and part of Chahar.

<sup>b</sup> Puppet state of Meng Chiang.

<sup>c</sup> Estimate as of March, 1942.

<sup>d</sup> The original population was estimated at 150,000,000 to 200,000,000.

<sup>e</sup> Agreements of Sept. 22, 1940, and July 29, 1941.

Including Intio Account some 26,664 square miles ceded to Thailand by French Indo-China Mar. 11, 1941.

Including British North Borneo, Brunei, and Sarawak.

Including Nicobar Islands.

<sup>e</sup> Territory of New Guinea which comprises Northeast New Guinea, the Bismarck Archipelago, and the northern Solomon Islands.

J Not including uninhabited islands in the western Aleutians occupied by Japan in June, 1942.

\*\*Including the population of occupied China.

Education and Religion. Illiteracy is confined largely to people over 50 years of age. The school enrollment in 1937 was: Kindergarten, 152,627; elementary, 11,566,912; secondary, 842,792; uni-

versities and colleges, 72,195; special and technical schools, 531,807; preparatory technical schools 1,964,599. Shintoism, with 13 different sects, and Buddhism, with 12 sects, are the principal religions. In 1940 all religious groups were brought under State control and the Christian denominations were merged in a single Japanese Christian Church.

Production. Manufacturing normally accounts for about 32.7 per cent of the national income (estimated at 24,519,036,000 yen in 1939), commerce for 25.4 per cent, and agriculture for 17.7 per cent. Agriculture, however, supports nearly half the population of Japan proper. Estimated production of the principal crops in Japan proper was (in metric tons): Rice, 11,298,000 in 1940–41 (335,000,000 bu. in 1941–42); wheat, 1,568,580 in 1941; barley, 1,687,300 in 1940; potatoes, 1,848,100 in 1938; beet sugar, 27,000 in 1940–41; cane sugar, 90,000 in 1940-41; tobacco, 87,054 in 1940; tea, 57,500 in 1939; rapeseed, 108,800 in 1940; soybeans, 348,300 in 1938; raw silk, 45,000 in 1940. The value of fish and other raw marine products in 1938 was 248,895,000 yen.

The world's leading exporter of cotton piece goods, Japan in 1940 exported 1,800,000,000 sq. yd. of cotton cloth valued at 378,000,000 yen, the lowest volume since 1931. Output of rayon in 1940 was 102,060 metric tons; cement, 4,250,000 metric tons (Japanese Empire); newsprint, 407,632 short tons; civilian passenger cars, trucks and buses, 23,525 vehicles (including 23,000 trucks). Mineral and metallurgical production was (in metric tons, except as stated): Steel, estimated at 7,000,tons, except as stated: Steet, estimated at 1,000,-000 to 8,000,000 tons annually; pig iron, about 3,000,000 in 1939; coal, 53,000,000 (including Korea and Formosa) in 1938; petroleum (crude and synthetic), 8,200,000 bbl. in 1941; copper (smelter), 104,000 in 1939; magnesium, 4,000 in 1940; con productions 25,000 in 1940; iron p 1940; aluminum, 35,000 in 1940; iron ore, 470,000 in 1936; lead (smelter), 12,000 in 1939; zinc (smelter), 55,000 in 1939; gold, 26,000 kilograms in 1939. Electric power capacity in 1941 was estimated at 8 million kilowatts, of which 85 per cent was used in industry. The annual production capacity of Japanese merchant shipping yards was estimated at 400,000 to 500,000 tons. Besides war materials and heavy and light industrial equipment, Japan produces a wide variety of manufactures.

Foreign Trade. For the calendar year 1940, merchandise imports of the Japanese Empire totaled 3,709,000,000 yen; exports, 3,972,000,000 yen. Imports from foreign-currency countries for that year were unofficially estimated at 2,700,000,000 yen; exports, 1,800,000,000. Before Japan entered the World War, trade was carried on mainly with the United States, Manchukuo, China, British India, the Netherlands Indies, and Great Britain, in the order named. For the principal import and export items, in 1939, see 1942 YEAR

Finance. The Japanese fiscal year ends March 31. Budgets for the years 1937-38 and for 1940-41 to 1942-43 inclusive are given in the 1943 Year Book, p. 344. The budget for 1943-44 balanced at about 40 billion yen. Receipts were estimated as follows (in billions of yen): Taxes, 10.3; bond issues, 20.3; government monopolies, forced loans, etc., 9.4. Finance Minister Kaya stated that 3.3 billions of "loans" were to be apportioned among the occupied territories. Of the total expenditures, about 32.2 billions were for defense (27 billions in the Temporary War Special Account and 5.2 billions representing defense items in the Gen-

# REPORTS OF JAPANESE ATROCITIES ARE PROVED

Although few were skeptical of earlier reports of the inhuman treatment of prisoners of war, the last doubt was removed when the reports of Lt. Col. William Dyess, Commander Melvyn McCoy, and Lt. Col. S. M. Melnik, who had escaped from prison camps in the Philippines, were made public. The photograph shows them with Gen. Douglas MacArthur (second from right) shortly after they reached Australia. Top: U.S. Army Official Posters based on the reports.

THE PROBLEM OF JUVENILE DELINQUENCY
As depicted in March of Time's Youth in Crisis

Wartime conditions have placed a heavy strain upon communities. In place of nonsupervised social gatherings in public places and resort to the juvenile courts, the Children's Bureau encourages programs of recreation and informal educational activities.

eral Account). Nonmilitary expenditures were estimated at 7.8 billions. The war budget exceeded 80 per cent of the total expenditures and was about 64 per cent of Japan's national income.

The Japanese public debt increased from 10,-578,000,000 yen in July, 1937, to 52,495,000,000 yen on Dec. 31, 1942 (internal, 51,275,000,000; external, 1,220,000,000). The average exchange value of the yen was \$0.2344 for 1940 and the first seven months of 1941. It rose to about \$0.27 just prior to Japan's attack upon the United States and Great Britain on Dec. 7-8, 1941.

Transportation. There were 11,144 miles of State

Transportation. There were 11,144 miles of State and 4,240 miles of private railway lines in 1938, 591,766 miles of roads in 1940, and 9,598 miles of air routes in August, 1939. The new undersea railway tunnel from Shimonoseki, on the Japanese mainland, to Moji, on the island of Kyushu, was opened to freight traffic in June, 1942. On July 1, 1939, Japan had 2,337 merchant steamers of 5,629,845 gross tons. Extensive improvements to the amalgamated Tokyo-Yokohama harbor (renamed Keishin Port) were completed in 1941.

named Keishin Port) were completed in 1941.

Government. The parliamentary system of government established under the Constitution of Feb. 11, 1889 (see 1942 Year Book, p. 303) fell increasingly under the control of Japanese militarist-Fascist elements after the conquest of Manchuria in 1931. Beginning in 1940, a totalitarian, corporative state was superimposed upon the old constitutional system by Premier Prince Konoye, the announced aim being state control of all economic, political, and cultural activities. The first step was the "voluntary" dissolution of the old political parties, some of them acting under strong military pressure. A new political agency, known as the Imperial Rule Assistance Association or League for Support of the Throne, was then created by the army leaders and government to function as the instrument of the new totalitarian principles. It consisted of an Executive Council to "convey the will and ideas of the convey the will are the convey the convey the convey the convey the will are the convey convey the will and ideas of those who govern to those who are governed," and a Central Cooperative Council, to "convey the will and ideas of those who are governed to those who govern." Members of both Councils were appointed by the Premier, one-half of the appointees to the Central Cooperative Council being chosen from names submitted by prefectural branches of the Imperial Rule Assistance Association. Branches of the Association were formed in every town and village, with all leaders appointed from above. In 1942 the Association entered candidates in the elections to the Diet and emerged as the organ of a one-party state (see 1943 YEAR BOOK, pp. 347-8). A Supreme Economic Council and a Supreme Cultural Council were appointed in 1940 to supervise economic and cultural affairs.

The Government assumed most of the aspects of an open military dictatorship with the formation of the Tojo Ministry on Oct. 18, 1941. Contrary to statutory law, Gen. Hideki Tojo remained in active military service while concentrating in his hands the powers of Premier, War Minister, and (temporarily) Home Minister, the latter office controlling the police. The administration of Korea, Formosa, and Karafuto was unified with that of Japan proper in October, 1942, and placed under the jurisdiction of the Home Ministry.

Japan signed the Anti-Comintern Pact with Germany Nov. 25, 1936, and adhered to the Italo-German military alliance Sept. 27, 1940 (see Axis Powers). After signing a nonaggression pact with the Soviet Union on Apr. 13, 1941, Japan attacked the United States and the British

Empire without warning on Dec. 7, 1941. For the ensuing declarations of war against Japan, see table under World War. For 1943 developments, see below.

#### HISTORY

Mental Outlook. The ebullient confidence which prevailed in Japan following the phenomenal victories of her armed forces in 1941–42 gave way in 1943 to a feeling of apprehension on the part of Japan's leaders as to what the future had in store for their quickly-acquired, over-expanded empire. The significant change which took place in Japan's mental outlook appeared to be the outstanding development in the situation in the Pacific in 1943.

The resolution adopted at the conference of President Roosevelt, Prime Minister Churchill, and Generalissimo Chiang Kai-shek at Cairo on December 1 was the first move on the part of the United Nations to counteract Japanese "thought warfare," or propaganda among oriental peoples designed to discredit the white man and his works in Asia. According to the resolution Manchuria and Formosa were to be restored to China, Korea was to regain its national independence, and Japan was to be stripped of all other territories acquired by force.

Aside from inhuman treatment accorded to interned American, British, and other war prisoners, Japanese propaganda included the promise of "independence" within the Japanese "co-prosperity" system to all of the lands formerly under occidental control, including the Philippines, Malaya, Burma, and Netherlands East Indies. The Japanese also created a puppet government for India, which had its base in Burma.

The restoration of China's territorial and administrative status was expected to encourage the Chinese to assume a position of democratic leadership in Asia which would prevent the development in the future of another military-dominated

Japanese empire.

Offense to Defense. Although the Anglo-American forces were still battling at the outer rim of Japan's defenses, sufficient had happened militarily to cause the Japanese to abandon their original plan of carrying the war into Britain's colonial empire in Australia and India and America's northwestern territory of Alaska. In place of these grandiose plans, Japan was forced to adopt a program of defense designed to hold the major portion of the gains she acquired in the first six months of the war. Japan's defense program included the intense exploitation of occupied terri-tories and the transfer of vital industries from the industrial centers of Japan proper to the continent where the Japanese hoped they might escape bombing raids on Japan's industrial centers. The Japanese also hoped that the decentralization of their industries would facilitate transport to her various fighting fronts, particularly on the continent. An extraordinary session of the Diet in mid-June, 1943, authorized a bond issue of 21,860,-000,000 yen, which included the sum of 3,519,-000,000 yen for the construction of highways and 17,163,000,000 yen for special military emergency measures. It was thought that much of this financial outlay was for the purpose of expediting the transfer of war industries to the Continent and the linking up of transportation systems, including an all-land rail line from Mukden, Manchuria, to Singapore, in order to circumvent American submarines which had exacted heavy toll of Japan's ocean shipping. The Japanese also worked strenuously to establish land communication across the Malay Peninsula between Indo-China and Thailand and Burma where major military activities were in

prospect.

Aflied forces made important gains in the Southwest Pacific during 1943 and American forces achieved vitally important victories in the Gilbert Islands, but the Japanese still held the important colonial territories of America, Great Britain, and the Netherlands which they overran at the beginning of the war. These included Hong Kong, Wake, Guam, Sarawak, Brunei, British North Borneo, British Malaya, Netherlands East Indies, the Philippines, Burma, part of the north coast of New Guinea, and a portion of the British Solomon Islands, as well as Portuguese Timor which the Japanese seized despite the fact that Portugal was still a neutral. The territories which Japan seized in the region of the South Seas had an area of 1,587,500 square miles with a popula-

tion of approximately 141,000,000.

Within these territories the Japanese found resources for which they hungered a half century in connection with their plans for building up a powerful oriental empire leading ultimately to a struggle for world domination. Among the resources which the Japanese seized and were strenuously endeavoring to exploit were rubber, tin, mercury, zinc, copper, petroleum, gold, iron, coal, antimony, manganese, aluminum, and the immensely valuable sources of supply of vegetable oils. Japan's seizure of rubber in British Malaya and Netherlands Indies embraced a large per-centage of the world's sources of supply of the natural product. Before the Japanese occupation British Malaya had an annual productive capacity of 480,000 metric tons of raw rubber, 80,000 tons of tin, and approximately 1,500,000 tons of iron ore. In the Netherlands Indies and British Borneo the Japanese seized oil fields that had produced 7,500,000 metric tons of petroleum and plantations which had produced 500,000 tons of rubber annually. The extent to which Japan was able to develop these resources was not known, but it was thought they were severely handicapped by shortage of shipping and lack of mechanical facilities. In the Philippines the Japanese acquired gold mines and iron supplies of immense value and the sources of supply of the even more valuable products of the cocoa palm.

Cotton Lacking. One raw product, however, for which the Japanese were almost entirely dependent on the West—cotton—they had not been able to develop to any appreciable extent in any of the territories they had seized. They attempted to make up for the large supplies they formerly obtained in the United States, South America, Egypt, and India by forcing the natives in the Philippines, Burma, and Netherlands Indies to cease production of their normal crops of rice and convert their fields to cotton. This resulted in a general unsettlement of the domestic economies of the countries affected. Japan's desperate need for cotton was indicated by the enforcement of regulations in the Netherlands Indies prohibiting the natives from purchasing Japanese cotton cloth unless they turned in a specified quantity of raw cotton. A somewhat similar regulation was en-

forced in the Philippines.

The five-year cotton production plan enforced in the Philippines provided for increasing the area devoted to cotton from 5,000 acres in 1941 to 500,000 acres by 1946. As there was no market in Japan for sugar, a chief Philippine product, it caused a serious unsettlement of Philippine domes-

tic economy and further impoverishment of the people. This was evidenced in the great influx of people from the rural areas into Manila, the population of which had doubled since the Japanese occupation. The Japanese also announced a cotton-conversion plan for Thailand which involved the changing over of 1,000,000 acres of rice lands.

Co-Prosperity. Japan's activities in the field of economics have been part of a daring program designated by the general term "Asiatic Co-Prosperity," the central motive being to induce the masses of Asia to discontinue production of raw materials which they previously produced for sale to the industrialized West and concentrate on the production of articles needed by Japan's industries. In this way the Japanese hoped to supplant the West as the supplier of manufactured goods to Asia. Although Japan's industries had enjoyed a phenomenal expansion in the preceding quarter century, the military and industrial leaders of the country could not wait and hoped by mili-tary means to speed up their program of economic domination. The Japanese planned in this man-ner to eliminate occidental influence from densely populated oriental countries which previously had their economy geared to industrialized Europe and the United States. The Japanese thus became able, temporarily at least, through their naval blockade of oriental sources of supply to dislocate occidental economic systems and hamper military retaliation which they knew would be forthcoming. The Japanese naturally hoped that their development program and defense measures would be sufficiently advanced to withstand the assaults of the West which would necessarily be delayed by the war in Europe.

Pacific Island Bases. Japan's defense strategy was largely based on her possession of well-placed island bases, some of which previously had been fully or partially developed by western genius. Such bases included Singapore, Manila Bay, Burma, Rabaul, Guam, Wake, and Truk Island which has been described as Japan's Pearl Harbor. Guam and Wake were formerly American possessions. Truk and the bases in the Marshall and Gilbert Islands, and Saipan in the Marianas were seized by Japan from Germany at the beginning of World War I in 1914. Americans might have had these islands, originally owned by Spain, when we acquired the Philippines in 1898, but we spurned them as of no importance. Spain then sold them to Germany. Japan was given the islands under the mandate system at the Paris Conference and agreed not to fortify them. The nonfortification agreement was further confirmed at the Washington Arms Limitation Conference in 1922 when the United States and Great Britain also agreed not to further strengthen their fortifications in the region of the Central and South Pacific. Anglo-American bases of potential strength upon which considerable work had already been done included British Hong Kong, American Guam, Dutch Harbor of the Aleutians, and the

Philippines.

But while the Americans and British observed their part of the agreement, this was not true of the Japanese who proceeded at once to develop air and submarine bases throughout their newly acquired island empire. American missionaries who previously worked among the native islanders were expelled and American naval authorities were prevented from making inspection trips. The difficulty which the Anglo-Americans have experienced in breaking through Japan's outer ring of fortifications in the Pacific has been due largely

## REPORTS OF JAPANESE ATROCITIES ARE PROVED

Although few were skeptical of earlier reports of the inhuman treatment of prisoners of war, the last doubt was removed when the reports of Lt. Col. William Dyess, Commander Melvyn McCoy, and Lt. Col. S. M. Melnik, who had escaped from prison camps in the Philippines, were made public. The photograph shows them with Gen. Douglas MacArthur (second from right) shortly after they reached Australia. Top: U.S. Army Official Posters based on the reports.

As depicted in March of Time's Youth in Crisis

Wartime conditions have placed a heavy strain upon communities. In place of non-supervised social gatherings in public places and resort to the juvenile courts, the Chil-dren's Bureau encourages programs of recreation and informal educational activities.

to the fact that the Japanese had practically 25 years in which to carry out their defense program while the other nations were not only prevented from matching the Japanese program, but actually reduced fortifications which had already been developed prior to 1922. Since occidental prestige in Asia was largely based upon superior military, particularly naval power, Japan's defeat of these forces in the brief period of about six months resulted in a serious loss of prestige on the part of the westerner among oriental races everywhere.

the westerner among oriental races everywhere. Prisoners of War. While both the United States and Great Britain by the end of 1943 had recovered from the naval losses they suffered at the opening of the war in the Pacific, they had not succeeded in obtaining the release of thousands of occidental prisoners, both civilians and servicemen, who were captured when the Japanese over-ran the Far East. These prisoners of war included approximately 64,000 British, Australian, and Caapproximately 04,000 British, Australian, and Canadian soldiers, 25,000 Americans, 24,000 Netherlanders, and some 185,000 Filipinos, Indonesians, Burmese, and others. A Japanese broadcast early in the year by Lieut. Gen. Fumis Oyama, Chief of the Bureau of Judicial Affairs of the War Ministry, claimed that Japan held approximately 300,000 war prisoners including 118,000 white 300,000 war prisoners, including 118,000 white troops—British, Americans, Netherlanders, Australians, and Canadians. These war prisoners for the most part were held in insanitary concentration camps where insufficient food and almost total lack of medical care caused large numbers of deaths from disease and malnutrition. The U.S. War and Navy Departments, on Jan. 28, 1944, released statements by three officers who had escaped from the Philippines. The statements told of the deaths by murder, torture, starvation, denial of medical supplies, and neglect of several thousands of American and Filipino prisoners who had surrendered to the Japanese at Bataan and Corregidor. The Japanese had previously admitted that some 300 American soldiers died of neglected wounds after the fall of Bataan and Corregidor.

The number of American civilians repatriated up to Dec. 31, 1943, was only 3,000, which figure included a considerable number of Canadians and South Americans. These civilians, repatriated on the neutral Swedish steamer Gripsholm, included persons who were engaged in business, missionary, and other professional activities, chiefly in Japan, Manchuria, Korea, China, and the Philippines. Aside from approximately 11,000 American troops held prisoners in the Philippines and some 2,000 at Shanghai, the Japanese still were holding between 5,000 and 6,000 American civilians, chiefly in China and the Philippine Islands. Several hundred other American civilians are also held prisoners in Malaya and the Netherlands East Indies but little was known of their condition. The exchanges of prisoners were effected at the little Portuguese ports of Lourenço Marques, East Africa, and Mor-mugão on the west coast of India. The British and American Governments both complained at the failure of the Japanese to issue lists of Americans, Dutch, and British war prisoners held in concentration camps in Malaya, Burma and Netherlands Indies, where there had been disturbing rumors regarding war prisoners being forced to work in labor gangs under inhuman conditions, resulting in large numbers of deaths.

The weakness of the Allied position on the question of exchanging prisoners was due to the lack of Japanese military prisoners in Anglo-American hands. Japanese casualties in the earlier phases of the war were unbelievably small, only 29,894, in-

cluding 9,174 killed, according to Japanese statements. The Japanese also seized vast stores of arms, munitions, and civilian goods in acquired territories.

Maritime Losses. Japan's shift from offensive to defensive strategy was made necessary by serious reverses suffered in the battles of the Coral Sea, Midway, New Guinea, the Solomons, Aleutians and Gilberts, all of which took place in the last three quarters of 1942 and in 1943 (see WORLD WAR). The Japanese not only suffered serious losses to their fleet and air force in these engagements but American submarines operating in Far Eastern waters sank well over a million and a half tons of Japanese merchant shipping. According to Secretary of the Navy Frank Knox, Japan's merchant shipping which amounted to about 6,300,000 tons prior to the attack on Pearl Harbor, was reduced to well below 5,000,000 tons. United States sinkings of Japanese tonnage greatly exceeded Japan's replacement capacity, particularly as it was no longer possible for Japan to augment her cargo space by seizures from other nations such as was possible in the early months of the war. There was, however, a noticeable increase in Japan's construction of small wooden ships for use in inter-island communications.

Japan's large fishing fleet, which was used so extensively in landing operations, was also greatly reduced. Reports from Far Eastern sources indicated that Japan was concentrating on the construction of wooden barges using a minimum of steel. Since Japan's island empire extends from Paramushiro in the northern Kurile group of islands to the Netherlands East Indies, a distance of 10,000 miles, her problem of maintaining communications was a monumental one. The Japanese attempted to relieve their land communication problem by the hurried construction of rail lines or motor roads linking up the various native railway and road systems along the coast of Asia which were already in operation at the time of the Japanese occupation. Japan's vital need of land communications to link up and consolidate her territorial holdings on the continent explained her 1943 military campaigns in the Central Chinese provinces, where the Japanese strove desperately to eliminate Chinese forces sitting astride the north and south rail lines connecting North and Central China with Canton and Hong Kong.

Japanese apprehension regarding the future, aside from actual naval and air reverses, was due to the fruition of America's gigantic naval construction program, which resulted in the development within the brief period of two years of the world's most powerful naval armada. Thus, while the Japanese were unable to replenish their losses, they observed that the United States on the other hand was able to completely outdistance her enemy to such an extent as to almost baffle the imagination. As a result the Japanese steadily avoided battle with their main fleet and only ventured to risk the loss of smaller forces necessary for convoys to replenish garrisons in the Southwest Pacific.

Dictatorship Strengthened. Japan's apprehension regarding America's growing economic and naval power was also indicated in developments on the Japanese home front. These developments took the form of warnings to the Japanese people by their leaders regarding critical times to come, and a further concentration of power in the hands of the ruling military clique headed by Premier Gen. Hideki Tojo. Japan had gone on a totalitarian war footing probably more completely than any other nation with the exception of Russia. Men, women, and school children have been pressed into the service of the state to perform allotted tasks. On

October 12 the Cabinet ordered a drastic curtailment of school enrollment in the interest of more national defense training. High school enrollment for 1944 was ordered reduced to one-third and college enrollment to one-half of that which previously prevailed. Men and boys between 14 and 40 years of age were obliged to serve in the armed forces or essential war industries. Women were directed to take their places in civilian pursuits and lighter war industries. Students who heretofore had been exempted from military service were now to become part of the military machine.

Puppet Mobilization. Japan also ordered a mobilization of all young men in her "southern regions" including Burma, Malaya, Sumatra, Java, Borneo, and the Philippines. Military schools for the training of officers and men were opened in Manila, Singapore, Kuala Lumpur, Mandalay, Medan (Sumatra), Bandoeng, and Batavia. The Japanese also legalized enlistment in the Japanese Army of large numbers of Koreans and Formosans, and there was serious unrest in Manchuria resulting from the drafting of young Manchurians for service in the Japanese Army. A report by the Netherlands East Indian Information Service said that Japanese propaganda circulated in connection with the recruiting of troops in the "southern regions" stated that the purpose was to wage major war against the white race. It was stated that the Japanese were develop-ing self-contained defense units in these regions "with the object of carrying on a hundred-year war." As an offset to these developments, there were reports from American missionaries returning to the United States from posts along the Central China coast that puppet Chinese soldiers, trained by the Japanese on behalf of the controlled Wang Ching-wei government at Nanking, had gone over to the Nationalist Chinese Government headed by Generalissimo Chiang Kai-shek at Chungking.

Theiland Build-up. Japan's defense measures in the so-called "southern regions" were also designed to maintain political control over oriental peoples as well as the "white imperialists." Most significant of these moves was the building up of the territorial and military strength of Thailand, formerly Siam. The Japanese entered into a 10-year secret military agreement with Siam long before Pearl Harbor. Under this agreement the Japanese assumed complete control of the development and disposition of the Siamese fleet and the training and equipment of the Siamese army and air force. Under the naval agreement the Siamese bound themselves to send all naval craft to Japanese shipyards annually for overhauling

and repairs.

The Japan-Thailand agreement was elaborated in 1942 and 1943 by the cession to Thailand of large sections of territory belonging to neighboring countries or dependencies of European nations. On Mar. 11, 1941, the Japanese handed over to Siam 26,664 square miles of territory belonging to French Indo-China and on Aug. 20, 1943, Japan ceded 15,388 square miles of Burmese territory with a population of about 230,000 and 16,000 square miles of British-Malayan territory with a population of about 1,000,000 people to Siam. The treaty confirming these significant transfers of territory was signed at Bangkok by the Siamese Premier, Field Marshal Luang Pibul Songgram, and the Japanese claimed that both France and Britain had forced Siam to cede these territories at an earlier date in exchange for the relinquishment of exterritorial rights previously held by France and Britain in Siam. Japan's intentions apparently were

to create a powerful puppet state in Malaya, securely bound to Japan by military treaties, which would be able to over-shadow possible future American assistance to an independent Philippines or possible similar British developments in Burma and India and Netherlands activities in the East Indies.

Aside from these activities the Japanese also promised independence under Japanese "Co-Prosperity" guidance to India, Burma, the Netherlands Indies, and the Philippines. Large numbers of young men from the Philippines, Burma, and the Netherlands Indies were taken to Japan for the purpose of impregnating them with Japanese ideas, which largely centered about the elimination of the white man and his works from Asia. The purpet Indian Government which the Japanese set up in Burma was headed by Subhas Chandra Bose, Indian revolutionist, who had resided in Japan for some 20 years. He was generally regarded as

a Japanese hireling.

Air-Roid Fears. Fear of further American air raids on Japan proper caused Premier Tojo to announce plans for the total evacuation of Tokyo. The Japanese did not intend to be caught unaware as they were on Apr. 18, 1942, when Col. James H. Doolittle's raiders dropped bombs on Tokyo, Yokohama, Kobe, and Nagoya, causing widespread alarm and considerable damage. The surprise on that occasion was so complete and the confusion so extended that many home defense commanders were court-martialed or committed harakiri. Several of the American aviators who were captured after forced landings in China, were court-martialed and executed because of their "inhuman acts."

A further significant development on the Japanese home front in the latter part of 1943 took the form of broadcasts of exaggerated reports of losses inflicted on the American naval forces by the Japanese naval and air forces, particularly on the Solomon Islands front. It was thought that these broadcasts of exaggerated claims and obviously false information was for the double purpose of counteracting reports of the Anglo-American-Russian conversations at Moscow, which had been circulated in Japan, and also for the purpose of quieting native unrest among Japan's subject peoples caused by Anglo-American bombings of Japanese military supply bases in China, Hong Kong, Indo-China, Thailand, Netherlands East Indies, and Burma.

Totalitarianism. The military dictatorship which was initiated on Oct. 18, 1941, when Gen. Hideki Tojo assumed office as Premier, was strengthened by further concentration of administrative power in the hands of Premier Tojo and the concentration of political power in the totalitarian Imperial Rule Assistance Association, which supplanted Japan's two leading political parties. Although contrary to statutory law, Premier Tojo retained his rank as a general in active military service. In addition to his power as Premier, he also has concentrated in his hands the posts of War Minister and Home Minister, the latter office controlling the powerful political police.

Premier Tojo announced in October, 1943, additional Cabinet changes and amalgamations which further concentrated power in his hands. The old Cabinet Planning Board or "Inner Cabinet" was abolished and in its place was created a new and powerful Ministry of Munitions in which was concentrated all production and mobilization agencies. A new Agriculture and Forestry Ministry was also created to combine the Agriculture and Forestry

Ministry and the Ministry of Commerce and Industry. In addition a new Transportation and Communications Ministry was created to combine the Communications and Railway Ministries. Pre-mier Tojo had already taken over as a "temporary the Ministries of Commerce and Education. His action in gradually bringing the various Cabinet posts under his personal control resembled the action of Mussolini in the last months of his dictatorship. The importance of the new Ministry of Munitions was indicated by the various bureaus included—mobilization, aerial ordnance, machinery, iron and steel, light metals, nonferrous metals, military science, fuel and electric power. Other changes included the creative transfer of the statement of the creative transfer of the statement of the tion of general headquarters for air defense in the Home Ministry and of a Bureau of Economic Warfare in the Foreign Office. The Cabinet Information Board was also expanded to include a new Office of Facts and Figures.

The new arrangement was approved by the "rubber stamp" Diet on October 25. The Tokyo radio, in referring to the foregoing, stated that no interpellations or questions were permitted and the Government's proposals "were adopted as al-

ready drawn up.

The powerful totalitarian party known as the Imperial Rule Assistance Association or, to use its other title, "League for the Support of the Throne," was also reorganized "leading toward the respection of a rigorous imperialism of the the perfection of a rigorous imperialism of the people." The Government announced on August 12 a drastic regulation banning public gatherings such as lectures, social functions, sports contests, or any meetings not authorized or arranged through the official propaganda agency. The Cabinet on October 12 approved a measure reducing government administrative personnel by 25 per cent, which meant the "dropping of 15,000 per-

ns," according to the report.

Tojo's Ten-Points. Premier Tojo on November 29 announced a 10-point program embracing "absolutely indispensable" steps, which he said must be adopted to meet the exigencies of the war situation. At the top of the list cited by the Premier and Commander in Chief was a "substantial" increase in airplane production, a subject which was stressed repeatedly in the last months of 1943. The next three points referred to the necessity of stepping up production in war, industrial, and food fields. Further points were concerned with the necessity of strengthening defense against air-raids and the utilization of the population and resources of puppet and conquered territories.

Premier Tojo announced at the same time the

appointment of a new Cabinet adviser, Ginjiro Fujiwara, with the rank of Cabinet Minister with-out portfolio. Fujiwara was to devote his efforts to increasing plane production. He delivered an address, broadcast simultaneously with the address of Premier Tojo, in which he declared in flamboyant manner his determination "to overthrow the enemy who boasts of his numerical superiority in planes in the shortest time possible." Kazuo Aoki, Minister of Asiatic Affairs and Chief Control Officer over puppet areas, also appealed to workers in the Mitsubishi Aircraft Company's plants to "accelerate their efforts."

Efforts to stimulate production of war materials, particularly airplanes, followed moves earlier in the year to step up production and reduce consumption of consumer goods. At that time the Premier, addressing a meeting of prefectural and municipal officials at the capital, declared that although the Government was planning new meas-

ures to stimulate war production it was, nevertheless, vital that the people who were already fac-ing "painful hardships" be made to understand Japan's war aims and remain in unity with the Government. He urged the 100,000,000 people of Japan "to hold their firm confidence in absolute victory and participate in the battle with their noble and tenacious fighting spirit." The Premier instructed prefectural officials to take "immediate and concrete steps" in the event they detected any dissatisfaction or unsettled feeling among the people within their jurisdictions. It was announced that henceforth all workers in Japan would be subject to compulsory labor laws under the Government's national mobilization plan.

Control of Business. Governmental measures designed to stimulate production included the ap-pointment early in March of a Wartime Economic Council and an Administrative Supervisory Council. The Cabinet Advisory Council included the following: Admiral Teijiro Toyoda, Minister of Commerce and Industry in the second Konoye Cabinet and Foreign Minister in the Third Konoye Cabinet; Viscount Masatoshi Okochi, member of the House of Peers; Ginjiro Fujiwara, a member of the Yonai Cabinet and a member of the House of Peers; Toyotaro Yuki, an executive of the Bank of Japan; Kamesaburo Yamashita, president of the Yamashita Steamship Company; Kiyoshi Goki, managing director of the Mitsubishi heavy indus-

tries; Chuji Susuki, president of the Showa Electric Industry Company.

The Wartime Economic Council which is headed personally by the Premier, includes the above Cabinet advisers and the Army and Navy Ministers. The Cabinet conferred extraordinary wartime administrative powers on Premier Tojo by promulgating an act giving him undisputed authority to issue orders "in the event of special necessity arising in connection with the expansion of key war materials such as iron, steel, coal, light metals, shipping, and airplanes." On August 26 Emperor Hirohito summoned leaders of various industries to the Palace to discuss increased production. The Emperor expressed deep concern over war production and urged new efforts.

Specific measures adopted between June and December included an agreement whereby the Government on October 16 became half owner of most of the enterprises of the two great family groups in Japan, the Mitsubishi and Sumitomo concerns. Under the terms of the agreement the directors of the two concerns were to double the capital of the various companies engaged in aircraft production, naval construction, steel, and chemicals. The Mitsubishi concern also was to increase the output of its machine tool plants and take over direction of the Japanese Aluminum Company. Mitsubishi, in addition, agreed to erect a number of magnesium plants and begin manufacture of duraluminum.

In order to allay uneasiness in industrial circles caused by these moves, the Covernment announced it had no intention of taking over the big industrial plants. The Mitsubishi and Sumitomo family concerns were among the largest industrial and financial organizations in Japan and ranked with the Mitsui and Yasuda families as leaders in the financial life of the country. Their enterprises included mining, shipping, agriculture, and other activities as well as manufacturing and finance

On November 10 the Government decreed a fundamental reorganization of Japanese commerce, especially foreign trade, in furtherance of the program for "consolidation of the entire economic life of the country." The outstanding feature of the decree was a drastic reduction in the number of firms permitted to engage in foreign trade—from 6,000 to 600. Only those firms which had an average turnover of 5,000,000 yen in 1941 and 1942 were permitted to continue in business.

The reorganization of the Empire's foreign trade set-up was part of Premier Tojo's announced program of completely overhauling the entire industrial and commercial structure. The plan encompassed consolidation of all productive elements in all fields of industry, the expansion of undeveloped industries vital to the prosecution of the war, the improvement and renovation of productive technique, the readjustment of labor, rationalization of the transportation industry, and reorganization of finance and banking in order to provide necessary funds "expediently and harmoniously." The program was drawn up by Lieut. Gen. Teiichi Suzuki, chairman of the Cabinet Planning Board, and was approved by Premier Tojo and the Cabinet.

Prices and Morale. Japanese civilians continued to take in their belts with customary docility and there was no indication of a crack in morale despite mounting prices and growing shortages in food in Japan. This was the consensus among American refugees who returned to the United States in early December on the second trip of the neutral Swedish exchange ship Gripsholm. The repatriates were guarded in their statements and admitted that they had been warned that reports of "sensationalized" incidents might result in re-

taliation against other internees.

Living costs for the common people in Japan had doubled by the end of 1943 despite government-pegged prices. Supplies of coal, rice, fish, meat, clothing, and other necessities were limited and strictly rationed, but despite strict regulations and heavy penalties, the black market was rampant and wartime profiteering was extensive. Food shortages were partly due to transportation congestion caused by military demands. Civilians had to get a Government permit in order to take a trip on a train. Wartime necessity absorbed all newly acquired raw materials including cotton fiber. Clothing, heavily loaded with "staple" made from wood pulp, deteriorated after two or three washings or trips to the cleaner. Shoes cost 150 yen a pair, were made of composition material, and fell apart in the first rain.

According to a report by one correspondent, the Japanese yen, once worth 50 cents in U.S. currency, but reduced to 23 cents before Pearl Harbor, was now an uncertain unit. From the standpoint of international exchange, it was rated by speculators as worth anywhere up to 450 for one American dollar. However, it was still a yen to the man in the street who had no interest in foreign exchange and was only concerned with the wherewithal to purchase the next meal.

Rice, staple food of the people, soared from 17 yen per hundredweight in December, 1941, to 80 yen two years later. Meat cost two and a half

times as much as it did in 1941.

The food situation in Japanese-occupied territories, particularly in China, was even more serious than in Japan. The cost of living in the Yangtze Valley, which is China's "rice bowl," had increased from 500 to 3,000 per cent since the Japanese occupation. Eggs, which once could be purchased in the Shanghai market for 1 cent each, cost \$2.40 each. Even the upper class Chinese were in tatters. Prevailing prices in Shanghai in

August, 1943, indicated the desperate situation: Meals at the leading Cathay Hotel, minimum, \$50; room and meals at the same hotel, one month, \$10,000; meals at a low-cost Russian restaurant consisting of soup, black bread, and spaghetti, \$20; loaf bread, \$9.90; coffee (Maxwell House), \$800; three fresh Chinese pears, \$100; pomolo (similar to grapefruit), \$25; bananas, none available; sugar, unobtainable; gasoline, \$300; whiskey, from \$500 to \$1,800 a quart for genuine Scotch; butter, \$400 for 12-oz. tin, Australian brand. An American \$100 banknote smuggled in from Chungking was exchanged in the Shanghai black market for \$15,000 in currency of the puppet Central Bank.

General opinion regarding the attitude of the Japanese masses in 1943 may be summarized as

follows:

1. The Japanese people were prepared to accept with patriotic obedience any further priva-

tions the war might bring.

2. Japanese governmental attempts to camouflage their dwindling war advantages, had defeated themselves and to some extent aroused disbelief among the people.

3. The Japanese were prepared for a long, hard war and no internal explosion was likely to overthrow the military dictatorship which ruled in

the name of Emperor Hirohito.

Health conditions among the Japanese had deteriorated and there had been a great increase in the national scourge, tuberculosis. Kingoro Hashimoto, an official of the Imperial Rule Assistance Association, declared in a broadcast that miners afflicted with tuberculosis "continue to work patriotically without treatment until the advanced stage of the disease causes their deaths."

Status of Japan's Allies. According to a correspondent from Shanghai, the position of Europeans, including Germans, Italians, and Russians everywhere in Japanese-occupied territory, was growing extremely precarious. Even the Germans were having a difficult time, as their situation became worse every time German armies suffered a reverse on the Russian front. Italians scattered through Jap-occupied areas in China also faced growing danger after the fall of Mussolini and the entrance of United Nations forces into Italy. Italian marines stationed at Tientsin under the old Boxer protocol were disarmed and interned and all Italian civilians in Shanghai and other coast port cities were placed under house-arrest. The large Italian liner, Conte Verde, was scuttled by the Italian collanse.

the Italian collapse.

German Jewish refugees, some 25,000 of whom went to Shanghai following the advent of Hitalier, were in a desperate situation. Aside from a few professional men employed by the Japanese in various necessary services, they were concentrated in a camp or "ghetto" which was worse than any Nazi ghetto in Europe due to lower Japanese standards of living. Russian and German Jews who had established small businesses in the foreign settlements had their properties confiscated and

turned over to Japanese merchants.

Cairo Declaration. The most important political development on the Pacific front in 1943 was the Cairo Declaration on December 1 (see UNITED NATIONS for text).

Although Premier Joseph Stalin was not present at the Cairo Conference, the issuance of the Declaration immediately preceding the Roosevelt-Churchill meeting with Stalin at Tehran, made it practically certain that Russia would, sooner or

later, become an active participant in the war against Japan. While Russia had strictly observed in letter and spirit her neutrality pact with Japan, it was obvious that Russia would wish to participate with the United States, Great Britain, and China, following the defeat of Japan, in disposing of the important Japanese-controlled territories bordering on the Soviet Union.

Japanese spokesmen attempted to minimize the importance of the Cairo Declaration, but Tokyo's serious concern was indicated by a hurried conference which the Japanese Foreign Minister, Mamoru Shigemitsu, held with Yakov Malek, Soviet Ambassador, and Heinrich Stahmer, Ger-

man Ambassador.

A significant element not mentioned in the Cairo Declaration, but nevertheless of vital interest to Russia, concerned the future of the strategically and economically important southern half of Sakhalin Island. If Japan was to be stripped of territories illegally acquired since 1895, this would obviously include the restoration to Russia of the southern half of Sakhalin which Japan acquired from Russia at the Portsmouth Peace Conference, following Russia's defeat by Japan in 1904–05. Sakhalin is rich in oil, coal, and other minerals.

Russo-Japanese Relations. Russian interest in a change in sovereignty over Korea and Manchuria might be likened to the interest of the United States in a possible change in the national status of Canada, Mexico, or Cuba, due to their proximity to

our borders.

Since Japan long had designs on Siberia and had occupied much of the territory following the Soviet Revolution in 1917, it was expected that Japan would invade Russia's Far Eastern territories following Japan's occupation of Manchuria in 1931 and parts of Mongolia in 1937–38. The anti-Comintern Pact which Japan signed with Germany in 1936 was directed at the Soviet Union and it was believed that the military alliance which Japan signed with Germany and Italy on Sept. 27, 1940, contained a clause providing for a Japanese attack on Siberia as soon as Nazi troops had invaded the Soviet Union.

The months following Japan's occupation of Manchuria in September, 1931, were occupied by strenuous Japanese activities in obvious preparation for an invasion of Siberia. New ports were opened on the upper eastern coast of Korea, opposite Vladivostok and new railways were built to the Siberian border with the obvious purpose of facilitating Japanese military transport to the Siberian border. Pressure was brought to bear on the Russians to force them to sell the Chinese Eastern Railway to Japan at a fraction of its original outlay. This action cost the Russians heavily in prestige with the Chinese who owned a half interest in the railway. In 1929 the Russians used force to prevent the Chinese from taking over the railway, despite the fact the Soviet leaders had offered to restore the 200-mile line to China immediately following the Revolution in 1917.

Soviet citizens and Russians, particularly Jews, holding certificates of Soviet citizenship, who resided in Manchuria were subjected to persecution and extortion by the Japanese or White Russian gangsters in Japanese employ, following the Japanese occupation.

In 1938-39 there were clashes between Japanese and Soviet troops stationed along the Manchurian-Siberian border which, under ordinary circumstances, would have provided sufficient provocation for war. These clashes, particularly along the

Amur River for the possession of islands lying in the stream often resulted in casualties on both sides. The first serious clash on the land frontier resembling actual war occurred in 1938 when the Japanese without prior notice occupied a strategic hill in the vicinity of Lake Khassin, a short distance from Vladivostok. Possession of the hill gave the Japanese Army a strategic advantage in the event of a move to encircle or cut off Vladivostok. But the Soviet forces did not hesitate. They launched a combined land and air attack on the Japanese forces and compelled them to withdraw from the occupied area.

Another and more serious clash occurred in May, 1939, on the western border of Manchuria which involved Soviet-controlled Outer Mongolia. In this instance the Japanese also moved across the border and occupied Russian (Mongolian) territory. The area seized was in the vicinity of Lake Buir Nor, an important source of water supply for the semiarid grazing district. The Japanese claimed the Buir Nor lake area belonged to Manchukuo and without warning moved in and occupied it with their troops. Mongolian guards with Soviet officers on the border put up strong resistance but were compelled to withdraw. Fighting continued for ten days with each side bringing up reinforcements. By May 22 the Japanese had a sufficient force, consisting of tanks, armored cars, artillery, and aircraft which was transported across the prairie from their big military base at Hailar, to launch a major attack, But the Russian-Mongol forces were ready and threw the Japanese back with serious losses. Fighting continued intermittently until July 2 when the Japanese launched a more determined attack with two divisions of infantry, a half dozen cavalry regiments, and large numbers of both planes and tanks. In the fighting which developed on a major scale the Russians brought up several of their large "landbattleships" or heavy tanks, the like of which the Japanese never before had seen. Japanese losses were heavy, variously estimated up to 18,000, while both sides lost heavily in planes. By September the tide had turned completely against the Japanese so they asked for an armistice and peace was restored with the Russian-Mongol forces in complete control of the original border and the water supply.

While the Japanese made their usual exaggerated claims regarding losses inflicted on the enemy, neutral newspaper correspondents attested to the superiority of both Soviet planes and tanks. Marshal Voroshilov, War Commissar, declared that Russia was prepared "at any moment to repeat the fighting on a larger and more convincing scale." But the Japanese had enough and their attitude toward the

Soviets changed from open hostility to conciliation. Early in 1941 Foreign Minister Matsuoka succeeded in renewing the Russo-Japanese fisheries agreement, concerning Japanese fishing rights in Siberian waters. The Russians exacted a 20 per cent increase in price through a currency exchange readjustment and also refused to extend the agreement for more than one year (previously the agreement had been issued for three-year periods).

In March and April, 1941, Matsuoka went to Ber-

In March and April, 1941, Matsuoka went to Berlin and Rome to negotiate the anti-Comintern Military Pact and returned home by way of Moscow where he stopped over for a conference with Soviet officialdom. On April 13 the world was startled by the announcement that Japan and Russia had signed a Neutrality Pact. Reports in the Japanese papers stated that the signing of the pact had taken place in an atmosphere of "utmost friendliness" and that both Stalin and Molotov had accompanied Matsuoka and his party to the railway station and

that Premier Stalin had thrown his arms around the neck of Japan's diminutive Foreign Minister and in a burst of affection had kissed him good-bye

The terms of the Neutrality Pact as published simultaneously in Tokyo and Moscow contained the

following clauses:

Article I. Both contracting parties undertake to maintain peaceful and friendly relations between themselves and mutually to respect the territorial integrity and inviolability of the other contracting party.

Article II. Should one of the contracting parties become the object of hostilities on the part of one or several third next is the other contracting party will observe neutrality.

the object of hostilities on the part of one or several third parties, the other contracting party will observe neutrality throughout the duration of conflict.

Article III. The Governments of the U.S.S.R. and Japan solemnly declare that the U.S.S.R. pledges itself to respect the territorial integrity and inviolability of Manchukuo and Japan pledges herself to respect the territorial integrity and inviolability of the Mongolian People's Republic.

Of the three points, the most important were the "neutrality" provision and what amounted to a mutual recognition on the part of Japan and Russia of each other's seizure of Chinese territory, Russia in

Mongolia and Japan in Manchuria.

That there were further unpublished clauses in the agreement was indicated in several important developments in the relations of the two countries. First and most important was the immediate cessation of Russian support, in the form of arms shipments to the Government of Generalissimo Chiang Kai-shek. The Japanese also discontinued their "anti-Comintern" propaganda. Next in importance was Russia's action in suppressing an active Korean independence movement in the regions of Vladivostok and eastern Manchuria where thousands of Koreans had migrated from their homeland. The large Korea University at Vladivostok where Korean revolutionaries received instruction was closed and the Koreans deported to the interior of Siberia.

Two months after the signing of the Soviet-Japanese Neutrality Pact Germany attacked Russia without warning and almost exactly eight months after the signing of the Pact the Japanese made their

sneak attack on Pearl Harbor.

Both Japan and the Soviet Union have found their new situation satisfactory although it had created an incongruous situation, with Russia fighting Japan's Axis partner, Germany in Europe and Russia's partner, America, fighting Japan in the Pacific.

JOHN B. POWELL.

### JAPANESE IN THE UNITED STATES. See ALIENS.

JAPANESE PACIFIC ISLANDS (Nunyo). The former German possessions in the Pacific, north of the Equator (130° to 175° E. and 0° to 22° N.), over which Japan was appointed mandatory in accordance with the terms of the Treaty of Versailles, 1919. The mandate comprises some 1,458 islands, islets and reefs, extending over an area of 1,200 miles north to south and 2,500 miles west to east. There are three main groups: (1) MARIANA or LADRONE (14 islands), including Saipan, Tinian, Rota; (2) CAROLINE (577 islands), including Yap, Palau (Babeldoab), Korror, Truk, Ponape, Kusaie; (3) MARSHALL (60 islands), including Jaluit. Total area, 830 square miles. Population (1940 census), 131,157 (72,540 males and 58,617 females).

Production and Trade. The main products were sugar, maize, coffee, phosphates, tapioca, bananas, breadfruits, copra, alcohol, vegetables, fish, forest products, and bauxite. Trade (1938): imports were valued at U.S.\$8,723,000 (rice, machinery, cloth, oil, wax, wood and wood manufactures, cigarettes, and alcohol were the chief items); exports were valued at U.S.\$13,350,000.

Government. Budget (1940): revenue U.S.\$2,-564,182; expenditure U.S.\$2,540,228. The administrative affairs of the mandate were managed by a governor who was subject to the direction of the Japanese Minister of Overseas Affairs, except that he was under the minister in charge, respectively, in matters relating to communications, finance, and commerce and industry. Headquarters of the Governor were in Korror, one of the Palau islands in the western Carolines. (See Jaluit, Kusaie, Ponape, TRUK, and YAP.)

JARVIS ISLAND. A mid-Pacific island (0° 23' S. and 159° 54' W.), south of Hawaii; owned by the United States. The island lies in the path of the main steamship lanes and airways from Honolulu to New Zealand and Australia. In former years guano was produced from the island but it remained uninhabited for a number of years until 1936 when the U.S. Department of the Interior set up an aerological station.

JEFFERSON MEMORIAL. See ART under Sculpture. JEHOVAH'S WITNESSES. See Australia under History; Law under Decisions Concerning Personal Liberties.

JET-PROPELLED AIRCRAFT. See AERONAUTICS. JEWEL PRODUCTION, JEWELRY. See FASHION EVENTS; NATIONAL BUREAU OF STANDARDS; PLATINUM.

JEWISH CONGREGATIONS. For the latest information available, see Religious Organizations and the article on Jewish Congregations in the 1942 Year Book.

JEWISH WELFARE BOARD. Organized Apr. 9, 1917, the Board has a two-fold purpose. It is the parent body for Y.M.H.A.'s, Y.W.H.A.'s and Jewish Community Centers in the United States and Canada. It also provides for the religious and welfare needs of men and women in the armed forces of the United States. The Board is composed of 315 constituent societies in the United States and Canada, which have 410,000 members. Seven regional organizations are affiliated in its work.

The Board serves the Jewish Center field and deals with problems relating to programs of activities and administration, vocational guidance, educational, cultural, and recreational activities, special Jewish cultural programs, community surveys and institutional studies, club leadership training, summer and day camps, health and physical education, forums and lectures, personnel service, and maintains a field service in contact with its affiliated organizations. The Jewish Center Division cooperates closely with government and private agencies regarding war activities and brings material and plans to the attention of the constituent

The Jewish Welfare Board is one of six organizations of the United Service Organizations (q.v.). In this connection, its activities are conducted on a

nonsectarian basis.

The Army and Navy Committee of the Board, Walter Rothschild, chairman, serves men and women of Jewish faith in the Army and the Navy. This Committee is composed largely of representatives of the 37 national Jewish organizations which are affiliated with it. There are almost 500 local Army and Navy Committees in the United States as well as overseas, through which communities cooperate in providing welfare activities for men and women in the armed forces. The Committee on Religious Activities (Rev. Dr. David de Sola Pool chairman) recruits and endorses rabbis to serve as chaplains in the Army and Navy, and prepares the devotional literature distributed to Jewish personnel in the forces. Other committees in the Army and Navy Division include Personal Service, Veterans Service, and Bureau of War Records.

The Women's Division (Mrs. Alfred R. Bach-

The Women's Division (Mrs. Alfred R. Bachrach, chairman) coordinates the efforts of national and local women's groups in behalf of the program of service to men and women in uniform and

civilian war efforts.

The officers of the Board are: Irving Lehman, Honorary President; Frank L. Weil, President; Lloyd W. Dinkelspiel, Mrs. Walter E. Heller, Mr. Carl M. Loeb, Jr., Mr. Walter Rothschild and Mrs. Felix M. Warburg, Vice-Presidents; Max Wilner, Treasurer; Joseph Rosenzweig, Secretary; and Louis Kraft, Executive Director. The headquarters are at 220 Fifth Avenue, New York City.

JEWS. See Refugees; also Algeria, Argentina, Belgium, Bulgaria, Denmark, Germany, Hungary, Italy, Japan, Morocco, Netherlands, Poland, Rumania, and Tunisia. For activities in the United States see Jewish Welfare Board; groups listed under Societies, as Jewish Women, Inc.; ORT; Zionist Organization; Zonta International.

JOHNSTON ISLAND. An atoll in the central Pacific, 809 air miles southwest of Honolulu, belonging to the United States. Useful as an advance observation post in the Hawaiian defense system, it is under the jurisdiction of the Navy Department. With funds appropriated by Congress in 1939 and 1941, the atoll was converted into a naval air base and submarine base. A channel was cut through the barrier reef; coral heads were removed from the lagoon to permit its use by seaplane tenders, seaplanes, and submarines; and landplane runways and other aviation facilities were installed. On May 15, 1941, the island was designated a "naval defensive sea area" and on Aug. 15, 1941, the naval air station was commissioned. In December, 1941, the installations were attacked by Japanese ships and planes. A United States garrison remained in control throughout 1943.

JOINT BRAZIL-UNITED STATES DEFENSE COMMISSION. A Commission composed of military delegates (Army, Navy, and Air Forces) of the two countries, established in August, 1942. Meetings are held in Washington for the purpose of making staff plans for the mutual defense of the Western Hemisphere. U.S. Chairman: Maj. Gen. J. G. Ord.

JOINT CHIEFS OF STAFF, U.S. Under the direction of the President, the Joint Chiefs of Staff are responsible for coordination between the Army and the Navy, representing the United States in the Combined Chiefs of Staff. In operations for which the United States has sole or primary responsibility, they are charged with the strategic conduct of the war. They are further responsible for the broad program of war requirements based on approved strategic policy; for the allocation of munition resources based on strategic needs and the availability of means of transportation; and for the requirements for overseas transportation based on ap-

proved strategic priority. For membership, see Combined Chiefs of Staff.

Office of Strategic Services. On June 13, 1942, the Office of Strategic Services, formerly the office of Coordinator of Information, was placed under the jurisdiction of the Joint United States Chiefs of Staff. Its functions, as modified by Executive order on Mar. 9, 1943, are (a) to collect and analyze such strategic information as may be required by the Joint Chiefs of Staff, and (b) to plan and operate such special services as may be directed by the Joint Chiefs of Staff. The director is Brig. Gen. W. J. Donovan.

JOINT ECONOMIC COMMITTEES (Canada and the United States). The Joint Economic Committees were established by the United States and Canada on June 17, 1941, to study and report to their respective governments on the possibilities of (1) effecting a more economic, more efficient, and more coordinated utilization of the combined resources of the two countries in the production of defense requirements and (2) reducing the probable postwar economic dislocation consequent upon the changes which the economy in each country is presently undergoing. The United States Committee is interdepartmental representing the Federal Reserve Board, War Production Board, Tariff Commission, Department of Agriculture, National Resources Planning Board, and State Department. The chairman is Alvin H. Hansen.

JOINT ECONOMY COMMITTEE (Byrd). See UNITED STATES under Investigations.

JOINT MEXICAN-UNITED STATES DEFENSE COMMISSION. A Commission organized Jan. 12, 1942, to study problems relating to the common defense of the United States and Mexico, to consider broad plans for the defense of Mexico and adjacent areas of the United States, and to propose to the respective governments cooperative measures.

U.S. Chairman, Vice Adm. A. W. Johnson.

JOINT PRICE ADJUSTMENT BOARD. A Joint Board created Oct. 20, 1943, to exercise certain authority formerly exercised by the individual agencies renegotiating war contracts; i.e. the War, Navy and Treasury Departments, the Maritime Commission, the War Shipping Administration, and the Reconstruction Finance Corporation for its subsidiaries

subject to the Renegotiation Statute.

The personnel of the Joint Board is as follows: Mr. Joseph M. Dodge, Chairman of the War Department Price Adjustment Board, Chairman; Mr. Kenneth H. Rockey, Chairman of the Navy Price Adjustment Board, vice chairman; Mr. Thomas M. Woodward, Chairman of the Maritime Commission Price Adjustment Board, who is also representing the War Shipping Administration Price Adjustment Board; Capt. Harry C. Maull, Jr., Chairman of the Treasury Department Price Adjustment Board; Mr. Charles T. Fisher, Jr., Chairman of the Reconstruction Finance Corporation Price Adjustment Board, and Mr. Carman G. Blough, War Production Board representative.

The establishment of the Joint Board provides a formal procedure in place of the informal procedure which has been followed by the individual price adjustment boards since their establishment and the relationship which has been maintained between them in such matters as the adoption and publication of joint statements of purposes, principles, policies, and interpretations.

The Secretary or head of each of the departments

or agencies engaged in renegotiating war contracts under the Renegotiation Statute has delegated authority and discretion to the joint board as follows:

(a) To formulate and adopt statements of purposes, principles, policies, and interpretations under the statute which shall be binding on the Departments.

(b) To define, interpret and apply by joint regulation the exemption specified by the statute relating to the product of a mine, oil or gas well or other mineral or natural deposit or timber.

(c) To exempt from some or all of the provisions of the statute general classes or types of contracts, and to

(c) To exempt from some or all of the provisions of the statute general classes or types of contracts, and to formulate standards for the exemption of such contracts.

(d) To determine whether any contractor shall be required to renegotiate for any fiscal period the contract price under some or all of his contracts subject to renegotiation under the statute.

(e) To assign any contractor to any Department for determination whether excessive profits have been or are likely to be realized from some or all of its contracts subject to renegotiation under the statute.

(f) To prescribe by joint regulation the form and details of the financial statements contractors may file, and the form, time and manner of giving the notice to which they are entitled, in order to commence the running of the period of limitation after which its contracts cannot be renegotiated.

Proposed amendments to the Renegotiation Stat-

Proposed amendments to the Renegotiation Statute were contained in the Revenue Act of 1943, which was pending before Congress at the end of 1943. For details, see TAXATION.

JOINT WAR PRODUCTION COMMITTEE (Canada and the United States). The Joint War Production Committee of Canada and the United States was established on Nov. 5, 1941, by the President of the United States and the Prime Minister of Canada, to coordinate the capacities of the two countries for the production of war materiel. For details, see 1943 YEAR BOOK, p. 351.

Attorney General in 1943: Francis Biddle. Solicitor General: Charles Fahy.

JUVENILE DELINQUENCY. In wartime, as in peacetime, delinquent behavior of children and young people is a sign of unsatisfied needs. In addition to their physical requirements for nourishment, clothing, shelter, protection, and medical care, children need the knowledge that they are loved, an

assured place in family and community life, and a chance to develop and use in suitable ways their intelligence, judgment, and initiative. During 1943 the great majority of young people in the United States met successfully the upsets and stresses of wartime, but even some of these may show a delayed reaction to emotional strains and deprivations resulting from the war and many who were not involved in overt acts of delinquency probably suffered to some extent from the factors that promote delinquency.

That juvenile delinquency—in the legal sense of an act or conduct that brings a child within the jurisdiction of the juvenile court—has increased in the United States under wartime conditions is clearly indicated by available information. Statistics reported to the Children's Bureau by nearly 500 juvenile courts furnish the most comprehensive body of information in this field. For 83 of these courts, all of which serve areas of 100,000 or more population, statistics are available for a series of years. The total number of delinquency cases disposed of by the 83 courts increased from 65,000 in 1940 to about 75,500 in 1942, an increase of 16 per cent. A recent study made by the National Probation Association that covered courts in 153 areas gave a similar percentage increase.

Statistics on juvenile-delinquency cases disposed of by juvenile courts, although representing the most reliable index available as to the extent of the delinquency problem, are affected by many variable factors. The jurisdiction of juvenile courts ceases at 16 years in some States, in others at 17 or 18 years or later. The reasons for which children are referred to juvenile court are varied, yet all, trivial and serious alike, are included in the total—the case of the child who hitched a ride on the streetcar or rode his bicycle on the sidewalk, as well as the case of one who robbed a store or committed assault. In places where social services are available for dealing with problems of behavior, the cases of many children whose conduct is contrary to law may be handled effectively without court action. On the other hand, an increase in delinquency cases may represent increased community concern with certain types of offense. Thus, the emphasis placed on the control of venereal diseases has resulted in bringing the problems of young girls increasingly to the attention of the courts.

For the 83 courts in the Children's Bureau series the percentage increase in girls' cases from 1940 to 1942 was strikingly greater than the increase in boys' cases (38 per cent compared with 11 per cent, respectively). Of the approximately 75,500 cases disposed of in 1942, however, about 60,500 involved boys and 15,000 involved girls, so that boys' cases outnumbered girls' cases by four to one.

Increases in juvenile-delinquency cases were associated, apparently, with conditions prevalent in rapidly growing war production areas. Of the 83 courts, 41 were situated in areas of increasing population, and for this group the increase in juvenile delinquency from 1940 to 1942 was 18 per cent. For the 42 courts in areas of declining population, the increase for this period was 9 per cent. Comparable reports for 1940 and 1942 for 130 courts in the Children's Bureau series, which serve small towns or rural areas in Massachusetts, New York, Ohio, and Rhode Island, show that in 49 of these courts the number of juvenile-delinquency cases decreased; in 8 there was no change; and in 73 the number increased.

The roots of delinquent behavior may go back to unsatisfied hunger for mothering and fathering in infancy or early childhood; to loss of security through family migration or the breaking up of family routines; to a child's bewilderment at the fact that he is expected to check his own destructive impulses while the vastly greater destructiveness of war is accepted by adults. They may be found in the experiences of school children who lack security and guidance, or the sense of personal achievement, who find the curriculum unsuited to their needs, or who suffer from wartime restrictions on educational opportunity. Adolescents react even more sensitively to war and to wartime demands that result in frustration, renunciation of personal plans, and restriction of freedom of action. The normal adolescent conflict between dependence on the family and the drive to become independent is sharpened by war conditions. Both boys and girls become resentful of authority, impatient to prove their personal worth, eager to live fully and dangerously. Thus, children of all ages are subjected during the war to more of the psychological conflicts that make for delinquency than ever before.

Other situations prevalent in wartime undoubtedly foster delinquency. One of these is lack of parental supervision because of the absence of fathers in the armed forces and the widespread employment of mothers in war industries. The importance of supervision and care for school-age children whose mothers are employed cannot be ignored as a factor in delinquency control. Another condition conducive to delinquency is the employment of teen-age boys and girls, either part-time or full-time, late at night or under conditions that curtail their schooling, impede their growth, or expose them to unwholesome influences. Other wartime conditions that make for increased delinquency are the extensive migration of families to crowded war centers where community resources, including schools, playgrounds, and health facilities, are overtaxed; the accessibility of "attractions" such as cheap dance halls or beer parlors in the vicinity of military establishments or industrial centers; and the general spirit of excitement and unrest generated by war.

As communities became increasingly conscious of their responsibility to assist parents in meeting the wartime needs of children and youth and of their further responsibility to provide services outside the home that are necessary for the rounded development and protection of children and youth, they turned to Federal agencies and national youthserving organizations for guidance. In February, 1943, a special meeting of the Children's Bureau Commission on Children in Wartime was held at the White House, at which attention was focused on problems of juvenile delinquency. As one result of this meeting the Children's Bureau, in consultation with other Federal agencies, prepared a bulletin, "Controlling Juvenile Delinquency—A Community Program," which was published in November. The goals for community action suggested in it are: Strengthening of resources needed by all children; protection of groups of children especially vulnerable to delinquency; control of harmful influences in the community; and provision of services for the delinquent child and the child with behavior problems. Among the community resources described as important in preventing delinguency are the home, the school, the church, and recreational and group activities. Groups of children considered especially vulnerable to delinquency include children of employed mothers, boys and girls in employment, children living in crowded

quarters or congested areas, mentally and physically handicapped children, and children in families with economic need. Control of harmful influences in the community depends on well-drawn laws and ordinances, effective enforcement of them, the protection of youth in public places, and the voluntary cooperation of commercial establishments in safeguarding children. Services considered essential for the delinquent child and the child with behavior problems include social services and child guidance, the police and the juvenile court, adequate detention care, and provision for adequate institutional and foster-family care.

In connection with the enforcement of the May Act prohibiting prostitution near military or naval establishments and the venereal-disease-control act, the cases of young girls engaged in prostitution, many of them already infected with venereal disease, attracted public attention. During the year the Children's Bureau of the U.S. Department of Labor and the Division of Social Protection of the Office of Community War Services (see FEDERAL SECURITY AGENCY) began the development of a program for strengthening the juvenile services of police departments. In November, 1943, a conference was held at the Children's Bureau, which was attended by members of the International Association of Chiefs of Police, the National Sheriffs' Association, the Division of Social Protection of the Office of Community War Services, the Federal Bureau of Investigation and the Bureau of Prisons of the Department of Justice, the Office of Education of the Federal Security Agency, and the American Public Welfare Association, as well as by child-welfare workers and educators in the socialservice field. Emphasis was placed on the need for closer working relationships in local communities between social-welfare and law-enforcement agencies and the further coordination of social services for juveniles who come to police attention. The Bureau was requested to appoint a committee to explore the possibilities and to develop emergency and continuing programs for training policemen and policewomen dealing with juveniles.

Many of the children who require attention because of delinquent or unacceptable behavior can be dealt with in their own homes, without action by the police or the juvenile court, if social services are available to help them and their families with their problems. Through the program of child-welfare services established under title V, part 3 of the Social Security Act, the Children's Bureau continued to make grants to State welfare agencies for services to homeless, dependent, and neglected children, and children in danger of becoming delinquent. During the year these services were adapted to the fullest extent possible to meet wartime needs. Twelve States (Alabama, Arizona, Indiana, Michigan, Minnesota, Mississippi, New York, North Carolina, South Dakota, Texas, Utah, and Virginia) devoted a part of their funds to special projects for the study and prevention of delinquency. Five States (Indiana, Michigan, Minnesota, Texas, and Utah) provided for a special consultant in delinquency problems on the staff of the State welfare agency. Six States (Alabama, Arizona, Mississippi, New York, North Carolina, and Virginia) provided for special workers in connection with the State industrial schools for delinquent children. Two States (Indiana and South Dakota) assigned local child-welfare workers to areas faced with special wartime delinquency problems

with special wartime delinquency problems.

Widespread detention of children in jails continued to be reported. According to a recent Children's Bureau study made in representative com-

munities of three States, hundreds of children under 16 years of age were found to have been detained in county jails in the course of a year, some of them for many nights. Yet food, sanitary conditions, medical care, and staff in local jails are generally so unsatisfactory that a very small proportion of them in the States where the study was carried on had been approved by the Federal Bureau of Prisons for the detention of Federal prisoners, either adult or juvenile. Moreover, many of the jails lacked provision for keeping children in separate quarters from adult offenders. The procedure recommended by the Children's Bureau calls for the detention of juveniles only when their release to their parents is not feasible, for planning to keep the length of detention to a minimum, and for the use of detention quarters entirely apart from those used for adults, preferably a carefully selected foster home or boarding home, or, if the community is large enough, a special detention home.

Wholesome recreation is one of the most important factors in preventing juvenile delinquency. Yet recreation facilities in war-affected communities where population had increased rapidly were reported to be limited, as a rule. In one shipbuilding center where the Children's Bureau made a recent study of recreation facilities a housing project of 5,200 family units was found where there were no leveled playgrounds, no suitable community center, and too few recreation leaders. Some communities with sound representative leadership, on the other hand, built up well-rounded programs of recreation and informal educational activities which included full utilization of school buildings, parks and playgrounds, park areas, community centers, museums, and libraries; the development of public recreation resources; varied activities conducted by youth-serving agencies, settlements, and churches; and wholesome use of commercial recreation facilities

under proper control.

Great Britain. In Britain juvenile delinquency, which had increased sharply in the early years of the war, had begun to decline by the end of 1941. Figures released by the British Information Services in July, 1943, show that the total number of children under 16 charged with indictable offenses, which rose from 29,123 in 1939 to 38,688 in 1940 and 44,298 in 1941, fell to 87,846 in 1942. (All figures are for 12-month periods ending August 31 of each year.) The decrease applied both to children 8 to 14 years of age and to young persons 14 to 16, but was much greater for boys than for girls. The causes of wartime juvenile delinquency in Britain are given as the opportunities for un-lawful acts afforded by the prolonged blackout; dislocations of home life, including mass evacua-tion of school children from London, destruction of homes in target areas, shelter life, absence of parents in the services and on war work; war-time restlessness; disruption of school life; high wages, often due to exceptionally long hours, obtained by many boys and girls inexperienced in self-direction; and delay in admitting young people to congested remedial institutions. Foremost among the measures credited with the reduction in juvenile delinquency are the reopening of most schools in 1941, the swing over from deterrent punishment of young offenders to remedial care, reduction of working hours, and the National Youth Movement developed by the Board of Education and the Department of Education for Scotland with the cooperation of the juvenile courts, the churches, the youth-serving agencies, the several branches of the armed forces, and the trade unions. The Youth

Service programs include recreation, vocational training, and pre-service training.

American Republics. No increase in delinquency in the other American Republics is evident from available reports, which deal mostly with measures for improving treatment of juvenile delinquents. In Buenos Aires, Argentina, the Government appropriations for the employment of probation officers, men and women, in the juvenile court have been increased, with a consequent decrease in the number of unpaid volunteers. In Brazil, where juvenile courts have been organized in several States under State law, the National Children's Bureau in 1943 announced a nationwide program which calls for the establishment of local child-welfare boards. These boards are to cooperate with the juvenile courts and police authorities and to provide greater funds and better facilities for the work of the courts. In Chile, the child-welfare law of 1928, under which juvenile courts were established in a few cities, was amended to provide for their establishment elsewhere: in places not served by juvenile courts, a judge of the regular court is to be assigned to hear children's cases. A committee to study juvenile delinquency was appointed by the Minister of the Interior. In Venezuela, a Division of Social Service, directed by a social worker, was established in 1942 in the juvenile court of Caracas, the capital, by order of the Venezuelan Council of the Child, official agency in charge of social services for mothers and children. See Childential Council of the Child, official agency in charge of social services for mothers and children. DREN'S BUREAU.

Officers. The Governor is Simeon S. Willis (Rep.), inaugurated in December, 1943, for a four-year term; Lieutenant Governor, K. H. Tuggle; Secretary of State, C. K. O'Connell; Attorney General, E. S. Dummitt. See Elections.

KENYA. A colony and protectorate of British East Africa. Area, 224,960 square miles. Population (1940 estimate), 3,534,862, including 3,447,706 natives, 44,240 Asiatics, 24,596 Europeans, and 15,857 Arabs. Chief towns: Nairobi (capital), 61,300 inhabitants; Mombasa, 50,000; Nakuru; Kisumu. Education (1940): 2,233 schools of all kinds. The amount spent by the government on African education during 1942 £86,000.

Production and Trade. The principal products include cotton, maize, cottonseed, sugar (19,500 tons, 1941), coffee (18,500 tons, 1941), sisal, pyrethrum, tea, timber (2,204,000 cu. ft., 1941), sodium carbonate (24,827 tons, 1940), wattle, and gold (77,243 fine oz., 1940). Other products are groundnuts, sesame, coconuts, tobacco, potatoes, essential oils, cashew nuts, dairy products, wool, and hides. Livestock, European owned (1938): 497,478 cattle, 563,049 sheep, and 13,192 swine. Kenya and Uganda are one administrative unit for customs purposes. Trade (1941): imports £8,085,000; exports £4,739,000. In 1941 reexports from both Kenya and Uganda were valued at £3,494,000. Kenya's chief exports were gold, pyrethrum, coffee, tea, and sisal. The main imports were cotton manufactures, foodstuffs, fuel oil, gasoline, coal, machinery, wearing apparel, and motor vehicles.

factures, foodstuffs, fuel oil, gasoline, coal, machinery, wearing apparel, and motor vehicles.

Communications. During 1941 the state-owned railways carried 1,706,416 tons of freight and 1,643,186 passengers, exclusive of 35,056 European troops and 45,090 European prisoners of war carried by special arrangement. Roads (1940): 16,537 miles. Telegraph and telephone lines (1940): 18,-

985 miles.

Finance. The largest appropriation (£4,867,000) in Kenya's history was authorized to defray expenditure for 1943. This was exclusive of supplementary appropriations. Debt service in 1943 required £1,178,000, which was 5.5 per cent more than the amount so authorized in 1942.

Government. The executive power is vested in a governor, assisted by an executive council. There

is a legislative council of 41 members (the Governor as president, 11 ex-officio, 12 nominated, and 17 elected). By the Kenya Annexation Order in Council, 1920, the territories of the mainland, excluding the mainland dominions of the Sultan of Zanzibar, were recognized as a colony; the coastal belt rented from the Sultan of Zanzibar remains a protectorate. Governor and Commander in Chief, Sir Henry Moore (appointed Oct. 26, 1939).

History. During 1943 the conscription of Kenya's

History. During 1943 the conscription of Kenya's European women was applied to the age groups of 18 to 21. In September East African troops were reported to have left Nairobi for India and Ceylon.

KERATOCONJUNCTIVITIS. See MEDICINE. KEYNES PLAN. See POSTWAR PLANNING. KIDNAPING. See FEDERAL BUREAU OF INVESTIGA-TION.

KINGMAN REFF. An atoll in the Pacific Ocean 1,067 miles southwest of Honolulu, Hawaii; owned by the United States. The reef is about eight miles long and the lagoon is about five miles wide, but only a small area of land remains uncovered at high tide. The atoll was occupied temporarily by a Pan American Airways crew in 1936–37. Effective May 15, 1941, President Roosevelt proclaimed it a naval defensive area. The Navy Department has jurisdiction over the atoll, which is useful as an outpost of the nearby naval air station at Palmyra (q.v.) and as an alternative way-station on the Honolulu-Pago Pago air route.

KIRGHIZ SOVIET SOCIALIST REPUBLIC. See Union of Soviet Socialist Republics under Area and Population.

KISKA. See World War under The War in the Pacific.

KODACHROME, KODACOLOR AERO, KOTAVACHROME. See Photography.

KOREA (CHOSEN). A former empire of eastern Asia, annexed by Japan on Aug. 22, 1910, and incorporated as an integral part of the Japanese empire in 1919. Capital, Keijo (Seoul).

Area and Population. Area, 85,246 square miles. Population, 24,326,327 at census of Oct. 1, 1940. The racial division of the population on Jan. 1, 1939, was: Koreans, 21,950,716; Japanese, 633,320; foreigners (mostly Chinese), 94,815. Populations of the chief cities on Jan. 1, 1939, were: Keijo (Seoul), 706,396; Heijo (Pyeng-Yang), 185,419; Taikyu, 110,866; Jinsen (Chemulpo), 102,473. The Koreans have their own spoken and written language, but Japanese is the language of the government.

Education and Religion. About 60 per cent of all adults are illiterate. As of Jan. 1, 1939, there were 499,300 Christians, 286,000 Buddhists, and about 105,000 adherents of Shintoism, which is supported by the government. Confucianism and ancestor worship are widely practiced. In 1940 the Christian denominations were brought under rigid government control.

Production. Over three-fourths of the working population is engaged in agriculture and forestry. About one-fourth of the cultivated area is devoted to rice (3,995,400 metric tons produced in 1940-41). Yields of other crops in 1939, except as stated, were: Barley, 37,549,620 bu. in 1940; millet, 25,977,578 bu.; soybeans, 19,184,462 bu.; rye, 14,858,612 bu.; wheat, 12,358,157 bu.; cotton, 157,752,637 lb.; silk cocoons, 22,713,000 kilos in 1940. In 1939 there were 1,705,000 cattle, 1,400,000 swine,51,000 horses, and 20,000 sheep. Fisheries produc-

tion in 1940 was valued at 151,090,000 yen; mineral and metallurgical production (1936), 110,429,655 yen, chiefly in gold, coal, pig iron, and steel. Other leading industrial products are textiles, paper, pottery, metal ware, and tobacco products.

Foreign Trade. Korea's merchandise trade with other parts of the Japanese Empire during the first 10 months of 1940 was: Imports, 1,121,900,000 yen; exports, 614,100,000 yen. Merchandise trade with foreign countries during the first nine months of 1940 was: Imports, 168,200,000 yen; exports, 150,700,000 yen. The chief exports are rice, fertilizer, crude copper containing gold and silver, raw silk, and soybeans.

Finance. Budget estimates for the fiscal year ended Mar. 31, 1942, placed both receipts and expenditures at 1,012,577,000 yen. The public debt on Mar. 31, 1938, was 593,546,214 yen. The yen exchanged at \$0.2596 in 1939, \$0.2344 in 1940, and \$0.2344 for the first seven months of 1941.

Transportation. Railways extended about 3,345 miles on Jan. 1, 1941 (state lines, 2,469; private, 876). Highways extended 19,048 miles in 1940. Air lines linked Keijo with the other chief cities of Korea, Japan, Manchoukuo, and North China. Shipping entering the open ports in 1938 totaled 14,677,742 tons.

Government. Korea was ruled by a Governor-General appointed by the Emperor of Japan until October, 1942, when its administration was unified with that of Japan proper and placed under the jurisdiction of the Japanese Home Minister. A Korean "provisional government" and "restoration army" were established in Chungking in 1940. The joint communiqué issued Dec. 1, 1943, following the Cairo conference of President Roosevelt, Prime Minister Churchill, and Gen. Chiang Kai-shek, declared that the United States, Britain, and China "mindful of the enslavement of the people of Korea, are determined that in due course Korea shall become free and independent." See Japan.

KUSAIE. A Japanese island in the eastern Carolines of the Japanese Pacific Islands (q.v.). Area, 45 square miles. There is a fine harbor with large commercial piers. The island was reported to be a base for Japanese armed forces.

KWANGCHOWAN (KWANGCHOW). See FRENCH INDO-CHINA.

KWANTUNG. The territory occupying the southern part of the Liaotung Peninsula in Manchuria, leased from China by Japan. Area, including 40 adjacent islands, 1,337 square miles. Population (census of October, 1940), 1,367,334. Chief towns (1938 populations): Dairen, 515,743; Port Arthur (Ryojun), 145,286; Pulantien; Kinchow. The chief industries are agriculture, fishing, and salt manufacture. Trade (1937): imports Y680,061,785; exports Y451,798,860 (yen averaged \$0.2879 for 1937; \$0.2344, 1940). Budget (1940–41): Y57,300,655. In December, 1934, the Kwantung Government was replaced by the Kwantung Bureau and subordinated to the Japanese Embassy. See Manchukuo.

LABOR, U.S. Department of. A Department of the U.S. Government which in 1943 consisted of the following principal bureaus and divisions:

Bureau of Labor Statistics Children's Bureau Division of Labor Standards U.S. Conciliation Service Wage and Hour and Public Contract Divisions Women's Bureau

A wartime Committee on Conservation of Manpower in Industry has been set up to advise on industrial accidents and health exposures and on what can be done to control or eliminate them. The Secretary of Labor in 1942 was Frances Perkins. See the articles on the separate branches. See LIVING COSTS AND STANDARDS for the report of Cost of Living Division. For reports on Cooperation see Consumers' Cooperatives.

LABOR CONDITIONS. The greater degree of government control of labor relations noted last year was intensified in 1943. Wages and working conditions were more directly fixed by government agencies, and employers were prohibited from increasing or decreasing rates of pay without government approval. During the year grounds for approval of wage increases were strictly limited. Longer working hours were imposed by government order on various industries and industrial areas, and regulations of working conditions for women and chil-dren were frequently eased to obtain necessary help. There was also more strict government control of hiring and in areas where manpower short-ages were critical, labor was allocated on the basis of labor priorities for the more essential industries. Quitting or changing jobs by employees was more strictly controlled. Added restrictions on the right to strike were imposed, but the number of strikes increased markedly. In the United States strong resistance to the government controls developed during the year among workers and labor organizations. Numerous work stoppages, unauthorized by the unions, were directed against delayed handling of cases by government agencies. The United Mine Workers and the C.I.O. unions, led by the Steel Workers, were in open revolt against the wage stabilization program, and as the year ended the Government took over the operation of the railroads to prevent a strike called by the railway brotherhoods against what they considered arbitrary rulings of the stabilization director.

Employment and Unemployment. At the end of 1943 the employed civilian labor force in the United States aggregated approximately 52,600,000. Em-

ployment in nonagricultural industries totaled 41,-200,000 of whom 26,700,000 were men and 14,-500,000 were women. Farm employment averaged slightly higher than in 1942 due primarily to an increase in the employment of women. In nonagricultural industries almost 2,000,000 more women

were employed in 1943 than the preceding year. Unemployment declined throughout 1943 and at the year's end totaled about 700,000, or less than half as many persons as in the latter part of 1942. In April, 1940, 16 per cent of the nation's labor force were idle. By the end of 1943 less than 2 per cent of the labor force were jobless.

Production of ships, planes, tanks, and other "heavy goods" war materiel continued to drain workers from factories producing luxury and non-essential civilian goods. At the end of 1943 approxi-mately 8,400,000 or 60 per cent of the nation's 14,000,000 factory wage earners were employed in the durable goods industries where the bulk of the war output was centered. Government employment—Federal, State, and local—declined slightly toward the close of the year after reaching an all-time peak of nearly 6,000,000 or about one-third greater than in 1939. The number of workers in the state of the year after reaching an all-time peak of nearly 6,000,000 or about one-third greater than in 1939. The number of workers in the state of the state of the year after reaching an all-time peak of nearly 6,000,000 or about one-third greater than in 1939. The number of workers are the year after reaching an all-time peak of nearly 6,000,000 or about one-third greater than in 1939. The number of workers are the year after reaching an all-time peak of nearly 6,000,000 or about one-third greater than in 1939. The number of workers are the year after in the building trades declined from about 2,200,-000 to slightly more than 1,000,000 as the peak

of war plant construction passed.

Acute shortages of workers for war and civilian industries led the War Manpower Commission and the War Production Board (qq.v.) in September to authorize establishment of Manpower Priorities Committees in various regions to work out procedures for the referral of workers by public employment offices to industries most urgently in need of additional labor. These procedures received their first trial on the West Coast where war production was falling behind schedule. Early in December the War Manpower Commission announced that the West Coast program had made possible a more accurate channeling of workers and reduced by 97,000 the labor requirements of shipyards in the area. Foreign workers, principally Mexicans, were brought into the country and prisoners of war and troops were also used for certain types of work.

The manpower needs of agriculture reached an acute stage in the spring as inductions into the armed forces and attractive wages in war plants siphoned off many farm hands until farmers of draft age were exempted from military service. Severe local labor shortages were relieved by the importation of about 70,000 Mexican, Jamaican, and Bahaman agricultural workers, the use of

troops, and war prisoners.

In Great Britain controls over civilian manpower were tightened still further and plans were formulated late in the year for the conscription of young men to work in coal mines. The aircraft industry experienced increasing difficulty in securing an adequate supply of workers and reported a shortage of supervisory and technical personnel. The number of unemployed declined from 116,000 in July, 1942, to 86,000 a year later.

In Canada, out of a total population of 8,720,000 men and women aged 14 and over, approximately 5,000,000 or about 60 per cent were at work or in the armed services. This represented an increase of about 1,000,000 since the outbreak of the war. According to trade union records unemployment in Canada declined to 0.3 per cent of a reported membership of nearly 500,000.

In Russia no shortage of unskilled labor developed but skilled labor continued to be in great demand. Soviet wartime manpower policy has concentrated upon regulating hiring practices rather than the formulation of policies of controlled labor allocation. A system of inter-industry clearance and reallocation of employed workers, integrated with national production planning has sufficed to solve most skilled-labor bottlenecks in war production which extensive training of youth and women

could not eliminate.

A study by the International Labor Office estimated that more than 30,000,000 men, women, and children have been torn from their homes and their native soil in Europe since the beginning of the war. Another survey estimated that within "Greater Germany," i.e. prewar Germany, Austria, Sudetenland, and parts of Czechoslovakia and Poland, 12,000,000 foreign workers were laboring under the Nazi yoke. Another 12,000,000 workers were estimated to be harnessed to the German war machine in the conquered countries.

See Business Review under Employment; Post-WAR PLANNING; articles on various branches of industry, as FOOD INDUSTRY, MOTOR VEHICLES, SHIP-BUILDING, also, the topics listed under MANPOWER

Women Workers. Increasing numbers of women were brought into the employed labor force of virtually all the countries actively engaged in the war. Where the need of additional manpower was extremely critical—as in England and Nazi-held territory-women were conscripted for civilian and even military duties. It was estimated that the German labor force included about 15,000,000 women. Thousands of Polish and Ukrainian women were taken into Germany by the Nazis for domestic servants, thereby relieving German domestics for work in armament factories. In England further registrations brought all women up to 50 years of age subject to the Government's program of labor conscription. Over 2,500,000 married women and 600,-000 part-time women workers were included in the labor force. Women were needed especially for work in aircraft factories, textile mills, and as nurses. In Canada, between 400,000 and 500,000 women were recruited for jobs by employment of-fices during the past year. Women constituted more than 80 per cent of all workers in instrument factories, about two-thirds of the small arms workers and over one-fourth of all aircraft employees. Women were building ships on both the Canadian East and West Coasts and, for the first time, took up jobs in steel mills.

Within the United States women continued to

enter war industries in large numbers. The total number of women in nonagricultural industries rose by almost 2,000,000 in 1943, and was more than 3,000,000 larger than in 1941 when the United States entered the war. By the end of 1943 approximately 5,000,000 more women workers were employed than in June, 1940. The proportion of women in the employed labor force rose from 23.5 per cent in June, 1940, to about 32 per cent in the fall of 1943. Over the same interval the number of unemployed women declined from 2,700,000 to 300,000—a drop of nearly 80 per cent.

The widespread use of women in industry helped them attain an employment status more nearly comparable to that of men. The National War Labor Board (General Order 16) declared that adjustments which equalized the wage or salary rates paid to women with the rates paid to men for comparable quality and quantity of work on the same or similar operations could be made by employers without Board approval. Although this order was issued Nov. 24, 1942, the full effect of it was not felt until 1943. Women were also accorded greater responsibilities in trade union mat-ters; many assumed posts of leadership in local unions and served as delegates to conventions.

While some States revised their minimum wage orders to compensate women workers for higher living costs, more than half of the States with minimum wage laws on their statute books had not made any wartime upward adjustment of their minimum wage rates. Restrictions on daily or weekly hours of work, on the other hand, were eased in a number of instances and work standards were sometimes disregarded. Longer hours, shortened rest periods, pressure for increased production, overcrowding within the shop, and use of makeshift toilet facilities were factors contributing to greater hazards of employment. Dermatitis and occupational poisoning were among the most frequent causes of industrial illness, while relatively higher rates of absenteeism for women in some industries were due to poor working conditions. As a means of promoting better work standards for women, a conference on Employment of Women in Wartime, called by the Secretary of Labor in the spring of 1943, stressed observance of a maximum 8-hour day and 48-hour week, one day of rest in seven, adequate rest and meal periods, and proper safeguards for health and safety. See Wom-En's Bureau; State Legislation under Labor.

Child Labor. Attractive wages, acute shortages of adult workers, and some relaxation in measures safeguarding the employment of minors combined to bring approximately 5,000,000 boys and girls from the ages of 14 through 17 into the United States labor force in the peak month of July, 1943. With the end of the summer vacation period the number of employed youth dropped to an estimated 2,750,000 working full or part time. In April, 1940, the Census showed only 872,000 children 14 to 17 at work; of these 416,000 were in industry and the remainder were on farms. In the first 6 months of 1943 more than twice as many employment or age certificates were issued to minors under 18 as in the same period of 1942.

The child labor provisions of the Fair Labor Standards Act, administered by the U.S. Children's Bureau, served as a partial bulwark against unnecessary and unconscionable employment of boys and girls, particularly of youth under 16 years of age. National policies defining the wartime production role of children under 18 were formulated by Federal agencies including the War Manpower Commission, Office of Education, Department of Agriculture, and the Office of Civilian Defense with a view to safeguarding the health and educational opportunities of employed youth. The policies thus established required observance of State and Federal labor standards, a minimum age of 14 years for either full-time or part-time employment, of 16 for factory employment, and of 18 for hazardous work. A ceiling of an 8-hour day, 48-hour and 6-day week was also placed upon the employment of minors under 18. Despite these efforts greater risks were encountered by boys and girls in assuming hazardous jobs and working long hours. School work was interrupted if not terminated for many, and juvenile delinquency (q.v.) assumed serious proportions. See CHILDREN'S BUREAU under Child Labor; STATE LEGISLATION (also for student work).

In Great Britain special registrations were held for youths of 16 and 17 under arrangements made by the Youth Service Committee of the Education Authorities. Most boys and girls were leaving school at the age of 14, and about 77 per cent of the boys and 67 per cent of the girls from 14 to 18 had full-time jobs. To safeguard their welfare and encourage further educational advancement, various steps were taken by public authorities to reduce the hours of work of young persons and to provide them with technical and vocational training.

The Argentine Government granted authoriza-

tion for children over 14 to work eight hours daily "under certain conditions" in contrast to previous legislation providing for a maximum workday of 6 hours for minors under 18 years of age. Brazil established a special section in its National Labor Department to promote the welfare of women and children employed in industry.

Hours of Work. In the United States the general tendency toward longer hours was stimulated by the issuance on Feb. 9, 1943, of Executive Order 9301, which provided for the establishment of a 48-hour minimum workweek as part of "the fullest mobilization" of manpower in areas and industries designated by the War Manpower Commission. At that time, while most basic war industries were on 48-hour schedules, some, like steel, were on 40-hour shifts, and coal mining had a 35-hour week. Many industries providing civilian goods or services were averaging less than 40 hours. The Commission initially designated 32 local laborshortage areas as subject to the Executive Order, and applied it nationally also to the lumber and nonferrous metal mining industries. In August the steel industry was placed on a minimum 48-hour week, and the equivalent of 50,000 workers were thereby added to the labor force.

According to the Secretary of Labor, ten million additional hours were devoted to the manufacture of war supplies in October, 1943, seven million of which were the result of a longer workweek. The average weekly hours of work for all factory wage earners combined was 45.4 in October, 1943, or 2 hours per week greater than a year earlier. Scheduled hours of work were, of course, higher. In several of the war industries—machine tools and scientific instruments, for example—the average workweek approximated 50 hours, but in some nondurable goods industries, hours in the autumn of 1943 still averaged less than 40 per week. In coal mining, an agreement was reached to work 48 hours a week instead of 35. In the railroad industry average hours worked substantially exceeded the scheduled 48-hour workweek.

In Great Britain, working hours rose to 70, 80, and even 90 in 1940, but the Government recognized that this pace could not be continued indefinitely and urged that workweeks no longer than 60 hours for men and 55 hours for women be observed. No statistics are available showing the average actual workweek, including overtime, for all British industries. In industries and enterprises where a 3-shift system is worked, the weekly hours are, in general, 48. Under a 2-shift system many workers have a scheduled 56-hour week. Hours actually worked are shorter than scheduled working time due to absenteeism and other causes. See Wage and Hour Division; State Legislation (for night work, day of rest, meal periods, etc.)

Wages. Wages in the United States continued to move upward during 1943. From October, 1942, to October, 1943—the first full year under the Government's Wage and Salary Stabilization Program—average hourly earnings of all factory workers advanced nearly 11 per cent, or to 99 cents per hour. Weekly earnings over the same period rose 15 per cent to an average of \$44.90. In the large war-producing durable goods industries, wage earners averaged \$1.09 per hour (including overtime payments) and \$51.50 per week in October, 1943. Earnings exceeded \$60 per week for workers employed in aircraft plants, shipyards, and a few other key war industries. On the other hand, the weekly wage income of many workers in various branches of the textile and apparel industries averaged less than \$25 per week. Among the

nonmanufacturing industries weekly wages ranged from an average of slightly more than \$21 for yearround hotel workers and retail general merchandise clerks to \$46 for bituminous coal miners, and over \$50 for building construction workers and em-

ployees in crude petroleum production.

Over the entire war period, from September, 1939, to the autumn of 1943, average hourly earnings of factory workers advanced from 63 cents to 99 cents—an increase of 36 cents or 57 per cent. Weekly earnings over the same interval climbed from \$23.93 to \$44.90. This was a gain of \$21 or 88 per cent. This rise in earnings was due to a combination of factors, the most important of which were fuller employment, longer hours of work, overtime payments at penalty rates, and increases in basic rates of pay. A study by the Bureau of Labor Statistics of the upward movement of factory wage rates between January, 1941, and June, 1943, revealed that the proportion of workers earning less than 50 cents an hour had declined from 31 per cent to 10 per cent, while the proportion receiving \$1.00 or more per hour had increased from 12 per cent to 31 per cent.

<sup>&</sup>lt;sup>a</sup> Included in "120 and under 130 cents" class; the number of workers receiving 120 cents or more was too small to permit further subdivision. Source: U.S. Bureau of Labor Statistics.

Government controls over wages were tightened during the year. In April the President issued his "Hold-the-Line Order," which froze existing wage rates, except for permissible cost-of-living adjustments within the Little Steel Formula and to cornect whether the cost of the cost o rect substandards of living. A month later in a "clarifying directive," the Stabilization Director eased the restrictions somewhat by authorizing, in addition, limited increases to eliminate gross inequities or to aid in the effective prosecution of the war. The wage stabilization policy is directed exclusively to the control of basic hourly rates of pay, not over-all or "take home" earnings. The National War Labor Board estimated that its decisions had increased basic wage rates of factory workers only 1.2 cents per hour during the first year of the stabilization program, but gross average hourly earnings increased 11 cents. See Economic Stabi-LIZATION, OFFICE OF; NATIONAL WAR LABOR BOARD; WAGE AND HOUR DIVISION.

Toward the end of the year protests of labor organizations that wages were being kept down while prices and cost of living continued to rise, led the President to appoint a committee of public, labor, and industry members to study the cost of living and its relationship to wage rates. The Secretary of Labor announced that cost of living had risen only 3½ per cent in 1943, as compared with 9 per cent the preceding year and 10 per cent in 1941. Since the outbreak of the war the cost-of-living index has risen approximately 25 per cent. Although "take home" weekly wages and, in most industries, even straight-time hourly earnings have exceeded these increases in cost of living, the labor organizations questioned the accuracy of the index, and at the end of the year a number of large unions were seeking additional increases to offset the rise

in living costs (q.v.).

In Canada, factory weekly earnings of \$32 in September, 1943, were about \$2.30 or 8 per cent higher than a year earlier. They averaged \$6.44 per week or 25 per cent higher than in June, 1941. The Canadian National War Labor Board ordered an increase in the cost-of-living bonus effective from the first payroll period beginning on or after Nov. 15, 1943. Previous increases had brought the total amount of the bonus up to \$4.25 a week. The final increase raised it to \$4.60. In December, however, under government order the cost-of-living bonus was added to and became a part of basic wage rates. The government announced that no further bonuses would be paid but that if the cost of living should rise more than 3 per cent and remain at that level for two consecutive months the entire program of price control would be reviewed and appropriate action taken.

Between October, 1938, and January, 1943, weekly earnings of a broad section of British manu-

facturing and nonmanufacturing workers advanced 65 per cent. Further small increases in earnings were recorded during 1943. Wage rates, as contrasted to earnings, rose about 5 per cent between mid-1942 and the fall of 1943, and averaged about 36 per cent higher than at the outbreak of war in Europe in 1939. See specific subjects for wage rates, as Civil Service, Newspapers, Motor Ve-HICLES; also below under Women Workers.

Strikes. More strikes occurred and more workers went on strike in the United States during 1943 than in 1942, and time lost by strikes mounted to 13½ million work-days, more than 200 per cent over 1942. Even after allowance for the separate counting of each of four bituminous coal strikes, the data show a greater amount of labor unrest than in any of the four preceding years, except 1941. Canada and Great Britain likewise experienced an increasing number of work stoppages. In each of these countries the number of strikes and lockouts rose above any previous war year, and the time lost due to stoppages also exceeded that of any year since hostilities broke out in Europe.

STRIKES IN UNITED STATES, CANADA, AND GREAT BRITAIN, 1939 TO 1943

| Country and Year    | Strikes | Workers<br>Involved | Man-Days<br>Idle |

Outstanding among the strikes occurring in the United States during the year were the four relatively short but widespread work stoppages of bituminous coal miners which took place between April and November, 1943, and a strike of anthracite workers in the spring. Between 400,000 and 500,000 miners ceased work at one time or another as union leaders, coal operators, and government agencies attempted to find a formula for settling the wage issues. (See Coal; Heating.) At Christmas time about 150,000 steel workers whose contracts had expired remained away from the mills until assured by the Government that wage increases resulting from negotiations would be made retroactive. (See Iron and Steel.) The first "cutback" strike came in December when nearly 600 workers opposed a labor force reduction occasioned by the loss of war orders by a steel plant. (See Railways; Newspapers, and, for Petrillo's ban on recordings, Music; NLRB; National War Labor Board; United States under The Domestic Front; sections below.)

In Great Britain, strikes in the coal mining industry also were a major disturbing factor on the labor front. Most of these strikes involved wage issues, although a number of stoppages arose out of sympathy for employees who had been prosecuted for absenteeism, for refusing to work underground, or for breaches in regulations. Shipbuilding, engineering, and other metal industries also experienced a relatively large number of strikes. Strikes in Canada involved workers in a number of important war industries including shipbuilding, steel, rubber, and aluminum. In December, Montreal experienced two brief strikes of public employees—police, fire, and public works employees, and city hall white-collar workers. Textile workers in Mexico quit their jobs in December demanding pay increases ranging up to 20 per cent. Argentine labor organizations staged a 24hour nationwide strike early in the year in protest of arrests of union leaders held for activity in support of the cause of the United Nations and for participation in movements to increase wages to meet the rising cost of living. See ARGENTINA, Australia, Belgium, Canada, Chile, Colombia, CUBA, GREAT BRITAIN, GREECE, MEXICO, NETHER-LANDS, PORTUGAL under History.

Labor Movements. Throughout the free world, workers' organizations faced increasingly complex problems as their traditional rights and conventional practices were curtailed by government action taken to further the war effort and combat inflation on the home front. Rank-and-file restlessness grew during the year, and criticism of failure of governments to keep down prices and profits continued. This was coupled with demands that organized labor be accorded a greater role in war agencies and that it be given a prominent place in the formulation of peace objectives and plan-

ning for the postwar world.

Delegates to the 63rd Annual Convention of the American Federation of Labor, held in October, 1943, reaffirmed the Federation's no-strike pledge, denounced proposals calling for the conscription of civilian manpower, and insisted upon more adequate measures of price control and taxation of war profits. The reported membership of 5,939,021 was increased to 6,564,141 during the convention when the International Association of Machinists, which had withdrawn from the A.F.L. earlier in the year voted to reaffiliate. The United Mine Workers—once the leader of the rival C.I.O. movement—also bid for reaffiliation, but acceptance of the bid was delayed because of rival jurisdictions of other A.F.L. unions. With respect to the A.F.L.—C.I.O. schism, the convention continued its unity

committee so that "no opportunity to establish unity may be overlooked," but the unity committees of the two organizations arranged for no further joint meetings. Cooperation with Latin American unions and the British Trades Union Congress was endorsed but the delegates again went on record against direct participation in an Anglo-American—Soviet Russia labor committee.

The Sixth Annual Convention of Congress of Industrial Organizations reported a membership of 5,285,000 organized into 40 national and international unions and organizing committees. The delegates reiterated their "no-strike" pledge, called for a revision of the Government's wage stabilization policies with the elimination of the "Little Steel Formula," and endorsed measures to unite on the political field all the liberal elements of the nation through its Political Action Committee which was created in July. Negro discrimination in American industries was denounced and the poll-tax system condemned. The United Automobile, Aircraft and Agricultural Implement Workers—a C.I.O. affiliate—became the first union in the United States ever to exceed a membership of 1,000,000 workers.

See under Societies and Associations for reports of A.F.L. and C.I.O. See also Music.

The Trades and Labor Congress of Canada in its 59th convention reaffirmed its pledge of support to an all-out war effort but was critical of what it regarded as a lack of government cooperation, particularly as regards labor representation on policy-making bodies. The reported membership was 190,778. The Canadian Congress of Labor—an organization somewhat similar to the C.I.O.—at its fourth convention endorsed the Cooperative Commonwealth Federation as the political arm of labor in Canada. Membership of the Canadian and Catholic Confederation of Labor climbed to about 53,400 in 1943.

Mexico's Confederation of Labor (CTM) held its third congress with nearly 5,700 delegates present representing 1,280,000 workers. The General Confederation of Labor of Argentina submitted to the Argentine Government demands for improved working standards which included a 40-hour week instead of the present 48-hour week, minimum wage and social security legislation, and a greater degree of union participation in agencies regulating commerce and industry. The National Convention of the C.T.C.H., representing over 300,000 Chilean workers, met in Santiago to consider wage and cost-of-living problems. In Costa Rica, the First National Conference of Catholic Workers' Organizations heard the Archbishop of San José declare that "our duty as representatives of Christ is to raise the living standards of the workers in factory, office, and field."

The Executive Committee of the Latin American Confederation of Workers (C.T.A.L.) at a summer meeting in Havana dealt with proposals to waive strike action during the war and to organize a general hemisphere labor conference. In Bolivia the Confederation of Workers demanded an increase in tin prices as a means of raising living standards and in Venezuela a National Oil Workers' Union was formed to push for a broad program of labor reform including better housing and wages. A joint United States-Bolivian Commission, which included representatives of organized labor, investigated working conditions of the tin miners of Bolivia and recommended major labor and economic reforms to curb exploitation of workers and to promote collective bargaining in that country.

British delegates representing an aggregate membership of 6,024,000 met in the 75th Annual Trades Union Congress in September and discussed the role of labor organizations in the war and the peace to follow. They called upon their elected leaders "to give immediate attention to the possibility of convoking a world conference of organized workers, as soon as war conditions permit, with the object of considering the most pressing problems of policy and organization affecting the interests of the working people, and thereby to promote the widest possible unity in aim and action of the international trade union movement. Legislation to put into effect the principles of the Beveridge social insurance plan was urged as the Congress evidenced great interest in all phases of postwar reconstruction.

Membership of 191 unions included in the All India Trade Union Congress aggregated approximately 270,000. The 1943 annual convention of the Congress urged the payment of an adequate cost-of-living bonus to offset rises in prices of goods and services, and labor representation in committees set up to supervise the rationing and control of supplies. The Chinese Labor Association, composed of 48 general labor unions, reported early in 1943 a membership in excess of 400,000. Although working in close cooperation with the Government, the Association has not relinquished

the right to strike.

Collective Bargaining and Government Control. The Swedish Employers' Federation and the National Federation of Trade Unions concluded a national collective agreement in December, 1942, laying down basic principles for all collective wage agreements during 1943. Under this agreement wages were not to be increased above the twenty and seven-tenths per cent supplement allowed in 1942 over basic wage rates of 1938, unless the cost of living index should rise 10 points in which event a further five per cent wage supplement would be payable. Such collective bargaining, aided by government mediation and arbitration agencies, has maintained industrial peace without strikes of any

importance for many years. In the United States the wartime "No-Strike Agreement" developed stormy conflicts in 1943 (see above under Strikes). At the year's end plans were being discussed for supplanting the agree-ment by legislation. The agreement authorized the President to appoint the National War Labor Board (q.v.) to hear and decide labor disputes, but laid down no principles or policies, either as to wages or working conditions by which the Board would be governed. When the Wage Stabilization Program was adopted, administration of this program was added to the duties of the Board. Questions of stabilization thus became intermingled with labor disputes and bans on strikes. Both labor policy and stabilization became confused. It became necessary for the Board to set aside or modify collective bargaining agreements when these were in conflict with the stabilization policy. This brought charges from some unions that the Government had changed the no-strike agreement; the coal miners' leaders justified their strikes on this ground. There were also charges that decisions of the War Labor Board were dictated by the Stabilization Director in some cases, and the Railroad Brotherhoods complained that he had set aside wage recommendations of an Emergency Board in contravention of the Railway Labor Act. The President's "Hold-the-Line Order" and de-layed handling of cases by the War Labor Board were added sources of dissatisfaction.

All this was reflected in the unrest and work stoppages noted above. In June Congress enacted the Connally-Smith Act restricting the right to strike (see below), but the law had little effect; strikes continued to increase. The President authorized sanctions for enforcement of the War Labor Board's decisions and directive orders, but these measures brought no noticeable results. More and more terms and conditions of employment were fixed by orders of the War Labor Board and the War Manpower Commission, with correspondingly less and less reliance upon the processes of

collective bargaining.

Eleven State legislatures adopted measures in 1943 to regulate the activities of labor organizations. (See STATE LEGISLATION.) The Province of Ontario, Canada, passed a law to provide for certification of collective bargaining agencies and to protect the collective bargaining process. A branch of the High Court of Justice—the Labor Courtdetermines appropriate bargaining units and certifies majority representatives. Refusals to bargain and discrimination are prohibited. The Chinese government, which since August, 1941, has directly supervised labor unions, extended its effective control into 71 localities. Unions must aid the government in stabilizing wages, conscripting labor, and increasing output.

Federal Labor Legislation. The principal piece of labor legislation passed by the Congress of the United States in 1943 was the Connally-Smith Bill, officially known as the War Labor Disputes Act. It was adopted on June 25 over a presidential veto. The law is a composite measure designed in various ways to prevent interruption of wartime production. By the end of the year, however, it was generally conceded that it had failed of its purpose, and proposals for new legislation were being dis-cussed. The War Labor Board was given statutory status by the Act and authority to intervene in labor disputes, to summon the parties, subpoena witnesses, and require the production of papers and records material to the consideration of any dispute. The Board is specifically authorized to decide labor disputes and to provide by order the wages, hours, and all terms and conditions governing the relations between the parties. The law also amends the Federal Corrupt Practices Act of 1925 to prohibit contributions by labor organizations in connection with the election of Federal officials.

The Act authorizes the President to take possession of any plant, mine, or facility which may be required for the war effort, and while it does not deny individuals the right to stop work, it prohibits any person from inducing or aiding in strikes, lockouts, or other interruptions of production after government possession. When the government takes possession, the terms and conditions of employment are frozen except that application may be made to the War Labor Board for an order to change wages or working conditions, and the Board's order, subject to approval by the President, binds the oper-

ating government agency.

For industries in private hands, the Act provides that representatives of employees must give the Government 30 days' notice of any dispute that threatens war production. The National La-bor Relations Board is directed to take a secret ballot on the thirtieth day to determine whether the employees "wish to permit an interruption of war production." The results of the ballot must be publicly certified. The National Labor Relations Board reported that by the end of the year 654 notices were received, but 444 were withdrawn before the end of the 30-day period. In 117 cases

the Board took strike ballots and in all but 14 of these the vote was in favor of striking by big majorities. Seven of the 14 ballots which resulted in majorities against a strike were taken in December. Although the votes in more than a hundred cases favored striking, very few of these cases actually resulted in strikes. Notices of intention to strike were given mainly as a means of putting pressure either on the employer or on the Government. Those employees that did engage in strikes usually gave no notice of their intention to

interrupt war production. The National Labor Relations Act was indirectedly amended during the year by a provision in connection with its appropriation that no money appropriated shall be used to prosecute com-plaints against allegedly illegal contracts between employers and labor organizations after such contracts have been in existence for 90 days. The Board itself limited the scope of its activities by a ruling which reversed its previous decisions and held that organizations representing foremen and other supervisory employees would not be certified as collective bargaining agents, and elections to choose representatives of such employees would not be held by the Board. More and more the Labor Relations Act is becoming mainly a vehicle for the determination of representation disputes. Of the more than 9,000 cases received by the Board during the year, two-thirds were representation disputes and only one-third were cases involving unfair labor practices. For several years the proportion of representation cases has been increasing

The U.S. Supreme Court decided three important cases in November interpreting the Railway Labor Act. It held that determinations in representation proceedings by the National Mediation Board, which administers the Act, are not subject to judicial review, and further that the Courts have no authority to review jurisdictional disputes between unions. The decisions of the Mediation Board in representation cases were given finality on the ground that Congress did not provide that such decisions should be subject to judicial review. Likewise, as to jurisdictional controversies, the Court held that Congress left the final authority of settlement "to agencies or tribunals other than the

Courts.' In the Revenue Act of 1943 the House of Representatives inserted a provision requiring labor organizations to submit informational financial reports to the Commissioner of Internal Revenue. At the end of the year the Senate had not yet acted on this provision.

LACROSSE. The old Indian game flourished in 1943, a year that found many other sports hit hard by the war. When the Intercollegiate Association campaign got under way in early spring, only Hobart and Pennsylvania were missing and Penn continued in the game on a club basis.

A fighting Naval Academy team that refused to quit under fire returned the intercollegiate laurels to the State of Maryland after Princeton had carried them away in 1942. The Middies, renewing their rivalry with Johns Hopkins after 15 years, broke a 4-4 tie in the closing minutes and went on to win, 7-4, then rallied against the University of Maryland for a 9-8 triumph in the last thirty seconds of play. The Annapolis stickmen then clinched the title by coming from behind to conquer their old service foe, Army. Trailing by 4-3 at half-time, the Middies put on a dazzling exhibition of passing to rout the Cadets, 12-5.

In the annual All-Star game, the South's collegians at need for their setback of the previous season by vanquishing the North, 9–5. St. Paul's of Baltimore dominated the schoolboy picture, being unbeaten in a 13-game campaign.

LATVIA. A former Baltic state, which proclaimed its independence from Soviet Russia Nov. 18, 1918. It was reannexed to the U.S.S.R. as a constituent republic Aug. 5, 1940, and occupied by German troops in 1941. Capital, Riga.

Area and Population. Area, 25,402 square miles;

estimated population on Dec. 31, 1939, 1,951,000. About 35 per cent of the population lived in communities of 2,000 or more. The population of Riga in 1939 was 393,211; of other towns at the 1935 census: Liepaja (Libau), 57.098; Daugavpils (Dvinsk), 45,160; Jelgava (Mitau), 34,099.

Education and Religion. At the 1930 census, 13.6

per cent of the population 10 years of age and over were illiterate. According to the 1935 census, 56.13 per cent of the inhabitants were Protestants, 24.45 Roman Catholics, 14.4 per cent Greek Catholics and members of the Orthodox Church, and 4.79

per cent Jews.

Production, etc. Agriculture, stock raising, lumbering, and manufacturing were the principal occupations at the time of the Russian occupation. State and private forests covered 4,317,482 acres. At the beginning of 1939 there were 5,977 industrial enterprises with 98,497 employees, chiefly in metallurgy, textiles, wood-working, foodstuffs, and chemicals. For the available production, trade, and financial statistics, see 1942 Year Book. At the the beginning of 1940 there were about 2,075 miles of railway lines, 58,730 miles of roads, 2,775 miles

of inland waterways.

Government. The democratic Constitution adopted by a Constituent Assembly on Feb. 15, 1922, was suspended May 15, 1934, when a de facto anti-Communist dictatorship was established by the government headed by Premier Karlis Ulmanis. On Apr. 11, 1936, Dr. Ulmanis assumed the Presidency in addition to the Premiership. On Oct. 5, 1939, the Latvian Government yielded to a Soviet ultimatum and signed a mutual assistance pact authorizing the establishment of Russian military, naval, and air bases in Latvia, but safeguarding the republic's independence. Violating the latter provision, the Soviet Government occupied all of Latvia June 17, 1940. A pro-Soviet regime was set up June 20, and on July 14–15 "managed" elections produced a solidly pro-Communist parliament, which met July 21 and petitioned for Latvia's admission into the Soviet Union. The petition was granted by the Supreme Soviet in Moscow August 5 and ratified by the Latvian parliament Au-

Following the German conquest in June–July, 1941, Latvia was incorporated in the Reich's new Ostland Province as a General District. Otto Drechsler was appointed General Commissar for Latvia (August, 1941) under the direction of Hinrich Lohse, Reich Commissar for the Ostland. The General District of Latvia was subdivided into six Districts, each headed by a German District Commissar. The German Commissars exercised absolute control over political, economic, and cultural affairs. They were assisted by a Latvian puppet administration composed of six "general directors," headed by Gen. Oskars Dankers. This administrative set-up was legalized by the decree of Mar. 18, 1942, issued by Alfred Rosenberg, Hitler's Minister for Occupied Regions in the East. For developments in 1943, see Lithuania under History.

LAW. This review is limited to important developments during the past year in judicial decisions, legal procedure, legal education, and jurisprudence. For discussion of legislation and similar topics, the special title involved should be consulted.

War Decisions. The mounting difficulties in Hawaii arising from the continued application of strict martial law to the civilian as well as the military population resulted eventually in a clash between the judiciary and the military, which is likely to be historic. Objections to the closing of the civil courts and the trial of both criminal and civil matters in the Islands by military tribunals led to negotiations between the War and Interior Departments and the Department of Justice in Washington over a considerable period of time between the Pearl Harbor attack and the beginning of 1943, by which time a substantial modification of many of the restrictions had been agreed upon. Hence by the Governor's public proclamation in February it was provided that judicial proceedings, both criminal and civil, should be resumed except as against members of the armed forces or for violations of military orders. Accordingly Federal District Judge Metzger concluded that the writ of habeas corpus had been restored, and, therefore, granted writs on behalf of two Americans of German descent, Glockner and Seifert, who had long been detained by the military authorities. The commanding general, Lieutenant General Richardson, refused to accept service of the writ (it is said that the deputy marshal was actually ejected by the military police), whereupon the judge fined the general \$5,000 for contempt of court. To this the general responded with a general order forbidding any person connected with any court to apply for, or act with respect to, a writ of habeas corpus and specifically prohibiting the district judge from proceeding in any way with the cases in which the petition had been filed, subject to prosecution before a provost judge and imprisonment for five years or fine not to exceed \$5,000. Nearly two months later, in October, the commanding general rescinded this order (after what are understood to have been extensive negotiations among the Washington departments), the military authorities transported the prisoners to the mainland, where they were released, and the district judge upon motion reduced his fine of the general to \$100. The War Department is said to have strongly urged that the Department of Justice recommend pardon for the general; at any rate, a pardon was lately forthcoming. A state-ment of some of the problems occasioned by martial law, with references to learned discussions, appears in last year's review on Law; this particular episode is interestingly related by the American Bar Association's ex-president Armstrong in Martial Law in Hawaii, 29 A.B.A.J. 698.

Apparently this is the only substantial rebuff so far suffered by the military from the judiciary in this war. It is true that in the case of Yasui, 48 F.Supp. 40 (D. Ore.), a district judge sharply criticized the application of restrictions to American citizens of Japanese descent; but when this case reached the Supreme Court in 320 U.S. 115 and in the companion case of Hirabayashi v. United States, 320 U.S. 81, that Court upheld the validity of orders establishing military areas within the Western Defense Command and promulgating a curfew for persons of Japanese ancestry, even including American citizens, as well as the Congressional Act of March 21, 1942, validating these orders. In the case of Korematsu, the Court by holding a judgment of probation to be final for purposes of appellate review, 319 U.S. 432, paved the way for the decision of the United States Circuit Court of Appeals for the Ninth Circuit, December 1, sustaining his conviction of violation of the further orders evacuating the Japanese to inland parts of the country. The situation of these Japanese Americans and the hardship of the orders made necessary as to them have caused extensive discussions in the reviews, many of which were noted in last year's review; among recent articles may be noted those by Messrs. Alexandre and Freeman in 28 Corn. L. Q. 385-458, by Professor Cushman in 23 B. U. L. Rev. 335, 362, and

in 43 Col. L. Rev. 949-954.

Presumably the validity of orders setting up the Eastern Defense Command and restricted areas on the Atlantic seaboard will come before the courts for definite adjudication in due course. In Schueller v. Drum, Lieutenant General, 51 F. Supp. 383 (E.D.Pa.), a district judge in Pennsylvania cast some doubt on at least parts of the orders in giving a declaratory judgment that the plaintiff could not be excluded from the Philadelphia area, while in United States v. Meyer, in the District Court for the Southern District of New York and now on appeal, they were sustained by implication at least in the conviction of the defendant for falsely testifying before a military tribunal set up under the orders to pass upon the exclusion of enemy aliens from the restricted area.

Various prosecutions have been had during the year of German nationals or sympathizers for a variety of offenses, in general showing opposition to the war effort. The law of treason has once again become of great importance; and one Max Stephan after a lengthy trial was convicted and sentenced to be executed upon proof that he had lent assistance to further the escape of a German aviator who was fleeing from a Canadian prison camp. Various appeals were prosecuted in his behalf; a final one in the Supreme Court, Stephan v. United States, 319 U.S. 423, unsuccessful like the others, recounts and gives references to the earlier proceedings. After legal proceedings had closed, the President commuted his sentence to life imprisonment. In *United States v. Cramer*, 137 F. (2d) 888 (C.C.A.2d)—now before the Supreme Court on grant of certiorari—conviction of Cramer was upheld for treason in assisting one of the German saboteurs landed in this country from a German submarine in June, 1942, the court finding it necessary to redefine the historic provision that conviction shall be had only upon the testimony of two witnesses to an overt act. Sentence was for imprisonment of forty-five years. A similar conviction of relatives of the German sabordeurs was set aside for a new trial, for errors in the admission of statements taken from the accused before arraignment, in *United States v. Haupt*, 136 F. (2d) 661 (C.C.A.7th); and another prosecution against one *Leiner*, in the Southern District of New York, failed for lack of proof of an overt act. Important convictions under other provisions of law have included those of Viereck, reversed in 318 U.S. 236, for errors in the trial, but thereafter again entered on retrial, Molzahn, affirmed 135 F. (2d) 92 (C.C.A.2d), cer. den. 319 U.S. 774, and Von Clemm, affirmed 136 F. (2d) 968 (C.C.A.2d). Members of the German Bund have also been convicted, their case now being on appeal; and petitions for the revocation of their citizenship have been sustained as to some. United States v. Kuhn, 49 F.Supp. 407 (S.D.N.Y.).

Cases involving the Selective Service Act have been numerous. In Bartchy v. United States, 319 U.S. 484, the Court reversed a conviction of a registrant for failure to keep his draft board notified of his address, while in Bowles v. United States, 319 U.S. 33, it affirmed the conviction of a conscientious objector on the ground that the facts had been determined adversely to him by the Director of Selective Service on final appeal to the President. In Falbo v. United States, 64 S.Ct. 346,

the Court finally settled an important question as to which the lower courts had been at odds by ruling that a registrant's failure to report as notified was in itself a crime, even though the draft board had committed error in his classification, and that the latter fact could not be shown in de-fense to a criminal prosecution. This means in practice that the only remedy a draftee has in the courts is by application for the writ of habeas corpus and that his redress is limited to cases of clear error of law. In United States ex rel. Phillips v. Downer, 135 F. (2d) 521 (C.C.A.2d), such an error of law was found and the writ was sustained upon failure of the board to follow the rule established in *United States v. Kauten*, 133 F. (2d) 703, 708 (C.C.A.2d), that the statutory definition of those having religious scruples against war might include even an atheist whose response is "to an inward mentor, call it conscience or God, that is for many persons at the present time the equivalent of what has always been thought a religious impulse." This view, it is said, has not, however, been accepted by the military authorities. Cornell, The Conscientious Objector and the Law (1943) 13, 19. Billings v. Truesdell, 135 F. (2d) 505 (C.C.A.10th), decided that taking the soldier's oath was not necessary to the completion of induction. There a university professor claiming to be a conscientious objector was held subject to military law when he appeared at camp for induction, though he refused to be sworn in. This case is now before the Supreme Court. These were perhaps the most interesting of a large, and apparently increasing, number of cases involving all aspects of the draft, now engaging the attention of the Federal courts.

The question of internment of enemy aliens under an ancient Federal statute of 1798 has presented problems as to whether citizens of some of the German invaded countries shall be considered within its terms. The question has been particularly acute as to citizens of Austria. In *United States ex rel. Schwarzkopf v. Uhl,* 137 F. (2d) 898 (C.C.A.2d), it was held that a Jewish citizen of Austria, residing in this country, did not become a citizen of Germany by the Anschluss of 1938, in the absence of a showing of his consent to accept the invader's sovereignty. Involved in *United States ex rel. D'Esquiva v. Uhl,* 137 F. (2d) 903 (C.C.A.2d), was the meaning of the word "native"; it was there held that a native-born Austrian residing in this country in 1938 was to be considered a native of the place where he was born, and that if that place, by events recognized as legally effective by our State Department (to which inquiry should be directed), had become a part of an enemy country he would come within the statutory definition. See 37 Am. J. Int.

L. 634; 57 Harv. L. Rev. 251.

Of the war agencies, the National War Labor Board (q.v.) has functioned by presidential order and later by statutory recognition, with practically no resort to the courts. It is a striking feature of the extensive quasi-judicial activities of this board, shown in many formal opinions now being published in permanent form, that it has been able to secure such complete immunization from judicial authority. In addition to the learned articles noted in last year's review, reference may be made to recent full accounts in Shields, The Authority of the War Labor Board, [1943] Wis. L. Rev. 378; Manoff, The National War Labor Board and the Maintenance-of-Membership Clause, 57 Harv. L. Rev. 183–219; Daykin, Treatment of Unionism by the National War Labor Board, 28 Iowa L. Rev.

457–483; and see also 11 Geo. Wash. L. Rev. 366; 11 Kan. City L. Rev. 203; 28 Iowa L. Rev. 671; and compare Gay, Freezing of Labor in Wartime, 18 Wash. L. Rev. 137. The powers of the Emergency Court of Appeals, set up to consider cases involving matters of price regulation, have been sustained, and attempts to litigate issues committed to it in other tribunals refused. Lockerty v. Phillips, 319 U.S. 182; compare United States v. Phillips, 319 U.S. 302; United States v. Hark, 64 S.Ct. 359; 43 Col. L. Rev. 921, 926; 41 Mich. L. Rev. 1197. See also Oppenheimer, The War Price and Rationing Boards, 43 Col. L. Rev. 147; 56 Harv. L. Rev. 1333. Construction was given to the Soldiers' and Sailors' Civil Relief Act of 1940 in Boone v. Lightner, 319 U.S. 561, where the Court upheld a trial court in refusing the statutory stay to a defendant in military service found to be deliberately attempting to evade trial where his military service was not such as to prevent his full defense of the action.

There have been interesting discussions academically of the manner and form in which punishment of war criminals might take place after the war. Thus, Professor Glueck of Harvard examines the issues at length in his article, By What Tribunal Shall War Offenders Be Tried? 56 Harv. L. Rev. 1059; while Professor Radin of California has gone so far as to project a picture of the trial of Hitler and other German leaders, in his striking book,

The Day of Reckoning (1943).

Decisions Concerning Personal Liberties. This has been a year of extraordinary activity in the Su-preme Court in the domain of personal liberties; and extensive divisions in the Court, which have been constant throughout the term, seem perhaps most acute in this group of cases, dissent being unusually sharp and vigorous. On two issues the Court deliberately staged a right-about, over the protests of some of its members. Last year's review called attention to the much discussed and often criticized case of Jones v. Opelika, 316 U.S. 584, where a majority sustained city ordinances making use of taxing and licensing powers to control and limit the distribution of religious pamphlets, no-tably by the sect of Jehovah's Witnesses, and where the dissenting minority took occasion to announce a change of view as to their position in the famous flag salute case of Gobitis, 310 U.S. 586, thus foreshadowing the overturn of that case. A further change in the personnel of the Court had the not unexpected consequence of making those the majority views of the Court. Upon rehearing, Jones v. Opelika was reviewed and reversed, 319 U.S. 103; and in a series of cases involving various cities, 319 U.S. 103-182, the Chief Justice and Justices Douglas, Black, and Murphy in separate opinions and with the approval of Justice Rut-ledge held these ordinances invalid as violating the constitutional guarantees of freedom of speech and religion, while Justices Reed, Frankfurter, and Jackson, with whom Justice Roberts concurred, argued at length for the reasonableness of the ordinances under the circumstances involved. (There were certain minor variations in views not important, and the Court was unanimous in thinking an injunction an inappropriate or unnecessary remedy, in view of the reversals of convictions of ordinance violations.) Reversal of the flag salute decision came in West Virginia State Board of Education v. Barnette, 319 U.S. 624, with Justices Roberts and Reed adhering to their former opinion that requiring school children to salute the flag violated no constitutional provisions, while Justice Frankfurter, the author of the earlier opinion,

dissenting at some length, vigorously asserted the right of the legislative body to determine issues of this character. The latter plea has receitly been echoed by a distinguished historian, Professor Commager, in his just published book dedicated to Justice Frankfurter, Majority Rule and Minority Rights (1943). In view of the critical comments on the earlier holdings, however, it seems probable that these new holdings will receive general law review support; see 43 Col. L. Rev. 928–938, 42 Mich. L. Rev. 163, 186, 319, 12 Geo. Wash. L. Rev. 70, 92 U. of Pa. L. Rev. 103.

A final case of historic proportions was that of

A final case of historic proportions was that of Schneiderman v. United States, 320 U.S. 118 (argued for the petitioner by Mr. Wendell Willkie, the Republican presidential candidate of 1940), where the Court reversed a cancellation of a certificate of citizenship of the petitioner, which had been granted by the lower courts, on the ground of his fraud in concealing membership in the Communist Party; the opinion by Mr. Justice Murphy, with concurring opinions by Justices Douglas and Rutledge and dissenting opinion by the Chief Justice, speaking also for Justices Roberts and Frankfurter, goes extensively into the activities of the Communist Party in this country. Extensive comment may be found in 3 Lawyers Guild Rev. 42; 42 Mich. L. Rev. 184; 28 Wash. U. L. Q. 275; 51 Yale L. J. 1215; 43 Col. L. Rev. 918, 936, 946; 12 Fordham L. Rev. 209-251.

12 Fordham L. Rev. 209–251.

Questions of freedom of speech have been litigated in connection with various agency rulings, involving the Labor Board, the Federal Communications Commission, and the enforcement of the Anti-Trust Act, which are noted hereinafter. The Court, however, has followed earlier precedents to reverse the highest court of the State of New York to hold that permanent injunction against labor picketing violated the constitutional freedom. Cafeteria Employees Union, Local 302, v. Angelos,

64 S.Ct. 126.

In past terms the Court has shown much patience in considering appeals of persons confined in Federal and other penitentiaries, addressed to it rather informally, which it has treated as applications for writs of habeas corpus. These have increased in great numbers and the Court recently disposed of a substantial number by dismissing them without prejudice to application to other courts, pointing out that it did not "save in exceptional circumstances" exercise its discretionary jurisdiction to issue such writs where an adequate remedy may be had in other courts. Ex parte Abernathy, 64 S.Ct. 13.

Decisions Concerning the Federal System. The Supreme Court has continued its attitude of recent years in upholding at once a broad Federal power over interstate commerce and other related Federal fields, with nevertheless much freedom reserved to the States to act in the absence of congressional action. Thus, it has sustained the California Agricultural Prorate Act and raisin-marketing program even against a claim of its violation of the Anti-Trust Act, Parker v. Brown, 317 U.S. 341, and has allowed Illinois to require cabooses on freight trains, Terminal Railroad Association of St. Louis v. Brotherhood of Railroad Trainmen, 318 U.S. 1. See 43 Col. L. Rev. 876-887. It has upheld a Pennsylvania requirement of minimum milk prices even on sales to the United States, Penn Dairies, Inc. v. Milk Control Commission of Pennsylvania, 318 U.S. 261, although it did not sustain similar provisions of a California Act as to milk actually sold within government territory at Moffett Field, California, Pacific Coast

Dairy v. Department of Agriculture of California, 318 U.S. 285, the Court dividing along somewhat different lines in the two cases. 43 Col. L. Rev. 895-903; 11 Geo. Wash. L. Rev. 381; 41 Mich. L. Rev. 993; 27 Minn. L. Rev. 577; 91 U. of Pa. L. Rev. 761. It also enjoined Florida officials from enforcing the provision of the Florida Commercial Fertilizer Law against the United States, according to the control of the control o tually engaged in carrying out its soil-building program, Mayo v. United States, 319 U.S. 441; and it upheld a Federal act excepting preferred stock of national banks owned by the Reconstruction Finance Corporation from State taxation. Maricopa County v. Valley National Bank of Phoenix, 318 U.S. 357; 12 Geo. Wash. L. Rev. 100. It upheld the priority of Federal tax liens in Detroit Bank v. United States, 317 U.S. 329, and Michigan v. United States, 317 U.S. 338; but it sustained State control over the accounting of fiducities of cetates let vi in bank with Finite Hanley. aries of estates later in bankruptcy, Emil v. Hanley, 318 U.S. 515. Its willingness, often shown of late, to sustain State taxation extensively in interstate commerce (see Lockhart, Gross Receipts Taxes on Interstate Transportation and Communication, 57 Harv. L. Rev. 40) induced a lower Federal court to uphold a State franchise tax on that part of an interstate trucking business which originated in the State. Spector Motor Service, Inc. v. Walsh, C.C.A. 2d, Dec. 24, 1948. In Standard Dredging Corp. v. Murphy, 319 U.S. 306, the Supreme Court also upheld a New York pay-roll tax upon employers of

certain maritime employees.

Not only in adjusting the rights of the States with the national government is the Supreme Court called upon to exercise its umpiring functions; it must also do so with respect to conflicts between States. The notable case decided at the Court's last session of 1942, Williams v. North Carolina, 317 U.S. 287, reversing the famous Haddack account of 1992, 271 115, 282 dock case of 1906, 201 U.S. 562, to hold that a State must accord full faith and credit to a Nevada divorce in the absence of a showing of fraudulent domicile imposed upon the Nevada court, has called forth more law review comment and more extensive learned articles than any other case in the last several terms of the Court. Space is lacking to attempt citation of these learned discussions; among the more notable, reference may be made to Professor Lorenzen's Haddock v. Haddock Over-ruled, 52 Yale L. J. 341, Professor Bingham's Song of Sixpence; Some Comments on Williams v. North Carolina, 29 Corn. L. Q. 1, Professor Cook's Is Haddock v. Haddock Overruled? 18 Ind. L. J. 165, and Professors Strahorn and Reiblich's The Haddock Case Overruled—the Future of Interstate Divorce, 7 Md. L. Rev. 29, and several pages of comment from the lay press quoted in 29 A.B.A.J. 78. The decision has compelled several States to change their practice extensively to a recognition of foreign divorce decrees. This is especially true in New York, where the cases construing the Williams case have already been numerous; a striking instance is the decision on November 24 of the Court of Appeals in the case of *In re Estate of Anna Holmes*, 110 N.Y.L.J. 1857, holding by a divided vote that recognition must be given a Navada divorce by the grant of letters of administration to the husband on the estate of a woman he had thereafter married, even though the wife had established the invalidity of the divorce as to herself by an action in New York. The situation in Illinois is discussed in Stephens v. Stephens, 319 Ill. App. 292, 49 N.E. (2d) 560, and 10 U. of Chi. L. Rev. 499. It seems probable that local courts will attempt to stop resort to the foreign divorce court by granting injunctions in advance; thus the daily press reports the case of Cromwell v. Cromwell, where a former ambassador has obtained an injunction from a New Jersey court, directing his famous wife not to proceed with her Nevada divorce action, on the ground that she is actually a resident of New Jersey, not Nevada, a direction which she and the Nevada court appear to have rejected as invalid. Undoubtedly the outcome of this already famous litigation will add new chapters to our never-dull divorce law. The theory of res judicata of the Williams case has now been carried over to another field of law where the Supreme Court, against sharp dissent, has ruled, in the Magnolia Petroleum case, 64 S.Ct. 208, that an award of workmen's compensation in Texas precludes a later award in Louisiana, even though the Louisiana Act calls for greater compensation and the Louisiana court had accepted the Texas award as a partial fulfillment of the obligation.

Supervision of Federal Agencies. During the year the Court has re-emphasized the limited nature of court review of the quasi-judicial adjudications of the various governmental agencies. In the past it has often pointed out that in general the agencies have the primary duty and responsibility of making adjudications on the facts and applying the law; and the courts may intervene only for decisions without adequate basis in the facts or clearly erroneous in law. Lately the Court took special pains to reiterate that, contrary to the different practice which had developed with respect to Federal taxes, the decisions of the Tax Court of the United States, formerly the Board of Tax Appeals, were entitled to the same respect as other agencies; and it stated a definite intent to apply a like rule to this agency. Dobson v. Commissioner of Internal Revenue, 64 S.Ct. 239; Dixie Pine Products Co. v. Commissioner of Internal Revenue, 64 S.Ct. 364. With respect to decisions of the National Labor Relations Board, it upheld the Board in requiring quite complete disestablishment of an employees' association which had been employer dominated, contrary to the view of the intermediate court, N.L.R.B. v. Southern Bell Teleph. & Telegr. Co., 319 U.S. 50; and it also supported the Board in ordering an employer to refund dues checked off for a company-dominated union, Virginia Electric & Power Co. v. N.L.R.B., 319 U.S. 533. It refused review of a ruling that State unemployment benefits did not constitute earnings to excuse refund by an employer, on the ground that objection had not been made to the Board itself. Marshall Field & Co. v. N.L.R.B., 318 U.S. 253; 43 Col. L. Rev. 926; 56 Harv. L. Rev. 1330. In N.L.R.B. v. Indiana & Michigan Electric Co., 318 U.S. 9, it held that misconduct and violence on the part of union officials would bar relief (three justices sharply dissenting on the facts); and in In re Bradley, 318 U.S. 50, it later held that sentence for contempt could be either only a fine or imprisonment, not both. One of its most interesting holdings came by way of refusing interference with a lower court ruling; in N.L.R.B. v. American Tube Bending Co., 134 F. (2d) 993, the Second Circuit Court of Appeals had reversed a Board order finding coercion in an employer's speech to his employees, fairly stating their freedom of choice, although arguing against approval of the Union. The Supreme Court denied certiorari, 64 S.Ct. 84, thus allowing the disapproval of the Board order to stand. Since the speech in question is set forth in the report of the lower court, it has been taken as a model of what is permissible comment by an employer.

With reference to the Securities and Exchange Commission, the Court in the Chenery Corporation case, 318 U.S. 80, expressed support of rather wide powers in the Commission to disapprove of a plan for reorganization of a public utility holding company because of improper actions of officers and stockholders in protecting themselves, but nevertheless, against sharp dissent, returned the case to the Commission for more complete findings and rule covering the matter. See 43 Col. L. Rev. 253; 56 Harv. L. Rev. 1002; 41 Mich. L. Rev. 987; 17 St. John's L. Rev. 129. In S.E.C. v. C. M. Joiner Leasing Corp., 64 S.Ct. 120, it held the Commission entitled to an injunction against violations of the law by dealers in a campaign to sell assignments of oil leases. In Charles Hughes & Co. v. S.E.C., C.C.A.2d, Dec. 10, 1943, the lower court sustained the Commission's revocation of a broker's license for a policy of extensive mark-ups of stocks over market prices, and in the several Okin cases, 132 F. (2d) 784, 137 F. (2d) 398, 862, 139 F. (2d)—(C.C.A.2d, Nov. 29, 1943), sustained actions by the Commission restraining or holding in contempt or otherwise limiting a sole stockholder of a corporation in a campaign for proxies based upon misleading statements. In Smolowe v. Delendo Corp., 136 F. (2d) 231 (C.C.A.2d), where the Supreme Court refused review, 64 S.Ct. 56, the same court sustained a claim of the Commission under the statute to recover for a corporation insiders' profits made by officers even without a showing of intent to defraud.

In National Broadcasting Co. v. United States, 319 U.S. 190, the Court sustained orders of the Federal Communications Commission designed to break up monopoly in radio broadcasting, even against the claim of control of freedom of speech, whereas in *Federal Communications Commission* v. National Broadcasting Co., 319 U.S. 239, the Court allowed the holder of a radio broadcasting license to intervene in a proceeding concerning the license of another holder which might affect the first holder's broadcast channel. See Barber, Competition, Free Speech and FCC Radio Network Regulations, 12 Geo. Wash. L. Rev. 34; 41 Mich. L. Rev. 1195; 42 Mich. L. Rev. 329; 52 Yale L. J.

671.

The jurisdiction of the Federal Power Commission against State regulation was sustained rather sion against state regulation was sustained rather broadly in Jersey Central Power & Light Co. v. Federal Power Commission, 319 U.S. 61; and see Niagara Falls Power Co. v. Federal Power Commission, 137 F. (2d) 787 (C.C.A.2d), cer. den. 64 S.Ct. 206. The Court continued generally its favorable construction of the Fair Labor Standards Act, Overstreet v. North Shore Corp., 318 U.S. 125; Walton v. Southern Package Corp., 64 S.Ct. 320, holding it inapplicable, however, to local wholesalers, Walling v. Jacksonville Paper Co., 317 U.S. 564; Higgins v. Carr Bros. Co., 817 U.S. 572, or to a contractor's cook furnishing meals to railroad employees, McLeod v. Threlkeld, 319 U.S. 491. See 43 Col. L. Rev. 259, 851-854; 31 Geo. L. J. 462; 41 Mich. L. Rev. 1060; 31 Calif. L. Rev. 415. In Southland Gasoline Co. v. Bayley, 319 U.S. 44, it construed and applied the exemption of employees of interstate motor carriers who are within the jurisdiction of the Interstate Commerce Commission as to qualifications and maximum hours of service.

One of the sharpest divisions yet encountered in the Court has occurred, however, with respect to the powers of the Federal Power Commission over rate-making. The issue goes back to a dispute which had its genesis more than fifty years ago as

the Court came to develop its famous and much criticized rule of "fair value" as a basis of ratemaking. In *Public Utilities Commission of Ohio v. United Fuel Gas Co.*, 317 U.S. 456, involving consideration of a State rate case, the Court had split as to the proper approach to natural gas regulation. In Federal Power Commission v. Hope Natural Gas Co., 64 S.Ct. 281, the Court sustained the Commission's use under the Natural Gas Act of 1938 of a rate base determined on the prudent-investment theory of valuation against the most vigorous dissent that natural gas rate-making required a different approach in view of its economic

and social aspects.

The Court has recently passed on acts of the National Mediation Board under the Railway Labor Act and held against dissent that certifications of union organizations made by the Board were not subject to review by the courts, Switchmen's Union of North America v. National Mediation Board, 64 S.Ct. 95, and so, also, as to provisions of a railway bargaining agreement, General Committee, etc. v. Southern Pac. Co., 64 S.Ct. 142, and jurisdictional controversies generally between railroad unions, General Committee, etc. v. Missouri-Kansas-Texas R. Co., 64 S.Ct. 146. The Court, in cases dealing with the reorganization of the Western Pacific, 318 U.S. 448, and the Milwaukee Railroads. 318 U.S. 523, has shown itself ready to sustain extensive powers of the Interstate Commerce Commission in the reorganization of railroads, while nevertheless insisting upon the protection of the earlier security investors, even against the ordinary stockholders. This matter is extensively discussed in two articles by R. T. Swaine, A Decade of Railroad Reorganization under Section 77 of the Fed-

eral Bankruptcy Act, 56 Harv. L. Rev. 1037, 1193. The Supreme Court is also called upon to supervise the activities of Federal law enforcement agencies in ordinary process of court review. In connection with the Sherman Act the upholding of the conviction of the American Medical Association at the beginning of the year, 317 U.S. 519, has been the subject of extensive comment, 53 Yale L. J. 162, 41 Mich. L. Rev. 1003, 29 Va. L. Rev. 832. A decision a year later seems destined to arouse as much interest, for the Court has held that an exclusive patent license may violate the anti-trust laws and that the formerly well settled patent doctrine of contributory infringement (that one who sells an unpatented part of a combination patent for use in the assembled machine may nevertheless be guilty of infringement) can no longer prevail against the defense that a combination patent is being used to protect an unpatented parl from competition. These cases, which involved also questions of res judicata as the points had been previously litigated, called forth sharp dissent, but certainly went far to establish the supremacy of the anti-trust over the patent laws. Mercoid Corp. v. Mid-Continent Investment Co., and Mercoid Corp. v. Minneapolis-Honeywell Regulator Co., 64 S.Ct. 268, 278. Another decision likely to disturb a patent-minded bar is Marconi Wireless Telegraph Co. v. United States, 320 U.S. 1, where a sharply divided court held one of the basic Marconi patents dealing with developments in wireless telegraphy-previously upheld in various courts-to have been anticipated by earlier patents to other inventors.

The Court sustained the immunity provisior under the Sherman Anti-Trust Act, holding that one who gave testimony under subpoena before & grand jury could not be prosecuted for that offense even though he had not claimed his privilege United States v. Monia, 317 U.S. 424; 41 Mich. L. Rev. 1199; 18 Notre Dame Lawyer 348. In the important case of United States v. Associated Press, 52 F.Supp. 362 (S.D.N.Y.), a three-judge district court held by a two-to-one vote that the Associated Press violated the Sherman Act by its rules of limited membership, making choice practically dependent upon competitors of the applicant in the vicinity. The judges held that constitutional freedom of speech was not involved. (See

NEWSPAPERS.)
During the year the Supreme Court sustained and gave new life to the ancient "informer" statute which allowed treble recovery to a person who successfully sued those making fraudulent claims against the United States. Thus it placed part of the anti-trust law enforcement in private hands, United States ex rel. Marcus v. Hess, 317 U.S. 537; United States ex rel. Ostrager v. New Orleans Chapter, Associated General Contractors, 317 U.S. 562, although by an equally divided court it failed to upset a decision below, United States ex rel. Brensilber v. Bausch & Lomb Optical Co., 131 F. (2d) 545 (C.C.A.2d), construing the statute narrowly as to the nature of the fraudulent claim to be recognized, 64 S.Ct. 187. See 41 Mich. L. Rev. 1001; 11 Geo. Wash. L. Rev. 531.

The Court also upheld the right of an author to sell his privilege of assignment, even though death might prevent him from ever exercising it. Fred Fisher Music Co. v. M. Witmark & Sons, 318 U.S. 643. See Brown, Renewal Rights in Copyright, 28 Corn. L. Q. 460; 18 Ind. L. J. 318; 42 Mich. L. Rev. 190; 16 So. Calif. L. Rev. 353; 17 Temp. L. Q. 299. Being called on to consider the taking of private property in eminent domain proceedings, it established general principles, including the right of the United States to recover back amounts overpaid, in United States v. Miller, 317 U.S. 369; 11 Geo. Wash. L. Rev. 385; 27 Minn. L. Rev. 534; 91 U. of Pa. L. Rev. 671; 28 Wash. U. L. Q. 178; but in United States ex rel. T.V.A. v. Powelson, 319 U.S. 266, in a five-to-four decision, it refused to allow value based upon a power project dependent upon the exercise of the State power of eminent domain. 29 Corn. L. Q. 236.

The Court has been careful to uphold rights of accused in Federal criminal cases, and during the year has established a vitally important principle that statements obtained from an accused even though of a voluntary nature are inadmissible in evidence if at the time the accused was being held in violation of statutes requiring a prompt arraignment before committing officials. McNabb v. United States, 318 U.S. 332; Anderson v. United States, 318 U.S. 350. See 56 Harv. L. Rev. 1008; 27 Marq. L. Rev. 212; 21 Chi.-Kent L. Rev. 340. This has caused the reversal of numerous cases by the intermediate appellate courts and has been the subject of much comment and proposed legislation, now being discussed in Congress, suggesting some modification of what is thought by many to be an undue strictness of the now announced law.

Other interesting cases involving the administration of the criminal law include *United States v. Johnson*, 319 U.S. 503, reversing a decision below invalidating an indictment by a grand jury continued into another term of court, on the ground that the jury, while it could not initiate new investigations, could, however, complete those which it had begun, 41 Mich. L. Rev. 966, 37 Ill. L. Rev. 453, 18 Notre Dame Lawyer 392; *Johnson v. United States*, 318 U.S. 189, criticizing (but holding the objection waived) the trial court's action

in commenting upon the accused's claim of privilege against self-incrimination after he had taken the stand to testify as to certain matters before asserting his claim; and Roberts v. United States, 64 S.Ct. 113, holding against dissent that when probation after sentence has been revoked an increased sentence cannot then be invoked. In Tot v. United States, 319 U.S. 463, the Court refused to sustain the statutory presumption under the Federal Firearms Act that possession of a firearm or ammunition was "presumptive evidence" of a violation of law, on the ground that it was violent and inconsistent with any arguments drawn from experience, a view of "presumptions" which has drawn the criticisms of Dean Morgan of Harvard, 56 Harv. L. Rev. 1324, and Dean Hale of Southern California, 17 So. Calif. L. Rev. 48. or Southern Canforna, 17 So. Cam. L. Rev. 48.

The Court held the Federal Kickback Act, penalizing the requiring of public works' employees to "give up" portions of wages, applicable to a foreman of a subcontractor on a public construction project. United States v. Laudani, 64 S.Ct. 215. It also upheld an indictment framed against imprisonment for alabt head on the part Civil Workship and th prisonment for debt based on the post-Civil War which prohibited the return of any person to a condition of peonage. United States v. Gaskin, 64 S.Ct. 318. Compare also Folsom, A Slave Trade Law in a Contemporary Setting, 29 Corn. L. Q. 203. It refused to hold the Federal Bank Robbery Act which covers in terms "any felony" committed in a national bank to include State felonics Lawrence Whited States 2019 12 101 onies. Jerome v. United States, 318 U.S. 101; 43 Col. L. Rev. 257, 861; 12 Fordham L. Rev. 66; 42 Mich. L. Rev. 191; 17 St. John's L. Rev. 131. And it refused to find violative of due process the New York trial of Louis Lepke Buchalter and others, 319 U.S. 427.

Decisions mainly concerning civil procedure have brought out the insistence of the Court, and particularly of a vigorous minority, on the full accord to litigants of the right of trial by jury; in cases such as those involving claims of war risk insurance or asserted negligent injuries of seamen and railroad employees, there has been a sharp division in the Court even as to the meaning and ex-tent of the Court's power to direct a verdict. Thus, in De Zon v. American President Lines, 318 U.S. 660, Galloway v. United States, 319 U.S. 372, and Brady v. Southern Ry. Co., 64 S.Ct. 232, a majority sustained the action of the trial court in taking the case from the jury; in Bailey v. Central Vermont Ry., 319 U.S. 350, and Owens v. Union Pac. R. Co., 319 U.S. 715, a majority went the other way; and in Tiller v. Atlantic Coast Line R. Co., 318 U.S. 54, the Court was in agreement in reversing a directed verdict below. See 31 Calif. L. Rev. 454; 92 U. of Pa. L. Rev. 92. The Court also extended the use of mandamus as an auxiliary remedy in the appellate courts, providing in effect in particular cases for a peremptory appeal, as in cases involving the United States or a friendly foreign government on a matter which might be delayed in the courts many years. Exparte Republic of Peru, 318 U.S. 578; Exparte United States, 319 U.S. 730; 43 Col. L. Rev. 843, 916. The generally limited nature of the remedy is stated in Roche v. Evaporated Milk Association, 319 U.S. 21; 41 Mich. L. Rev. 1205. The Court has also established important principles with respect to actions removed from State courts to the Federal court by defendants under the removal power in matters involving Federal questions or where the parties are citizens of different States; the Court in effect holds the removed action to be a Federal cause and allows the pleading of a

counterclaim of matters cognizable only in the State courts. Freeman v. Bee Machine Co., 319 U.S. 448. It has further clarified the law of declaratory judgments, holding that this new remedy cannot be used broadly to draw control over State tax laws into the Federal court. Great Lakes Dredge & Dock Co. v. Huffman, 319 U.S. 293. A majority of the Court held that such a judgment could not be refused as to a matter of State law, even though doubtful and disputed, where the Federal court had jurisdiction because of the diversity of citizenship of the parties, Meredith v. City of Winter Haven, 64 S.Ct. 7, while a somewhat different grouping of the Court held in Burford v. Sun Oil Co., 319 U.S. 315, that resort to that ground of Federal jurisdiction should not be allowed to destroy a State unified method for formation of policy regarding the oil industry. 56 Harv. L. Rev. 1162; 42 Mich. L. Rev. 337.

Reform of Legal Procedure. The outstanding event of the year in reform of legal procedure has been the announcement by the advisory committee ap-pointed by the Supreme Court of its draft of uniform rules of criminal procedure for the Federal courts. Federal Rules of Criminal Procedure—Preliminary Draft (1943). These rules represent a notable attempt at clarity, simplicity, and uniformity, as in the rules of civil procedure effective in 1938, and have been acclaimed with practically unanimous support of their guiding principles, with disagreement limited only to details. Rather curiously the one point which seems to have aroused the most discussion was a provision of the rules adopting the substance of the McNabb decision referred to above; and after consideration, the committee, in making its report to the Court in November, decided to eliminate this rule, seemingly to allow the law to develop by court decision or by legislation and also because this issue involved a rule of evidence which was not extensively restated in the committee's draft of rules. Among important advantages of the new rules are the combination of all the old-fashioned forms of objection by a defendant—motion to quash, plea in abatement, demurrer, and the like-into one simple uniform motion by which all preliminary issues may be raised; the simple forms of indictment and of stating the charge upon which prosecution is being had; the granting of the right to waive grand jury indictment, with trial then on information only; simpler provisions for appeal in line with the civil rules; and in general provisions line with the civil rules; and in general provisions for an uncomplicated direct form of administration of the criminal law along lines already achieved in the civil rules. See Orfield, The Preliminary Draft of the Federal Rules of Criminal Procedure, 22 Tex. L. Rev. 37; Robinson, The Proposed Federal Rules of Criminal Procedure, 27 J. Am. Jud. Soc. 38; Waite, ibid., 27 J. Am. Jud. Soc. 101; and 29 A.B.A.J. 376, 390, 603, 654. The committee after publishing its draft and receiving committee after publishing its draft and receiving comments from the bench and bar again presented its draft to the Court, but the Court has suggested that it take time to receive further comments during the coming year in order that it prove fully acceptable for adoption thereafter.

The Court's advisory committee on the Federal Rules of Civil Procedure has been active during the year to consider amendments to the highly successful practice in the civil courts. As yet no public report has been made. In this connection it is to be noted that the progress of procedural reform in the States, although vigorously supported by the important Special Committee on Improving the Administration of Justice of the American

Bar Association under the leadership of Federal Judge John J. Parker, has somewhat slowed down so far at least as concerns actual accomplishments of definite reforms. It is true that in addition to the reforms noted in last year's review new codes appear to have been adopted in Iowa, Missouri, and North Dakota, 27 J. Am. Jud. Soc. 19, but these reforms have been of a considerably restricted nature as compared to the Federal rules. Notably, too, the rather complete adoption of the Federal system made by the Nebraska Supreme Court under its rule-making power was repealed by the legislature—a step which must be counted a setback, not merely because the Nebraska rules were well drawn, but because they re-enforced the idea of court rule-making. The need of reform was notably stated by Chief Justice Simmons to the Nebraska legislature in an address, Why New Rules of Civil Procedure Now? 26 J. Am. Jud. Soc. 170, and the whole field exhaustived in surveyed by former Dean Pound of Harvard in the Administration of Justice, 29 Improving A.B.A.J. 494.

In a more limited way, the courts appear to be accepting their responsibilities to improve details of their procedure as they can by their local rules. Thus, the Federal appellate courts have gone far to avoid heavy printing costs upon litigants by eliminating the requirement of a formal printed record, and allowing the parties to print, as appendices to their respective briefs, only such parts of the proceedings below as they definitely plan to rely upon in their appeals. See 26 J. Am. Jud. Soc. 148, 179; 27 J. Am. Jud. Soc. 55. The adoption of this rule in November by the busy appellate court for the Second Circuit, sitting in New York 'City, makes it applicable in nearly one-half the circuits and in probably more than one-half the

total Federal appeals.

The method by which judges should be selected has once more come under critical public consideration in connection with events occurring at the regular popular election in New York last November. Just before election day the District Attorney in New York County revealed evidence in his possession showing a rather intimate connection between one of the candidates and a person adjudged of ill repute because of his criminal associations; and it appeared that the candidate had expressed thanks to this person for his nomination to judicial office. Thereupon the two major parties, which had both nominated this candidate along with others in a bipartisan choice of those presumably best fitted for the bench, tried to withdraw the nomination. The courts, however, ruled that such action was too late, and also decided that grounds were lacking upon which the candidate might be disbarred from practice of the law and thus rendered ineligible for a judicial position. Although an extensive campaign in the press and elsewhere was waged for his defeat, never-theless the party nominations were sufficiently strong to insure the candidate's election, though by a comparatively small vote. Whether the agitation which took place will lead to a change in the much debated system of election of judges remains to be seen. A judicious statement of the entire affair appears in the article, New York Experience Shows Need for Better Methods of Choosing Judges, 29 A.B.A.J. 690.

Legal Education. The difficult period which the war ushered in for the law schools, so brilliant a feature of American education previously, was a topic of discussion in last year's review. Conditions have remained serious, indeed, perhaps only

slightly ameliorated in places by the action of the Army or Navy in taking over the physical quarters in which a school has been housed for use in military or naval training. No further figures of law school enrollment have been available; but it is understood that the enrollment is still further reduced, presumably to less than a quarter of its prewar level. Schools in general are continuing under reduced faculties, with many professors away in the Army or Navy or engaged in other war activities. Meanwhile the demand in both governmental and private legal circles for lawyers continues to be most heavy. It must be considered one of the maladjustments of war that legal training is made of no use in the military establishment—lawyer-soldiers being said to be "a dime a dozen" -just when the demand for expert legal service is increasing because of a combination of new problems and decreased personnel.

Nevertheless, and in spite of the difficulties, it is interesting to note the amount of vigor which legal education has had and which is still apparent in the discussions in the law reviews, greatly abbreviated as those must be because of printing difficulties and the great dearth of student editors. Thus, a notable article, Lasswell and McDougal, Legal Education and Public Policy: Professional Training in the Public Interest, 52 Yale L. J. 203, advocated in vigorous and extended detail a more definite emphasis by the schools upon leadership training, rather than upon vocational skills. This, in turn, provoked discussion, as by Professor Llewellyn in the May Columbia Law Review, an issue devoted almost wholly to discussions of methods of legal education by law and sociology teachers and students, Messrs. Weihofen, Cavers, Johnson, Moorhead, Halpern, and Llewellyn, 43 Col. L. Rev. 423-485. At the same time, under the leadership of Dr. Hubert W. Smith of Harvard, symposia on the relation of law and medicine, including practical discussions of scientific proof of medical knowledge in law, have appeared in several law reviews, including those of Boston, Chicago, Iowa, Michigan, North Carolina, Southern California, Tennessee, Virginia, and Yale. Meanwhile a very interesting controversy has developed in English legal history involving one

of the most famous of books on English law, Bracton's De Legibus et Consuetudinibus Angliae, of the thirteenth century. In 1941 there were published lectures of the late Professor Kantorowicz entitled Bractonian Problems, wherein he criticized Professor Woodbine's monumental edition of Bracton, published by the Yale Press, and argued that the author of the famous book

presage a resurgence of interest in this particular subject, as well as in legal history.

Perhaps as surprising as any recent development in law as a science is the report by Professors Underhill Moore and Charles C. Callahan of their long-continued studies of the effect of parking habits in a city, Law and Learning Theory: A Study in Legal Control, 53 Yale L. J. 1–136. The authors have achieved the unusual result, a veritable tour de force, of making city automobile parking so scientific as to be ununderstandable except to the esoteric initiated.

Note was taken in last year's review of the extensive system developed by the Board of Legal Examiners operating under the U.S. Civil Service Commission (q.v.) to establish a roster of lawyers eligible for the Federal service. This unique and interesting experiment in the selection of government lawyers has achieved a great measure of success, notwithstanding the difficulties of recruiting personnel in these times. The development of an examination along the lines of a highly organized specialized intelligence test for lawyers, followed by the personal interviews by distinguished local boards, established new methods of selection which are likely to prove a model. The various steps in the process have been learnedly discussed by several members of the Board in the Bar Examiner for July, 1943, 12 Bar Examiner 35-48, containing articles by Solicitor General Fahy, Board Member Wickser, Board Secretary Fuchs, and Professor Weihofen, Principal Attorney of the Legal Examining Section. Professor Wei-hofen, who was instrumental in organizing the examination itself, has a discussion of the statistical studies made concerning it, in The Civil Service Program for Government Lawyers, 3 Lawyers Guild Rev. 1

CHARLES E. CLARK.

LEAD. Lead, which in 1942 was one of the few metals for which supply exceeded demand, was less plentiful in 1943. While production dropped, demand increased, making it necessary to draw upon the stockpile which had been accumulated. Only about 40 per cent of total consumption was secured from domestic mine production, the deficit being made up from imports, secondary lead, and steadily increasing withdrawals from stockpile.

had greater familiarity with Roman sources than had been conceded to Bracton, thus suggesting in effect that perhaps another than Bracton was the author. This theory, although accepted by the distinguished historian Holdsworth, was discussed most critically by Professors Woodbine, 52 Yale L. J. 428, Schulz, 59 L. Q. Rev. 172, and McIlwain, 57 Harv. L. Rev. 220; and the debate seems to

The same labor shortage which shackled copper and zinc production restricted lead mining, but contrary to frantic efforts to secure manpower to mine and smelt the two former metals, little assistance was given to lead. Lead-zinc mines whose values were composed in too large a proportion of the former were shunted from the top to the bottom of the labor priority list.

Because Australian railroads were inadequate to haul both lead and zinc concentrates from mine to tidewater for shipment as ballast to American smelters, lead had to bow to the more critical need for zinc making receipts from the South Pacific continent uncertain. Likewise, copper and zinc were given priority on bottoms from South America, where Peru was the principal lead producer. Thus imports, like domestic production, were restricted, although Canada and Mexico, which also faced production difficulties, each shipped considerable quantities to the United States.

Domestic mine production promises to decline further in 1944 because of labor shortages, the lead producers industry advisory committee to the War Production Board stated in November, 1943. Imports were expected to increase somewhat, but recovery of scrap also was believed to be on the downgrade. Further withdrawals from stockpile appear inevitable unless an unexpected drop in

requirements develops.

During 1942 and 1943 shipments of refined lead to lead sheathed cable manufacturers were larger than for any other use. Ammunition was the second largest user, but proportionately smaller quantities were required for this purpose than in the first World War. In the first World War lead shrapnel shells were manufactured in large quantities, but these have been largely replaced during the current war by fragmentation shell with the result that this particular munition use has been virtually eliminated. On the other hand, lead azide has largely replaced mercuric fulminate as a detonator, although this is not a large consumer by

As in peace time, storage batteries both for automotive equipment and for submarines have consumed large tonnages. Because of a scheduled decrease in small arms ammunition in 1944, considerably less lead will be required during the year for that purpose. Compensating increases in demand for other essential products, such as batteries, cables, tetraethyl lead, and other products

for the war program are expected by the WPB. As in 1941 when southeastern and central Missouri produced 164,388 tons of 461,426 tons of lead mined in the United States, and in 1942 when this district produced 195,916 tons of 496,239 tons mined in the country, the relative importance of producing districts was fairly stable during 1943. Although the Hecla Mine, the State's largest producer, neared the end of its career, the Coeur

INDUSTRIAL CLASSIFICATION OF D REFINED LEAD SHIPMENTS DOMESTIC [American Bureau of Metal Statistics]

<sup>&</sup>lt;sup>a</sup> Primarily lead shipped ex primary refineries, which is mainly virgin lead derived from ore, but into which some lead derived from battery scrap has already entered. Shipments ex primary refineries during 1943 appear to have been accounting for about 50 per cent of the total shipments into consumption.

<sup>b</sup> Includes white lead, red lead, litherge, and other oxides; sheet and pipe.

<sup>c</sup> Includes white lead, red lead, litherge, and other oxides.

Includes white lead, red lead, litharge, and other oxides; sheet and pipe; solder, babbitt, and lead for making tetraethyl for gasoline. Of the lead that goes into the oxides a considerable proportion passes on into the manufacture of storage batteries.

d'Alene district of Idaho was second in importance in 1943. In 1941, Idaho produced 104,914 tons; in 1942, 113,909; in 1943, 96,100. Utah was third with a production of 66,250 tons in 1943, compared with 69,601 in 1941 and 71,930 in 1942. Domestic mines operated under the Premium Price Plan, by which the Federal government paid premiums as high as 51/2 cents per lb. over the market price for production in excess of quotas set for each mine by a committee including WPB and OPA representatives. When the Premium Price Plan was established in 1942, a single premium of 2¾ cents per lb. was established, but early in 1943 action was taken to make it possible to pay an additional 234 cents per lb. premium to high-cost mines. On Oct. 27, 1943, it was announced that mines not already operating would not be eligible to receive this additional premium. No new projects for the production of lead which require government financing will be approved, although mines now producing will, of course, be kept in production. See Antimony.

The ceiling price for lead remained at 6.50 cents per lb. at New York throughout the year, although domestic mines were, of course, paid the premiums described above in addition to this price.

CHARLES T. POST.

LEAGUE OF NATIONS. The League of Nations, whose normal activities had been largely checked in 1939 when the nations took the alternative method of war, gained ground noticeably during 1943 not only as a working institution but also as an ideal and philosophy of cooperation and collective se-curity. As the world's thoughts turned more and more towards the planning of peace and reconstruc-tion, they increasingly went back over the League's record and drew on its experience. (See Postwar PLANNING.)

Most striking in the immediate practical sense was the association of continuing League agencies in the newly developing United Nations agencies (q.v.). The United Nations Conference on Food and Agriculture took a first cautious step in inviting the League's Economic and Financial Section and the International Labor Organization to transmit any documentation to its Conference at Hot Springs; the Interim Commission which grew out of that Conference went further in inviting actual participation in the planning of the new permanent agency. The United Nations Relief and Rehabilitation Council at Atlantic City, however, went the full way at once, not only inviting both agencies, as well as the League's Health Section, to the opening conference but also extending that invitation automatically to the future meetings of the Council, regional committees, and technical committees, with the reciprocal authorization for its representatives to participate in meetings of the other agencies. Thus an effective working arrangement developed almost spontaneously whereby the international agencies created after the last war were enabled by daily association to add their experience and assistance to the new agencies being created in this war.

At the same time, the League's own organizations began to pick up activity. While the principal political agencies of Assembly and Council remained unconvened for the third war year, various other agencies met in four different countries. The Supervisory Commission, which had been entrusted with emergency powers for the war, held its 91st and 92nd Sessions in Montreal in June and July, approving present League activities and voting the next year's modest budget of ten million Swiss francs. Various committees in the economic and

financial field also met during the year, including the Committee on Economic Depressions in Princeton in April, to approve its report for publication, a Committee of Fiscal experts from the Americas in Mexico City in July, to approve three model conventions on Double Taxation, and a meeting of the members of the Economic Committee resident in the Americas in Princeton in December, to consider the application of the Hot Springs and Atlantic City recommendations. Certain other social or humanitarian work also continued, the High Commissioner for Refugees in London doing what was possible in this vast field in connection with the Bermuda and other meetings, the anti-drug agencies also meeting in London in October, and various consultations amongst the Health Committee leading to the standardization of two new sera and an important report on typhus prevention. The permanent staff, which had been divided as the German threat spread over Europe, continued separated, about 80 officials at headquarters in Geneva, the Treasury and Refugee offices in London, the Economic Mission in Princeton, a group of Anti-Drug officials in Washington, as well as about 100 officials of the International Labor Office (q.v.) in Montreal.

Certain other important developments occurred in 1943. On April 15 Generals de Gaulle and Giraud, in their first joint diplomatic action, sent identic notes to the League stating that Vichy's notice of withdrawal from the League was made under foreign pressure and consequently without effect. Several declarations of policy were made in Britain, Prime Minister Churchill on March 21 stating that, for the future, "certainly we must take as our foundation the lofty conception of freedom, law, and morality which was the spirit of the League," and Foreign Secretary Eden and Minister of State Richard K. Law making further sympathetic statements in Parliament. In the United States, frequent references were made to the League in the Senate debate which finally resulted in the resolution for "a general international organization" on lines which were closely similar to the League's; Senator Taft, indeed, proposed use of the League as the framework for international cooperation. Thus, as the year came to a close, it seemed evident that whatever international agency developed from the war, it would certainly embrace the existing League agencies and probably closely follow the general League lines. See Syria.

| Anguilla<br>Virgin Islands <sup>b</sup> (Road Town)    | 67       | 5,829<br>6,720   |
| Leeward Islands (St. John)                             | 4221/4   | 97.644           |

<sup>&</sup>lt;sup>c</sup> Includes the dependent islands of Barbuda (62 sq. m.) and Redonda (1 sq. mi.). <sup>b</sup> Also known as St. Christopher.

Chief towns St. John (capital), 10,000 inhabitants; Basseterre, 8,000; Plymouth, 2,000; Charlestown, 1,200; Road Town, 400. Education (1938): 112 schools and 17,850 pupils (average attendance).

Production and Trade. The important products are sugar, molasses, cotton, limes, fruits, coconuts, tomatoes, onions, coconuts, and tobacco. In 1941 total imports were valued at £802,262 and total exports at £947,629. Shipping entered and cleared totaled 6,409,408 tons.

Government. Finance (1941): revenue £413,105; expenditure £368,786; public debt £128,780. The administration for the whole colony is headed by a governor, assisted by a federal executive council and a general legislative council. For local government each of the presidencies of Antigua, Montserrat, and St. Kitts-Nevis have their own executive and legislative councils while the Virgin Islands has an executive council. Governor and Commander in Chief, L. B. Freeston (appointed in October, 1943 to succeed Sir Douglas Jardine).

LEGISLATION. See STATE LEGISLATION; TAXATION; UNITED STATES under *Congress*; articles on foreign countries; also the subject, as LABOR CONDITIONS, SELECTIVE SERVICE, etc.

LEINER CASE. See Law under War Decisions.

LEND-LEASE PROGRAM. On Mar. 11, 1941, nine months before the Japanese attack on Pearl Harbor, the U.S. Congress passed the Lend-Lease Act, empowering the President to provide goods and services to those countries whose defense he deemed vital to the defense of the United States. Lend-lease goods began to move immediately. From March 11 to May 2, lend-lease operations were in charge of the President's Liaison Committee, headed by Maj. Gen. James H. Burns, in the Office of the Secretary of the Treasury. On May 2, 1941, the work of this committee was entrusted to the Division of Defense Aid Reports in the Office for Emergency Management. This Division had the job of coordinating the efforts of the various Government departments concerned with the lend-lease program.

Since the program was rapidly growing in size and complexity, a separate agency—the Office of Lend-Lease Administration—was established on Oct. 28, 1941, with Edward R. Stettinius, Jr., as Administrator. The Office of Lend-Lease Administration acted as a sort of "holding company" for lend-lease activities. Its functions were policy making, coordinating, expediting, and record-keeping. On Sept. 25, 1943, the President issued an executive order coordinating the civilian agencies operating in the foreign economic field, including the Lend-Lease Administration, in a new agency, the Foreign Economic Administration (q.v.) headed by Leo T. Crowley.

No actual purchasing has been done by the Lend-Lease Administration. In order to integrate the entire war effort of the United States, procurement of lend-lease goods and services has been handled by the agencies best qualified—military goods and services by the War and Navy Departments, merchant ships by the Maritime Commission, the charter and hire of ocean transport by the War Shipping Administration, foodstuffs and agricultural commodities by the Department of Agricultura, and industrial and other nonmilitary products by the Procurement Division of the Treasury Department. Other agencies concerned with the lend-lease program have the following responsibilities: the State Department for negotiating Lend-Lease Agreements with foreign countries; the Munitions Assignments Board for the assignment of munitions; the War Production Board for the allocation of industrial material

rials; the Petroleum Administration for War for the allocation of petroleum products; and the Food Requirements and Allocations Committee of the War Food Administration for the allocation of foodstuffs. (See the articles on these agencies.)

Before the United States entered the war, Congress made all appropriations of lend-lease funds direct to the President. Since then, it has continued to make funds available in this manner for nonmilitary goods and services, but has appropriated money direct to the Army and Navy for the munitions requirements of our allies. Until Dec. 1, 1943, a total of \$24,670,000,000 had been appropriated to the President. In addition, there had been authorized the transfer of up to \$35,970,000,000 of military goods and services procured with appropriations to the Army, Navy, and Maritime Commission.

By Dec. 1, 1943, the President had declared the following countries eligible for lend-lease aid:

Mexico Netherlands Nicaragua Norway Argentina Belgium Ecuador Egypt
El Salvador
Ethiopia
Fighting France
Fr. N. & W. Africa Bolivia British Common-Panama Paraguay wealth Chile Peru China Colombia Guatemala Poland Saudi Arabia Haiti Costa Rica Honduras U.S.S.R. Cuba Czechoslovakia Iceland Iran Uruguay Dominican Repub-Venezuela Liberia Yugoslavia lic

To Oct. 31, 1943, lend-lease has accounted for about 13.5 per cent of the total United States war expenditures. From Mar. 11, 1941, to Oct. 31, 1943, lend-lease aid—goods transferred and services rendered—totaled \$17,533,000,000. Of this amount, \$1,244,000,000 was furnished in 1941, \$7,009,000,000 in 1942, and \$9,280,000,000 in the first ten months of 1943.

Transfers of munitions have accounted for 53 per cent of the total, industrial items for 20 per cent, and foodstuffs and agricultural products for 13 per cent. The remaining 14 per cent has consisted of services rendered. Services include the repair of United Nations vessels in American shipyards, the charter and hire of merchant ships to carry lend-lease goods, the building of factories and shipyards in the United States to manufacture lend-lease articles, the ferrying of aircraft, and the training of United Nations pilots in this country. See also articles on U.S. industries and products affected, as Aeronautics under American Aircraft Production, Food Industry, Hides, Molydenum.

From Mar. 11, 1941, to Oct. 31, 1943, shipments of lend-lease goods totaled \$13,844,000,-000. Of this, \$5,980,000,000 went to the United Kingdom; \$3,550,000,000 to the U.S.S.R.; \$2,168,-000,000 to Africa, the Middle East, and the Mediterranean Area; \$1,603,000,000 to China, India, Australia, and New Zealand; and \$543,000,000 to other areas.

Lend-lease shipments to the United Kingdom have consisted of munitions for offensive action against the enemy, industrial materials for the fabrication of military goods, and foodstuffs for soldiers and war workers. Through October, 1943, munitions have accounted for 40 per cent of total shipments, industrial items for 26 per cent, and foodstuffs and other agricultural products for 34 per cent.

The composition of lend-lease exports to the U.S.S.R. has been quite different from that of goods to the United Kingdom. Munitions, for example, have comprised 56 per cent of lend-lease

exports to the U.S.S.R., industrial items 27 per cent and foodstuffs 17 per cent

cent, and foodstuffs 17 per cent.

Among the finished munitions sent to Soviet Russia, there have been more than 6,900 planes (more than to any other lend-lease country), 3,600 tanks, 132,000 sub-machine guns, and 198, 000 motor vehicles. We have also made available to the Russian armies 247,000 field telephones and 780,000 miles of field telephone wire for the maintenance of their long lines of communication.

Lend-lease aid to the United Kingdom and the Soviet Union has played an important part in the allied victories over the Axis. The munitions sent to the U.S.S.R. are helping drive the Germans out of Russia. Lend-lease equipment was used effectively by the British First Army in the fighting in North Africa and by the R.A.F. in its devastating raids over Europe.

As the war in Africa, the Middle East, and the Mediterranean area gained in scope and intensity, lend-lease shipments to this area increased. Nearly three-fourths of the exports have been military goods. These helped to equip the British Eighth Army for its drive from El Alamein to Tunisia, and for the campaigns in Sicily and the Italian peninsula.

Lend-lease has aided the United Nations in the war against Japan. Almost two-thirds of the lend-lease supplies sent to the Far East—China, India, Australia, and New Zealand—have been munitions. American guns, ammunition, planes, and tanks are being used by our allies in the fighting in China and the Southwest Pacific. As the war in the Pacific intensifies and our allies further expand their operations, the part played by lend-lease will increase.

In addition to goods shipped to the various theaters of war, lend-lease has helped to develop and maintain the supply lines of the United Nations. Many ships built in the United States with lend-lease funds have been transferred for the duration of the war to Great Britain, the U.S.S.R., and other United Nations. Air routes have been developed with the aid of lend-lease from the United States to the Middle East, U.S.S.R., India, and Australia. Lend-lease has also financed in varying degree the construction of pipelines, supply depots, docks, warehouses, railroads and rolling stock, and plane and truck assembly and repair shops in the Middle East.

Reverse Lend-Lease. Lend-lease has not been a one-way street. Rather, the United Nations have put their resources into a common pool, each according to its ability, for the most effective prosecution of the war.

As of June 30, 1943, the British Commonwealth of Nations reported total expenditures of about \$1,171,000,000 for reverse lend-lease aid to the United States. The United Kingdom spent about \$871,000,000 of this amount; and Australia, New Zealand, and India about \$300,000,000. Based upon estimates for the first six months of 1943, expenditures by the British Commonwealth for reverse lend-lease to the United States are at an annual rate of about \$1,250,000,000. This figure does not include expenditures for supplies transferred by the United Kingdom to American forces in colonial theaters of war. Furthermore, it excludes important raw materials, formerly purchased by us for cash, which the British are now going to provide under reverse lend-lease.

In the British Isles the American forces are

In the British Isles the American forces are receiving without payment by us a wide variety of goods and services, ranging from airfields, barracks, transportation, repair and recreational facilities, to food, ordnance, and aircraft. The British transported a large proportion of the American troops who participated in the North African and Sicilian landings. American ships are serviced and repaired under reverse lend-lease in British ports

throughout the world. Under reverse lend-lease, Australia and New Zealand supply the United States troops stationed in the Southwest Pacific area with approximately 90 per cent of their food requirements, in addition to housing facilities, hospitals, airdromes, articles of clothing, and miscellaneous equipment. Australia provided to the United States forces through June 30, 1943, the following quantities

of foodstuffs:

| Meat                         | 61,480,000 | pounds |
|------------------------------|------------|--------|
| Bread, biscuits, and cereals | 48,110,000 | pounds |
| Potatoes                     | 29,762,000 | pounds |
| Vegetables and fruit         | 49,931,000 | pounds |
| Canned foods                 | 28,340,000 |        |
| Emergency rations            | 2,231,000  | pounds |
| Sugar                        | 11,782,000 | pounds |
| Butter                       | 6,628,000  |        |
| Condensed milk               | 8.711.000  | pounds |
| Fresh milk                   | 11,500,000 | pints  |
| Fresh eggs                   | 22,000,000 |        |

In the same period New Zealand supplied to our men under reverse lend-lease over 170,000,000 pounds of food, as follows:

| Fresh meat              | 49,650,000 pounds | , |
|-------------------------|-------------------|---|
| Canned and smoked meat  | 21,600,000 pounds | ļ |
| Potatoes                | 9.150,000 pounds  |   |
| Other vegetables        | 24,125,000 pounds |   |
| Fruit                   | 10,825,000 pounds |   |
| Butter and cheese       | 12,550,000 pounds |   |
| Other dairy produce     | 10,000,000 pounds |   |
| Sugar                   | 7.100,000 pounds  |   |
| Flour and other cereals | 13.725.000 pounds |   |
| Miscellaneous supplies  | 11,475,000 pounds |   |

Reverse lend-lease aid has also been furnished in the Middle East, U.S.S.R., China, and other countries.

The story of reverse lend-lease does not end with the aid received by the United States forces overseas. The British have sent to this country under reverse lend-lease small naval craft, barrage balloons, machine tools for shipyards, benzol, and other industrial products. Our allies have also made available to us specifications for aircraft, guns, tanks, and other weapons, as well as military knowledge of inestimable value gained in hard-won battle experience.

See Algeria, Arabia, Australia, Belgium, Brazil, Chile, Cuba, Liberia, New Zealand, South Africa, Turkey, Uruguay, under *History*; United States under Appropriations.

JOHN D. EAST.

LEROS. See Greece under History; World War under The Balkans.

LIBERIA. A Negro republic, founded in 1847 by freed slaves from the United States, on the west coast of Africa between Sierra Leone and French Ivory Coast. Capital, Monrovia (pop. about 10,000.)

Area and Population. Area, about 43,000 square miles; population, variously estimated at from 1,000,000 to 2,500,000. Only about 60,000 of the coast Negroes are considered civilized. Among them are some 12,000 American-Liberians, who form the governing and intellectual class. The primitive natives of the interior belong to six main and numerous smaller tribes, each with its own language. English is the language of government and commerce. There were 261 United States citizens in Liberia on Jan. 1, 1941.

Education and Religion. About 10,000 pupils were

attending 70 government and 80 mission schools in 1938. There are two colleges at Monrovia (one government and one Methodist) and an industrial and vocational school at Kakata. The American-Liberians are Protestant Christians; the indigenous tribes, mainly pagans and Moslems, with some Christian converts.

Defense. In 1941 there was an enlisted Frontier Force of 750 men and a militia of some 4,000 men, organized in 7 infantry regiments. By the agreement of Mar. 31, 1942, the U.S. Government undertook to extend financial and technical aid in the organization of Liberian defense forces. U.S. military forces arrived in Liberia in May, 1942, to assist in the defense of the republic for the duration of the

Production. Rubber, produced on the Firestone Company's 1,000,000-acre concession at Marshall, on the coast 40 miles south of Monrovia, is the chief export crop. The 77,000 acres under cultivation in 1941 produced more than 18,000,000 lb. of dry rubber annually. Native coffee, cacao, sugar cane, cotton, piassava fiber, palm oil and kernels, kola nuts, rice, oil seeds, and gold are produced in relatively small quantities. There are rich unde-

veloped forest, mineral, and agricultural resources.
Foreign Trade. Imports in 1941 were valued at \$3,291,967 (\$2,236,051 in 1940); exports, \$5,096,-919 (\$3,242,290). Exports of raw and crepe rubber in 1941 totaled 18,080,788 lb. valued at \$4,987,763 (25,984,985 lb. valued at \$7,353,050 in 1942). For the other 1941 exports and imports, see 1943 Year Book. The United States was the principal market

and source of supply.

Finance. The 1942 budget estimated receipts at \$837,521. Actual collections in 1940 were \$898,617. External bonded debt, \$1,415,000 on Jan. 1, 1941; internal floating debt, \$164,834. The unit of currency is the Liberian dollar. U.S. currency was made legal tender on Nov. 1, 1942. At the official exchange rate fixed on that date \$4 U.S. exchanged for 1 pound sterling or for 4.80 Liberian dollars. Under the terms of a loan contract, the government has an American financial adviser.

Transportation. Transportation in the interior is carried on mostly by porters. There are no railways. Highways extended \$45 miles in 1942. The St. Paul River is navigable for 25 miles. In 1941 Monrovia became an alternate stopping point in the ferry service for military planes established between the United States and Egypt, and a regular station on the new Pan American Airways route between New York and Leopoldville, Belgian Congo. Marshall and Monrovia are the principal harbors. All cargoes must be loaded or unloaded by surfboats or lighters. In 1940, 245 ships of 715,797 registered tons en-

tered the ports Government. While the Constitution is modeled on that of the United States, suffrage is restricted to Negro landowners. The True Whig party, dominated by a small oligarchy of American-Liberian families at Monrovia, has controlled all branches of the government since 1878. President in 1943, Edwin Barclay, inaugurated Jan. 6, 1936, for an eight-year term. The bicameral legislature, composed of 10 Senators and 21 Representatives, consisted entirely of True Whigs. The United States—Liberian agreement of Mar. 31, 1942, gave the U.S. Government the right to construct and operate airports in Liberia for the duration of the war, to defend any part of the republic from enemy attacks, to extend the Liberian road system, to assist in the reorganization and equipment of Liberian forces, and to maintain jurisdiction over U.S. military and civilian personnel stationed in Liberia (see

1943 Year Book, p. 377). For 1943 developments, see below.

History. United States-Liberian relations were placed on a more intimate plane of cooperation during 1943 as a result of an exchange of Presidential visits. En route home from the Casablanca Conference, President Roosevelt made a side air trip from Bathurst, Gambia, to Monrovia to meet President Edwin Barclay and to inspect U.S. troops on January 27. On May 6 it was announced that William V. Tubman, also of the True Whig party, had been elected to succeed Barclay at the expiration of his term on Jan. 3, 1944. Charles L. Simpson, Liberian foreign secretary since 1934, was chosen Vice President. Soon afterwards President Barclay and President-elect Tubman journeyed to Washington to visit President Roosevelt in response to an invitation delivered during Roosevelt's Liberian visit. They were overnight guests at the White House on May 26-27 and then made a tour of U.S. war plants and cities before returning to Liberia.

On January 11 President Roosevelt declared the defense of Liberia vital to the defense of the United States, opening the way for lend-lease aid. The two Governments on June 8 signed an agreement on the principles applying to mutual aid in their common defense, in conformity with the Lend-Lease Act. New U.S. combat units arrived in Liberia in March to relieve the forces that landed during 1942 (see 1943 Year Book). The new troops proceeded to carry forward the road-building and other defense projects and the training of Liberian forces provided for in the special treaty of 1942 and in the 1943 lend-lease agreement. The importance of these defense installations was emphasized by Henry S. Villard of the State Department on August 19. "I do not doubt," he said, "that in any plans which may be worked out for international security after the present conflict, Liberia—across the way from the bulge of Brazil—will be one of the focal points of special importance to the Americas."

LIBERTY SHIPS. See Maritime Commission; Shipbuilding.

LIBRARY PROGRESS. During 1943 the major activities of libraries and librarians were devoted almost entirely to the war effort and to planning for the postwar period. Libraries continued as war and consumer information centers; supplied technical information to industrial defense workers and students; disseminated information in the fields of economics, government, history, and international relations; made available interpretations of current facts and events; supported domestic and international postwar planning; and helped relieve the strain of war by providing recreational reading. Beginning with a National Institute on War and Postwar Planning in Chicago in January, a series of 18 regional and many local institutes were conducted to give librarians in comparatively small groups an opportunity to inform themselves with the help of specialists in these fields.

the help of specialists in these fields.

A "Conference in Print" is planned for early 1944 with the theme "Preparing for Postwar Library Service." Among the subjects to be discussed by librarians and others in the American Library Association Bulletin are the opportunities for educational service afforded to libraries by demobilization and readjustment, postwar cultural relations with other nations, and books which influence American thought and action.

Upon request of the military authorities, a second

Victory Book Campaign was sponsored in 1943 by the A.L.A., American Red Cross, and United Service Organizations. Some 17,000,000 books were collected during the past two years and of that number about 10,000,000 were distributed to the Army, Navy, and Merchant Marine, War Prisoner's Aid, War Relocation Centers, and selected industrial areas.

Because of the importance of government publications, especially during wartime, the A.L.A. Executive Board sponsored a study of Government Publishing in Wartime (see College and Research Libraries IV: 100–106, 119, March, 1943). This report presented observations and suggestions based on the needs of educators, students, scholars, professional organizations, colleges, universities, schools, and libraries; as well as the usefulness of such persons and agencies to the government in getting the right distribution of such publications.

Increased attention has been given to postwar plans for libraries. The first step in planning was this year's publication of Postwar Standards for Public Libraries which sets up new goals for library service, size and area of library units, the book collection, technical processes, personnel, finance, and buildings. A survey and evaluation of present library service in terms of the standards is in process and later actual plans will be made with State, regional and Federal participation, it is hoped. It is recommended that \$200,000,000 a year be spent in the postwar period for the maintenance of public libraries and that \$400,000,000 was spent in capital outlays. In 1940, \$50,000,000 was spent for maintenance and \$3,000,000 for capital outlays. Recommended per capita expenditures for library support are: \$1 for limited or minimum service, \$1.50 for reasonably good service, and \$2 for superior service.

Among other postwar planning studies are: a report on what libraries can do to assist in the demobilization and rehabilitation of men and women from the armed forces and war industry; a report summarizing the planning activities of various library groups and presenting suggestions concerning areas in which planning is needed and problems for which solutions should be sought; and a report on the readjustment of librarians to the conditions which will prevail after the war. For details of 1943 library war activities and postwar plans, see all issues of the A.L.A. Bulletin, College and Research Libraries, Library Journal, and Wilson Library Bulletin.

Because of the war, international aspects and developments have greatly increased. The most important project was the completion of plans and the establishment, by means of funds from the Rockefeller Foundation, of the A.L.A. International Relations Office in Washington, headed by Dr. Harry Miller Lydenberg.

In addition to work in the Latin American field mentioned in Societies under Library Association, American, the following are 1943 developments: the foundation of a library school at the Escol Livre de Socialogia e Politica in Sao Paulo, Brazil; the preparation of a union catalog of library resources, the development of micro-film service and the organization of a short library institute in Mexico City; the formation of a bibliographical center for the cataloging of books for the University of Buenos Aires; the conducting of courses of library science in the National Library of Brazil; the formation of the Chilean Library Association (Associacion de Bibliotecarios de Chile); the establishment of a small American library in Saltillo, Coahuila, Mexico; and the assistance United States

librarians are giving in the reconstruction of the National Library of Peru, which was destroyed by fire on May 10, 1943. In connection with this last project, the Secretary of State appointed a committee which sent representatives to Peru in August to confer with the new director of the National Library, Dr. Jorge Basadre, regarding the planning of a new building. Books and materials, to replace those destroyed, are being provided by many individuals, libraries, institutions, and governments of the Americas.

Many libraries throughout the devastated war areas have been destroyed by bombs and fires or their collections looted by the enemy. Information concerning these is being collected in connection with postwar planning for reconstruction and development. In connection with these problems, the A.L.A. submitted recommendations to the State Department on ways in which libraries can contribute their share to cultural rebuilding of the world; and on policies effecting libraries outside the United States now and after the war.

Contacts are being maintained with the Library Association and other organizations of Great Britain regarding war and postwar plans. British librarians are purchasing large quantities of American books with a special fund of \$100,000 provided by the Carnegie United Kingdom Trust, to learn about the United States. As a gesture of reciprocity, the A.L.A. International Relations Board sponsored a British Book Week in American libraries, Oct. 24-30, 1943, with the cooperation of the British Information Services, Books Across the Sea, and the English-Speaking Union.

During the fall of 1943, five United States li-

braries were established in other countries by the British Division of the Office of War Information in close cooperation with the Division of Cultural Relations of the Department of State and with the Library of Congress. Following the pattern established for the American Library in London, the new libraries are located at Sydney and Melbourne, Australia; Wellington, New Zealand; Johannesburg, Union of South Africa; and Bombay, India

State and Federal Aid. During the year there was an increase of State aid to libraries and appropriations to State library agencies, due in part to the discontinuance of WPA library service. Another result of discontinued WPA library service is the interest expressed by a few congressmen in some type of Federal aid to libraries. Considerable growth has been noted in county library service. At present 631 counties receive library service, compared to 592 a year ago. All States, excepting Arizona, now have State library extension agencies. State aid for school libraries is also on the increase and in most cases the funds allocated by the State to a community are matched locally.

Notwithstanding the increased aid to libraries, there are still 35,000,000 people in the United States without library service; most of them in the rural areas. During the year Public Library Statistics, 1938-39 was published by the U.S. Office of Education. The 1942 general and salary statistics for public libraries in the United States were published in the April, 1943 issue of the A.L.A. Bulletin. Similar statistics for college and university libraries were included in College and Research Libraries for March, 1943.

Library Training and Personnel. Prior to the outbreak of the war, the annual placement of library school graduates was 100 per cent, leaving no reserve to offset the unusual number of positions that have developed in wartime. This year many more librarians have gone into the armed services than

last year. Hundreds of librarians have been drawn into government libraries, defense work, and library service for the Army and Navy. During 1942-43 there were about 1,200 students enrolled in the 34 accredited library schools of the United States and Canada, which is about 600 less than the 1940-41 enrollment. At the present time the turnover in library positions has reached an all-time record and it is expected that there will continue to be a great shortage of librarians within the next few years. The subject of salaries for librarians has received considerable attention during the past several years, resulting in the publication this year of three volumes on Classification and Pay Plans for Libraries in Institutions of Higher Education.

Grants, Gifts and Buildings. Throughout the year,

grants totaling about \$415,000 have been made to the A.L.A. for some fifteen projects, ranging from \$1,200 to \$125,000. A three-year grant was made to the Library of Congress by the Rockefeller Foundation for the acquisition and temporary storage of new commercial films having documentary sig-nificance. Tuskegee Institute also presented its outstanding collection of Booker T. Washington material to the Library of Congress. Funds and bequests of the year include: a \$1,000,000 bequest from Mrs. James C. Stodder to the Bangor (Me.) Public Library. See Philanthropy.

Gifts of books and collections include: the Theodore Roosevelt collection of books and material to Howard College Library from the Roosevelt Memorial Association; ten tons of general office correspondence and records covering the period of 1850 to 1887 to the Newbery Library, Chicago, from the Burlington and Quincy Railroad; the \$1,000,000 Thomas Mann literary collection purchased by W. T. Grant for the University of Kansas City Library.

Due to the war, practically no new library buildings were started. The following are among those completed in 1942 or early 1943: Lake View Branch of Chicago Public Library and Logansport (Ind.) Public Library; memorial libraries in Hillsdale, Ill.; Limestone, Me.; and North Branford, Conn.; and libraries at Union Theological Seminary, Richmond, Va.; and St. Mary's College, Holy Cross, Ind. The first unit of the new District of Columbia Public Library was finished and priorities received for the completion immediately after the war.

See Rockefeller Foundation; Peru.

Publications. The A.L.A. Department of Publishing and Cooperative Services considered some 100 publishing projects during the year and published the following: Rue, Subject Index to Books for Primary Grades and Subject Index to Books for Intermediate Grades (first supplement); War and Postwar Issues; Proceedings of the National Institute of the A.L.A.; Pomeroy, ABC's for Hostital Institute of the A.L.A. Charles in the Life of the Nation; Hadley, John Cotton Dana, a Sketch; Post-War Standards for Public Libraries; Power, Work with Children in Public Libraries; Mann, Introduction to Cataloguing and Classification of Books (2nd Ed.); Thompson, A.L.A. Glossary of Library Terms; Classification and Pay Plans for Libraries in Institutions of Higher Education (3 Vol.) and a series of buying and reading lists related to the war. Books issued by other publishers include: Butler, The Reference Function of the Library; Manley, Public Library Service in Business; Mason, The Patient's Library; a Guide-Book for Volunteer Hospital Library Service; Who's Who in Library Service; and Basset, A Cataloging Manual for Law Libraries. Libraries.

MILDRED OTHMER PETERSON.

LIBYA. An Italian colony in North Africa; conquered by British and allied armed forces, 1942—43. Area, 679,358 square miles; population (Jan. 1, 1939), 888,401, including 793,225 natives (763,179 Moslems and 30,046 Jews), 89,098 Italians, and 6,078

other Europeans. Chief towns: Tripoli (capital) 108,240 inhabitants in 1939, Bengasi 64,641, Misurata 45,097, Homs 34,940, and Derna 21,547. Ghadames, Sinauen, Mizda, Murzuk, and Ghat are important caravan stations in the interior.

Production and Trade. Barley, dates, olives, oranges, lemons, almonds, vegetables, salt, sponges, anges, lemons, almonds, vegetables, salt, sponges, fish, and tobacco were the main products. Livestock (1938): 820,323 sheep, 726,006 goats, 91,782 camels, 69,670 cattle, 55,676 donkeys, mules, and horses. Trade (1938): imports 882,057,532 lire; exports 108,961,545 lire (lira averaged \$0.0526 for 1938; \$0.0520, 1939). Shipping (1938): 5,545 ships entered and landed 696,890 tons of freight and 127,458 passengers: 2,549 ships left with 76,190 127,458 passengers; 2,549 ships left with 76,190 tons of freight and 122,521 passengers. Roads (1940): 8,342 miles.

Government. Budget (1939-40): 600,115,000 lire. The colony comprises four provinces (Bengasi, Derna, Misurata, and Tripoli), and a military territory in the south (capital, Hun), called Libyan Sahara. On Jan. 9, 1939, the four provinces of Libya were incorporated in the national territory of Italy.

History. Continuing its epochal drive from Egypt, the British Eighth Army stormed into the city of Tripoli on Jan. 23, 1943. By the end of that month German and Italian forces were driven out of the whole of Libya. Before evacuating Tripoli, German troops entered the ghetto and summarily executed a number of leading Jews. The incoming British immediately established military rule over the whole of Libya. Brig. M. S. Lush, installed as military governor under the military commander, brought with him a fully trained staff of 80 officers of the Occupied Enemy Territory Administration. The British rescinded the anti-Jewish laws, be-

gan the distribution of essential foodstuffs to the disorganized and distressed population, instituted price-fixing to curb profiteering, interned Fascist leaders, closed Fascist clubs and cultural centers, and forbade the use of Fascist textbooks or the teaching of Fascist doctrines in the Italian schools. Otherwise little change was made in the former Italian administration. Italian law remained the basis of civil government and some Italian admin-

istrators were retained at their posts.

The currency was stabilized by the introduction of British military scrip, to which the lira was pegged at 480 liras to the pound. Steps were taken to restore banking, communications, trade, and agriculture. In Cyrenaica Arabs took over many farms abandoned by the Italians and cultivated them under British supervision. The British and Egyptian authorities jointly undertook the widening and improvement of the coastal highway linking Tripoli

and Alexandria.

The decision as to the future of Libya was postponed until after the war. However Prime Minister Churchill on September 21 declared that the Italian empire had been "irretrievably lost." (On Jan. 8, 1942, Foreign Minister Eden had given a pledge that "at the end of the war the Senussi in Cyrenaica will under no circumstances again fall under Italian domination.") Several battalions of Senussi tribesmen under British officers assisted in driving the Axis forces from Libya. The Arab population of Tripolitania, freed of many of the restrictions imposed by the Fascist regime, was also reported friendly to the British. For the first time in 30 years they were allowed complete freedom to celebrate the Moslem festival of Bairam. This evoked a demonstration of thanksgiving by 100,000 Arabs in Tripoli on October 6.

On June 21 King George VI visited Tripoli during his Mediterranean tour of British battle fronts. He reviewed units of the British Eighth Army and Allied forces and greeted both the Grand Mufti and Chief Rabbi of Tripolitania.

LIECHTENSTEIN. A principality of Central Europe, adjoining Switzerland on the east. Area, 65 square miles. Population (1941 census), 11,218. Capital, Vaduz (2,020 inhabitants). Chief products: corn, wine, fruit, wood, marble. Main industries: cotton spinning and weaving, leather goods, pottery, and livestock raising. Liechtenstein belongs to the Swiss Customs Union; Swiss currency is used. Budget estimates (1942): revenue 2,248,000 francs; expenditure 2,239,000 francs. Public debt, Dec. 31, 1941, 5,810,000 francs (Swiss franc averaged \$0.2321 for 1941; official rate \$0.2320 during 1942). Reigning Prince, Francis Joseph II (succeeded Aug. 25, 1938).

LIFESAVING EQUIPMENT AND MEASURES. See COAST Guard; Red Cross.

LIPPE. See GERMANY under Area and Population. LIQUID FUEL. See CHEMISTRY under Petroleum Gases; Coal; Mines, Bureau of.

LIQUOR INDUSTRY. The alcoholic beverage industry, which has in the ten years since Repeal ac-counted for over ten and a half billion dollars in taxes, continues to be the nation's largest collector of internal revenues. In the fiscal year ending June 30, 1943, the alcoholic beverage industry accounted for \$1,423,646,457 in Federal taxes alone

During 1943, the industry was faced with the problem of an abnormal demand, aggravated by hoarding and speculative buying, and a subnormal supply. The shortage which resulted showed no signs of abating as the year came to an end, and it became evident that no relief is possible until some partial resumption of beverage distillation is per-

The reason for the shortage is simple. Since Oct. 8, 1942, not a gallon of whiskey has been manufactured. The distilling industry's facilities have been engaged exclusively in the manufacture of war alcohol to be used in making smokeless powder, synthetic rubber, medicines, anti-freeze, and other war essentials. Almost half of the war alcohol produced in 1943 was produced by the beverage distilleries.

On Dec. 31, 1943 (the last date for which Government figures are available at this writing) the Alcohol Tax Unit of the Treasury Department reported 385,348,781 gal. of whiskey in government warehouses. This compares with the normal inventory of 510,930,550 gal. in government warehouses on Dec. 31, 1941. These figures, however, refer to the amount of whiskey originally placed in the barrels. There is a certain percentage of this total lost through soakage and evaporation. According to Government tables this loss amounts to about 24 per cent of the total. Thus, on Dec. 31, 1943, there were actually only 292,865,074 gal. of whiskey in these warehouses.

Withdrawals during the calendar year of 1943 were necessarily lower than during 1942. In order to provide a continuity of supply distillers have

adopted self-imposed rationing plans.
Whiskey is not a product which can be consumed immediately upon its production, but must be set aside for aging before it is fit for drinking. Prior to the war, the distilling industry, while producing continuously to replace losses by sales and natural evaporation, carried an inventory of at least 500 million gal. which it considered necessary in order to maintain reasonable standards of quality. For the purpose of avoiding a repetition of conditions which existed in 1934, following the repeal of prohibition, when young and immature whiskey was offered to the public, it is believed necessary in the public interest that some reserve be maintained for postwar requirements. Otherwise, there will be a bone dry period following the war, or the public will be compelled to drink green, insufficiently aged whiskey.

Since the entire whiskey stocks available at the end of 1943 were already dangerously lower than normal inventory needs, the reserving of not less than 100 million gal. was considered imperative, even though entirely inadequate. Consequently, as the year drew to a close there were approximately only 197 million gal. of whiskey actually available for consumption. At the present unprecedented rate of demand, if the producers were to abandon their self imposed rationing plans, this would last certainly less than a year, unless some resumption of distilling is permitted.

Stoppage of production of gin on Oct. 8, 1942, created an even greater shortage of this product than exists in whiskey. Withdrawals of gin during the last six months of 1943 amounted to 47,750 gal. as compared to the normal figure of 3,045,309 gal. during the same period of 1941. Since gin does not usually require aging, it was pointed out, there were no large stocks on hand and the shortage developed

soon after the stopping of distillation.

During the fiscal year ending June 30, 1943, production of brandy amounted to only 16,579,064 gal. as compared to 29,273,293 gal. during the previous fiscal year. Yet during the fiscal year ending June 30, 1943, taxpaid withdrawals of brandy amounted to 5,435,584 gal. as compared to 2,159,091 gal. during the previous fiscal period.

LITERATURE, American and British. For publishers, 1943 seemed a great year. Almost everything sold, and the public appetite for books both in America and Britain seemed unappeasable. Titles went out of print with astonishing rapidity. Though the restrictions on paper, already heavy in Britain, grew heavier in America, the publishers had much

reason to be happy.

But the evidence indicated that the writers were not happy, at least, not the writers whose works made some pretensions to imagination and permanent value. For them, 1943 seemed a year of pause. They could be topical, and meet the public demand for information or thought about the war. But the war was too close, too overwhelming, and especially too changeable. On the other hand, to ignore the war was to falsify their own and the public's most intense preoccupation, to lapse into empty escapism. So the output in the larger imaginative forms, as fiction, poetry, drama, was rather thin, in quality if not in quantity. The happiest writers worked in biography and history, where the past seemed to have some relevance to the present without being dominated by it. And in these writers' works could perhaps be detected the first signs of that larger synthesis of events and nature which will guide the more creative writers in the future.

Biography. The year's real riches could be found in this field, especially in autobiography. All kinds of people were able to write about themselves with vitality and charm. Harold L. Ickes'

Autobiography of a Curmudgeon made him friends, even though he was a reformer and bureaucrat. Connecticut Yankee, by Wilbur L. Cross, described his career as scholar and politician winningly. Woody Guthrie's Bound for Glory told of a slumdweller and tramp who could write with astonishing force and beauty, while Vincent Sheean spent his time between 1935 and 1942 among the great and luxurious, and called it Between the Thunder and the Sun. Mrs. Belloc Lowndes thought of her youth in France and England Where Love and Friendship Dwelt. Louise Randall Pierson's Roughly Speaking described her life of ups and downs. The doctors had their customary say in Burma Surgeon, by Gordon S. Seagrove; A Surgeon's World, by Max Thorek; and Exploring the Dangerous Trades, by Alice Hamilton, an industrial physician. Edward R. Hewitt's Those Were the Days described an almost forgotten New York in an inventor's childhood and youth. Katharine Butler's The Little Locksmith was the fantastic imagining of an invalid child. Lloyd Morris' A Threshold in the Sun told little about the career but much about the ideas of an intellectual. Three naturalists reported themselves: Roy Chapman Andrews in *Under a Lucky Star*; Thomas Barbour in *Naturalist at Large*; Edwin Way Teale in *Dune* Boy. C. Kay-Scott (Frederic Creighton Wellman) found Life Is Too Short but full of adventure. Ferris Greenslet's Under the Bridge told the life of a Boston publisher. H. L. Mencken's Heathen Days 1890–1936 were full of gusto. Robert Traver, in Trouble Shooter, described the work of a public prosecutor in upper Michigan. Boot Straps, by Tom M. Girdler, gave the career and ideas of an industrialist. Kathleen Coyle's The Magical Realm told about a childhood in North Ireland. Three foreigners found much to admire in America: a Czech, Hans Natonek, in In Search of Myself; Salom Rizk, in Syrian Yankee; and a Chinese, Pardee Lowe, in Syrian Iankee; and a Chinese, Fardee Lowe, in Father and Glorious Descendant. A playwright was revealed in Channing Pollock's Harvest of My Years, and a stage designer in Lee Simonson's Part of a Lifetime. John Erskine thought his The Complete Life, and Frank Kingdon told how he climbed Jacob's Ladder. Charles B Driscoll's family were Kange Light Joseph B. Driscoll's family were Kansas Irish. Joseph Bromley's Clear the Tracks! was about railroading. Emily Kimbrough told how We Followed Our Hearts to Hollywood.

In biography the interest in American personalities was marked, as it was also in history. Hamilton Basso's Mainstream tried to describe the American character by biographies of such figures as Cotton Mather, Jefferson, P. T. Barnum, and others. The extraordinary career of Judah P. Benjamin was vividly portrayed by Robert Douthat Meade, and other Civil War figures were given in Mr. Lincoln's Wife, by Anne Colver, and Gideon Welles, by Richard S. West, Jr. Henry Seidel Canby published a scholarly Walt Whitman, and DeLancey Ferguson Mark Twain: Man and Legend, both these trying to clear up old misconceptions. The Jefferson bicentennial prompted three books: Marie Kimball's Jefferson: the Road to Glory, 1743–1776; Hendrik Willem van Loon's Thomas Jefferson; and a collection of appreciations edited by James Waterman Wise, Thomas Jefferson Then and Now. In Giants Gone: Men Who Made Chicago, Ernest Poole told of McCormick, Armour, Field, Pullman, and others. American musicians appeared in: The Story of George Gershwin, by David Ewen, and Charles T. Griffes, by Edward M. Maisel. Carleton Mabee made a case for Samuel F. B. Morse as The American

Leonardo. Robert P. Parsons' Trail to Light was about Dr. Joseph Goldberger. In Lonely Midas, Henry Emerson Wildes gave the life of Stephen Girard. Max Lerner edited from speeches, letters, and other writings The Mind and Faith of Justice Holmes. The Negro scientist appeared in Rackham Holt's George Washington Carver, and a devoted Negro worker for abolition in Earl Conrad's Harriet Tubman. Katherine Burton's Celestial Homespun had to do with Isaac T. Hecker, founder of the Paulist Order. Eric F. Goldman gave John Bach McMaster: American Historian, and Louise Fargo Brown called Lucy M. Salmon, the Vassar historian, An Apostle of Democracy. Hubert H. Hoeltje, in Sheltering Tree, described the friendship of Emerson and Bronson Alcott, and John Skelly Terry edited *Thomas Wolfe's Letters* to His Mother. George Coleman Osborn's John Sharp Williams showed a memorable politician, and Isaac Don Levine described Mitchell: Pioneer of Air Power.

Richard Aldington, usually cynical, especially about soldiers, wrote an admiring biography of *The Duke* (of Wellington). Maisie Ward studied and explained *Cilbert Keith Chesterton*. Blanche Colton Williams found Keats Forever Young. Catherine Macdonald Maclean saw William Hazlitt as Born under Saturn. Theodore Maynard, as a Roman Catholic, attacked Queen Elizabeth. Hesketh Pearson's sprightly pen sketched Conan Doyle. In The Desire to Please Harold Nicolson described an eighteenth-century ancestor of his, Archibald Hamilton Rowan. Ernest Campbell Massner tried to revive The Forgotten Hume. René Kraus wrote about Young Lady Randolph (Churchill), the prime minister's mother. Arthur Ponsonby's Henry Ponsonby: Queen Victoria's Private Secretary shed new light on the Queen.

Geoffrey Bruun's Clemenceau was brilliantly done. Philip Guedalla compared The Two Marshals: Bazaine, Pétain. Jan Fortune and Jean Burton described a great eccentric in Elisabet Ney. Eugénie, a great favorite with biographers, was this time called The Innocent Empress by Erna Barschak. Two Biblical characters appeared: David, by Alfred Duff Cooper, and Joshua, by Rogers MacVeersh and Thomas B. Costein.

MacVeagh and Thomas B. Costain.

Criticism and History of Literature. Output in this area was unusually thin in 1943, perhaps naturally. Fiction received most attention, as in Edward Wagenknecht's Cavalcade of the English Novel, a distinguished one volume history; Lionel Trilling's study, E. M. Forster; and Ellen Glasgow's A Certain Measure, discussion of aims and values in fiction, especially her own. Edmund Wilson edited an anthology of literary criticism, The Shock of Recognition, by American writers on American writers. Jacques Barzun discussed Romanticism and the Modern Ego in the Western World, a history of ideas; and Floyd Stovall, in American Idealism, described its continuing force in our literature. Leon Howard published a scholarly volume on *The Connecticut Wits*. Oscar James Campbell's *Shakespeare's Satire* was concerned mainly with the "dark" plays. Alan R. Thompson's The Anatomy of Drama was brilliant, thorough, and sound. Robert P. Tristram Coffin discussed The Substance That is Poetry. Robert Graves and Alan Hodge, in The Reader over Your Shoulder, criticized amusingly a number of contemporary writers and laid down laws for good writing. Sir Max Beerbohm praised Lytton Strachey.

Drama. In a year when even very ordinary plays ran for months, promising new playwrights might be expected to appear. But the old standbys held

the field, except, perhaps, for The Army Play by Play, a collection of one-acts by enlisted men. Moss Hart's Winged Victory gave the Air Force exciting treatment. Joseph Fields' The Doughgirls showed a tense and vulgar Washington in war time. Noel Coward's This Happy Breed showed England in war, but his Present Laughter was completely escapist. Philip Barry's Without Love, S. N. Behrman's The Pirate, and John van Druten and Lloyd Morris' The Damask Cheek added little to these established playwrights' reputations. Strip for Action, by Howard Lindsay and Russel Crouse, was a collection of vaudeville acts, made to look like a play. Florence E. Ryerson and Colin Clements did a rather tame biography of Harriet Beecher Stowe in Harriet. James Gow and Arnaud d'Usseau's Tomorrow the World showed a Nazi child in an American home. Dark Eyes, by Elena Miramova and Eugenie Leontovich, was about some charming Russians, also in an American home. Sean O'Casey published Red Roses for Me, a play about an unlucky artist. (For plays produced but not necessarily published, see THE-

Essays. The meaning and value of American life seemed to provide essayists with material, as Charles A. Beard, in *The Republic: Conversations* on Fundamentals, mainly political; Donald Culross Peattie, in Journey into America, mainly historical; Carl Sandburg, in *Home Front Memo*, odds and ends, mainly topical; Pearl S. Buck, in *What America Means to Me*, the issues of war and peace; Philip Wylie, in Generation of Vipers, lively and bitter abuse of American mores. Not evaluating, but good reporting, were Excuse My Dust, by Bellamy Partridge, about the early days of the automobile, and Copper Camp, about Butte, Montana, by the Montana Writers Project, WPA. Albert Jay Nock's Memoirs of a Superfluous Man was scarcely autobiography but a collection of unusual opinions and judgments instead. Humorist Stephen Leacock told *How to Write*, and humorist Robert Benchley found *Benchley Beside Himself*. Alexander Woollcott's *Long*, *Long Ago* was anecdotal, and so was Katharine Brush's Out of My Mind. D. W. Brogan delightfully explained The English Peo-

ple to Americans.

Fiction. As widely read and praised as any novel of the year was John P. Marquand's So Little Time, about a man who had fought in the First World War and was frightened by this. The book should have frightened its readers, for it revealed a despair of our civilization which may be widespread. A first novel by Betty Smith, A Tree Grows in Brooklyn, was a tender story of a slum childhood and youth, immensely popular. Richard Llewellyn surprised his readers with None But the Lonely Heart, about an underworld cockney, very different from his How Green Was My Valley of 1939. C. S. Forester's The Ship told of a light cruiser in the Mediterranean. Also concerned with war was Pearl S. Buck's *The Promise*, continuing her Dragon Seed of last year, but with action laid in Burma. John Dos Passos published Number One about a demagogue, and Sinclair Lewis Gideon Planish about an uplifter, both satirical. Hervey Allen's The Forest and the Fort was the first of a series of six historical novels, this one of the French and Indian War. Indigo, by Christine Weston, studied all strata of life in India. The fourth volume of the Danny O'Neill series was My Days of Anger, by James T. Farrell, and the fourth of the Lanny Budd series was Wide Is the Gate, by Upton Sinclair, who also satirized the Blessed Virgin in Our Lady. The Conspirators, by Frederic Prokosch, told of murder and violence in Lisbon in

Vardis Fisher's Darkness and the Deep was the first of a series intended to tell about Man from the beginnings of the Earth. Mr. Fisher also published The Mothers, about the Donner party. J. B. Priestley, with Daylight on Saturday and Blackout in Gretley, described war industry, a subject quite fashionable this year, as shown by Glenda Swarthout's Willow Run, the bomber plant, Francis Wallace's Explosion, a coal mine, and Edward J. Nichols' Danger—Keep Out, an oil refinery.

Some good historical novels were: Howard Fast's Citizen Tom Paine; Hugh Walpole's last and incomplete story of the Herries, Katherine Christian, the early 17th century; Conrad Richter's The Free Man, an indentured servant in the Pennsylvania colony; Daphne du Maurier's Hungry Hill, a 19th century melodrama laid in Ireland. In Against This Rock, Louis Zara told about Charles V of Spain, and in Grand Parade, G. B. Lancaster de-

scribed Nova Scotia in the early 1800's. Vincent McHugh's I Am Thinking of My Darling imagined a convention-destroying disease sweeping New York City. Robert Nathan, in But Gently Day, sent his central character three generations back from now. Political novels included Walter Duranty's Search for a Key, a foreign correspondent; Berry Fleming's Colonel Effingham's Raid, corruption in the South; Francis Hackett's The Senator's Last Night, Washington in war time. First novels to attract attention: Elizabeth Janeway's The Walsh Girls; Jerre Mangione's Mount Allegro, about Sicilian-Americans; Laura Z. Hobson's The Trespassers, refugees and New Yorkers; Ira Wolfert's Tucker's People, about the policy racket. Novels dealing directly with this war were pretty undistinguished, but Storm Jameson's Cloudless May, about the fall of France, Louis Golding's No News from Helen, who was in Malaya, and Edmund Gilligan's The Ringed Horizon, about fishermen against submarines, might be mentioned, with James Hilton's The Story of Dr. Wassell, written as if fiction, and advertised by the President's mention.

An adolescent puzzled by the adult world was shown in Jerome Weidman's The Lights around the Shore. Capricornia, by Xavier Herbert, about North Australia, was full of violence. Joseph Freeman's Never Call Retreat was highly intellectual. William Saroyan's The Human Comedy was written after the movie script, perhaps the first time this was done. A wandering American family appeared in The Big Rock Candy Mountain, by Wallace Stegner. Lewis Browne described American fascism in See What I Mean? Ilka Chase was so-phisticated in In Bed We Cry. Martin Flavin's Journey in the Dark, about a successful failure won a prize. Caroline Slade's Lilly Crackell couldn't say no. Robert Penn Warren's At Heaven's Gate exposed evil in the South. Jesse Stuart's Taps for Private Tussie gave a hillbilly family, and Gladys Hasty Carroll a Maine one in Dunnybrook. Taylor Caldwell published a good melodrama in The Turnbulls, and a historical novel of France in Richelieu's time, The Arm and the Darkness.

Outstanding among collections of short stories was Isak Dinesen's Winter's Tales, mystical, strange, unworldly. Stephen Leacock's Happy Stories were meant to be laughed at. The New Yorker magazine's peculiar type of story could be found in Robert M. Coates' All the Year Round; John Cheever's The Way Some People Live; and Sylvia Townsend Warner's A Garland of Straw. Various authors wrote The Ten Commandments, against the Nazis. Joseph Mitchell's McSorley's Wonderful Saloon was in downtown New York. Martha Foley edited The Best American Short Stories 1943.

History. Publications in American history were many, varied, and interesting. Bernard DeVoto claimed that American history was changed in *The Year of Decision*: 1846, to fill and annex the West. James Truslow Adams' *The American* showed how he became what he is as a national type, and something similar was done by Gerald W. Johnson, with a stronger biographical slant, in American Heroes and Hero-Worship. The Revolutionary period was studied in: Origins of the American Revolution, by John C. Miller; The Revolutionary Generation, 1763–1790, by Evarts Boutell Greene; Mutiny in January, in the Continental Army in 1781, by Carl Van Doren; This Was New York: the Nation's Capital in 1789, by Frank Monaghan and Marvin Lowenthal. Writings of privates and noncoms were collected in Our Soldiers Speak, 1775-1918, by William Matthews and Dixon Wecter, and in The Life of Johnny Reb, by Bell Irvin Wiley. Irving Stone discussed and rated defeated candidates for the Presidency in They Also Ran. Douglas Southall Freeman continued his study of command in vol. ii of Lee's Lieutenants: Cedar Mountain to Chancellorsville. Hermann R. Muelder and David M. Delo's Years of This Land was geographical history, while William R. Van Dersal's *The American Land* was a history of agriculture. Matthew Page Andrews rather pretentiously titled his story of the founding of Virginia The Soul of a Nation. Merle Curti's The Growth of American Thought was cultural history with an isolationist slant. Wilfred E. Binkley studied American Political Parties: Their Natural History with scientific detachment. Gustavus Myers thoroughly but dully gave The History of Bigotry in the United States. The Rivers of America appeared again in Dale L. Morgan's The Humboldt and Branch Cabell and A. J. Hanna's The St. Johns: a Parade of Diversities, the latter very lively. Walter S. Hayward and Dorothy Adams Hamilton's The American People was racy and sketchy. In History of the English-Speaking Peoples R. B. Mowat and Preston Slosson treated the British Isles, America, and the dominions as one community. Leland D. Baldwin's *The Story of the Americas* gave the history of the hemisphere in one volume.

J. B. Brebner and Allan Nevins told of The Making of Modern Britain for the benefit of Americans. B. H. Sumner's A Short History of Russia went backward from the present. S. Harrison Thompson described Czechoslovakia in European History. J. M. Thompson wrote The French Revolution. Edward Kennard Rand's The Building of Eternal Rome was a history of ideas from the Republic to the Renaissance. Paul Winkler's The Thousand Year Conspiracy was a history of Prussianism. The Department of State published two volumes of documents on The Paris Peace Conference.

Sidney Hook, in The Hero in History, insisted on the hero's share in the creation of events. Joseph R. Strayer edited The Interpretation of His-

tory, to show how it has been made.

Poetry. T. S. Eliot's Four Quartets showed him becoming much less formidable, but it was not apparent why the four poems should be called quartets. Less than complete intelligibility, though that fashion was certainly passing, could also be found in Dylan Thomas' New Poems, which never-

theless burned with strange fires. Stephen Vincent Benét, in Western Star, never to be finished, projected an epic of America's western development. A first book that attracted much attention was Margaret Walker's For My People, about Negroes. James Pipes' Ziba was nine poems about Negroes also, mainly narrative, lively and admirable. Leonard Bacon's Day of Fire and Norman Rosten's The Fourth Decade were directly about the war, as was Here and Now, by Ettore Rella, an army sergeant. The soldier was grimmer and more pessimistic than the civilians. John Masefield and Edward Seago collected British poems of the war in A Generation Risen. Mr. Masefield also published Wonderings, about his own childhood. John Holmes' Map of My Country was also autobiographical. Kenneth Patchen's Cloth of the Tempest was lively free verse. Walter Benton was erotic in This Is My Beloved. Robert Farren, in This Man Was Ireland, wrote a long narrative of early Christian Ireland. Hortense Flexner's North Window was pessimistic. Amanda Benjamin Hall described rural beauties in Unweave a Rainbow. Conrad Aiken's Brownstone Eclogues were in his by now familiar manner. Across the Boards, by David Cornel De Jong, was not easy reading. George Barker's Sacred and Secular Elegies included some of the year's religious poetry. Kenneth Fearing's Afternoon of a Pawnbroker was up-to-date, quite completely "New York." The Dark Rain Falling, by Gilbert Maxwell; No Boundary, by Lenore G. Marshall; The Violent, by Harry Brown, also deserved mention. T. S. Eliot made A Choice of Kipling's Verse, with a notable essay, and Oscar Williams, edited an authology. Name and Oscar Williams edited an anthology, New Poems 1943.

See Bibliography under the various topics; LI-BRARY PROGRESS; NEGROES; PULITZER PRIZES. Compare MAGAZINES, NEWSPAPERS, articles on foreign literature. For French publications in America, see

FRENCH LITERATURE.

#### BENFIELD PRESSEY.

LITHUANIA. A former Baltic republic, which proclaimed its independence from Russia on Feb. 16, 1918, and was reannexed by the Soviet Union Aug. 3, 1940, as a constituent republic. In June–July, 1941, it was occupied by German forces. Kaunas was the provisional capital of Lithuania prior to Aug. 15, 1940, when Vilna was proclaimed capital

of the Lithuanian Soviet Republic

Area and Population. Including the Vilna territory acquired from the Soviet Union Oct. 10, 1939, and excluding Memel Territory (q.v.), ceded to Germany Mar. 22, 1939, Lithuania had an area of 22, 964 square miles and an estimated population of 2,879,070 on Dec. 31, 1939. The newly annexed Vilna territory comprised 2,570 square miles with 457,500 inhabitants. According to a German-controlled Baltic newspaper, further rectifications in Lithuania's border in the Vilna sector were made in April, 1942, adding three districts with a population of 200,000. Estimated populations of the chief cities on Jan. 1, 1939, were: Vilna (Vilnius), 208,900; Kaunas, 152,365; Siauliai (Shavli), 31,-299; Panevèzys (Poneviej), 26,508.

Education and Religion. About 15 per cent of the adult population was illiterate in 1939. Roman Catholics formed 80.5 per cent of the population at the 1923 census; Protestants, 9.5; Jews, 7.3; Greek

Orthodox, 2.5.

Production, etc. About 77 per cent of the population in 1939 was engaged in agriculture and 10 per cent in commerce, industry, and transportation. Forests, mostly pine, covered 2,645,000 acres. In-

dustrial establishments (1938) numbered 1,441, with 40,818 employees and an output valued at 480,000,000 lits. Previous to the Russian annexation, Lithuania had 1,680 miles of railway line, 20,272 miles of roads and highways, and about 1,600 miles of waterways; its only port was lost with the cession of Memel to Germany. For production, trade, and financial statistics prior to the Russian annexation, see 1942 Year Book.

Government. The democratic system established by the Constitution of Aug. 6, 1922, collapsed on Dec. 17, 1926, when the conservative Nationalist Union party established a single-party dictatorship, headed by President Antanas Smetona. He was reelected by a board of electors Dec. 11, 1932, and Nov. 14, 1938. The Nationalist Union adopted fascism as its ruling principle Dec. 16, 1933. A new Constitution promulgated Feb. 12, 1938, was drawn up by a parliament (Seimas) chosen entirely from members of the Nationalist Union. It vested wide executive powers in a President, elected by parliament for seven years, and his Council of Ministers. Members of parliament were elected for five years from a one-party list by universal, secret suffrage. Representatives of two outlawed opposition parties, the Christian Democrats and Agrarian Socialists, gained representation in the new cabinet formed by Premier Antanas Merkys (Nationalist Union) on Nov. 21, 1939, as a result of the crisis precipitated by the conclusion of the Soviet-Lithuanian mutual assistance pact of Oct. 10, 1939 (see Year Book, 1939, p. 443).

This pact authorized the establishment of Soviet in the crisis between the conclusion of the soviet of the crisis pact authorized the establishment of Soviet in the crisis and the cris

This pact authorized the establishment of Soviet military and air bases in Lithuania, but safeguarded the republic's independence and social-economic system. However, on June 15, 1940, Soviet troops occupied the remainder of the country, and established a pro-Soviet government. Controlled elections, held July 14–15, produced a pro-Communist parliament, which on July 21 unanimously adopted a resolution for union with the U.S.S.R. Its petition was accepted by the Supreme Soviet in Moscow August 3, when Lithuania became the 14th con-

stituent republic of the Soviet Union.

Coincident with the German attack upon Russia, Lithuanian patriots seized control in Kaunas and established an independent Government (June 23, 1941). This was dissolved by the Germans August 6 and the country was made a district in the newly-created Ostland Province of the Reich, with Dr. Adrian von Renteln as General Commissar for Lithuania. Under the administrative system legalized by the Reich Minister for Occupied Territories in the East on Mar. 18, 1942, the General Commissar appoints German District Commissars with full control over the districts into which Lithuania is subdivided. He also appointed a puppet administration (General Council) of seven pro-German Lithuanians to assist in governing the country. Head of the General Council, Gen. Petras Kubiliunas, former chief of the Lithuanian General Staff.

For 1943 developments, see below.

History. The political and economic situation in the three German-occupied Baltic States of Estonia, Latvia, and Lithuania continued during 1943 to develop along the same lines as in 1942 (see 1943 Year Book, p. 383-4). When the tide of the war turned against the German armies in Russia early in 1943, German authorities in the Baltic States demanded that the General Councils of the three states assist in the recruitment of Estonia, Latvia, and Lithuania legions to fight the Soviet Union. Moreover the Germans on February 18 decreed the restoration of private property rights to those participating in the struggle against Russia or notably

assisting the German war effort in the economic field. General mobilization of men of military age was decreed February 27, according to a Berlin report. Men reporting at mobilization centers reportedly were given the choice between volunteering for military service and conscription for labor service.

The General Councils balked at endorsing the recruiting drives unless granted a greater degree of national independence. In Lithuania the German General Commissar declined to bargain and appealed over the heads of the Councillors to the Roman Catholic Archbishop of Kaunas and to a special conference of Lithuanian leaders held April 5 for their support. They likewise rejected the demand. Out of 93 persons attending the April 5 conference, 90 signed a manifesto protesting at both Russian and German oppression and demanding immediate independence. Only a few hundred volunteers responded to direct German appeals for recruits. Many men fled to the forests to avoid labor or military conscription. There were pro-independence demonstrations and strikes and acts of sabo-

This defiance brought the German Gestapo chief, Heinrich Himmler, to Lithuania during the spring. The General Council was dissolved. Four of its members were jailed. Some 40 peasant leaders were executed for failing to fill their agricultural quotas. An ensuing outbreak of guerrilla warfare was met by further reprisals, directed particularly against students, professors, and the intellectual classes. The Universities of Kaunas and Vilna were said to have been closed and libraries and scientific laboratories wrecked or burned. The systematic economic looting of the three Baltic States was continued to a point where the inhabitants

faced hunger and severe hardship.

As the Russians pressed nearer to the Baltic States' frontiers, there were numerous reports during the latter months of 1943 that the Germans were preparing to evacuate the entire region. Inhabitants of some frontier districts were forcibly evacuated. Homeless Germans and Balts who had been settled in the Baltic States after the German occupation were repatriated to the Reich along with industrial equipment.

According to reports from the Baltic States, the guerrillas and underground organizations fighting the Germans were divided into pro-Soviet and anti-Soviet factions. The latter regarded the prospect of a second Russian occupation with growing apprehension as indications pointed to the reincorporation of the three republics in the Soviet Union without effective opposition by Russia's western Allies. See Great Britain and Union of Soviet Socialist Republics under *History*.

LITTLE STEEL FORMULA. See LABOR CONDITIONS; NATIONAL WAR LABOR BOARD; UNITED STATES under Inflation and Labor.

LIVESTOCK. A discussion of general conditions appears in the articles on AGRICULTURE and FOOD INDUSTRY. Livestock statistics for the United States, to the extent that 1943 figures are available, are given below. (For fuller information, covering 1942, see 1943 Year Book, p. 225-7.) It was estimated that over-all meat production in 1943 would total 23,000,000,000 lb., a figure exceeding even the record production of the preceding year.

The number of cattle in the United States on Jan. 1, 1943, was 78,170,000 head, valued at \$69.66 each, representing a total value of \$4,140,256,000.

The number of hogs, Jan. 1, 1943, was estimated

at 73,660,000 head, valued at \$22.54 each and representing a total value of \$1,660,652,030. The number of pigs raised in 1943 was estimated at 121,847,000. The support price for hogs was raised to \$13.75 for good and choice grade butcher hogs of 200–300 lb.

The number of sheep on farms as of Jan. 1, 1943, was 55,089,000, a decrease from the previous year, but values rose to \$9.68 per head, representing a total of \$533,327,000. The lamb crop of 1943 was estimated at 31,101,000, and the slaughter of sheep and lambs during the year approximated 27,000,000 head. Consumption of apparel wool in the first ten months of 1943 amounted to about 918,000,000 lb.

The estimated number of chickens as of Jan. 1, 1943, was 540,107,000, the value per chicken at \$1.037 and the total value of \$560,095,000. Production of eggs was placed at 4,949,000,000 dozen, a figure which exceeded the year's goal by 169,000,000 dozen. The 1944 egg goal is 2 per cent higher than 1943 production. The farm flocks at the start of 1943 included 65 per cent pullets and 35 per cent hens. In November, 1943, about 24,000,000 chicks were hatched by commercial hatcheries, a 7 per cent decrease from the figure a year earlier; however, the January-November total showed a 20 per cent increase over the same period in the previous year. The average price paid by farmers per 100 chicks was \$13.00, an increase of \$1.68 cents. The number of turkeys on farms, Jan. 1, 1943, was 6,668,000 valued at \$4.45 per head. Statistics on dressed weight produced in 1943 for both chickens and turkeys are not yet available.

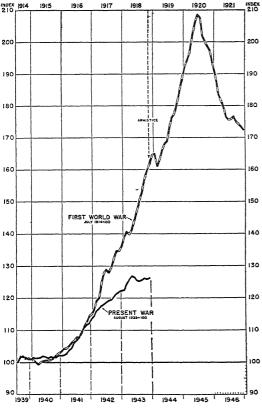

The number of horses continued to decrease, from 9,907,000 in 1942 to 9,678,000 on Jan. 1, 1943, the average value on the latter date being \$79.97. The number of mules was 3,712,000.

See Hides, Leather, and Shoes; Insect Pests; foreign countries under *Production*.

LIVING COSTS AND STANDARDS. After two years of war, the plane of living of American families in 1943 was substantially above that of most countries in peacetime. The level of national production throughout the year was extraordinarily high and the gross national product totalled almost 187 billion dollars, as compared with less than 152 billions in 1942 and 97 billions in 1940. The rapid transition from a peacetime to a full war economy in this country caused production of some civilian goods to be curtailed but, contrary to popular expectations, did not radically disrupt civilian life. The relative slightness of change in civilian consumption habits was more remarkable because such a large proportion (45 per cent) of the value of gross national product was devoted to the war machine.

Some changes in the everyday living of the civilian were inevitable. Many workers in war production centers were living in trailers, in temporary houses and barracks, or in crowded boarding houses. Frequently their housing conditions were far below those they enjoyed in prewar days. Husbands often were working on war jobs away from home, and were separated from their families. Women, who had never worked in factories before were helping to produce war tools in 1943, and some of these new workers retained the responsibilities of taking care of home and children as well. With gasoline rationing, pleasure driving became chiefly a remembered luxury. Clothing standards were simplified, shoes were rationed, the quality of many lines of every day apparel deteriorated, silk and nylon and higher quality cotton fabrics

were reserved for use of the armed forces, and there were limited supplies of children's clothing (particularly cotton underwear and nightwear). Transportation difficulties and the European campaign sharply reduced the fuel oil available to consumers in Eastern States and families became accustomed to a temperature of 60° instead of 70°-75°. All service industries were beset by the manpower shortage. Laundries and dry cleaning establishments curtailed their services, restaurants were universally short-handed, and domestic servants were often impossible to obtain. Total food supplies were adequate to fulfill the nation's needs but inevitable shortages of some articles shifted food consumption habits. Butter was scarce and oleomargarine appeared on the dinner tables of many families, and the nation as a whole ate less meat and more cereal products.

COST OF LIVING—WORLD WAR I AND II

Average for large cities beginning July, 1914 (top) and

August, 1939 (bottom).

Manufacture of most consumer durable goods had largely ceased by 1943. (See WAR PRODUCTION BOARD.) In February, 1942, production of automobiles for civilian use was halted and during 1942 factories producing other consumer durable goods were rapidly converted to war purposes. Unusually large inventories in the hands of retailers at the beginning of 1942 cushioned the effect of the contracted production and civilians were able to purchase new refrigerators, washing machines, vacuum cleaners, and radios many months after manufacture had completely ceased. The small inconveniences experienced by housewives unable to obtain new mechanical equipment and the many small gadgets and utensils commonly used in prewar

homes were accepted as an inevitable result of the war situation.

Despite the heavy drain on supplies of clothing and other semi-durable goods which resulted from military and Lend-Lease needs, widespread shortages occurred in relatively few types of commodities. Curtailment of wool imports restricted the production of all wool garments and blankets during the first half of the year. Clothing manufacturers were encouraged to use blended fabrics, and wool content of blankets was limited to 80 per cent. Easing of the shipping situation in the last half of 1943, however, was followed by a relaxation of these limitations. All-wool suits, coats, and blankets were again available to moderate-income families in the fall of 1943.

Changes in food consumption habits were especially striking in 1943, the first full year of food rationing in the United States. Rationing of sugar and coffee in 1942 preceded the rationing of meats, butter, fats and oils, and canned fruits and vegetables in the spring of 1943. According to estimates of the Department of Agriculture per capita civilian consumption of all food in the United States was 2 per cent less in 1943 than in 1942. This small decline is due in part to the food supplied by the United States for our own armed services and those of our allies, and in part to shipments to our allies and to countries liberated from Axis occupation. About 25 per cent of our total food production was withheld from the domestic civilian markets in 1943 as compared to 14 per cent in 1942 and 6 per cent in 1941. Unfavorable crop weather in 1943 caused a 9 per cent decline in total crops as compared with record yields in 1942, although farmers had planted the largest acreage in 11 years. (See also Acriculture; Food Industry.)

Added transportation difficulties were also responsible in part for local, temporary shortages of some foodstuffs. (See Railways.) The flow of meat supplies, particularly beef, to retail markets was irregular during the year and many families increased their consumption of fish and poultry as meat shortages developed.

The impressive expansion in total economic activity in this country resulted in an increase of 23 per cent in total income of individuals in 1943. The amount of money available for consumer expenditures and savings after payment of individual income taxes was 14 per cent larger than in 1942 and 83 per cent larger than in 1939. During the same periods, consumer expenditures rose 10 per cent and 47 per cent respectively. It is clear that a large share of the rise in consumer expenditures was a result of higher retail prices of goods and services. Even with increased living costs and substantially higher personal taxes, Department of Commerce statistics show that net savings of individuals rose 25 per cent in 1943 and amounted to 24 per cent of total income payments to individuals. (See Business Review; Labor Conditions under Wages; Taxation.)

At the close of 1943 living costs of moderate-income families were little more than 3 per cent higher than in December, 1942. During the first five months of the year, the cost of living advanced rapidly, until in May the Bureau of Labor Statistics' index stood at its highest level since the beginning of World War II. Seasonal reductions in fresh fruit and vegetable prices and price "roll-backs" under the subsidy program resulted in a 1.4 per cent decrease in total living costs during the three summer months ending in August. Between August 15 and December 15 the cost of living index fluctuated within narrow limits, influenced primarily by sea-

sonal changes in food prices, increased clothing costs, and an advance in coal prices allowed by the Office of Price Administration to cover higher costs involved in the wage settlement of miners. At the close of the year, living costs of wage earners and lower-salaried workers were one half of 1 per cent below their peak in May, 1943, 5.6 per cent above September, 1942, and 23.4 per cent above January, 1941, base date of the Little Steel formula.

The 3.3 per cent rise in retail food prices between December, 1942, and December, 1943, was small compared to the advance of 17.3 per cent in the year 1942 and 16.2 per cent during 1941. The sharp rise in food prices in 1941 and 1942 primarily followed the unprecedented civilian and military demands and substantially higher prices for farm products. The Emergency Price Control Act of January, 1942, specifically limited the price controls which could be placed on agricultural commodities and therefore prices of most foods remained un-controlled until the passage of the Economic Stabilization Act in October, 1942. The subsequent imposition of price controls combined with rationing of scarce foods and the OPA food subsidy program served to hold down the advance of retail food prices in 1943. (For price controls, see Economic Stabilization, Office of; Price Admin-ISTRATION, OFFICE of. For subsidy program, see UNITED STATES under Inflation.)

In general the rise in retail food costs in most large cities was confined to a narrower range of products than in the two previous war years. Prices of fresh fruits and vegetables, fresh fish, and eggs showed the largest advance over the year, ranging from 25 per cent for fish to 8 per cent for fresh eggs. Many other foods, such as cereal and bakery products, nonalcoholic beverages, fats, oils, sugar, and sweets changed very little in cost during 1943. Butter and most meats were actually less expensive at the end of the year than at the beginning, on the average declining 8 per cent and 2 per cent respectively largely as a result of the OPA subsidy

program. Retail clothing costs to American city families advanced 6.9 per cent during the year, compared to an increase of 9.7 per cent in 1942. By December, 1943, consumer clothing expenditures were 34.2 per cent above the prewar level. The rise in clothing prices was caused partly by increases in raw material costs and partly by the gradual disappearance of lower-priced merchandise. Mounting wages and farm incomes in conjunction with the growing scarcity of inexpensive apparel served to build up consumer demand for higher quality goods. The understandable desire of manufacturers to take advantage of the larger margin of profit often obtained by making higher priced articles was also a factor in eliminating lower-priced merchandise. Retail sales of apparel stores in the United States rose about 21 per cent in 1943, reflecting higher retail prices as well as the effect of the widespread "trading up." Price increases were most pronounced for articles of women's clothing. Percale wash frocks increased 23 per cent over the year, untrimmed sport coats 19 per cent, and rayon panties 5 per cent. In men's clothing, prices of suits and overcoats advanced 4 per cent and 5 per cent respectively and pajamas, cotton underwear, and business shirts up to 8 per cent.

The end of the year saw a lengthening list of clothing articles which were in short supply. Children's clothing and shoes, men's shorts and pajamas and work clothing, and women's rayon panties were difficult to obtain in many cities. The lack of definite quality standards in the clothing field precluded the possibility of full statistical measurement of the dollar value of quality decreases of individual items.

It was increasingly apparent in 1943 that the variety of styles and fabrics available to civilians was smaller than that to which most people had grown accustomed before the war. The War Production Board during 1942 and 1948 inaugurated simplification programs limiting the amount of yardage and the types of materials to be used in the manufacture of many clothing articles. War Production Board restrictions were tightened or relaxed as the supply picture changed during the year. Limitations on the use of wool, for example, were eased for the fall season as stock piles of wool were restored in this country. (See Fashion

EVENTS.)

Cost of all housefurnishings to moderate-income city families rose 3.4 per cent over the year. Textile housefurnishings, subject to the same limitations in supply as was cotton clothing, were scarce in many large cities. Cotton curtains had disappeared from the shelves of many stores throughout the country. Sheets, which advanced I per cent in price over the year, were reported in short supply from time to time during 1943. (See Textures.) Durable housefurnishings, on the other hand, were generally unavailable by the year's end and housewives had to do without new washing machines, vacuum cleaners, and electric refrigerators. In addition, replacements of broken parts of these household conveniences were often difficult to obtain. No new radios were manufactured for civilian use in 1943, and metallic kitchen utensils were largely replaced by plastic or glass substitutes. Severe curtailment of the use of steel for civilian equipment, plus the shortage of skilled labor and lumber, all contributed to lowering total furniture production in 1943, and particularly the lower grade articles. Total retail sales of housefurnishings decreased 11 per cent but an easing of military requirements toward the end of the year made possible a brighter outlook for increased production of durable consumer goods in 1944. The War Production Board announced that electric irons, and coil springs for upholstered furniture would be available in 1944. Washing machines and mechanical refrigerators may also be manufactured in limited quantities.

There was a one tenth of 1 per cent increase in average rental charges for homes in large cities. This small change demonstrates the effectiveness of the government rent control program. This increase does not include any rise which may have occurred in room rents. In addition, many war workers obtained jobs away from home and were unable to secure adequate living quarters for their families within commuting distance of the plant. Such workers often found their personal housing costs doubled because of the necessity of maintaining

two residences.

In war production centers which mushroomed almost over night, the housing shortage is still acute despite the extensive defense housing program instituted by governmental authorities and private contractors (see NATIONAL HOUSING AGENCY). Many families are living in trailer camps and dwellings which fail to meet minimum standards required for health and decency. In some shipbuilding and other war centers, men are reported to be paying astronomical charges for beds which are rented out to three shifts a day. In the first six months of 1943, the National Housing Agency surveyed 35 war centers, and found that in half of them the proportion of habitable vacant dwelling units was less than 1 per cent of all dwelling units as compared with the average vacancy rate in normal times of about per cent.

By the end of 1943 the scope of OPA rent control had become virtually complete for urban areas and war production centers in the United States. In December, 1942, rent control extended to areas populated approximately by 70 million persons; a year later the areas under control included 87 million persons. Of the 34 large cities covered in the Bureau of Labor Statistics cost of living index, only Scranton, where rents had remained relatively stable, was exempt from rental control.

Wage earners and clerical workers found their fuel, electricity, and ice costs had increased 3 per cent during 1943. Coal prices rose during the first quarter of the year following the extension of the work week in the coal industry to six days with payment of overtime rates for the extra day. The settlement of the mine wage dispute in November caused a further advance in labor costs, and another advance in prices was allowed which brought the total rise in retail prices of coal over the year to 8 per cent. Fuel oil prices advanced 4 per cent over the year, reflecting increases granted by OPA to compensate distributors for added expenses resulting from the rationing program. These advances were partly counterbalanced by declines in average gas and electricity rates in scattered large cities of the country. (See COAL; GAS; ELECTRIC LIGHT; Petroleum, etc.)

The cost of miscellaneous goods and services to consumers rose 4.7 per cent in 1943. The sharpest increases occurred in personal services, most of which are exempt from OPA price control. Beauty and barber shop services, hospital charges, medical care, domestic and laundry services all showed appreciable advances in cost over the year. Prices for toiletries and drugs and public transportation rates on the other hand changed relatively little in 1943.

By and large, average American families experienced surprisingly few real hardships as a result of wartime conditions. In 1943 the goods essential for healthful living were present in adequate supply. Most Americans who have not contributed members of their families to the armed forces have as yet made few sacrifices in this war.

For living conditions abroad, see the countries under History.

LUTHERAN CHURCH. The latest figures show that Lutherans in the United States and Canada have 5,116,807 baptized and 3,635,588 confirmed members in 15,909 organized congregations, with 13,-332 ministers. In 1942 they raised \$51,819,089 for local congregational expenses and \$13,229,557 for

the work of the church at large. Activities related directly to war conditions in 1943 called forth campaigns for \$1,000,000 by the National Lutheran Council, representing eight Lutheran bodies, and for \$500,000 by the Missouri Synod. In the five months ending Oct. 1, 1943, both goals had been passed by 20 per cent with indication of continued generous response. These two agencies maintain 48 full-time and 71 part-time centers in camp communities for spiritual ministry to service men and women. The Council expanded its ministry in 20 defense industry areas, currently employing 9 pastors and 31 lay workers. It also continued its emergency maintenance of about 50 orphaned mission fields and was instrumental in getting some missionaries back to their posts despite travel difficulties.

Although various Lutheran bodies drew closer in cooperative work programs, the year 1942 did not see any official progress toward Lutheran union. But informal advance was made when theological professors representing 17 of the 21 Lutheran seminaries in the United States met for a week of study and discussion of doctrinal stands. Plans for another such conference in 1944 were laid. Two small Lutheran bodies, the United Danish Church and the Danish Church, appointed committees to

study the question of union in the coming year.

Among special 1943 undertakings was the opening of mission work in Argentina by the Norwegian Lutheran Church of America in cooperation with the United Danish Church; three missionaries are soon to be sent out. This project fittingly climaxed the former body's celebration of the one hundredth anniversary of the first congregation organized in 1843 by Norwegian settlers in the United States and the ordination of the first American-Norwegian pastor. During the year the Augustana Synod, of Swedish-American origin, laid plans for a some-what similar "faith with works" program, scheduled to culminate in 1948 in the centennial of the first Swedish Lutheran congregation in America

The American Lutheran Church initiated an intensive campaign of personal evangelism in which its young people's league will give special attention to the fight against teen-age delinquency. Along the same line are the Child Evangelism Campaign of the American Lutheran Publicity Bureau and the Christian Home Emphasis Program of the United Lutheran Church which stress the responsibilities of church schools and homes, both campaigns planned for 1943—44. See Norway.

LUXEMBOURG. A grand duchy of Western Europe, occupied by German troops on May 10, 1940, and formally annexed to the Reich Aug. 30, 1942. Bounded by Germany, France, and Belgium, Luxembourg has an area of 999 square miles and a population estimated at 301,000 on Dec. 31, 1939. About 98 per cent of the inhabitants profess the Roman Catholic faith. They speak a Germanic dialect, with French as their secondary language. Chief towns: Luxembourg (capital), 57,740 inhabitants: Esch-Alzette, chief mining center, 27,517; Differdange, 15,945; Dudelange, 13,572. There is no illiteracy.

Production, Trade, etc. Agriculture normally supports some 32 per cent of the population. Mining and metallurgical industries are important, production figures for 1939 (in metric tons) being: Pig iron and ferroalloys, 1,776,000; steel ingots and castings, 1,824,000; iron ore, 5,140,632 (1938). A Belgo-Luxembourg customs union, established May 1, 1922, ended Aug. 15, 1940, when Luxembourg was incorporated in the German customs area. In 1940 there were 2,558 miles of highway and 318

miles of railway line open to traffic.

Government. Previous to the German invasion, executive power and the right to organize the government rested with the Grand Duchess Charlotte, who succeeded to the throne on Jan. 9, 1919. Legislative power was vested jointly in the Grand Duchess and the Chamber of Deputies (lower chamber) of 55 members (comprising in 1940, 25 Catholic-Conservatives, 18 Socialists, 6 Radical-Liberals, and 6 others), elected for a term of six years by universal suffrage. The Council of State (upper house) of 15 members was appointed for life by the sovereign. On Aug. 29, 1939, Parliament unanimously voted full executive and legislative powers to the Grand Duchess and her Government for the duration of the impending European hostilities.

Upon the German invasion, Grand Duchess Charlotte and four of the five Cabinet members escaped to Paris. When France collapsed the Grand Duchess and Prime Minister Peter Dupong transferred the Government-in-Exile to Montreal, Canada (November, 1940). However the Ministers of Foreign Affairs (Joseph Bech) and of Labor and Social Welfare (Peter Krier) established offices in London. Both cities are official seats of the Govern-

ment.

Reichsfuehrer Hitler on July 25, 1940, appointed Gustave Simon as Nazi Gauleiter, or Chief of Civil Administration, in Luxembourg. He undertook the progressive assimilation of Luxembourg in the German Reich (see preceding Year Books). For

1943 developments, see below.

History. The German regime of oppression in Luxembourg, described in preceding Year Books, became more onerous during 1943 according to members of the Government-in-Exile and underground reports emanating from the duchy. In January thousands of iron and steel workers were reported to have struck in protest against their long hours and the shipment of the mills' output to the Reich. Hundreds of strikers were said to have been arrested. Conscription of young men for military service in German forces provoked new disturbances. An official London statement of March 6 said a revolt of conscripts at the railway station just before their departure for Germany was quelled

with machine-gun fire. In September the German authorities ordered the registration of Luxembourg men of 50 to 59 inclusive for military service.

The Luxembourg Commissioner of Information estimated in March that over 30,000 of his countrymen, or 10 per cent of the population, had been shipped to German concentration camps or war factories. Food conditions were reported "very bad" in August. See Belgium under *History*; World War.

LYNCHING. See NEGROES.

M-9 (Electric Fire Director). See PHYSICS; also, ELECTRICAL INDUSTRIES; MILITARY PROGRESS.

MACAO. A Portuguese colony at the mouth of the Canton River in South China. It consists of a peninsula on the island of Macao, and the nearby islands of Taipa and Colôane. Area, 6 square miles. Population (1940 census), 374,737, including 8,989 Portuguese. Macao, the capital, is a free port. Trade, mainly transit, is in the hands of the Chinese. Budget (1942): 46,798,761 escudos. Shipping (1938): 6,406 vessels (3,117,571 tons) cleared the port. Governor, Comm. Gabriel Teixeira.

History. According to Chinese reports, Japanese troops aided by Chinese mercenaries committed a flagrant violation of Portuguese neutrality on Aug. 18, 1943, by forcibly commandeering the British river steamer Sian at Macao after killing more than 20 armed guards and policemen. See Portugal

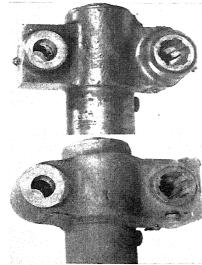

under History.

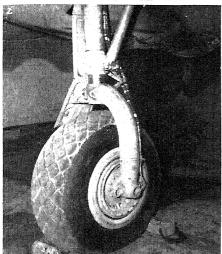

MACEDONIA. See BULGARIA, GREECE, and YUGO-SLAVIA.

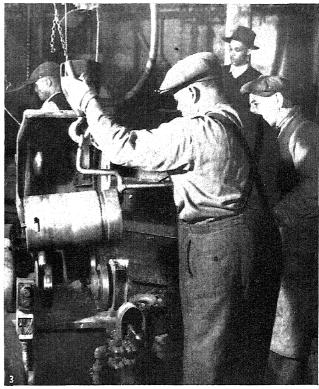

MACHINE BUILDING. Numerous changes have taken place during 1943 in the methods used in manufacturing war material and machinery in general. While few of these have been startling they all show progress in the way of acceptances of practices and methods which were previously considered too radical. The demand for greater production of planes, tanks, and guns has made it necessary to accept newer methods than had been used previously. This does not mean that quality has been sacrificed to quantity but rather that former prejudices of both Army and Navy officials have been broken down to permit the use of newer methods.

Three outstanding examples of this are the acceptance of welded structures in many places, the use of steel castings instead of forgings, and the use of new methods in producing the rifling grooves in barrels of the new, light automatic rifle which has been so effective in the hands of paratroopers and commandoes. Welding has proved perfectly satisfactory in the making of oleo struts for airplane landing gear, steel castings by the centrifugal process at Fords are being used for airplane engine cylinder barrels and landing gears, and the rifling is being done by both broaching and compression.

Although welded gun carriages were proved perfectly satisfactory at the Watertown Arsenal a number of years ago, other branches of the service refused to accept it and demanded forgings from which it was necessary to machine great quantities of valuable material. A notable instance of this was the oleo cylinder for landing gears for airplanes. These were formerly forged in very expensive dies and on very heavy steam hammers. Then from 70 to 80 per cent of the metal was machined away. All this was in order to have the lugs

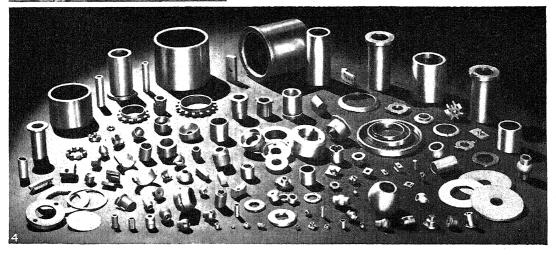

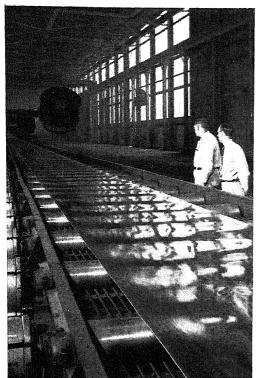

1. The acceptance of welded structures, exemplified in the axle for anti-aircraft gun mount. The top view shows the forged axle. The bottom view shows the axle redesigned for arc welded construction, which resulted in a saving of approximately \$68 per unit. (Photo courtesy The James F. Lincoln Arc Welding Foundation, Cleveland)

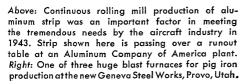

2–3. Use of steel castings instead of forgings, as adopted by the Ford Company for airplane engine cylinder barrels and landing gears. Above, the heated mold in which the engine barrel is cast is being lowered into a centrifugal casting machine. Left, landing gear of a B-24 bomber, centrifugally cast. (From Ford News Bureau)

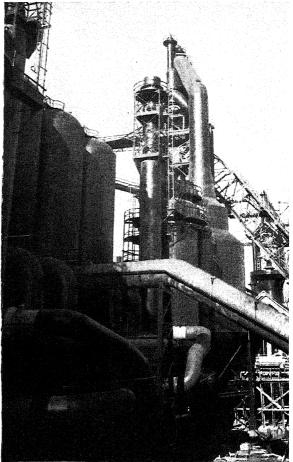

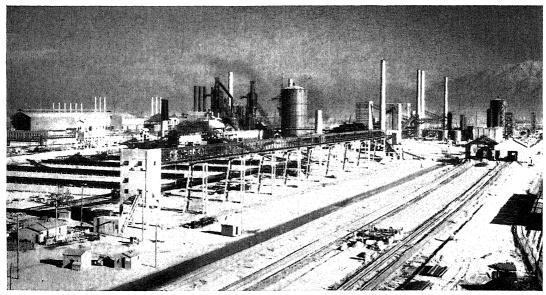

#### ACCEPTANCE OF NEW METHODS-SPEEDED BY URGENT MACHINERY NEEDS

4. Some of many machine parts now being made from powdered metal. The powdered metal is compressed in molds to about one third of its original volume and then heat treated. These parts can be made to very accurate dimensions and save much machining work as well as waste material. (Courtesy American Machinist)

### EXPANDING PRODUCTION OF CRUCIAL MINERALS AND METALS

Largest unit in the war time steel expansion program is Defense Plant Corporation's Geneva Steel Works near Provo, Utah, shown immediately above. This completely integrated \$180 million plant, built from the ground up, will be operated by Geneva Steel Company, United States Steel Corporation subsidiary, and will produce steel plates for the Pacific Coast shipbuilding industry. See the articles on various minerals and metals.

or ears for the connections an integral part of the cylinder. Now these lugs are welded on to a steel tube, the forging hammers can be used for other purposes, the metal is saved as well as the machine hours wasted by the previous method, and maintenance depots where planes are serviced report very favorably on the use of the welded structures.

Until comparatively recently, cylinders for highpower airplane engines have been made from steel forgings or from drawn tubing. Ford, however, is building his quota of Pratt & Whitney 2,000-h.p. engines with cylinders of centrifugal steel castings. Tests have proved these castings to be at least equally as satisfactory as the forgings and they save both time and material. Similar castings are also being used in the landing gear for the large Liberator bombers being built by the Ford Company. The use of castings and the welded structures previously referred to are likely to affect materially future designs and specifications, both of which have been affected by the fact that designing companies also owned drop forging plants.

Cyclewelding, which is really a cementing process that has been in the process of development for several years is being used to some extent in the assembly of minor airplane parts of sheet metal. Its use will probably be limited because it requires a close mating of parts and fixtures in which they can be firmly held while being heated for the joining process. Another and newer process is one by which glass and metals or plastics can be joined by a plating method that is not at all common as yet. This joining can also be made pliable.

As a result of the war demand the output of aluminum and magnesium has increased so greatly that plans for building planes of plastic wood have been abandoned in this country even though the British Mosquito bomber, a wooden plane, has been very successful. The increased supply of these light metals are leading to their more extensive use after the war, although they will meet competition

from the plastic bonded wood in many cases. The stability of the plastic bonded woods is usually greater than of the molded plastics and seem more likely to be used for such parts as automobile body

doors on that account.

Forgings of both aluminum and magnesium are likely to find a place in machine construction to an even greater extent after the war. It has been found that these metals require different treatment in forging. While aluminum can be readily forged under the hammer the magnesium gives better results when forged by steady pressure as in the forging machines, or squeeze presses. It is quite probable that forgings of these metals will replace castings in some machine constructions.

Metallurgy is also playing an important part in the war effort. Aside from the lighter alloys we have the socalled "N E" steels, the letters standing for National Emergency. Some of these have largely taken the place of many of the older steels requiring alloys which are now difficult to obtain. It is quite probable that some, at least, of these new steels will find a permanent place in industry as we learn how to heat-treat them so as to secure the best results. While there are a few complaints regarding the service obtained from these new steels there are doubtless many places where they will prove very satisfactory substitutes for the more expensive alloys

Many machine parts are now being made by compressing powdered metal into molds which give it accurate form and which compress it to about one-third of its original volume. The molded material is then heat treated at a temperature below

the melting point which fuses the particles into a solid mass. Further heat treatment gives it the characteristics desired and the piece is ready for use without machining in most cases. These parts can be made to very accurate dimensions and are saving much machining work as well as much waste material. This method began with the making of bronze bearing shells some years ago and is being developed so as to handle many different metals and in constantly increasing sizes. Further development may greatly reduce the amount of machine work in many parts which now require special and intricate machine operations.

Glass is being substituted for high grade steel in the making of ring and plug gages for inspecting parts being machined. The use of glass has proved most satisfactory for both plug and ring gages used in the inspection of parts for small arms and for various munitions. Glass is less affected by temperature than steel, wears longer, and has several other advantages. Breakage would seem to be a handicap but it has been found of small moment. Glass has the advantage of retaining its size better than steel in case of its being dropped; unless it breaks the gage retains its original size. Steel, on the other hand, may be distorted from a fall and go unnoticed unless carefully checked.

All of these changes in manufacturing methods have a direct bearing on the building of machine tools and machines for other purposes. The substitution of steel tubing for forgings in the hydraulic landing gear of airplanes reduces the number of drilling and boring machines necessary for the work. The same is true when centrifugal castings

can be used.

Development of powdered metal manufacturing will also greatly reduce the number of machines required for making such parts as can be molded instead of machined. Should plastic wood replace sheet metal in automobile bodies it will merely change the tools and fixtures used but will not materially alter the total number required. The same is true in the substitution of glass for gages and other tools so far as the making of the tools themselves is concerned. The difference will be in the making of the raw materials used.

The developments in airplane construction should make for lower costs if quantities can be maintained to warrant the use of the methods which have replaced the hand work of prewar days. Even now there is more hand work than would be necessary if frequent changes were not made necessary to secure ever increasing efficiency in combat. In peace times the improvements could

be spread over a longer period.

Many developments will not and cannot be turned to normal channels until after the war. But they are, in most cases, capable of adaptation to peacetime products and should greatly increase the quality of our postwar products.

See the article which follows; articles on minerals and metals; also, CHEMISTRY; ELECTRICAL INDUS-TRIES; MOTOR VEHICLES; SHIPBUILDING; REFRIGER-

ATION, etc.

FRED H. COLVIN.

MACHINERY INDUSTRY. Urgent military ordering of new war-plant equipment, replacement demand arising from the heavy wear and tear on existing productive facilities, and substantial lend-lease requirements, were prime factors in raising the output and shipments of industrial machinery to alltime record levels during the past year. The value of all industrial machinery produced in 1943 probably exceeded \$5,000,000,000, compared with the \$1,500,000,000 prewar annual rate of output. To fill its huge volume of war orders, the industry, which includes manufacturers of such diversified lines as metal-working tools, power-generating machinery, and construction and mining equipment, employed a force of 1,250,000 wage earners, contrasted with a normal peacetime staff of less than 300,000 workers, and expanded productive facil-

ities rapidly.

Peak demand for industrial machinery was reached by mid-year, at which time the war construction program had been rushed to virtual completion, and such key industries as iron and steel and mining had been serviced. Machinery shipments, which had averaged some 290 per cent of 1939 deliveries in 1942, and 340 per cent in the 1942 fourth quarter, advanced to 346 during the first quarter of 1943 and to 356 in the second quarter. Shipments in the third quarter moved up slightly to 359 and tapered off in the final three months of the year. Despite the high level of activity, manufacturers' inventories were held under firm control through most of the year, with some effort in the later months to work down stocks.

In performing their vital war tasks with spectacular success, machinery makers achieved notable progress in overcoming obstacles which had hampered operations in the previous year. Problems arising from shifts in designs and in military specifications were taken in stride. Scarcities of raw materials were greatly alleviated under the smoother functioning of the Controlled Materials Plan, and the flow of critical component parts was expedited. Manpower shortages on the other hand became acute in some labor areas, and the skill of applicants declined. While the major difficulties of 1942 and early 1943 had been identified largely with the challenge of attaining an adequate production volume to meet military needs, developments later in the year focused attention on prob-

lems of a different nature.

With original equipment requirements of munitions and ordnance works largely satisfied by late summer, with lend-lease deliveries past their maximum, and with cutbacks in some war schedules, new ordering of industrial machinery dropped sharply, and manufacturers turned increasingly to the output of direct war items to supplement normal-line sales. Subcontracting activity in the production of various war weapons and other equipment, including parts for bombs, torpedoes, submarines, and airplanes, proved of some benefit in bolstering shipments. The industry was assured, in addition, continued large-scale ordering of certain products which are expendable in the war effort. Makers of such civilian-line equipment as textile, food processing, printing, and paper mill machinery, whose output had been curtailed severely early in the war, and who as subcontractors on war contracts had felt the impact of cutbacks in the fall of 1943, were hopeful that they might soon be permitted to restore their facilities to a larger nonmilitary production. Because of numerous bottlenecks, however, reconversion of important machinery plant capacities to civilian production was not believed a near-term prospect.

The disposition of used equipment and machinery loomed as a dominant problem for industrial machinery makers before the end of 1943 had been reached. The Redistribution Division of the War Production Board turned its attention to ways and means for liquidating a growing inventory of used machinery, owned for the most part by Federal Agencies. Of total used machinery stocks, dealers late in 1943 held an estimated \$200,000,

000 worth, the Defense Plant Corporation about \$90,000,000, Treasury Procurement \$120,000,000, while the Army-owned items aggregated possibly \$1,000,000,000 in value. With the bulk of used machinery supplies still in the future, when war plants would be dismantled, the government already was taking measures to move the accumulating surpluses. Listings of second-hand equipment were circularized throughout the country but war contractors manifested little interest. Efforts were made to develop the market for idle equipment in South Amrica, and it was expected that the rehabilitation of war-torn industries in Europe might provide another outlet. The Smaller War Plants Corporation considered plans for purchase of surplus machinery and subsequent leasing to small

manufacturers with option to buy.

Machine Tools. Problems of excess plant capacities and used equipment inventories became particularly pressing during 1943 in the vital machine fool division of the industrial machinery industry. Makers of such types of tools as lathes, grinding, drilling, and milling machines, planers, and threading, boring, and broaching machines, expanded facilities rapidly, and saw sales, stimulated by the war "tooling up" demand, soar from the prewar level of \$200,000,000 per year to \$1,320,000,000 in 1942, representing an expansion in unit output from the 1930-39 annual average of 25,000 units to 270,000 units. While total shipments of machine tool plants in 1943 aggregated around \$1,100,000,-000, or only 17 per cent below the record 1942 showing, monthly sales declined steadily throughout the year. Such sales, which had reached \$383,000,000 in the 1942 fourth quarter, declined to \$357,000,000 in the first quarter of 1943, and to \$341,000,000, \$271,000,000 and \$215,000,000 in the succeeding quarters of last year. New ordering fell to \$30,000,000 monthly by the end of the year, and backlogs had been reduced to around \$210,000,000 or approximately seven months' business. The War Production Board's pool ordering program was discontinued in mid-year; of pool orders placed since February, 1941, and aggregating \$1,864,000,000 in value, only some \$50,000,000 remained on manufacturers' books at the 1943 yearend.

Manufacturers of such standard machine tools as millers, planers, lathes, and other general purpose equipment were first to be affected by the slump in new ordering, while builders of specialized, single-purpose tools were able to maintain sales with greater success. The backbone of demand came from the airplane industry and from lendlease, with Russian shipments a leading factor. The decline in total ordering was accelerated by the cutback program in war plant construction and machine tool output of the War Production Board, launched in May. In its program, the War Production Board directed that new purchases of machine tools, machinery, or equipment, would be authorized only when it had been conclusively proved that the work could not be done with existing facilities. By mid-year, 100 machine tool companies out of 377 reporting to the War Production Board had been given releases to engage in other work. Converted tool makers turned to the production of such items as valves, heat exchangers, motors, airplane assemblies, Diesel engine parts, turbines, instruments, and hydraulic equipment for warplanes and ships. The shift away from machine tools remained a relatively slow process, however, and by late fall a War Production Board survey showed that 83 per cent of the industry's capacity was still devoted to tools, 9 per cent to direct war

orders, and the remaining 8 per cent was idle. Over 53 per cent of the reporting companies had no direct war work at all, and it was believed that by early 1944 over two-thirds of the industry's capacity would be available for work other than machine tool output. Despite declining shipments of tools, however, the number installed in manufacturing plants throughout the nation had risen to around 1,500,000 units by the end of 1943; of this total almost half, or 700,000 units, had been added since 1939, about 65 per cent being owned by the government. According to the National Machine Tool Builders' Association, the depreciated value of tools in use stood at \$3,890,000,000 at the beginning of 1944, compared with a pre-war value of some \$900,000,000. Machine tools in the government stockpile, estimated at a 10 years' normal supply, were reported to be twice as efficient as tools installed in industry prior to 1940, and promise to rapidly become a significant supply factor, since about 90 per cent of some 220 types made can be adjusted to peacetime production with little difficulty.

A congressional committee was urged in December by Charles E. Wilson, president of General Motors, to authorize production of machine tools for civilian goods output. Restrictions on the use of essential material for nonwar work, and manpower shortages, were seen as the chief obstacles toward immediate utilization of large idle capaci-ties for this purpose. Meanwhile, the War Department prepared a questionnaire at the year-end designed to arrange for the disposal of surplus tools. Contractors were to be asked to list the quantities of tools they might be interested in buying when machine tools are declared to be surplus. Controls were tightened over idle tools by establishing a mandatory reporting system for all unused items, to the end that the flow of available materials to existing facilities could be expedited. Future contracts then would be placed with greater knowledge of available machine tool capacity, and the voluntary transfer of idle tools to companies in need of

them might likewise be encouraged. Power Generating Machinery. By contrast with the machine tool makers, producers of power-generating machinery enjoyed a further marked sales gain during 1943, in meeting the enormously expanded needs of the shipbuilding industry for motors, turbines, and other generating apparatus. As compared with 8,089,000 dead-weight tons of merchant shipping delivered from yards in 1942, shipbuilders' deliveries last year approximated 19,000,000 tons. In addition to the huge tonnage of cargo vessels, deliveries of warships to the Navy climbed rapidly. Demand for steam generating equipment from the utilities, normally the major factor in this machinery field, was not an important influence last year, however. Construction expenditures of electric utilities for production plant, which amounted to \$228,000,000 in 1942, dropped down to \$153,000,000 in the 1943 budget. Nevertheless, sales of steam engines and boilers, turbines, heaters, and internal combustion engines during 1943 undoubtedly exceeded the prewar volume of \$150,000,000 per year many times over. Demand for Diesel engines, both from industry and shipbuilding, was particularly impressive. Thus, Diesel engine sales in 1943 probably attained the 25,000,000 horsepower level, contrasted with an output of 4,600,000 h.p. in 1941 and of 2,700,000 h.p. in the 1939 period. Multiple-engine installations gained more favor in marine use, while applications in the railway equipment field widened and Diesel-driven tractors continued to win approval in agriculture.

See Electric Light and Power; Shipbuilding. Construction Machinery. Construction activity in 1943 fell to about two-thirds of 1942's volume, as the war program terminated and civilian building remained negligible, but manufacturers of heavy machinery usually employed in this industry found a substantial market for tractors, bulldozers, and excavating units in the military field. Toward the end of the year, war demand constituted almost the entire sales volume. Mining activity, on the other hand, was sustained at peak levels through most of 1943, and sales of mining tools were maintained well above prewar performance. Expansion of oil refinery capacities found reflection in good demand for pumps, but restricted drilling held down sales of some oil field equipment makers. (See Construction Industry.)

Other Machinery. Producers of machinery required in industries such as textiles, paper mills, commercial laundries, printing, leather workers, and food processing, of course, were required to convert their facilities early in the war to military production. These companies engaged in extensive subcontracting on various projects and late in 1943 began to suffer from the cutback program. A return to civilian output was not allowed as the year closed, and the main hope of industrial machinery manufacturers in such lines was that they could possess sufficient flexibility to switch rapidly to new phases

of the war effort.

See Business Review; articles on materials, as Iron and Steel and Vanadium; War Production BOARD under Conservation. Compare Machine BUILDING.

MACHINE-SHOP MIST. See HEATING AND VENTILAT-MACKENZIE, District of. See Northwest Territo-

MADAGASCAR. A French island colony near the southeast coast of Africa. Area, 241,094 square miles including 790 square miles in the Comoro Islands (Mayotte, Anjouan, Grande Comore, and Moheli). Population, 3,797,936 at the 1936 census (Comoro Islands, 128,608), comprising 3,758,338 Malagasy, 25,255 French, and 14,343 foreigners. Total estimated population in 1940, 3,900,000. The natives are of Malay-Melanesian origin, with the Malay type predominating in the interior and an admixture of Arab, East Indian, and Negro races along the coast. Chief towns (1936 census): Tananarive, the capital, 126,515; Majunga, 23,684; Tamatave, 21,421; Antsirabe, 18,215; Tulear, 15,-180. Figurary 14,740 180; Fianarantsoa, 14,740.

Production. The inhabitants are mainly engaged in stock-raising and agriculture. Chief products, with latest available output in metric tons: Corn, 100,000 in 1938–39; rice, 440,000 in 1938–39; potatoes, 36,000 in 1937–38; coffee, 30,000 in 1940–41; cane sugar, 12,000 in 1940–41; tobacco, 6,300 in 1938–39; copra, 2,000 (net exports), in 1938; groundnuts, 8,200 in 1937–38; manioc (exports), 35,534 in 1938; tapioca (exports), 8,989 in 1938; sisal (exports), 2,467 in 1938; graphite (exports), 13,433 in 1938. Other leading export products were gold, 435 kilograms in 1939; vanilla, 74,858,000 francs in 1938; clove oil and other essential oils, 8,300,000 lb. in 1938; cloves, over 10,000,000 lb. in 1938. The principal industries are with latest available output in metric tons: Corn, 10,000,000 lb. in 1938. The principal industries are engaged in processing sugar cane, rice, cloves, etc., for export or local consumption.

Foreign Trade. Imports in 1940 totaled 363,758,-903 francs (641,278,246 in 1939); exports, 616,- 501,638 (756,097,807 in 1939). About three-fourths of the prewar trade was with France. Coffee, vanilla, canned meats, and hides, in the order named, were the leading exports.

Finance. The revised 1943 budget for Madagascar and its dependent islands balanced at 495,644,000 francs (about \$11,368,000 at the 1943 exchange rate of 43.6 francs to the U.S. dollar). The public debt on Jan. 1, 1939, totaled 823,866,684 francs (chiefly for public works).

Transportation. Tamatave, Majunga, Diego Suarez, Tulear and Fort Dauphin are the leading ports. Vessels entering all ports in 1938 numbered 7,364 of 4,306,309 tons. The Pangalanes Canal, a natural channel sheltered by reefs, connects most of the towns of the east coast. Railways extend 534 miles. A network of good roads, built for the most part since 1930, extended 15,756 miles in 1941. Air services established in 1943 connected Tananarive with French Somaliland and with French colonies

in West and North Africa.

Government. The island is administered by a French Governor General. He is assisted by administrative and advisory councils, the different ethnic groups being represented on the latter body. Following Marshal Pétain's capitulation to Germany on June 22, 1940, the French authorities in Madagascar adhered to the Vichy Government. British forces invaded and occupied the whole of Madagascar during 1942 (see 1943 Year Book, p. 391) to forestall a threatened Japanese landing. After concluding an armistice with the Vichy authorities Nov. 5, 1942, the British occupationary authorities in January, 1943, turned over the civil administration to Gen. Paul Louis Legentilhomme, who was named Governor General by Gen. Charles de Gaulle's French National Committee Dec. 14, 1942. After the creation of the French Committee of National Liberation at Algiers early in June, 1943, General Legentilhomme was succeeded as Governor General by M. Le Mart. A British gar-

rison remained on the island.

History. It was announced in London May 5 that the French National Committee had concluded agreements with the U.S. and British Governments for the sale of Madagascar's surplus raw materials and essential foodstuffs through Anglo-American governmental agencies. Less essential commodities were made available for purchase through normal

trade channels.

MADEIRA. An administrative district of Portugal, consisting of a group of islands (Madeira, Porto Santo, and three uninhabited isles) in the Atlantic about 600 miles southwest of Lisbon. Area, 314 square miles. Population (1940 census), 249,771. Capital, Funchal (on Madeira). Normally Funchal was an important port of call for shipping lines and pleasure cruises, but as a result of the war the tourist trade came to an end. In 1942 some 187 vessels docked at Funchal as against 1,316 in 1938. Hand embroidery and wine making are important occupations. The wine output in 1942 was estimated at 2,113,360 U.S. gallons; exports totaled 244,557 U.S. gallons. Sugar, bananas, and other fruits are grown. See Portucal.

MADOERA. See NETHERLANDS EAST INDIES under Area and Population.

MAGAZINES. The first year of war brought about few changes in the magazine industry, but by 1943 wartime conditions began to have important effects. Reader interest as evidenced by mounting circulations was at an all-time high. The news-

stands absorbed almost as many copies of their product as could be supplied. Advertising, too, shot upward, and for the first time in the history of the business, magazines were forced to adopt some form of restriction on the amount of advertising they could accept. This publisher's utopia was marred only by the fact that the government restricted the amount of paper which could be used by magazines to 90 per cent by weight of their 1942 usage. But in spite of this, circulation zoomed higher than 1942 figures.

Almost all magazines shared in the boom. The war-inspired emphasis on technical knowledge increased the circulation of trade magazines, especially those in the field of aviation, radio, and mechanics. The news and opinion magazines were in even greater demand to fill the need for interpretation and analysis of war news not otherwise supplied by the newspapers and the radio. The general magazines, offering a combination of entertainment, interpretation, and solutions to new problems, found an ever-increasing audience among people who never before were interested or could afford to buy. The rise in purchasing power of the public and the effective distribution methods of the magazines served to bring product and market together advantageously. Changes in mode of travel from auto to train gave people greater opportunities for reading. Forced to stay at home because of travel restrictions, they read more. This, coupled with the fact that millions of men now in the Army and Navy discovered reading as a form of recreation and education, and read voraciously everything from comics to highbow literary journals, gave impetus to the boom in magazines.

Top circulation position among the monthlies was still held by *The Reader's Digest* with approximately 8,000,000 in the United States edition. The Ladies' Home Journal, with almost four million and a quarter, was the next highest, and was first among all magazines carrying advertising. Among the weeklies, Life reached the amazing total of 3,600,000 copies per week. Almost all other magazines were at their all-time highs. Even the so-called quality magazines such as Harper's and the Atlantic Monthly, reached far above their usual 100,000. The comic magazines, too, attained new highs, with an estimated readership of 20,000,000, not only among children, but with a large proportion of readers among civilian adults and service

men.

Advertising volume for all magazines reached an estimated total of \$220,000,000 in 1943, an increase of \$50,000,000 over 1942, and the biggest volume in magazine history. For the twelve months of 1943 there was an increase in advertising of 28.5 per cent over the similar period in 1942. Not all magazines showed this general average. The largest gain was made by Newsweek, whose advertising during the first nine months of 1943 showed an increase of 80.1 per cent. All the other large general magazines showed increases, but not in such sensational proportions. Even Liberty, long in the doldrums, showed a 20 per cent gain in linage over 1943, and under the direction of its new publisher, Paul Hunter, will probably show a profit. Generally, the paper shortage had the effect of increasing advertising content and decreasing editorial content of magazines. A survey of 21 leading magazines made by the Publishers' Information Bureau showed that 16 magazines ran fewer editorial pages during the first nine months of 1943 than they did during the same period in 1942.

In spite of the fact that many war-expanded American industries were eager to place large amounts of advertising, mainly of the institutional type, many magazines were obliged to ration advertising space. As early as last April Mademoiselle began to turn away new advertisers. Between April and the end of the year they rejected almost 400 pages in advertising, 100 pages for the August issue alone.

There have been many changes in the mechanical make-up of magazines to bring them within the limits of paper restrictions, and to avoid the necessity of cutting subscriptions to 90 per cent of 1942 totals. Margins became narrower, the columns wider, the type smaller, and (most widespread) much lighter paper was used for cover and

text.

Some publishers of group magazines dropped less profitable publications to bolster paper quantity on their more popular ones. This practice was more general among pulps, generally run in groups, which could easily shift or combine publications.

which could easily shift or combine publications. The changes in editorial content during 1943 were not so drastic as in other aspects of magazine publishing. A minimum of so-called experimental material was used. There was an increase in most of the national magazines in the number of articles related to current events the world over, and a decrease in the amount of fiction of the "escape" or mere entertainment variety. Irrespective of war conditions, there has been a tendency on the part of magazines during the past few years to use more and more nonfiction. Articles and stories were shorter, not only because the readers prefer shorter lengths, but also because it is possible with shorter pieces to include the same number of pieces in fewer pages. Serials were eliminated from a number of magazines and the use of novelettes complete in one issue became more widespread. In the general magazines, the editorial material dealing with the war received the greatest emphasis. This covered the widest possible range, from eyewitness accounts by regular war correspondents to articles about problems on the home front such as rationing and production. Fiction, too, had to take the war into account. No longer could the hero of a story appear in civilian clothes without explanation. The activities of all characters, women

included, could not ignore the war background. The government suggested to some extent the subjects for fiction and nonfiction alike. The Magazine Bureau of the Domestic Branch of the Office of War Information worked closely with the magazines in this country making suggestions as to ideas they wished emphasized to help the war effort. The Bureau kept magazines informed each month of the latest war developments through the issuance of the Magazine War Guide, which lists war-related topics likely to be of public interest three months from date of issue. Writers prepare and submit articles and stories on the suggested subjects to magazine editors through the regular channels—either direct or through literary agents. Magazines carried almost four thousand articles, editorials, stories, and other features suggested by the Magazine War Guide during the period from September, 1942, to November, 1943.

The government for the first time became a magazine publisher, despite considerable opposition from some quarters. The Overseas Branch of the Office of War Information published during the year 1943 two magazines for overseas distribution, USA and Victory. In these magazines they have embodied the two most important aspects of the American magazine—the digest and pic-

tures. USA is a digest magazine with 75 per cent text and 25 per cent pictures; and Victory is a picture magazine with 75 per cent pictures and 25 per cent text. Circulation figures for these magazines are constantly changing, but as of Dec. 1, 1943, USA distributed 540,000 copies for all areas, and Victory 535,000 copies for all areas. USA is published in eight languages: English, French, Spanish, Portuguese, Italian, Arabic, Greek, and Norwegian. Victory is published in seven languages: English, French, Italian, Spanish, Portuguese, Arabic, and Afrikaans. Both are distributed in all neutral and Allied countries except Sweden and China, and in occupied countries where possible. They are not distributed to American civilian or military personnel overseas. Where it is advisable to do so, arrangements are made with local dealers to sell the magazines. Victory accepts advertising.

Aside from these two government publications for the foreign countries, the magazine industry in this country expanded tremendously in the field of foreign editions. *Time* established printing operations in Honolulu, Australia, Persia, Mexico, and Colombia, and is planning others in Sweden and Turkey. The magazine is the same as that published in this country, but the printing is actually done in these foreign countries for mechanical expediency. Prior to the past year, *Time* had two overseas editions, one known as the Air Express Edition, which was printed in this country and flown throughout Latin America, and the other published in miniature size for distribution

in Great Britain.

The Reader's Digest also increased its foreign language editions starting two new ones during 1943: Det Basta ür Reader's Digest, published in Swedish, was begun in March, 1943, and has a current circulation of 300,000. Al Mukhtar, published in Arabic in Cairo, was first issued in September, 1943, and now has about 150,000. Their other two foreign language editions, published in Spanish and in Portuguese for distribution in Latin America, now have a combined circulation of over a million and a quarter copies. Unlike the United States edition, all of these foreign language edi-

tions accept advertising.

Foreign language editions of United States magazines were not the only representatives of the magazine industry overseas. At the suggestion of the Special Services Division of the Army Service Forces, over a score of magazines began supplying magazine reading to American military personnel overseas with the publication of so-called "pony" editions. These midget editions (modeled on the overseas edition of Time started in 1942 for British readers) measure six by nine inches and are about one-quarter their usual size. They are printed only for issue by the Army Special Services Division and for resale by the Army Exchange Service. They contain no advertising. Magazines published in the "pony" edition include Coronet, Infantry Journal, Inside Detective, Life, Time, Modern Screen, Newsweek, New Yorker, Omnibook, Science News Letter, Sporting News, Esquire, three Ziff-Davis publications, Flying, Radio News, and Popular Photography, and a number of others. Although not strictly a "pony," Life's overseas edition is printed regular size but on especially light paper. It is expected that twenty-five others will soon be added to the list. Omnibook alone is furnishing 50,000 copies a month in this edition, and liked its smaller size so much that in April the magazine changed its domestic edition to the pocket-size.

Time runs several hundred thousand copies in the pony size. These magazines are an excellent morale-builder for the men in the armed forces, since they offer service men abroad a definite tie with their home life.

Because of the paper shortage, the War Production Board frowned upon starting new magazines in 1943, but in spite of this, over twenty new magazines appeared. The cases of some of these new magazines will be reviewed by the War Production Board, but in the meantime, they are still being published. These include Everybody's Digest, Prefabricated Houses, Plastics World, Plastic and Resin Industry, St. Nicholas (since suspended), War Plant Worker, Home Garden, Flying Cadets, Tune In, Predictions, Aviation News, Air Transport, Army Exchange Reporter, Palisades, World at War, Living Poetry, Finish, Woman's Reporter, Read.

There have been a number of magazine suspensions during the year, mostly among the "little" or experimental type of publication. Magazines such as Bow, Crucible, Alentour, etc., are no longer published. Golfing, the largest casualty, was sus-

pended for the duration early in 1943.

Joseph N. Pew, oil magnate and owner of the Farm Journal, purchased the Pathfinder from Emil Hurja. Graham Patterson, publisher of the Farm Journal became publisher of the Pathfinder as well. Patterson instituted several changes in this 50-year old weekly, which preceded even the Literary Digest as a news weekly. The plans call for an improved format and cover similar to the large news magazines; nationwide correspondents to supply the magazine with original material, instead of its former dependence upon rewritten material from the newspapers and press services; a foreign staff which will seek to personalize the war news from the small-town point of view; general advertising instead of the patent medicine and mail order copy that was formerly used. The publishers do not intend to change the homespun quality of the editorial material.

In September, Esquire was accused by the Post Office Department of publishing matter of a lewd and obscene character, and was ordered to show cause why it should not have its second-class mailing privileges suspended. Hearings were held in Washington for three weeks, the defense including such well-knowns as H. L. Mencken, Channing Pollock, Louis J. Croteau, executive director of the New England Watch and Ward Society, Raymond Gram Swing, and several psychiatrists from large universities. But even with this imposing roster of witnesses pleading its cause, the suspension of Esquire's second-class mailing privileges was ordered by Postmaster General Frank C. Walker, effective Feb. 28, 1944, contrary to the twoto-one vote in favor of Esquire by the board of postal officials. Curiously enough, in spite of the fact that the original charge was that Esquire printed material of an obscene nature, the action revoking the second-class mailing privilege was taken on the grounds that the magazine fails to meet the requirements of being "originated and published for the dissemination of information of a public character, or devoted to literature, the sciences, arts, or some special industry." Enforcement of this order would increase Esquire's mailing costs by an estimated \$500,000 annually. At the year's end, Esquire was seeking a court injunction to set aside this suspension.

Shortly after her retirement as editor of *This Week*, Mrs. William ("Missy") Meloney, legendary figure in magazine publishing, as well as in

many other fields, died. (See Necrology.) She was editor of *This Week* since it was launched eight years ago. William I. Nichols, former managing editor of This Week, succeeded her as editor. After several changes of editors, Edward Maher became editor of *Liberty*, replacing Jerome

Argosy, the famous old pulp magazine in which O. Henry and Jack London appeared, was made into a slick paper, all-fiction magazine. It now features modern and historic adventure stories, tales with engineering and industrial backgrounds, sports, mystery, and love stories.

Time was prominent in magazine publishing news. It began a new "Canada At War" Depart-ment in its Canadian edition, which is designed to picture for Canadians the part of the Dominion in the war. Also, it was prominent among the publications banned by Argentina for stories which were considered unfavorable to the revolutionary government there. Printing operations on the West Coast were begun, and Time is the first and only national magazine with printing operations west of Chicago. Here they plan to run off 100,000 copies primarily for California distribution.

In December, 1943, the War Production Board announced a further cut in the amount of paper to be used by magazines in 1944. This order limits magazines to 75 per cent by weight of the total amount used in 1942. Also, magazines using 100 tons or less per year, previously exempted from reductions, were brought down to 90 per cent of their 1942 usage, and only those using 5 tons or less in any calendar quarter will be allowed to use in 1944 the full amount of their 1942 tonnage.

How magazines will meet this new cut can be inferred from the action taken late in 1943 by a number of magazines which began to ration subnumber of magazines which began to ration subscriptions. Cosmopolitan, Good Housekeeping, Harper's Bazaar, House Beautiful, Motor Boating, Town and Country, Chemical Abstracts, Chemical and Engineering Chemistry, Journal of the American Chemical Society, Electrical Manufacturing, and Western Short Stories will accept only renewally and the Stories of the Saturations and the party subscriptions. The Saturations and the party subscriptions. subscriptions and no new subscriptions. The Saturday Evening Post and the Ladies' Home Journal will accept only subscriptions for two or more years. The McGraw-Hill Publishing Company, publishers of 26 trade journals including Business Week, Aviation, American Machinist, etc., will accept only the number of subscriptions equal to those which are not renewed.

The number of copies of magazines supplied to newsstands had to be reduced in order to allow many magazines to fill their subscription orders, and further reduction will undoubtedly be necessary. More magazines will be forced to curtail the amount of advertising they can accept. Experiments with still lighter weight paper may be a partial solution, but it is apparent that for the first time in the history of magazines in America the demand will exceed the supply. Though not an official government order, rationing of magazines on an informal basis by the publishers will undoubtedly be put into effect.

See French Literature, etc.

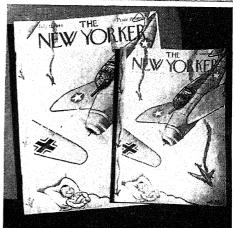

A. S. BURACK.

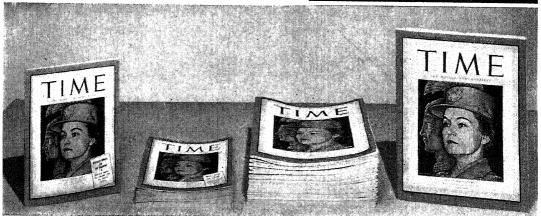

MAGNESIUM. Magnesium came off the shortage list in 1943 as expanded production facilities swung into operation although the originally anticipated peak annual production of 700 million lb. was not realized. According to the U.S. Bureau of Mines, the 1943 production was about 330,000,000 lb. (94,840,000 lb. in 1942).

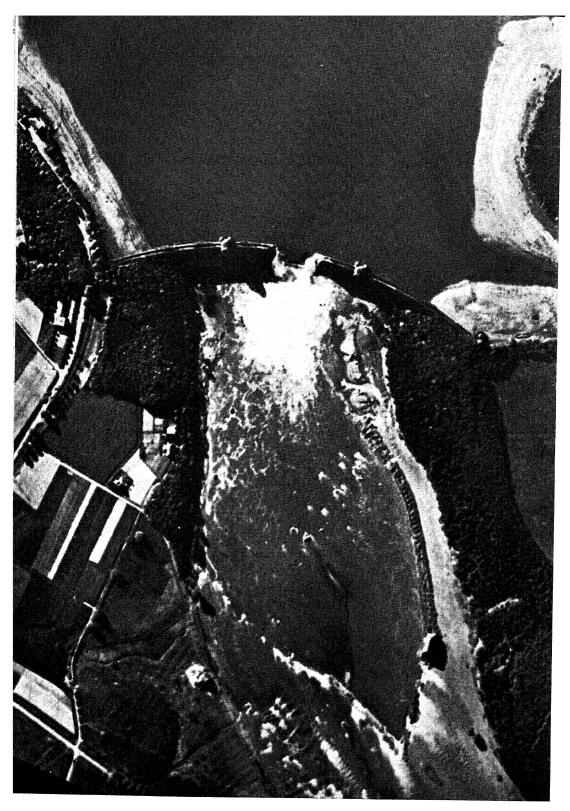

#### SHUTTLING NEWS ACROSS THE SEAS

Above: A group of magazines on military subjects. Right and below: Midget or "pony" editions designed for overseas shipment to service men. Over a score of magazines are now being supplied with full contents in lightweight format to American military personnel, and it is expected that a number of others will be added to the list. Here shown are The New Yorker (photo by Tide) and Time (courtesy the publishers) in both regular and miniature size.

EMPLOYMENT OF AIR POWER AGAINST ENEMY SUPPLY

An air view showing the 200-foot breach in the Moehne Dam, after the R.A.F.'s historic attack of May 17 in the Ruhr area. The photograph shows the lake already drained of much of its contents. The foam visible below the bridge covers the space where the power station was situated. (British official Photo)

Although by no means as relatively abundant as aluminum, its light metal twin, production for the year met all essential war and civilian require-ments and even contributed to a small stockpile. The last unit of the sprawling Basic Magnesium plant at Las Vegas, Nev., whose management was assumed by Anaconda Copper in the fall of 1942, went into production on July 12, 1943. The output of the \$130-million plant, with annual capacity of 102 million lb. was sufficient to take magnesium out of the critical class. The Permanente Metals plant near San Francisco, under the management of Henry J. Kaiser, overcame earlier technical difficulties to achieve maximum production.

On the other hand, the big government-owned reduction plant at Spokane, Wash., operated by Electro-Metallurgical Co., was handicapped seriously by labor shortages making it problematical whether full production could be achieved even in 1944. Two smaller plants also operated at far less

than capacity.

Those who had expected magnesium to assume greater importance in aircraft construction as compared with aluminum during the year were disappointed. No all-magnesium airplane fuselage appeared, and both Germany and the United States used the metal in about the same way and in the same relative amounts in the manufacture of aircraft. The Germans, however, introduced large streamlined forgings of magnesium alloy for the mounts of in-line engines. Ready acceptance of the metal caused by its light weight (onethird lighter than aluminum; four-fifths lighter than copper), the favorable strength-weight relationship of its alloys and its ready workability was offset by greater prominence given in discussions to such disadvantages as high co-efficient of expansion, susceptibility to stress corrosion, and high

Widespread speculation as to the postwar importance of the three principal production processes -electrolytic, carbothermal, and ferrosilicon-revolved around production costs. The ferrosilicon process, upon which the government has based much of its emergency expansion program be-cause of its relative simplicity and minimum requirements of power and critical materials, was shown to be relatively expensive by figures re-leased by the Canadian government. The Domin-ion Magnesium Co., Ltd., Haley's Station, Ontario, the first large plant to use the Canadian-developed ferrosilicon process, produced the metal at an average cost of 39.7 cents per lb. during March, 1943, although this figure undoubtedly was later reduced. This compares to a ceiling price of 20.50 cents per lb. for 99.8 per cent pure ingots.

Like aluminum, magnesium has a tremendous

wartime importance for aircraft manufacture, but in addition has a demand practically as large for the manufacture of incendiary bombs. (See BOMBS.) Magnesium production facilities in the United States are 94 per cent government owned. See CHEMISTRY; ELECTRICAL INDUSTRIES; MA-

CHINE BUILDING.

MALTA. A British colony in the Mediterranean, comprising the island of Malta (95 sq. mi.), Gozo (28 sq. mi.), and Comino (1 sq. mi.). Civil population (Jan. 1, 1940), 270,000. Capital, Valletta, 22,779 inhabitants in 1931. Vital statistics (1939): 8,930 births and 5,385 deaths. Education (1938–39): 168 schools and 34,846 students enrolled. Malta is a fortified naval base.

Production and Trade. Barley, wheat, potatoes, maize, oranges, figs, honey, grapes, and cotton are the main products. Livestock (1939): 34,470 goats, 15,936 sheep, 6,707 swine, 4,540 cattle, and 8,799 horses, donkeys, and mules. Trade (1939): imports £4,167,465; exports £659,812 (including reexports of £433,756). Shipping (1939): 2,359 vessels aggregating 4,077,526 tons entered the port of Valletta. Roads (1940): 521 miles.

Government. For the year ending Mar. 31, 1942, the deficit was estimated at £662,000. Malta is governed according to Letters Patent of Feb. 14, 1939, promulgated on Feb. 26, 1939, which granted a new constitution under which there is a council of government of 20 members (5 exofficio, 3 official, 2 unofficial nominated by the Governor, and 10 elected) presided over by the Governor who has a casting but no original vote. English and Maltese are the official languages of Malta. Governor and Commander in Chief, Field Marshal Viscount Gort (appointed May 27, 1942).

History. Allied victories in the Mediterranean area during the first half of 1943 ended the long and terrible siege of Malta (see 1943 YEAR BOOK, p. 393) and inaugurated a period of reconstruction. According to a statement by the British Colonial Secretary, the toll of Axis air raids on Malta up to the end of June, 1943, was 1,436 civilians killed, 3,415 wounded, and 7,000 buildings destroyed or damaged. The £10,000,000 voted by the British Parliament in November, 1942, for the reconstruction of the island and payment of private property damages was made available in February, 1943. Shipments of vitamin concentrates sent by the American Red Cross reached the island in March. King George VI visited Malta on June 20 during his tour of the Mediterranean and received a warm welcome from the populace. He elevated the Governor, Viscount Gort, to the rank of field marshal. Meanwhile the island had been transformed into an important offensive base for RAF operations. It played a leading role in cutting the supply lines of Axis troops in Tunisia and in the Allied invasion of Sicily and the Italian mainland. General Eisenhower and his staff used Malta as operational headquarters during the attack on Sicily (see World War). On July 7 the British Colonial Secretary announced in the House of Commons that the Government planned "to restore to Malta a system of responsible government after the war." Meanwhile the state of siege declared when Italy entered the war remained in effect. In August some 17,000 dock workers in Valletta went on strike for six days until the Governor agreed to increase subsidies for certain rationed goods and raised the minimum weekly wage to about \$12.

## MANADO. See NETHERLANDS EAST INDIES. MANAGEMENT-LABOR COMMITTEE. See WMC.

MANCHUKUO. An empire in northeastern Asia established under Japanese protection Mar. 1, 1932; comprising the former Chinese provinces of Fengtien, Kirin, and Heilungkiang in Manchuria, and Jehol and the six northern counties of Chahar in Inner Mongolia. Capital, Hsinking (formerly Changchun). Ruler, Emperor Kangtê, who was enthroned Mar. 1, 1934.

Area and Population. Including the South Manchuria Railway Zone under direct Japanese jurisdiction but excluding Kwantung (q.v.), the area of Manchukuo is estimated by Japanese sources at 503,013 square miles. The population at the census of October, 1940, was 43,234,000 (23,920,000 males, 19,314,000 females). As of Jan. 1, 1940, there were estimated to be 37,581,833 Chinese and Mongols (Mongols numbered about 1,000,000), 1,162,127 Koreans, 642,356 Japanese, and 67,710 of other nationalities. Estimated populations of the chief towns in 1939 were: Mukden, 834,703; Harbin, 473,422; Hsinking, 395,855; Antung, 214,972; Kirin, 135,008; and Newchwang, 168,931.

Education and Religion. Education statistics for June, 1939, showed 15,877 primary schools with 1,579,169 pupils; 254 secondary schools, with 60,368 pupils; 14 colleges, with 4,872 students; 16 normal schools, with 4,045 students; and 65 vocational schools, with 5,048 students. According to a Japanese source, there were on Dec. 31, 1937, 1,770,692 Buddhists, 377,337 Taoists, 153,844 Roman Catholics, 132,636 Mohammedans, and 51,398 Protestants. Lamaism was believed to have far more adherents than Buddhism, but no statistics as to their number were available.

Production. Agriculture supports about 85 per cent of the population. Yields of the chief crops in 1940 were officially estimated to total 18,000,000 metric tons, divided as follows: Soybeans, 3,827,000; kaoliang, 4,407,000; millet, 3,900,000; corn, 3,075,000; wheat, 870,000; perilla seed, 47,000; cotton, about 75,000 bales (of 500 lb.); beet sugar, 25,800; rice, 942,300; tobacco, flue-cured, 14,000; flax, 3,000; hempseed, 80,400; sesamum (exports only), 9,100; Manila hemp, 14,600 in 1939. Estimated mineral and metallurgical output (in metric tons): Coal and lignite, 24,500,000 in 1941; iron ore, 1,300,000 in 1936; pig iron and ferroalloys, 736,000 in 1940; steel ingots and castings, 427,000 in 1937. Magnesite, salt, gold, lead, and oil shale are other leading minerals. At the beginning of 1939 there were 3,900 industrial establishments and business concerns. These industrial enter-

prises are almost entirely under Japanese control. Foreign Trade. For the first nine months of 1940, merchandise imports totaled 1,337,500,000 yuan (1,749,400,000 for the full year 1939); exports, 405,300,000 yuan (665,500,000 in all of 1939). For the distribution of trade in 1939, see 1942 Year Book.

Finance. The general accounts or administrative budget for 1941 balanced at 649,220,000 yuan. The 1941 special accounts budget placed revenues at 1,849,077,161 and expenditures at 1,758,175,-290 yuan. Public debt on Jan. 1, 1939, 858,918,000 yuan (346,750,000 borrowed in Japan). The Manchukuo yuan was pegged to the Japanese yen (at 1 yuan equals 1 yen) on Oct. 28, 1935.

Transportation. In January, 1941, Manchukuo had 7,590 miles of railway line, an increase of 1,710 miles in the preceding four years. All lines were owned or operated by the South Manchuria Railway Co., controlled by the Japanese Government. The company's revised budget for the fiscal year 1943—44 totaled 525,000,000 yen, the largest on record. Highways suitable for motor traffic extended about 27,960 miles in 1940. A network of airlines connects all of the principal cities with those of Japan, Korea, and North China. Steamer services are maintained over 4,222 miles of inland waterways. Normally three-fourths of Manchukuo's trade passes through Dairen. New trade outlets are being developed at Rashin, Korea, and at Tatung, situated at the mouth of the Yalu River.

Government. Under the Constitution of Mar. 1, 1934, as amended July 1, 1937, Manchukuo is a monarchy in which the Emperor exercises both executive and legislative powers, the latter being subject to the approval of the Legislative Council, an advisory body appointed by the Emperor. There is also a Privy Council of five members; a State Council, or cabinet, of six departments; and a General Affairs Board, attached to the State Council, which supervises budgets and national policies.

Under a protocol signed Sept. 15, 1932, Manchukuo and Japan agreed "to cooperate in the maintenance of their national security; it being understood that such Japanese forces as may be necessary for this purpose shall be stationed in Manchukuo." Actually, the government is controlled by the Japanese Ambassador to Manchukuo, who is also commander-in-chief of the Japanese and Manchukuoan troops in Manchukuo and Kwantung (q.v.). Japanese Ambassador and commander-in-chief in 1943, Lieut. Gen. Yoshikiro Umezu (appointed, September, 1939). Prime Minister, Marshal Chang Ching-hui (appointed Mar. 21, 1935).

shal Chang Ching-hui (appointed Mar. 21, 1935).

History. The reports of growing economic and political difficulties emanating from Manchukuo in 1942 (see 1943 Year Book) were followed during 1943 by further reports of a similar nature. According to Japanese broadcasts of September 25, the drastic reorganization of the Japanese home front decreed by Premier Tojo was extended to Manchukuo. Prime Minister Chang Chung-hui was quoted as warning the Concordia Association, the Japanese-controlled Manchukuoan political party, of "the gravity of the current situation." He complained of lack of cooperation in the production field.

A Hsinking broadcast reported by U.S. Government monitors early in October declared that large deposits of "edible earth" were being excavated in Manchuria and mixed with flour to make "delicious bread and biscuits." Americans repatriated from Manchukuo in August in exchange for Japanese held prisoner in the United States said that drought had caused a serious crop failure and

that thousands of hungry and poorly clad Chinese and Manchus faced death from starvation or exposure during the coming winter. The entire country was said to be rife with unrest.

## MANCHURIA. See Japan under History.

MANDATED TERRITORIES. Following is a list of territories conquered from the German and Turkish empires during World War I and mandated by the League of Nations to various of the Allied Powers under the terms of the Treaty of Versailles.

Iraq, a territory mandated to Great Britain, became an independent state by treaty with the mandatory power on June 30, 1930. Iraq was admitted to membership in the League of Nations and the mandate terminated on Oct. 4, 1932. Syria and Lebanon were proclaimed independent republics on Sept. 16 and Nov. 26, 1941, respectively, by Gen. Georges Catroux, the Free French High Commissioner. However the League mandate had not been terminated up to the end of 1943. See separate article on each mandated territory.

MANGANESE. Although there is no reason to believe that the United States deviated from its prewar custom of importing most of its manganese requirements, supplies of this important ferro-alloy

remained plentiful throughout 1943.

Manganese ore shipments normally come to the United States from the Gold Coast and Rhodesia in Africa, not far from the lend-lease route to Red Sea and Persian Gulf ports, enabling return of ore as ballast. Moreover, it was agreed among the United Nations that manganese ore from North Africa, where French Morocco is a major producer, would be shipped to the United States. While probably less than 100,000 tons annually has been mined in this latter area, ballast shipments again were possible. Although U-boats were a menace in the Caribbean early in the year, in later months trade routes were open to Cuban and Brazilian deposits. Extensive development work by a Homestake Mining Co. subsidiary in Lower California, Mexico, was completed during the year and arrangements were made to mine and mill manganese ores there on a large scale, it was reported.

A substantial rhodochrosite deposit in Montana continued in production, and a calcining plant to convert this ore to usable form, was completed and substantial tonnages were produced during the year. Likewise, a beneficiation plant to treat a low grade southern Nevada ore deposit was placed in operation near Las Vegas, Nev. Battery grade ore,

which is particularly rich, was mined in surpris-ingly large quantities near Livermore, Calif. Metals Reserve Co., the Federal ore-buying agency, has committed itself to a purchase of small lots of manganese ore through 1944, these purchases to be made at any of 21 depots in ten western States. On May 15, 1943, upon the recommendation of the War Production Board ferroalloys branch, Metals Reserve Co. revised its purchase price schedule, raising prices somewhat on lower grade ores, and agreed to purchase carbonate as well as oxide ore. The base price established on this schedule is \$48 per long dry ton for ores and concentrates analyzing 48 per cent manganese, 6 per cent iron, and 11 per cent silica plus alumina.

The War Production Board early in 1944 re-leased figures on United States' production con-sumption, and stocks of manganese, as follows: Domestic production in 1943, 175,000 tons (30,-683 tons prewar); domestic consumption 1,400,000 tons (674,583 prewar); stocks of manganese on Dec. 31, 1943, 1,525,000 tons. See Geological

SURVEY.

CHARLES T. POST.

MANITOBA. A prairie province of Canada. Area, 246,512 square miles, including 26,789 square miles of fresh water. Population (1941 census), 729,744 (378,079 male; 351,665 female), of these, by racial origin, British totaled 360,560, Ukrainian 80,769. Exemple, 52,006. Common 41,470. Nether 89,762, French 52,996, German 41,479, Netherland 39,204, Polish 36,550, Scandinavian 32,620, Jewish 18,879, etc. Religious membership (1941 census): Roman Catholic 203,259, United Church 194,001, Anglican 125,076, Lutheran 48,213, Presbyterian 43,075, Mennonite 39,336, Greek Orthodox 20,777, Jewish 18,715, etc. Chief cities: Winnipeg (capital) 221,960 inhabitants in 1941, St. Boniface 18,157, Brandon 17,383, Portage la Prairie 7,187. In 1942 there were 15,670 live births, 6,410 and 8,395 marriages. Education (1940-41): 150,657 students enrolled in schools and colleges.

Production. The gross value of agricultural output for 1942 was \$181,575,000 (field crops \$111,372,000, farm animals \$34,734,000, milk \$18,777,000, poultry and eggs \$12,616,000, fruits and vegetables \$2,118,000). Chief field crops (1942): wheat 52,000,000 bu, oats 70,000,000 bu, barley 74,000,000 bu, who are 3,600,000 by the ground 2,000,000 bu. 000 bu., rye 3,600,000 bu., flaxseed 2,000,000 bu., potatoes 118,900 tons, turnips, etc. 16,200 tons, hay and clover 792,000 tons, alfalfa 480,000 tons, fodand clover '92,000 tons, alraira 480,000 tons, fodder corn 150,000 tons, sugar beets 129,000 tons. Livestock (June 1, 1943): 927,500 cattle (including 370,000 milk cows), 298,500 horses, 327,000 sheep, 877,000 swine, 8,052,000 hens and chickens, 511,600 turkeys. Fur output (1941–42): 844,631 pelts valued at \$2,596,436. Fisheries catch (1942): \$3,577,616.

Mineral output (1942) was valued at \$14,643.

Mineral output (1942) was valued at \$14,643,-269, of which metals accounted for \$11,791,580 (gold, 138,606 fine oz., \$5,338,641), and clay products, etc. for \$2,255,062. Manufacturing (1941): 1,184 plants, 32,262 employees, \$40,894,267 for salaries and wages, \$132,330,823 for cost of material of the control rials, \$74,450,721 was the net value of production.

Government. Finance (year ended Apr. 30, 1942): revenue \$19,920,813; expenditure \$18,151,988; total direct and indirect liabilities (less sinking funds) \$115,936,058. The executive power is vested in a lieutenant governor who is advised by a ministry of the legislature. In the Legislative Assembly there are 55 members elected for a five-year term by popular vote of the adult population (26 Progressive Liberal, 15 Conservative, 7 Independent, and 7 other members were elected at the provincial election of Apr. 24, 1941). Six members (appointed for life) in the Senate and 17 members in the House of Commons represent Manitoba in the Dominion Parliament at Ottawa. Lieut. Gov., R. F. McWilliams (appointed Nov. 1, 1940); Premier S. S. Garson (appointed Jan. 14, 1943).

MARINE INSPECTION, Division of. See COAST GUARD.

MARITIME COMMISSION, U.S. The United States Maritime Commission, operating under mandate of Congress since 1937 to develop and maintain a strong Merchant Marine "manned with a trained and efficient citizen personnel," is producing and manning shipping tonnage at a rate never before attained by any nation. That the threefold project of building ships, training personnel, and transporting material and supplies to the fighting fronts of a global war is being successfully performed, is evidenced by figures from shipyards, from maritime training centers, and from the War Shipping Administration.

Early in 1942, President Roosevelt directed that the ship production for 1943 should total 16,000,-000 tons deadweight. With production accelerated, the President's original request was increased to 18,890,000 tons deadweight, and the Maritime Commission extended every facility to meet this demand. By Dec. 1, 1943, a total of 17,194,-387 tons deadweight comprising 1,688 vessels had been delivered to the Maritime Commission. This includes 1,118 Liberty Ships, 146 C-types, 217 tankers, I passenger cargo vessel, 31 coastal cargo vessels, 41 ocean-going tugs, 16 ore carriers, 23 barges, and 97 special types. The shipbuilding goal of 24,000,000 deadweight tons for 1942 and 1943 was passed in mid-November. By Jan. 1, 1944, the total delivered to the Maritime Commission was 19,238,626 tons dead weight.

A survey of shipbuilding facilities in the United States in 1937 revealed the existence of but 10 yards with 46 shipways capable of building oceangoing vessels of 400 feet in length. Facilities have been expanded so that now approximately 70 shipyards with more than 300 shipways located in 24 States are building and repairing ships. More than 700,000 persons, 14 per cent of whom are women, are employed in this work.

The year 1944 will see a part of the Liberty Ship program superseded by deliveries of a larger, faster, and generally more efficient ship known as the Victory Ship. This vessel is of standardized construction, designed to use geared turbine propulsion machinery of more than 6,000 horsepower, with a speed of 15 to 17 knots as compared to about 11 knots for the Liberty Ship. See also SHIPBUILDING

Projecting the shipbuilding program to the end of 1944, the Maritime Commission will by then have added approximately 2,000 new ships of various types to those already delivered or sched-

uled for completion by the end of 1943.

Of great importance, also, in our maritime program is the maintenance and repair of this vast merchant fleet. For every ship going down the ways an average of 42 merchant seamen is needed to carry on its operations. The training of marine personnel, officers, and seamen, originally supervised by the Maritime Commission and in the early part of 1942 assigned to the Coast Guard, was transferred, by executive order, to the War

The Training Organization of the War Shipping Administration in July, 1942.

The Training Organization of the War Shipping Administration is made up of three divisions: (1) the United States Merchant Marine Cadet Corps, which trains a selected group of young men as marine officers; (2) the Maritime Service, which operates schools for training apprentice seamen for ungrading of unlicensed personnel. prentice seamen, for upgrading of unlicensed personnel to officers, for upgrading licensed personnel, and for specialized training and (3) five State Academies operated under their respective State governments, but with partial support from Federal funds. Graduates from these Academies become officers in the United States Merchant Marine or are commissioned officers in the Naval Reserve. From 1938 to Sept. 1, 1943, the training program made available to the Merchant Marine 9,169 officers, 1,261 radio operators, and 36,568 unlicensed seamen in all ratings, or a grand total of 46,998 men.

The Recruitment and Manning Organization of the War Shipping Administration is charged with supplementing the efforts of owners, operators, and maritime unions in properly and adequately manning ships of the Merchant Marine. From May, 1942, to Sept. 1, 1943, the organization placed over 50,000 men aboard ship.

The War Shipping Administration has the duty of operating ships for the duration. Each month war materials and men must be transported to our fighting fronts. Each soldier needs from five to 12 tons of supplies upon disembarking and requires at least two tons a month while in combat service. Besides this, ships of the United States Merchant Marine must carry lend-lease goods and other authorized exports and bring back to this country strategic raw materials.

The War Shipping Administration was made the representative of the United States Government for cooperation with the British Ministry of War Transport and similar shipping agencies of other United Nations engaged in wartime shipping. Representatives from these British and American agencies make up the Combined Shipping Adjustment Board, which jointly operates the pools of American and British shipping from offices in Washington and London. Thus the Board is able to plan operations on an international scale,

and by coordinating its activities with the Chiefs of Staff and other agencies of the United Nations, it regulates the flow of raw materials to industrial centers, from there to the fighting fronts, and also provides shipping for the transport of essential goods for the all-out war effort. MARTINIQUE. A French island colony in the West Indies, between the British islands of Dominica and St. Lucia. Area, 385 square miles; population (Jan. 1, 1940), 260,000, mostly Negro and mulatto, with about 5,000 whites. Fort-de-France, the capital, had 52,051 inhabitants; Le Lamentin, 16,303.

Production, etc. Sugar (55,000 metric tons in 1940–41), cacao, bananas, pineapples, and rum are the main products. Trade (1938; in U.S. dollars): imports \$6,756,000; exports \$8,918,000. Budget (1937): 101,100,000 francs.

Government. Until the fall of France in June,

1940, Martinique and Guadeloupe were each administered by a Governor, a Privy Council, and a General Council. Under the democratic Third Republic, all citizens without regard to color enjoyed the same civil and political rights as Frenchmen in the mother country. The General Council, which passed upon the budget, and the municipal councils were elected by universal suffrage. In addition, each colony was represented in the French Parliament by one senator and two deputies

This democratic system, which had won the loyalty of the colored population, was discarded after Marshal Pétain established his authoritarian Government at Vichy, France. On Dec. 4, 1940, Pétain appointed Adm. Georges Robert, commander-in-chief of all French West Indian forces, as his High Commissioner for the colonies of Martinique, Guadeloupe, and French Guiana. Robert used dictatorial powers to bring all military, political, and economic activities under his control. The Councils General, the municipal councils, and other democratic institutions were suppressed. The colonial and local administrative officials were replaced by naval officers or by Pétain supporters among the small white and upper-class mulatto minority. Robert, on Dec. 13, 1940, named Yves Nicolle Governor of Martinique and M. Saurin Governor of Guadeloupe.

All persons affiliated with Masonic lodges or suspected of de Gaullist or pro-Allied sympathies were weeded out of the Government service and some were imprisoned. They were replaced by pro-Vichy agents from France or by officers or sailors from the French warships that had taken refuge at Fort-de-France. The Navy took over the direction of the police and information services. Criticism of

the Vichy Government or its officials was forbidden along with the expression of pro-Allied sentiments. The people of the islands were forbidden to listen to British or American radio broadcasts while the French naval information officers at Fort-de-France carried on a vigorous anti-British and anti-American propaganda. Meanwhile much of the antidemocratic legislation decreed by the Pétain Government in France was placed in effect in the French West Indies. For developments in 1943, see below.

History. Steady politico-economic pressure by the United States, rioting by the colored population, and a military revolt forced Admiral Robert on July 14, 1943, to terminate the authority of the Vichy Government and surrender his powers to Henri-Etienne Hoppenot, the Delegate Extraor-dinary of the French Committee of National Liberation at Algiers. Upon arriving at Fort-de-France Hoppenot announced the abrogation of the laws and decrees issued by Admiral Robert on behalf of the Vichy Government and pledged the restoration of the republican system of government.

As a result of this overturn, the aircraft carrier Béarn and several other French warships at Fortde-France, 140,000 tons of merchant shipping, and all the facilities and resources of Martinique and Guadeloupe were placed at the disposal of the United Nations war effort. Some \$250,000,000 of French Government gold stocks, stored at Fort-de-France since the French capitulation to Germany, was held in trust for the Government of liberated

Robert's hold on the islands became increasingly precarious when he reiterated his allegiance to Marshal Pétain after the Pétain regime in November, 1942, broke off relations with the United States and acquiesced in the German occupation of all France (see 1943 Year Book, p. 396-397). The United States then discontinued the small shipments of food and other essential articles that it had permitted to reach Martinique and Guadeloupe. This deepened the already acute economic crisis and added to revolutionary discontent among the population.

Admiral Robert refused to go through with the agreement for closer cooperation with the United States, announced by Secretary of State Cordell Hull on Nov. 23, 1942. He gave as his reason the Anglo-American landings in French North Africa. General Giraud early in 1943 sent an emissary, Rear Admiral Battet, to Martinique to win Robert over to active collaboration with the United Nations. But Robert threatened to arrest the emissary unless he left immediately. He also prepared to scuttle all French naval and merchant ships under his control in the event of an American invasion.

The High Commissioner's position was further weakened by the secession of French Guiana (q.v.) from his authority on March 18 and by the action of the U.S. Government in withdrawing its Consul General from Fort-de-France and terminating all political negotiations (April 26). Meanwhile hundreds of Negroes and scores of white Frenchmen fled from Mantinique and Guadeloupe to nearby islands, some of them on their way to join the forces of Generals de Gaulle or Giraud. Early in May four men were killed by police in suppressing anti-Government disorders in Guadeloupe. On June 4 another revolt broke out in Guadeloupe under the leadership of M. Valentino, a full-blooded Negro who had been president of the island's General Council. It was broken up by a few volleys from the training ship *Jeanne d'Arc*, moored off Pointe-a-Pitre. On June 24 large de Gaullist demonstrations occurred in Fort-de-France, Martinique. The demonstrators defied Admiral Robert and forced the release of their arrested leaders. Several hundred soldiers under the command of a captain then took possession of Camp Balata near Fort-de-France and demanded Robert's resignation.

The situation in both islands became so menacing that Admiral Robert on June 30 broadcast a statement over the Martinique radio asking that "to avoid bloodshed" the U.S. Government dispatch a "plenipotentiary to fix the terms for a change of French authority." He insisted, however, upon guarantees of French sovereignty over the islands and that there would be no American occupation. Adm. John H. Hoover, commander of the U.S. Caribbean Sea forces, was designated by the State and Navy Departments at Washington to open negotiations. He arrived in Martinique July 3. On the same day the newly formed French Committee of National Liberation in Algiers intervened directly in the situation. It appointed M. Hoppenot, who was then in Washington with a mission headed by General Giraud, to negotiate an agree-

ment for the transfer of the islands to its control.

Indicating the difficulty of restraining opposition elements, Admiral Robert on July 8 broadcast another appeal for M. Hoppenot to go to Martinique as soon as possible. The United States, however, had not recognized the French Committee of National Liberation as the provisional government of France. It was not until after arrangements fully safeguarding American military interests in the Caribbean had been concluded by M. Hoppenot and American naval authorities that the State Department "accepted" Hoppenot's designation as Acting High Commissioner for the French West Indies on July 13. See France under History.

Robert left Fort-de-France for Puerto Rico upon the arrival of Hoppenot. The U.S. Government ordered its Consul General to return to Fort-de-France and announced that it would cooperate in restoring the economic life of the French islands. A United States relief ship, bearing 5,000,000 lb. of food and clothing, arrived at Fort-de-France July 17. On July 21 1,200 Negroes who had fled to the Dominican Republic during the Robert regime were welcomed back to Martinique by cheering thousands. On September 14 the French Committee of National Liberation appointed Louis Ponton to be Governor of Martinique.

LEGISLATION

Officers. The Governor is Leverett Saltonstall (Rep.), inaugurated in January, 1943, for his third two-year term; Lieutenant Governor, Horace T. Cahill; Secretary of State, Frederick W. Cook; Attorney General, Robert T. Bushnell.

MATERIAL COORDINATING COMMITTEE (Canada and the United States). A Committee created May 14, 1941, to make possible the free exchange of vital information between responsible officials of Canada and the United States relating to their supplies of strategic raw materials required for defense production. The United States members are Wil-liam L. Batt, Howard C. Sykes, and Frederick M. Eaton. The Canadian members are G. C. Bateman and H. J. Symington, Members of the Canadian Wartime Industry Control Board.

MATERIEL COMMAND, WAR MATERIEL. See AERONAU-TICS; MILITARY PROGRESS; NAVAL PROGRESS. Compare topics listed under Munitions and War Pro-DUCTION.

MATERNAL WELFARE. See BIRTH CONTROL; CHIL-DREN'S BUREAU. MATHEMATICS, Teaching of. See Education. MAURITANIA. See French West Africa.

MAURITIUS. A British colony in the Indian Ocean, comprising the island of Mauritius (720 sq. mi.; pop. 420,861 on Jan. 1, 1941) and its dependent islands, 230 to 1,200 miles away (87 sq. mi.; pop. 12,507). Capital, Port Louis, with 57,803 inhabit-

ants including suburbs in 1941.

Production and Trade. The chief products are sugar (322,000 tons in 1941), copra (exports, 1,600 metric tons in 1939), aloe fiber, tobacco, and tea. Merchandise imports in 1941 were valued at more than Rs40,000,000 (Rs37,000,000 in 1940); domestic exports Rs56,000,000 (Rs32,000,000) The rupee averaged \$0.3016 in 1940 and \$0.3014 in 1941. Finance (1941–42): revenue Rs23,661,000; expenditure Rs22,122,000. Public debt, June 30, 1940, £2,218,539. There are 146 miles of railway line, 862 miles of roads, and shipping services from Port Louis to African and Indian ports. Shipping (1940): 165 vessels totaling 509,199 tons entered.

Government. The Governor is assisted by an Executive Council and a Council of Government of 27 members (8 ex-officio, 9 nominated, and 10 elected by restricted franchise). Governor, Sir

Donald Mackenzie-Kennedy (appointed May 15, 1942).

MEDICAL-DENTAL CONVENTION. See DENTISTRY.

MEDICINE AND SURGERY. The Office of War Information has released a report on the state of health among the armed services. In the previous 18 months there have been flare-ups of diseases, but only cerebro-spinal meningitis reached epidemic proportions, and its death toll was low. The situation in units overseas seemed even better. In those diseases for which vaccine had been developed, namely, typhoid, smallpox, tetanus, typhus, yellowfever, cholera, and plague, it is excellent. Malaria and dysentery present a serious problem in land combat conditions, and the Navy has reported some trouble with infectious jaundice and with filariasis. Disease incidence reported in 1942 was lower than the preceding year and continued good in 1943. An average of a little more than three per cent of the Army personnel in this country was off duty because of sickness or non-battle injuries at any given time during 1942. Similar, though perhaps lower, averages obtained for the Navy. Cerebro-spinal fever, which threatened to reach epidemic proportions in the early months of 1943, was controlled promptly in service posts, through the use of sulfonamides to treat those infected, and also by preventive doses to those who might have had contact with the stricken men.

Deaths, which in previous epidemics ran from 30 to 40 per cent of those contracting the disease, were held to three to five deaths out of every 100 cases. In this war there have been no cases of yellow fever in either the Army or the Navy, and only a scattering of reports among the other diseases for which preventive vaccines have been given. The Army reported about 60 cases of typhoid fever, but with very few deaths. The Navy had eight cases

with one death in 1942

Dysenteries and diarrhea, including food poisoning, is the Army's second greatest disease threat in the number of cases among overseas troops. The Army reports about seven cases per 1,000 men in the Continental United States for 1942. In combat zones abroad admissions for treatment averaged about 30 men per 1,000 annually in 1942, and 50 in 1943—a very good record in contrast with the last war.

Malaria is a leading disease overseas in land operation in malarious areas. Rates of infection in particular theaters are held secret for security reasons, but strong preventive action is being taken, and the Army and Navy believe our record is superior to that of the enemy forces. There seem to be adequate supplies of essential drugs.

Other facts of interest in this report consist of data concerning personnel and physical equipment. The Army has a dental corps of about 13,000 officers. Those in the service now have a record of 4,000,000 cases during 1942, with more than twelve and one-half million sittings. (See DEN-TISTRY.) Quite amazing is it to learn that the Army maintains about 80 general hospitals in the United States. These generally contain a thousand beds or more, each. Backing up these large institutions the department maintains hospitals of from 25 up to 1,000 or more beds at some 600 posts, camps, and stations around the world. The number of beds available in the United States for Army personnel totaled about 350,000 in September, with more hospitals building. The Navy maintains 36 hospitals and seven convalescent hospitals, with a total of 40,000 beds in the United States alone, in addition to dispensaries at posts and stations with a total of 25,000 beds.

Among the civilian population, in spite of the war, and either as the result of the application of specific and general prophylactic measures, or because of a change in the nature of the diseases, the death rate for scarlet fever, whooping cough, diphtheria, influenza, pneumonia, tuberculosis, typhoid fever, appendicitis, and puerperal fever has reached the lowest level ever recorded by a large life insurance company (Statist. Bull. Metrop. Life Insur. Co., 28:1-3, July, 1942). Most striking is the reduction by 55 per cent of the mortality from the various types of pneumonia from 1938 to 1942. In the ten years prior to 1938, the year in which sulfapyridine was first used, the death rate never fell below 79 per 100,000, but by 1942, the rate dropped to 32 per 100,000. (See VITAL STATIS-TICS.

Refrigeration (Crymo Anesthesia). A discussion of crymo-therapy appeared in these columns at an earlier date. Its earliest application appeared in the treatment of metastatic malignancy. This work was pioneered in Philadelphia by Temple Fay. Talbot, of Boston, utilizing an easily portable apparatus, has reported exhaustive investigations into the biochemical changes associated with lowering of the body temperature. He has further experimented in the use of this method in the treatment of various organic-mental diseases, as well as in drug and alcohol addiction; although no conclusions of far reaching consequence have been forthcoming from such studies as yet. This year has seen further application of the method in the development of re-

frigeration anesthesia.

The fundamental work in this form of anesthesia was done by Frederick M. Allen and his collaborators in the City Hospital of New York and experiments to extend the application are being continued in the New York Medical College. The basic principles and the main results, so far, of the new method have been reviewed in a recent meeting of the American Congress of Physical Therapy. For some time it has been known that tissues can be kept alive for many days at ice-box temperature, provided they are not frozen. In experiments, Allen has demonstrated that the cooling of limbs and other parts with ice water, or ice cracked and pul-verized, down to near the freezing point, say five degrees Centigrade, or 40 degrees Fahrenheit is harmless. There is a temporary suspension of life with resumption of cellular activity as the temperature returns to normal. Oxygen consumption of the tissues can be reduced about 13 per cent for each degree Centigrade. Now, when a tourniquet is applied to a limb so refrigerated the skin temperature falls to two to four degrees Centigrade and surgical anesthesia is complete within about two hours. Needless to say, freezing must be avoided, and for this reason, salt must not be used. Refrigeration without a tourniquet is useful but not completely anesthetic. Refrigeration with a tourniquet affords surgical anesthesia and does not of itself require amputation. The method was first used for amputation of partially gangrenous extremities of patients in the older age group. There has been some caution in applying it to the traumatic cases. However, experience with the method is growing; it is now known that a human limb can be kept bloodless and anesthetic below the tourniquet for at least eight hours and the indications are much longer, even up to 48 hours, without injury, while the rest of the body remains warm. Amputation is done without pain, loss of blood or strength, and also without shock. The nerves in the cooled, bloodless tissues cannot transmit painful impulses or harmful reactions. Toxic products are not absorbed from the refrigerated limb; infection or its

extension is prevented. Refrigeration anesthesia provides for a bloodless and shockless amputation, apparently without interfering with the healing of the stump, which can be cooled as desired by gradual removal of the refrigeration. So far, the reports of the results of major amputation by this method have been uniformly favorable. An editorial of the J.A.M.A. (May 15, 1943) states as follows: "Refrigeration anesthesia undoubtedly is destined to increasing use under civilian conditions as well as in war. In trauma of the limb, for instance, which is common in war, refrigeration anesthesia will be of special service, not only in amputation, but also in the control of hemorrhage, pain, progressive shock, and infection during the transportation of the patient, when adequate treatment cannot be applied on the spot. The methods of refrigeration anesthesia are being standardized. In the New York City Hospital a controllable electric refrigeration apparatus is in use. Light equipment has been devised for connection of engines of motor vehicles and problems of the tourniquet are receiving attention. Obviously, the field of refrigeration anesthesia, besides the great variety of injuries, will include also the vascular diseases that endanger the life of limbs. Refrigeration anesthesia is an important advance in treatment. For the sake of its great practical significance, the work under way in this field should be pushed ahead, and the clinical application of the method expanded. Among the developments under immediate trial are refrigeration as an anesthetic for skin grafting and the treatment of frost-

Continuous Caudal Analgesia in Obstetrics. This year has seen the introduction and extension of a most important advance in anesthesia. This method has to do with the relief of pain in childbirth, which has been one of the long sought goals of the medical profession. The method is called "Continuous Caudal Analgesia." Credit for its introduction goes to Hingson and Edwards, working in the U.S. Public Health Service Marine Hospital, at Stapleton, on Staten Island in New York. The technique of caudal anesthesia in obstetrics is in itself by no means new, dating as far back as 1911.

The continuous application of caudal anesthesia—starting in the early stages of labor, to relieve the pain and discomfort for the parturient in this period with the added advantage of continuing the analgesia until the completion of labor and postpartum repair—constitutes, indeed, a most significant advance. Since the introduction of this method it has been tried in some 19 clinics associated with medical schools and well established hospitals. Altogether, some 589 women have been delivered of babies by this method, without maternal mortality and with only three instances in which infants died—these without reference to the method of analgesia which was employed.

The application of the method is by no means without hazard. In developing their technique Doctors Hingson and Edwards have traveled frequently to leading institutions of medical education and lying-in hospitals in order to train men work-

ing in these fields in the technique. A recent attempt on the part of the editors of the J.A.M.A. to assemble the opinions of some of those who have had opportunity to test the method under control conditions in hospitals resulted in almost uniformly favorable impressions. It is emphasized, however, that the method should be used only in hospitals in which there are available the services of persons trained in the administration of the analgesia, and of sufficient competence to conduct a delivery with scientific consideration and finesse associated with the special practice of the obstetric art.

Advances in Sulfongmide Therapy. The past year has not witnessed the introduction of any new sulfonamide of any particular promise. It has, however, seen succinyl-sulfathiazole, a comparatively new sulfonamide commercially known as sulfasuxidine, largely replace sulfaguanadine for use chiefly in the preparation of patients for surgery of the bowel. This is known as one of the relatively insoluble sulfonamides and its use has been further extended to the treatment of bacillary dysentery and epidemic neonatal diarrhea. Also the year has seen sulfamerazine replace sulfamethazine (see YEAR BOOK 1943, p. 401). Hall and Fink, from the University of Minnesota Medical School, have reported the result of their experience in the treatment of 116 patients with sulfamerazine and its sodium salts in a variety of clinical conditions. They conclude that sulfamerazine appeared to be as effective as sulfadiazene in the treatment of 40 cases of pneumococcic pneumonia or bronchitis. It was somewhat less effective than sulfathiazole in the treatment of staphylococcus sepsis. Thirty-three patients with staphylococcic infections responded as well to sulfamerazine as a comparable group did to sulfadiazene.

Compared to sulfadiazene, when sulfamerazine was given orally, adequate blood concentration necessitated smaller doses given less frequently. Because sulfamerazine is retained in the body for a longer period of time than sulfadiazene, doses of the former may be given at less frequent intervals. Because of its increased solubility in urine and lower rate of excretion, it was hoped that the appearance of renal complications would be eliminated by the use of sulfamerazine, in place of sulfadiazene. Two patients, however, developed hematuria crystalluria and reduced the urine output, when sulfamerazine was given orally.

when sulfamerazine was given orally.

This report is the first to appear concerning the value of sulfamerazine in the treatment of human infections, and while its advantages may not seem numerous, still its more rapid absorption from the gastro-intestinal tract than is possible with sulfadiazene, may prove significant. When sulfamerazine was administered it appeared that adequate blood levels could be quickly obtained without the necessity of giving the sodium salt intravenously, and such levels could be maintained by giving only one or two doses by mouth daily.

One of the most spectacular triumphs of sulfonamide therapy is to be found in its use in the treatment of cerebro-spinal fever. Until recently many clinicians experienced in this disease advised combined treatment of some form of antiserum and a sulfonamide compound, at least for the most serious cases. The shift from intraspinal to intravenous serum therapy has prevailed generally for some time. Accumulation of data now seems to show that the drug treatment alone will bring better results. The disagreeable and sometimes dangerous reactions associated with all sorts of serum therapy are well known.

A recent editorial in the J.A.M.A. (Feb. 13,

MODERN RESOURCES MARSHALED TO REDUCE THE TOLL AMONG THE WOUNDED

Sensational advances in treatment (see Medicine) combined with speed and skill in the field have operated to reduce substantially the proportion of fatal injuries as compared with previous wars. 1. A hospital and ambulance train built from salvaged passenger cars in Egypt (Signal Corps Photo). 2. A field hospital in North Africa (Signal Corps Photo). 3. A Douglas C-39 transport converted into an ambulance plane (Official Photo U.S. Air Forces). 4. Soldiers wounded in the invasion of Makin transferred from a landing barge to a Navy plane which will fly them to a hospital base (Official U.S. Coast Guard Photo).

1943) states as follows: "In England a statistically adequate number of patients treated with serum alone gave a fatality rate of 36.6 per cent, as a whole. With sulfonamide compound plus serum, there was a total fatality of 13.8 per cent, and with the use of sulfonamide compounds alone a total fatality of 9.2 per cent. Aside from a few rare and practically always fatal cases the prompt diagnosis and early vigorous treatment, preferably with sulfadiazene, will save cases which had fatal prognosis with serum therapy, and in practically all cases recovery is much more prompt." Here again, the miracles of chemotherapy supplant the more cumbersome biologicals.

Continued research into the mechanism of the action of sulfonamide compounds has given support to the current ideas that bacteriostasis depends on specific inhibition of an enzymatic reaction, involving para-amino-benzoic acid, one of the less well known components of the Vitamin B Complex. These enzymes are protein in nature and inhibition of their action involves some form of chemical interaction between the inhibitor and the enzyme. The problem of sulfonamide fastness or the ability of certain bacteria to resist the effect of sulfonamide has received considerable study.

An increase in the amount of para-amino-benzoic acid is supposedly one of the chief causes of the resistance to the action of sulfonamide compounds, but this could not be proved until a method was devised by which that substance in cultures of bacteria could be detected and measured. By applying a new technique to the cultures of certain staphylococci that were resistant to sulfonamide compounds, Landy and his associates, (J. Bio. Chem., 146:109-114, November, 1942) have shown that this was so. At least the resistant staphylococci make 70 times as much para-amino-benzoic acid in a synthetic medium as do parent drug-sensitive strains of the same bacteria. Drug-fast staphylococci elaborate much more para-amino-benzoic acid than do other varieties of bacteria tested, and evidence suggests that the ability to produce these large amounts is permanent. On the other hand the resistant strains of Escherichia coli, Vibrio choleræ, Salmonella dysenteriæ, and Diplococcus pneumoniæ produced no more demonstrable paraamino-benzoic acid, than did their parent drug sensitive forms. Some other anti-sulfonamide me-tabolites may eventually be discovered to account for the resistance of drug fast bacteria of these varieties to the action of the sulfonamide com-pounds. Methods for overcoming the resistance to the sulfonamide compounds have been recently suggested. The addition of urea has inhibited the growth of resistant staphylococci in a concentration of sodium sulfathiazole, which alone was ineffective, thus overcoming their drug-fastness.

It is to be hoped that this innovation in chemotherapy will prove to be effective clinically. Another way to deal with drug-fast types of bacteria, at least some of them, is to use penicillin, to which they are sensitive. Unfortunately, according to some investigators, pneumococci, staphylococci, and hemolytic streptococci may also become penicillin-fast. Whether this tendency is clinically significant as yet, is not known.

Rheumatic Heart Disease. The most important recent advance with respect to rheumatic heart di-sease is the accumulation of evidence that re-crudescences may be prevented by the use of one or other of the sulfonamide drugs. It may almost be stated as a fact that recurrences of rheumatic activity may be prevented in over 90 per cent of those so treated, and that the natural history of

the disease as a consequence may undergo a substantial change. For a disease from which over a million adults suffer, and from which the yearly deaths total nearly 40,000, such an advance is

most significant.

Kuttner and Rayersback, (J. of Clinical Investigation, 22:77, 1943) have carried out a careful study, the results of which confirm the fact that streptococcic infections of the upper respiratory tract and rheumatic relapses in rheumatic children are prevented by the prophylactic administration of sulfonamides. Their studies were carried out during two successive winters on rheumatic children living in an institution. There was every facility for daily clinical observation and routine bacteriologic study. Other studies have been conducted on this problem, and there now seems little question that, when properly employed, sulfonamide drugs will guard the heart of severely rheumatic children.

Still another drug has recently been shown to have prophylactic value in preventing rheumatic recurrences. This is none other than sodium salicylate, which has a long and honorable record in the treatment of rheumatic fever. Coburn and Moore (J. of Pediatrics, 21:180, 1942) encouraged by good news of preventive tests on rheumatic children by English physicians began a study in which they asked cases of quiescent rheumatic heart disease to report to the clinic at the onset of any attack of pharyngitis. At this time cultures of materials from the throat were made and a daily ration of four to six grams of salicylate was begun. If the cultures contained an organism other than group A, hemolytic streptococcus, treatment was discontinued and the patient omitted from the study. All but one of 47 patients treated with salicylates escaped clinical manifestations of rheumatic fever, while 57 of 139 controls, suffered recurrences. While there do not seem to be any comparable studies showing that the salicylates have any great value in preventing rheumatic occur-ances, the advantages of their use are obvious, especially the advantage that they may be successfully used during or immediately after the first phase (the respiratory infection) at which time the sulfonamide compounds are not only valueless, but contraindicated.

Arterial Hypertension. A brief review is impossible for the large number of studies reported on the mechanism of arterial hypertension in animals, and the clinical counterpart in man. There seems little reason to doubt that constriction of the renal ar-teries in various animals may lead to permanent hypertension, due to a humoral mechanism of renal origin. There is also good evidence that this hypertension is due to the liberation of a substance, renin, which interacts with another substance, renin-activator, or hypertension precursor to form the effective vaso-constrictor agent named angio-tonin (Page) or hypertensin (Braun-Mendenez). There seems little doubt that a wide variety of pathologic conditions which have in common a partial reduction of blood flow to one or both kidneys may cause permanent hypertension in man. Such conditions include narrowing of the mouths of renal arteries, aberrant renal arteries, various nephritides, chronic atrophic pyelitis, and hydronephrosis. These conditions probably represent the clinical counterpart of experimental renal hypertension. With respect to essential hypertension the causal relation to the kidneys is not wholly clear, but a concept of the mechanism and the part the kidney plays has been summarized recently by Shroeder (Am. J. M. Sc., 204:734, 1942). Individual susceptibility, Shroeder points out, is an important factor in the development of essential hypertension. This susceptibility is usually declared by an excessive vascular response to emotional stimuli. This effect may be hereditary or the result of early environmental influence. Injection of epinephrin hydrochloride, he further points out, results in prolonged renal vaso-constriction. Psychic stimulation, or to put it another way, anxiety, can apparently do the same. The possibility, therefore, exists that often repeated or prolonged psychic stimulation in predisposed persons may cause a sufficient degree of renal ischemia to result in hypertension. Such hypertension would be temporary at first, but after a time might lead to permanent hypertension as a result of damaging the renal arterioles. Shroeder believes that the foregoing concept may account for the variations in the clinical course of hypertension so frequently observed.

There is little new with respect to the treatment of essential hypertension. Potassium sulfocyanate continues to enjoy considerable favor, despite ocasional untoward effects. Further experience with extract of kidney tissue has yielded disappointing results. The technical difficulties in separating fractions which may have a specific physiologic effect are great; despite the fact that the normal kidney tends to counteract the hypertensive effect of a contralateral ischemic kidney, the results of treating hypertension by means of kidney extract seem to hold little promise at present. Tyrosinase apparently causes lowering of the blood pressure, but not by its enzymatic action. Further trial is warranted.

Antibody Function of Lymph Nodes. The year 1943 has seen crucial tests of the lymph gland theory of specific antibody production. For fifty years it has seemed logical to immunologists to assume that specific antibodies are formed as internal secretions by certain fixed tissues. As early as 1898 Pfieffer had directed attention to lymphatic tissues as the probable source of antibodies, but the data were not generally considered proof of local specific antibody formation. It has remained for Ehrich and Harris, of the Department of Pathology of the University of Pennsylvania School of Medicine, to produce substantiation of this theory. They selected the popliteal lymph node of rabbits as offering a unique opportunity for their study. This gland is the only lymph node draining the hind foot, and is supplied by afferent and efferent lymphatics of sufficient size for convenient aspiration. By means of injections of suspensions of formed antigen and subsequent collection with a tuberculin syringe, of samples of lymph from the afferent and efferent lymphatic vessels, they have been able to gather data to justify the conclusion that both hemolysins and agglutinins are formed within regional lymph nodes. They found that antibodies began to appear in the afferent lymphatic of the vaccinated node in titer increases of one hundred fold, often exceeding that of the blood serum. The local tissue proliferation was chiefly of the lymphatic type, from which they concluded that the lymphocytes are the major or perhaps the only local cells responsible for antibody synthesis.

Progress Among the Virus Diseases. While 1943 has not seen any significant advance in the therapy of virus diseases, it is none the less heartening to see the amount of research which is being carried on in this field. Vaccination against smallpox represents about the only available specific protection against a known virus disease, and the list of virus diseases is ominous and imposing. Sanders and Alexander (J. Ex. Med., 77:71, January, 1943) have reported

the isolation and identification of a virus from the conjunctival scrapings from two patients suffering from epidemic keratoconjunctivitis. This disease, while not new, having been reported since 1890 in Austria, broke out during the summer of 1941 in the Hawaiian Islands among the armed forces and has now appeared in various parts of the United States. It is highly contagious and may leave permanent eye damage. Circular letter #14 of the office of the Surgeon General treats of this disease, so important has it become. The virus isolated by Sanders and Alexander proved to be pathogenic for mice, and it produced a mild but characteristic keratoconjunctivitis in a human volunteer. The serum contained specific antibodies for the virus one month after the infection.

Further studies by means of differential ultracentrifugation of infected monkey and chimpanzee stools by Melnick (J. Ex. Med., 77:195, March, 1943) resulted in his obtaining the virus of epidemic poliomyelitis in purified and concentrated form. The virus so isolated caused poliomyelitis in monkeys and it appears that a sensitive method of detecting the virus has been found. A further report by Baker (Science, 96:475, Nov. 20, 1942) reports the isolation of a virus involved in a respiratory tract infection in cats, observed in the past year in the northeastern part of the United States. A number of instances of contact between sick cats and people who subsequently developed atypical pneumonia appeared. Complement-fixation tests have been made, but the results in both cats and man have been, so far, inconclusive. It is apparent, however, that this respiratory disease in cats is due to a virus in elementary bodies and that this virus is the same as, or cross-related to, the one causing at least some of the cases called atypical or virus pneu-

monia in man.

Finally, interesting indeed is the experimental work being done by Sprunt, of Duke University, to determine what dietary factors are essential to the multiplication of virus. The well known "lipotropic" effect of choline, preventing or curing fatty liver, and the effect of choline deficiency, producing in rats falling of hair, swelling of paws, along, with signs of muscle weakness, suggested that this material might be of value in virus resistance. Thiamin chloride or Vitamin B, is also a contributing factor in the production of these fatty livers. Choline and thiamin seem to show an antagonism in such cases. That labile methyl groups serve a useful function is shown by the fact that methionine, a source of the labile methyl group, behaves like choline in the removal of some of the symptoms of so called dietary fatty livers. Betaine also shows similar detoxifying action.

shows similar detoxifying action.

Sprunt found that subcutaneous injections of methionine in rabbits increased their dermal resistance to experimental inoculation with vaccinia virus. Five rabbits receiving a daily dose of 300 mgs. of methionine for two days preceding, and five days following, injection with the virus showed a dermal resistance increased fourteen-fold, as compared with the resistance shown by the control rabbit. If the first methionine dose was delayed until immediately after the skin test, the calculated increase in resistance was ten-fold. Equally striking results were obtained with choline, given in 300mg. doses at eight-hour intervals, two days before and for five days after the skin tests. The calculated dermal resistance to the choline series was nineteen-fold. Betaine caused a similar, but less pronounced, increase in resistance, the calculated ratio here being five-fold. Whether or not exposed mucous surfaces shared in this therapeutically increased virus resistance has not yet been determined. Viruses other than poliomyelitis virus have not yet been tested. These researches are indeed promising, and the opportunities for research in the field of the viruses grow daily more numerous. The

results promise benefit to mankind.

Poliomyelitis. The appearance again of poliomyelitis in almost epidemic proportions emphasizes anew the serious inadequacy of our knowledge of this dread disease. Indications are that 1943 was the worst year for this disease since 1940, when 9,770 cases were recorded. California, Texas, Oklahoma, and Connecticut appear to be the States most seriously affected. Most other parts of the country have been relatively unaffected with no more cases than would be expected.

The usual port of entry to the human body of poliomyelitis virus has not been precisely determined. The accumulated evidence suggests that the olfactory system is not as a rule primarily involved and that invasion generally occurs through the ali-mentary tract. The part of the canal most vulnerable to virus penetration, however, is still undeter-

Faber and his colleagues, at California's Leland Stanford University (Science, 96:473, Nov. 20, 1942) have developed new evidence to suggest that the oropharyngeal surfaces are the commonest port of entry. They were unable to infect monkeys by the oral administration of massive doses of virus enclosed in capsules covered in a digestible fat. The same monkey resisted infection by a high enema containing the virus. Finally, some months later, the mouth of one of these monkeys, after zinc sulfate olfactory blockade, was sprayed on three successive days with 5 cc. of a virus-containing solving Five days with 5 cc. of a virus-containing solution. Five days after the first spraying the usual symptoms of poliomyelitis occurred and the animal was sacrificed and the tissues studied. The lesions formed could all be explained on the assumption of a nerve-born infection entering through the oropharyngeal surfaces. Thus the mouth and the pharynx appear to be more vulnerable to penetration by this virus than the lower portion of the alimentary tract.

Progress in the search for extra-human sources of poliomyelitis has met with notable recent success. Work by Jungeblut and Dalldorf of Columbia University indicates that virus-infected rodents may be the source of outbreaks of human poliomyelitis. These observations may well constitute one of the most important contributions to the epidemiology

of poliomyelitis of the present decade.

Five cases of poliomyelitis occurred during September and October, 1942, within a sharply circumscribed half square mile area in White Plains, N.Y. The cases occurred in rapid sequence and were the only cases of poliomyelitis reported in White Plains for over a year. Two of the cases were fatal. In the search for the extra-human sources of the epidemic, a dead gray house mouse was discovered in the basement of the home of one of the fatal cases. A second gray mouse was trapped in the same basement. Additional mice were trapped from the area of the epidemic. Ten per cent saline suspension of the glycerated brains of these mice was prepared and injected intracerebrally into white mice. Definite symptoms were observed in white mice injected with three suspensions: one prepared from the dead mouse, one from the trapped mouse in the same house, and one from another mouse trapped in the immediate neighborhood.

The disease in the infected mice resembled in all respects the clinical picture of "rodent polio-myelitis" as previously described. The infection

thus far has been propagated through twelve serial passages from these fatal cases. The serums from two of the three local convalescent patients neutralized the virus in vitro. From such evidence it is concluded that the dead and trapped mice were presumably suffering from the same virus infection

as the human patients.

Appropriate material from the brains and cords of two fatal cases has produced a prostrating paralysis with typical lesions in one monkey. The cord material from the monkey caused death in a rat on the twentieth day, from which point on it could be transmitted to rats or mice, either by intracerebral or intraperitoneal injections. This passage virus was neutralized with poliomyelitis hyper-immune horse serum, and also with the three convalescent human serums from surviving patients. The viruses isolated from the dead mouse and the fatal human cases are therefore apparently identical in specificity. This marks the first time that a probable extra-human source of human poliomyelitis has been supported by experimental evidence.

Progress Report on Penicillin. Penicillin was discovered by Fleming in London in 1929. It is the name applied to the powerful antibacterial substance contained in the filtrates of broth cultures of the mold, Pencillium notatum. It has now been obtained in crystalline form, but only partially purified, representing only about 10 to 15 per cent pure pencillin. Its formula is probably  $C_{12}H_{19}NO_6$  or  $C_{14}H_{17}NO_5$  and  $H_2O$ . (Dawson, H. and others in J. Bact. 45:65, Jan. 1943.)

The first information concerning its unique therapeutic possibilities was revealed in the publications of Florey, Chain, and other collaborators of Oxford. Professor Florey visited this country in the summer of 1941 at the invitation of the Rockefeller Foundation and together with his colleague, Heathey, he proceeded to the Northern Regional Laboratory of the U.S. Department of Agriculture at Peoria, Ill., where studies were at once initiated by Dr. R. D. Coghill and Dr. A. J. Moyer on the cultural characteristics of Pencillium notatum and on methods of purification. The studies have been of great value to those who are undertaking the production of penicillin.

Returning from Peoria, Florey consulted with several commercial companies in the hope that they might undertake production developments. His efforts in that direction were supported by encouragement from the Committee on Medical Research and the National Research Council. In a statement issued by Dr. A. N. Richards, Chairman of the Committee, on May 22, 1943, it is revealed that in early autumn, 1941, research looking toward production was begun in several commercial laboratories in this country and has continued so that today some sixteen companies are engaged in or intend to become engaged in the production of

penicillin.

This report further points out that the difficulties confronting large-scale production arise from the fact that in the metabolism of the mold only very minute amounts of penicillin are formed and those only after days of growth. A yield of as much as one gram of purified product from 20 liters of culture fluid would be regarded as exceptionally high

high.

The first clinical tests of penicillin in this country were reported by Dawson of Columbia in 1941. In June, 1942, the Committee on Chemotherapeutic and Other Agents of the National Research Council, under the Chairmanship of Dr. Chester S. Keefer, was invited to organize and supervise clinical investigation in selected hospitals, the records

to be coordinated by Dr. Keefer and his committee. The costs of these studies are provided by contract with Office of Scientific Research and Development, recommended by the Committee of Medical Research.

The first report of this committee, summarizing its experience with the use of penicillin in the treatment of 500 cases of various infections, has appeared in the Journal of the American Medical Association for Aug. 28, 1943. All of these cases have been treated by 22 groups of clinical investigators, scattered over the entire United States, accredited to the Committee, and the results of treatment have been collected and summarized by the chairman of the Committee. This unique effort is a tribute to cooperative scientific endeavor, and was initiated and is being continued as a phase of the war effort directed primarily toward the benefit of our armed forces. The conclusions from the study are of general interest and are as follows:

Penicillin is a remarkably potent antibacterial agent which can be given intravenously, intramuscularly or topically. It is ineffective when given by mouth. Following intravenous or intramuscular injection it is excreted rapidly in the urine, so that in order to obtain an adequate amount of potent material in the circulating blood and tissues it is necessary to inject penicillin continuously or at frequent intervals; that is, every three or four hours.

tinuously or at frequent intervals; that is, every three or four hours.

Penicillin has been found to be most effective in the treatment of staphylococcic, gonococcic, pneumococcic and hemolytic streptococcic infections. It has been disappointing in the treatment of bacterial endocarditis. Its effect is particularly striking in sulfonamide resistant gonococcic infections.

While the dosage schedule requires additional investigation, it seems clear that the average patient requiring intravenous or intramuscular injections for serious staphylococcic infections requires a total of between 500,000 and 1,000,000 Oxford units, and the best results have been observed when treatment is continued for at least ten days to two weeks. At least 10,000 units should be given every two to three hours at the beginning of treatment, either by continuous intravenous injection or by interrupted intravenous or intramuscular injections.

Satisfactory results are obtained in sulfonamide-resistant cases of gonorrhea following the injection of 100,000 to 160,000 units over a period of forty-eight hours.

Patients with pneumococcic pneumonia frequently recover following the use of 100,000 units given over a period of three days. This is especially important in sulfonamide-resistant pneumococcic infections. It may be necessary to give between 60,000 and 90,000 Oxford units daily for four to seven days to get a maximum effect.

In the treatment of empyems or meningitis it is advisable to use penicillin topically by injecting it directly into the pleural cavity or the subarachnoid space.

Toxic effects are extremely rare. Occasional chills with fever, or headache and flushing of the face have been noted. Urticaria has been reported and thrombophlebitis at the site of injection has been described.

MELLON INSTITUTE. The aim of Mellon Institute is the creation of new knowledge by scientific investigation, in accordance with the institution's definite

fellowship system. According to this procedure the researches are restricted to major problems of the pure and applied sciences and particularly chemistry—problems that require protracted periods of time for solution by specialists. The Institute was founded by Andrew W. Mellon and Richard B. Mellon in 1913 and is located at 4400 Fifth Avenue, Pittsburgh, Pa.

The industrial research of the Institute is organized on a contract basis, the problem being set by a person, firm, or association interested in its solution, the scientific worker being found and engaged by the Institute, and an industrial fellowship being assigned for a period of at least a year. Each holder of an industrial fellowship is given broad facilities for accomplishing the research entrusted to him and all results belong exclusively to the donor of the fellowship. Only one investigation is conducted on a specific subject at any one time and hence there is no duplication of the research activities of the fellowships in operation. At present there are 100 of these industrial fellowships, which employ 425 scientists and engineers. The projects range from powder metallurgy and refractories to novel pharmaceuticals or medicinal agents, synthetic rubber, new plastics and textiles, and improvements in foods and other essential commodities. Practically all the work during wartime relates to urgent military problems. The Institute's department of research in pure chemistry is concentrating on the synthesis of antimalarials.

MEMEL. A German territory on the east coast of the Baltic, created an autonomous district under Lithuanian sovereignty by the Memel Statute of May 8, 1924, and ceded by Lithuania to Germany on Mar. 23, 1939 (see Year Book for 1939, pp. 478-474). Area, 1,092 square miles; population on Jan. 1, 1940, 155,000. See GERMANY.

MENG CHIANG. See MONGOLIA under Inner Mongolia.

MENINGITIS. See Public Health Service.

MENNONITES. A religious group founded in Switzerland in 1525 in protest against ecclesiastical rule and rigid liturgy. In the United States the Mennonites first settled at Germantown, Pa., in 1683, ulti-mately dividing into 17 bodies. For statistics, see RELIGIOUS ORGANIZATIONS.

MENTAL DISEASE. See PSYCHIATRY; PSYCHOLOGY; PUBLIC HEALTH SERVICE.

MERCHANT MARINE. See MARITIME COMMISSION; SHIPBUILDING; SHIPPING. For Merchant Marine Council, see COAST GUARD.

MERCURY (Quicksilver). Contrasting sharply with its status at the outbreak of war, when mercury was the only strategic metal in which the Axis held production dominance, by the end of 1943 supplies available to the United States had become so plentiful that the War Production Board was able to relax materially its restrictions on use and, on Feb. 2, 1944, cancel them altogether.

Domestic production came largely from the older, larger mines in the Pacific Coast States, many of the new producers brought into production by the soaring price of mercury the previous year having fallen by the wayside. The New Idria mine in central California, a producer for the past century, was the country's largest. California mines contributed over 60 per cent of domestic production. Oregon dropped close to the common level of Idaho, Nevada, and Texas. Some production came from Arkansas, Alaska, and Arizona. United States

output was 53,500 76-lbs. flasks; Mexico produced about 25,000 flasks; Canada nearly 20,000 flasks; and Peru, Chile, and Venezuela, minor amounts. In 1942, United States production was 50,846 flasks. Recently developed mines in British Columbia, Mexico, and Idaho were the only large newcomers on the production list. No production information is available on Spain's Almaden Mine, world's largest prewar mine, or Italy, normally the second largest world producer. It is understood, however, that much of the Spanish output went to Great Britain.

As in former years, over 50 per cent of consumption was for industrial chemicals, principally for medicine and paint. The next most important use was for production of mercuric fulminate for detonating explosives. This use, insofar as am-munition is concerned, has dropped greatly since the last war, being replaced by lead azide, which deteriorates less rapidly. On Sept. 9, 1943, the WPB amended Conservation.

The OPA ceiling price of \$191 per 76-lb. flask, f.o.b. Pacific Coast shipping points, set in 1942, continued in effect. Sales were reported at a somewhat lower figure as abundance of the metal grew and by February, 1944, West Coast mines offered to sell as low as \$125 per flask. Mines whose April, 1942, production was less than 90 flasks were, during 1943, afforded a price floor by Metals Reserve Co. contracts carrying a price of \$192 per flask, f.o.b. New York. These contracts were cancelled effective Jan. 31, 1944. For 1944, the WPB announced that domestic production and imports for both private and government purchase each are to be reduced to 70 per cent of 1943 levels as a means of conserving manpower, materials, and equipment. No financial and priority assistance is to be given new producers.

Heavy Russian requirements were supplied by the United States in 1943, and a substantial American stockpile accumulated. See Geological Sur-VEY.

METEOROLOGY. Among the notable events of the year were airplane flights through two tropical hurricanes made by officers of the Army Air Corps.

Flights through the storm of July 25-28 were made from the Instructor's School at Bryan Field, Texas. On the first flight Col. Joseph P. Duck-worth was accompanied by 2d Lt. Ralph M. O'Hair, navigator, and on the second trip by 1st Lt. William H. Jones-Burdick, a pilot weather officer. This is the first time that a plane has been intentionally flown through the center of a hurricane. The flights were made at altitudes between 4,000 and 9,000 feet. The following is quoted from Colonel Duckworth's report:

As we broke into the "eye" of the storm we were, of course, contact, and could see the sun and the ground. Apparently the "eye" was like a leaning cone as observation of the ground showed a considerable ground wind. On the whole, neither flight through the hurricane was as uncomfortable as a good, rough thunderstorm. Rain had been encountered in thunderstorms which was heavier than the rain in the hurricane, to say nothing of much more severe drafts and choppy and bumpy air.

Later in the season observations were reported by Capt. Gordon H. MacDougall, Army Air Corps, during two flights through the hurricane of August 20–26. These flights were made from the island of Antigua, British West Indies, during the morning hours of the 20th and 21st of August. Various meteorological elements were observed and excellent cloud and swell observations were obtained.

Sea conditions observed within the storm area are described in this excerpt from his report:

For those of us who had spent enough time in the Caribbean to be familiar with the magnitude of the waves usually encountered, it was hard to believe what we saw below. The seas were tremendous and the crests were being blown off in long swirls by a wind that must easily have exceeded 70 miles per hour. The long parallel streaks of foam streaming from one wave to another made it evident from which direction the wind was blowing.

Captain MacDougall reported that after pictures were taken an examination of the camera lens showed a salt residue from water droplets de-posited at 1,000 feet.

The fact that it is possible to fly modern air-planes through tropical hurricanes will encourage similar missions in the future and will give meteorologists a wealth of direct upper air observations with which to perfect knowledge of the cause and behavior of these destructive storms.

The U.S. Weather Bureau. Because of the war the activities of the Weather Bureau were considerably expanded. Expenditures for the fiscal year 1943 were \$11,616,938 as compared with \$8,668,632 in 1942. On June 30, 1943, the Weather Bureau had 3,357 full time employees, an increase of 767 in twelve months. Not only has the number of employees increased but there has also been a change caused by the employment of a large number of women. Prior to Pearl Harbor the making of weather observations was, in the main, considered a young man's work since it required physical activity and considerable exposure to the weather at all seasons of the year. On Dec. 7, 1941, the Bureau had only two women weather observers; by the middle of 1943 there were nearly 700 women engaged in observational work.

Meteorological Instruments. The development of a practical method for measuring ceiling heights during the daytime by means of a modulated light beam and appropriate detector and recording equipment has been completed. This apparatus provides a reliable means of determining cloud heights throughout the entire day, and makes available for the first time a permanent automatic

record of ceiling heights.

A new anemometer has been developed for the measurement of wind speed. The advantages of this instrument over previous designs are the practical elimination of drag due to friction and the absence of mechanical contacts in the electrical circuit permitting the indicating meter to follow the speed of the cups more closely and rapidly, thus increasing the accuracy in the measurement of wind fluctuations and speed. The unit is relatively simple and requires a minimum of adjustment.

An improved method for the measuring of water vapor in the atmosphere has been perfected. This device employs spectroscopic means and is superior to other methods in that it is possible to measure an integrated value throughout a mass of air rather than measuring a point sample; it also provides a means for accurately measuring water vapor at a low temperature.

Inter-American Meteorological Training School. On Feb. 23, 1943, the Inter-American Meteorological Training School was opened at Medellin, Colombia. It is conducted by the Weather Bureau in cooperation with the Division of Cultural Relations of the State Department, the Office of the Coordinator of Inter-American Affairs, and the Defense Supplies Corporation (qq.v.). Every Latin-American republic is represented in the total of 192 students. In the curriculum emphasis is placed upon fundamental meteorological studies, thorough training in observational techniques, and the English language. Instruction is also given in the construction and analysis of synoptic weather maps and in mathematics, physics, and climatology. An interesting feature of the school is the part taken in the instruction work by Latin-American instructors who are especially qualified in their respective fields. A number of the students are being selected for advanced training at universities in the United States. It is felt by officials that the benefits of this training will exercise an important influence on the development of meteorology and climatology in this hemisphere and react favorably on the exchange of meteorological information needed by American interests.

See AGRICULTURE under *Production*; COMETS; EARTHQUAKES; FLOODS; HURRICANES; WEATHER BUREAU. For weather reports, see Censorship, Office of. For determination of cloud heights, see ILLUMINATION.

RICHMOND T. ZOCH.

METHODIST CHURCH. On Aug. 26, 1943, the Supreme Court of South Carolina decided (1) that the Plan of Union, which united the Methodist Episcopal Church, South, with the Methodist Episcopal and Methodist Protestant Churches in 1939 was valid, and (2) that the Methodist Church had no exclusive right to the old name "Methodist Episcopal Church. South."

was vaid, and (2) that the Methodist Childhad no exclusive right to the old name "Methodist Episcopal Church, South."

In February, 1943, the Council of Bishops, meeting in Washington, D.C., planned a Crusade for a New World Order embodying Christian principles, economic, social, and racial. Elaborate preparations have been made. Bishop Oxnam of Boston is chairman of the Committee in charge.

Final returns of Methodist population for 1943 are not yet available. A recent tabulation gives the church 24,176 ministers (aside from local preachers), serving 42,000 congregations on 21,031 pastoral charges. Sunday school enrollment, still declining, was 5,093,588. Adults baptized numbered 143,314; children 124,104. Active members were 6,240,424, a gain of 80,829. Adding nonresident members (1,173,467) gives a total membership in the United States of 7,713,891. Foreign membership is probably under half a million. In July the Statistical Office was removed to 740 Rush St., Chicago, and Director T. P. Potter was succeeded by Albert C. Hoover.

ter was succeeded by Albert C. Hoover.

Methodist Church finance took an upturn. Everywhere local church debts were being reduced or cleared. Contributions for ministerial support reached \$35,342,941, and World Service offerings, "Benevolences," rose 11.6 per cent to \$4,384,686. For other local church expenses \$43,698,423 was collected. For Overseas Relief in the year closing May 31, \$464,049 came in, and in the six months ensuing \$306,350 was added. Total for war emergency giving for 18 months was about \$2,000,000. Receipts for the Episcopal Fund were \$720,588, the largest ever. For Administrative expenses the total was \$160,220. The Commission on World Service and Finance received \$4,659,830, an increase of \$492,650. Sixty per cent of this went to the Board of Missions and Church

Extension, 14.55 per cent to the Board of Education, and the remaining one-fourth to ten other Methodist agencies. The Missions' share was divided in the ratio of 56 per cent Foreign to 44 per cent Home. Sales of the Methodist Publishing House totaled \$6,326,144, the largest in a century and a half, its Abingdon-Cokesbury general religious books sharing popular favor with the Sunday School periodicals, and the Christian Advocate (circulation 250,000 weekly). Assets of the house are about eight millions; from the "produce" a dividend of \$250,000 is distributable to the retired ministers, and similar amounts are applicable to debt-reduction and new equipment. In the fiscal year pensions amounting to \$3,842,639 were paid to 12,868 ministerial beneficiaries, income resulting from collections and from endowments aggregating \$29,611,387.

While the government publishes no statistics regarding chaplaincies, now it may be told that the 1,000th Methodist minister has been accepted for the Army and the 300th for the Navy. This, however, does not exhaust the Methodist quota.

Delegates, lay and clerical in equal numbers, are being elected by the Annual Conferences to the second General Conference of the Methodist Church which meets in Kansas City, Mo., for about ten days, beginning Apr. 26, 1944. Pending legislative proposals relate to the election and interchange of bishops; to the functions of the six Jurisdictional Conferences, which the Plan of Union grafted into the constitution, and which some characterize as "a fifth wheel"; and to the racial problem, especially the Central Jurisdiction, which includes virtually all of what Methodists call "the colored work." Bishops, Editors, Board secretaries, Publishing Agents, and other General Officers are now chosen by the Jurisdictional Conferences, which meet next summer, or by the respective Boards and Commissions.

Notable visitors from the "world parish" of Wesley were Madame Chiang Kai-shek of China, who visited her old school, Wesleyan College, Macon, Ga., and who took home with her a lovegift of \$50,000 from thousands of American fellow Methodists for the war-orphans of China; Rt. Hon. Isaac Foot of Plymouth, England, and the Rev. Walter J. Noble, ex-President of the British Methodist Church. Both addressed large gather-

ings throughout the country.

Though the Japanese Empire and its overrun territory is sealed against Christian missions the Methodist Division of Foreign Missions had an active and fruitful year. Increased receipts for World Service and from the Week of Dedication enabled it to bear the emergency cost of war dislocations, to repatriate many of its workers, to pay off its burdensome debt, and to help the churches and schools of China to carry on. Secretary Diffendorfer was the prime mover in the timely Study Conference on the Bases of a New World Order, in which select group of 250 persons met at Ohio Wesleyan University, Delaware, Ohio. Another advance step is the setting up of the Collins Pension Fund for Missionaries, to which the bequest of the late Everell Collins, lumberman, of Portland, Ore., has been assigned. It will probably yield three million dollars. Mission work continues vigorously in India, Central and South Africa, and Latin America. Total receipts of the Division were \$2,327,012. Permanent Funds gained \$83,306, making the aggregate \$4.742.561.

306, making the aggregate \$4,742,561.

The Methodist Church reports 9 universities, 10 schools of theology, 69 colleges, 27 junior colleges, 18 secondary schools, and 2 training schools.

Though the war has brought difficulties, no school has been compelled to suspend. Over 20,000 alumni are in the armed service. Twenty institutions are cooperating with the Army and Navy training programs, receiving about 15,000 trainees. A bequest of Walter Murphy adds \$20,000,000 to the endowment of Northwestern University.

There are 77 Methodist hospitals with 13,248 beds, which cared for 636,438 patients in the year; 6,847 homeless children found shelter in 56 Methodist Homes, and 3,777 old folks found refuge in Methodist Homes for the Aged. The 24 homes for workers housed 1,865 young men and women. The value of property and endowments is \$91,854,000.

Bishop H. Lester Smith, of Cincinnati, Ohio, is president of the Council of Bishops for 1944, and Bishop G. Bromley Oxnam of Boston (518 Boylston St.), Secretary. Bishop Adna W. Leonard (68) of Washington Area, Chairman of the General Commission of Army and Navy Chaplains, was killed in the crash of an Army plane in Iceland, May 3, while on tour of visitation of overseas chaplains. Bishop E. H. Hughes administers Washington Area pro tem and Bishop Peele heads the Methodist Committee on chaplains.

MEXICO. A Federal republic of North America, comprising 28 States, 2 Territories, and the Federal District (City of Mexico and 11 surounding villages). Capital, Mexico, D.F.

Area and Population. Area, 758,258 square miles; population, 19,653,552 in 1942 (16,552,722 at 1930 census). Preliminary vital statistics for 1940: Births, 850,367; deaths, 456,295; marriages, 146,-959; immigrants, 167,161; emigrants, 150,509. The racial division of the 1930 population was: Indians, 4,620,880; whites, 2,444,466; mixed, 9,040,590; of unknown origin, 140,094; foreigners, 159,876. The language of the country is Spanish, but about 3,000,000 Indians use native Indian languages exclusively or by preference. The 1940 populations of the chief cities were: Mexico, D.F., 1,464,556; Guadalajara, 228,049; Monterrey, 180,942; Puebla, 137,324; Mérida, 98,334; León, 86,089; Tampico, 81,834; Aguascalientes, 81,124; San Luis Potosí, 78,042; Torreón, 76,613; Veracruz, 70,958; Chihuahua, 57,456; Pachuca, 52,387.

Defense. As of May, 1942, Mexico had a regular army of 70,000 men, a small air force with 100 or

army of 70,000 men, a small air force with 100 or more planes, and 65,000 trained army reserves. In addition some 20,000 industrial workers and about 300,000 farmers had received some military training. The Navy consisted of three 2,000-ton gunboats armed with 4.7-inch guns, 11 armored coast-

al patrol vessels, and one heavy transport.

The decree of Aug. 11, 1942, ordered compulsory military training for all able-bodied men from 18 to 45 years of age. Under this program, an estimated 1,000,000 men still in their civilian occupa-tions were receiving part-time military instruction from army officers outside of working hours. Only 10,000 youths in the 18-year-old class were actually called to the colors during the first seven months of 1943, due to the lack of equipment. Under the lend-lease agreement signed Mar. 27, 1942, and amplified Mar. 18, 1943, the U.S. Government undertook to supply Mexico progressively with arms and equipment for between 1,000,000 and 1,500,000 men. Only a small part of this material was delivered during 1942–43. According to a statement by the Minister of Defense on Apr. 5, 1943, the contemplated reorganization and expansion of the army would require five years. A joint Mexico-United States Defense Commission was established in January, 1942, to coordinate their defense measures (see 1943 YEAR BOOK, p.

Education and Religion. The illiteracy rate was estimated at 45 per cent in 1940. Primary education is free and nominally compulsory up to 15 years of age. According to the President's message of Sept. 1, 1942, there were in the republic's 390 school zones (excluding the Federal District) a total of 12,000 rural schools, 211 demonstration schools, 20 frontier schools, 42 model schools, 391 day and 28 night schools for adults, and 1,054 schools maintained by industrial enterprises for children of their laborers. Registration in these schools in 1941 totaled 1,030,000 pupils. In addition there were 240,000 pupils in public schools and 21,000 in private schools in the Federal District. There are nine universities.

Roman Catholicism is professed by over 90 per cent of the population. The 1917 Constitution established State control of all churches. All foreign priests were expelled in 1926. In 1936 all buildings used for religious purposes were nationalized and the number of native priests permitted to officiate was reduced to about 350. In subsequent years a number of State governments permitted many churches to reopen. The breach between the Federal Government and the Catholic Church appeared to have been healed in 1942 when the Church ordered loyal cooperation with the Government in the prosecution of the war (see 1943

Year Book, p. 411).

Production. Mexico is primarily an agricultural country, with 65 per cent of the population living from the soil. The principal crops, with estimated 1942 production figures in metric tons, were: Corn, 2,356,000; wheat, 430,000; chickpeas, 77,492; beans, over 180,000; unhusked rice, 130,000; peanuts, over 20,000; coffee, 57,000 (see COFFEE). The 1942 cotton crop was 104,420 tons; henequen (Yucatan Peninsula), 550,000 bales. Production of refined sugar in 1943 was estimated at 454,148 short tons; of native brown sugar, 110,230 tons. About 2,000,000 cattle are produced annually and about 450,000 head exported to the United States. Chicle production in 1943-44 was scheduled at 9,170,359 kilos. Rubber production, 1941, was about 5,200 metric tons. Cocoa beans, peas, bananas, tomatoes, and vegetables are other crops.

The petroleum wells, state-owned since 1938, produced 32,955,000 bbl. of oil in 1942 (41,160,produced 32,955,000 ppl. or on in 1942 (41,100,-000 in 1941). Other mineral production in 1941 was (metric tons): Copper, 48,716; zinc, 154,996; lead, 155,258; coal, 855,696; antimony, 11,131; graphite, 16,928; arsenic, 12,844; silver, 2,437. The gold output in 1941 was 24,822 kilograms. According to the 1940 coppers there were 19,711 industrial ing to the 1940 census, there were 12,711 industrial establishments with 332,000 employees and an invested capital aggregating some \$520,000,000. Textiles, shoes, wheat products, beer, sugar, vegetable oils, alcohol, cement, bricks, iron, paper, etc., are the leading manufactured products. During 1942 60 new industrial plants with a nominal capital of \$38,000,000 were established, many of them by United States corporations (see 1943 YEAR BOOK, p. 409).

Foreign Trade. Imports in 1942 totaled \$155,001,-000 (\$188,274,000 in 1941); exports, \$194,878,-000 (\$150,298,000). Silver and gold accounted for \$56,800,000 of the 1942 exports (\$44,527,000 in 1941). Visible imports exceeded exports in 1941 for the first time in this century, but the normal favorable trade balance was restored in 1942. In round numbers, the United States supplied imports to the value of \$147,000,000 in 1942 (\$159,000,-

000 in 1941) and took exports in 1942 valued at \$179,000,000, including \$27,000,000 of silver and \$40,000,000 of gold (\$141,000,000 in 1941, including silver valued at \$26,000,000 and gold valued at \$17,000,000).

The value of the principal 1941 exports (in pesos worth \$0.2058) was: Silver bars, 106,179,000; copper bars, 70,026,000; lead bars, 37,015,000; henequen, 33,043,000; lead bars, 37,015,000; henequen, 33,043,000; zinc concentrates, 29,342,000; crude petroleum, 29,299,000; coffee, 28,799,000; gold bars, 28,382,000; chicle, 25,143,000; cattle, 23,475,000.

Finance. Budget expenditures for 1943 were fixed by Congress at 707,845,000 pesos, which the President, using his emergency war powers, increased by 105,672,400 pesos. Actual receipts in 1942 were 631,000,000 pesos and expenditures 667,000,000 pesos (119,000,000 pesos for defense).

The bonded (foreign) public debt is estimated at 185,000,000 pounds sterling; the internal and floating debt was 354,000,000 pesos in 1940. The average free market exchange rate of the Mexican peso was \$0.2054 in 1941 and \$0.2057 in 1942.

Transportation. The National Railways of Mexico (nationalized in 1937) had 13,864 miles of line in operation in 1942. For the year ended Aug. 31, 1942, gross income of the National Railways was 236,106,974 pesos and disbursements 216,083,961 pesos. A new international bridge over the Suchiate River, linking the terminus of the Mexican National Railways at Suchiate with the northern terminus of the International Railways of Central America at Ayutla, Guatemala, was opened Nov. 1, 1942. United States aid in the rehabilitation of the National Railways was extended under accords signed Apr. 7, 1942 (see 1943 Year Book, p. 409). The highway mileage on Jan. 1, 1941, was 56,923. About 30,000 automobiles carried an estimated 95,000 tourists from the United States to Mexico City in 1941. The network of Federal highways increased to nearly 7,000 miles in 1942. Work was rushed on the section of the Pan American Highway from Mexico, D.F., to the Guatemalan border. Various other important road projects were under construction, including a 424-mile highway connecting Torreon and Durango with the Pacific port of Mazatlan. Over 20 air lines provide services between the chief towns and to the other American countries. Veracruz and Tampico are the chief ports. Steam, motor, and sailing vessels entering and clearing the ports in 1940 numbered 10,368 of 5,683,391 gross tons. Government. The

Constitution of 1917, as Government. amended in 1929 and 1933, vests executive power in a President elected by direct popular vote for six years and ineligible for reelection. Legislative power rests with an elective Congress of two houses

—a Chamber of Deputies of 171 members chosen
for three years and a Senate of 58 members renewed every six years. President in 1948, Gen. Manuel Avila Camacho, who assumed office Dec. 1, 1940. Predominant political power has been exercised since 1928 by the National Revolutionary party, organized by President Plutarco Elias Calles, and its successor, the Party of the Mexican Revolution (PRM), formed at the direction of President Lázaro Cárdenas in 1938. For 1943 developments,

see below.

## HISTORY

Mexico at War. Mexico's principal contribution to the United Nations' war effort during 1943 was in supplying minerals and other strategic materials to United States war industries. In addition, the Government extended and improved the measures

taken during 1942 (see 1943 YEAR BOOK) to place the nation on a war footing, to assist United States and Central American forces in guarding and patrolling frontier and coastal areas, to protect vital factories, communications, and other internal installations against sabotage, and to exercise vigilance over resident foreigners.

War Minister Lazaro Cárdenas admitted on February 4 that there had been some opposition to the compulsory military service system which went into force Aug. 18, 1942. He said the authorities had "launched a campaign of orientation" to explain the need for military conscription and the aims of subversive elements who were fighting it. As a result, he said, the people were fully collaborating with the Government Mgr. Luis Maria Martínez with the Government. Mgr. Luis Maria Martínez, Roman Catholic Archbishop of Mexico, placed the full support of the church behind the compulsory service law and the war effort in a statement issued February 27. To prevent 18-year-old youths from evading military service by marriage, the War Ministry on March 22 announced that no soldier in that class would be permitted to marry during his period of service.

The Government experienced even greater difficulty in its efforts to overcome the strong opposition to sending Mexican troops overseas. On April 30 the first sample poll was taken in Mexico City by the newly created Mexican Institute of Public Opinion. It showed that the majority of Mexicans in the capital favored direct participation in the war "only if Mexican national territory is attacked by the Axis nations." The majority also wanted "energetic measures to combat fifth columnists," further efforts to strengthen national unity, and stricter control of prices to check the rising cost of

In line with prevailing sentiment, President Avila Camacho on February 21 stated that Mexico would not send troops overseas. But a series of subsequent statements prepared public opinion for a reversal of this stand. In a radio speech on May 29 the President said Mexican troops were ready to join United Nations fighting men whenever needed. On November 16 he announced that the Government would send troops abroad "if our Allies have sound reasons to ask us" but that in such an even-tuality the Mexican force would expect "a defined war sector, no matter how limited, controlled by our command and under our flag." He indicated to a special committee of the Senate on December 6 that an expeditionary force would be sent to fight along side of U.S. forces in the Pacific if an official request was received from the United Nations. Two days later the President's brother, Gen. Maximino Avila Camacho, Minister of Communications, in a newspaper interview declared an expeditionary force unnecessary and denounced as "demagogic" the leftist groups espousing direct participation in the fighting. Those favoring direct participation felt that Mexico could not hope for a voice in the peace conference without taking a more active part.

United States Relations. Opposition to sending Mexicans to fight overseas arose in part from the traditional Mexican distrust and hostility toward the United States. This sentiment was further inflamed during 1943 by the serious hardships imposed by the rising cost of living, attributed by the uneducated to the Government's economic collaboration with the United States. Pro-Axis elements conducted a persistent campaign seeking to obstruct and sabotage Mexican-United States friendship and collaboration. Much resentment was aroused in Mexico by the clashes in Los Angeles in June between members of the U.S. armed forces and "zoot-suiters" of Mexican blood. Four hundred students demonstrated in Mexico City on June 25 in protest against these incidents.

Discrimination in some localities of the United States against Mexican laborers sent to work on American farms and railways under agreements made by the U.S. and Mexican Governments was another sore point. Another such agreement for the temporary migration of Mexican maintenance-ofway laborers for work on Southwestern U.S. railways was announced on May 1. However on August 4 the Labor Ministry announced that no more laborers would be sent to the United States, as the agreements between the two Governments had been fulfilled. Under these agreements 37,946 farm workers and 13,303 railroad workers had been sent to 14 States. Discrimination against Mexican workers in Texas led Foreign Minister Ezequiel Padilla in July to inform the Governor of Texas that Mexico would not permit the migration of laborers to harvest Texas crops unless the State authorities gave guarantees of proper treatment.

The Mexican and U.S. Governments did not permit these relatively minor obstructions to impair the close cooperation that had developed since 1941 (see previous YEAR BOOKS). In his annual message to Congress on September I, President Avila Camacho said that Mexican-United States relations had "never before reached the high quality that at present characterizes them." New accords of a political and economic nature concluded during 1943 bore out his statement.

Meeting of Presidents. Through notes exchanged on January 22 the two Governments agreed on reciprocity of treatment for nationals residing in either country with respect to military service. On April 20 President Roosevelt journeyed to Monterrey, Mexico, for conferences with President Avila Camacho and other high Mexican officials. In his prepared address at Monterrey, President Roosevelt said that the two governments "recognize a mutual interdependence of our joint resources and 'know that the day of the exploitation of the resources and the peoples of one country for the benefit of any group in another country is definitely over." The following day President Avila Camacho and his entourage accompanied their American visitors to the Corpus Christi, Tex., naval air training station, where some Mexican cadets were receiving training.

One result of the meeting of the two Presidents was the creation on April 29 of a joint Commission for Economic Cooperation to study cooperative measures needed to deal with the Mexican economic crisis, which threatened to curtail output of strategic materials needed by the United States. This commission convened in Washington May 21 and after investigations there and in Mexico City submitted its report and recommenda-

tions on July 17.

The report stated that the U.S. Government would make available the supplies, equipment, and repair and replacement parts necessary for the production of strategic materials and expansion of food production in Mexico. The Commission recommended U.S. cooperation in the orderly development of the electrical, steel, rubber, cement, chemical, textile, sugar and alcohol, and pulp and paper industries; revisions in U.S. undertakings to supply general commodities to Mexico in accordance with changed economic conditions; the immediate execution of certain drainage, flood-control, and sanitation projects; and various measures calculated to maintain and increase Mexico's transportation facilities, including the establishment in Washington of a permanent mechanism for effective and continuous cooperation with Mexican transportation authorities.

One recommendation called for the creation of a Mexican-American Industrial Commission to carry forward long-term programs for the industrialization of Mexico. This was approved by the Mexican Government and the six members (three Mexicans and three Americans) met for the first time in Mexico City September 20 to begin their labors. The 1941 monetary stabilization agreement between the two Governments was renewed on June 3. Due to the acute currency shortage in Mexico, export of silver to the United States was suspended

in May, but on December 27 it was announced that the ban would be lifted on Apr. 1, 1944.

For the first time in the history of U.S.-Mexican relations, the Chief of Staff of the U.S. Army visited the Mexican capital at the invitation of the Government to witness the annual independ-

ence day ceremonies on September 15.

Economic Measures. The basic cause of the economic boom and inflation in Mexico was the highly favorable trade balance with the United States. Due to the war, American industry was unable to furnish manufactured goods in return for heavy shipments of minerals and agricultural products from Mexico. During 1942 Mexican exports to the United States surpassed imports from that country by \$50,000,000, and this trend continued during 1943. This accumulation of credits in Mexico was increased by an influx of investment capital from the United States seeking higher returns or escape from war taxation. Currency in circulation rose to unprecedented levels while consumer goods became scarcer, producing a steady rise in the cost of living. This rise in living costs bore heavily upon the peasants, wage-earners, and white collar workers comprising the great bulk of the population, while industrialists, business-men, landowners, and mining companies experienced exceptional prosperity.

The Government took various steps to curb the menacing inflation. Taxes on corporations and on some consumer articles were raised in January. A government "consortium" established in March was authorized to control prices, stocks, transportation, and distribution of articles of primary consump-tion. Export control measures were adopted. In mid-April the Bank of Mexico decided to allow free purchase of gold in exchange for silver coins and bank notes. An Economic Emergency Board was set up on May 13 under the chairmanship of the President, and on July 21 the Government launched a \$40,000,000 defense loan to absorb excess currency and utilize surplus dollar credits to

redeem part of the foreign debt.

Growing labor agitation for a curb on prices and for higher wages led the President on September 21 to freeze prices of all basic foodstuffs, announce heavy fines for speculators, and establish a federal monopoly for the production of corn. Yet these measures failed to stabilize food prices, as the 1943 crops were poor at a time when consumption was increasing. On November 20 the President appealed to farmers and peasants to abstain from politics and concentrate upon production. A 15 to 25 per cent reduction in the size of all newspapers was ordered November 27.

Meanwhile the Government on July 14 resumed interest payments (for the first time since 1927) on the foreign debt held by U.S. and British bond-holders, in accordance with the agreement of Nov. 5, 1942 (see 1943 YEAR BOOK). On December 6

President Avila Camacho told the Senate that the expected 1944 budget surplus would be used to pay off the foreign debt and prepare for postwar

unemployment.

Railway Program Delayed. United States aid in reorganizing and rehabilitating the Mexican National Railways, provided for in November, 1942 (see 1943 Year Book), was delayed during the first part of 1943 by a controversy over the reforms demanded by the management to eliminate abuses, waste, and lack of discipline among the workers. The Syndicate of Railroad Workers had been given control of the National Railways during the administration of President Cárdenas. The failure of the Syndicate to operate the railways efficiently led President Avila Camacho to entrust the management to a commission of five, three representing the Government and two the Syndicate. However the Syndicate continued to block the management's efforts to appoint its own officials, enact reforms, or enforce discipline. Service on the railways steadily deteriorated and in February, 1943, the system was reported by the general manager to be losing about 1,450,000 pesos monthly.

Strong pressure from the Government and the Mexican press finally induced the Syndicate on March 10 to accept the chief reform measures proposed by the management, including the latter's right to appoint executive officials and to discipline workers guilty of dereliction of duty. This agreement enabled the U.S. railway mission to proceed with its work. Between February and mid-December, the U.S. Government advanced \$4,-000,000 and the Mexican Government additional sums for rolling stock and other equipment, much of it obtained second-hand in the United States. Yet relations between the workers and management remained unsatisfactory and in June the Government was obliged to intervene to prevent a threatened nation-wide railway strike. Notwithstanding this experience with nationalization of the principal railway system, the Government obtained authorization from Congress in December to expropriate all the other railways in the country.

Oil Settlement. The U.S. Government also helped the government oil monopoly, which expropriated U.S. and British-owned oil properties in 1938, in obtaining equipment for the maintenance and expansion of operations. According to the President's message of September 1, the daily refinery capacity was then 83,000 barrels, as compared with an average daily capacity of 102,000 barrels in 1938. He said that under the collective labor contract effective between the petroleum monopoly and the oil workers since May, 1942, the workers were receiving about 30,000,000 pesos annually in wages and loan benefits over what they received from foreign companies in 1938.

On September 29 the U.S. and Mexican Governments reached an agreement on the manner and conditions of payment of the \$23,995,991 which Mexico in 1942 undertook to pay for the expropriated American oil properties. This was the final step in carrying out the basic agreement of Nov. 19, 1941 (see 1942 and 1943 Year Books). The first payment of \$3,796,391 due under the 1943 agreement was made by the Mexican Government on September 30. The remainder was due in four

annual payments.

On October 1 the Standard Oil Company of New Jersey announced its acceptance of the terms reached by the two Governments for settlement of American claims arising from the expropriation. Standard Oil subsidiaries were to receive a total of \$18,391,651 plus interest of \$3,940,843. The Sinclair Oil Corporation, which made a direct settlement with the Mexican Government in May, 1940, also received the final installment of \$1,500,000 on the \$8,500,000 which the Mexican Government.

ment had undertaken to pay.

Internal Politics. Two right-wing movements, one of them reportedly antagonistic to the United States and violently hostile to the Government's close collaboration with Washington, attracted growing attention during 1943. The most important was the Union Nacional Sinarquista, a wellorganized group of some half a million Catholic laymen pledged to rebuild "a Christian social order" in Mexico "by destroying liberalism, perverse democracy, and anarchy." The Sinarquistas were said to have many members among Mexican colonies in Los Angeles and other parts of the United States. The movement was repeatedly attacked by leftist deputies in the Mexican Congress as being pro-Axis and pro-Fascist, but the Avila Camacho Government rejected demands for its dissolution.

The other right-wing group was the Accion Nacional party, led by Manuel Gomez Morín, which demanded restoration of Roman Catholic teaching in the schools (forbidden by the Constitution) and attacked the Government as an inept, one-party dictatorship. Accion Nacional vigorously assailed the dominant Party of the Mexican Revolution during the campaign that preceded the election of 147 Federal Deputies and 7 State governors on July 4. A Government decree of April 29 curbed free public assembly in order to prevent "groups in opposition to the National Government from provoking disturbances and discord." It failed to forestall clashes in Mexico City prior to the election when PRM members broke up a number of opposition meetings. It was estimated that less than 1,000,000 of some 6,000,000 potential voters went to the polls. The results proclaimed by the Federal Electoral Board gave the Government party an overwhelming victory. Opposition leaders charged that this was achieved through fraud and chicanery.

Friction between leftists and rightists increased after Congress reconvened in September. Leftist charges that the Church was inspiring the activities of rightist groups led Archbishop Martínez to declare on November 8 that "the Church is not linked with the Accion Nacional, the Union Nacional Sinarquista, or any other organization of a civil or political character . . ." However a PRM-controlled Congressional committee began an investigation into both the above right-wing movements, asserting that they were composed of "traitors and outlaws." Minor outbreaks of banditry, attributed to difficult economic conditions, were reported during September and October.

were reported during September and October.

Trotsky Killer Sentenced. Jacques Mornard, confessed slayer of Leon Trotsky, the Russian Bolshevist leader and rival of Joseph Stalin, was convicted of premeditated murder and illegal possession of arms by a Mexico City court on April 16 and sentenced to 20 years in prison. Mornard, whose real nationality and political connections remained unrevealed, mortally wounded Trotsky on Aug. 20, 1940, in the latter's private home in the Coyoacan quarter of Mexico City. The slayer had been linked with the Soviet secret police by some observers of the case and was reported supplied with funds by Mexican Communists (see 1940 Year Book).

Other Events. The Soviet Ambassador to Mexico, Constantine A. Oumansky, was invited to address a joint session of the Mexican Congress held on November 8 to commemorate the 26th anniversary of the Russian revolution. He received an unusually cordial reception. Early in the year the Mexican Government undertook to provide a refuge for all Spanish Republican refugees in French North Afri-

can internment camps.

In February a new volcano emerged from the side of a mountain only 200 yards away from the village of Paricutin in the State of Michoacan. In less than a week the volcano developed a crater a quarter of a mile in circumference. It continued to erupt dense columns of smoke, gas, and lava for the remainder of the year, and led to the evacua-tion of neighboring villages. The phenomenon was referred to as the Paricutin or "Rock Oven" vol-

MIDDLE EAST SUPPLY CENTER. A joint British-American war agency, originally established by the British Government in April, 1941, to coordinate the joint resources and civilian requirements of the Middle Eastern countries in essential commodities with a view to the conservation of Allied shipping. Its activities in 1943 covered the following territories: Egypt, Anglo-Egyptian Sudan, Turkey (bulk commodities only), Syria, Lebanon, Ethiopia, Palestine, Trans-Jordan, Malta, Cyprus, Aden, British Somaliland, Italian Somaliland, Iran, Iraq, Eritrea, Saudi Arabia, and Libya. The executive committee of the Center sits in Cairo. A policy committee, known as the Middle East Supplies Committee, functions in London. Chairman of the Executive Committee in Cairo, James M. Landis, U.S. Minister to Egypt; Director-General, R. G. A. Jackson

(Great Britain).

The MESC is primarily a planning board, the activities of which are closely tied in with the British-American Combined Boards in Washington and London. Its plans, after being approved in London and Washington, are executed by the State Department, the Board of Economic Warfare, and the Lend-Lease Administration in the United States, and by corresponding government agencies in London. The United Kingdom Commercial Corporation (q.v.) and the United States Commercial Corporation serve as agents for the Center in all commercial transactions. See Palestine; United KINGDOM COMMERCIAL CORPORATION.

MIDGET SUBMARINES. See Naval Progress under Small Torpedo Craft.

MIDWAY ISLANDS. A group of islets in the Pacific, 1,304 statute miles northwest of Honolulu, belonging to the United States. Midway consists of two tiny islets-Sand Islet and Eastern Islet-lying inside of a circular atoll or coral reef that encloses a sheltered body of water about five miles wide. Land area, 28 square miles. From 1935 to Dec. 7 1941, the previously uninhabited islets were used as a station on Pan American Airways transpacific route to Manila.

In 1939 the U.S. Congress authorized commencement of work on naval-air and submarine bases at Midway. A more extensive program adopted in March, 1941, called for the cutting of a channel 30 feet deep and 300 feet wide into the central lagoon to permit passage of submarines and large seaplane tenders. Landing fields and airplane repair facilities were provided and a garrison of U.S. Marines was established. The islands were placed under the jurisdiction of the U.S. Navy Department and on May 15, 1941, were proclaimed a "naval defensive sea area." The Navy Department reported on Aug. 29, 1942, that construction work at Midway had reached a total value of \$19,795,548.

The Midway installations were heavily bombarded by Japanese naval units on Dec. 7, 1941, and five additional sea or air attacks followed during the first half of 1942. The last of these, on June 4, inaugurated the important naval-air battle off Midway in which a large Japanese fleet seeking to occupy the islands was beaten off with heavy losses. Thereafter Midway served as a base for American air and naval attacks upon Japanese islands and shipping in the Western Pacific. See

World War.

MILITARY PROGRESS. War operations during the year were marked, on the part of the United Nations, by an ever growing emphasis on the technique and production of material for amphibious operations. Except for the Sino-Japanese front and long range bombardment from the air, every angle of approach to the enemies required the highly involved and hazardous task of transporting the combat elements and technical services of a land army over water and shifting it from sea to land against armed opposition. To this end the trend toward an ever closer integration of all components of the war team—ground, air, and sea forces—continued to dominate military thought and action.

Important in this respect was the organization in the United States of the Army and Navy Staff College. Announced in May, the new college functions as an agency of the Joint Chiefs of Staff, for

the training of senior officers of the Army, Navy and Marine Corps, and their air components, in all phases of joint or coordinated operations involving land, sea, and air. Air operations, and the logistics involved in combined operations are stressed. The course is of four months' duration, divided into two phases. The students, specially selected, are normally in the grades of lieutenant colonel and colonel in the Army and Marine Corps, and the corresponding grades of commander and captain

in the Navy

In the first phase of the course, officers selected by the Navy spend one month at the Army's Command and General Staff School at Ft. Leavenworth, Kan., and one month at the Army Air Corps School of Applied Tactics at Orlando, Fla. Concurrently, officers of the Army Air Forces spend one month at the Command and General Staff School, and one month at the Naval War College at Newport, R.I., and officers of the Army Ground Forces take one month at the Air Corps School of Applied Tactics and one month at the Naval War College. The second phase of the course, for all the students, consists of two months of special studies, in accordance with a curriculum devised by the Joint Chiefs of Staff and administered by a faculty of officers designated by them, at Washington, D.C. Commanders and staff officers from all the active combat areas are brought in, fresh from the field, to give their experiences and lessons to the students. Upon graduation, these officers are the students. Upon graduation, these officers are dispatched immediately to the staffs of active the aters throughout the world. Lieut. Gen. John L. DeWitt, U.S. Army, former commanding general of the Western Defense Command and Fourth Army, is Commandant of the College, and Commodore E. J. Foy, U.S. Navy, is deputy commandant. The first class of the Army and Navy Staff College was graduated Sept. 30, 1943.

Many of the basic principles underlying amphiba-

Many of the basic principles underlying amphibious warfare were worked out by the U.S. Marine Corps, the main mission of which, for the past 20 years, has been to provide an amphibious expeditionary force to operate with the fleet. A few officers of the Army and Navy have been assigned to Marine Corps Schools and some units of the Army given amphibious training at the Marine Corps' large bases in New River, N.C., and San Diego,

Calif.

As the war progresses and the size of amphibious operations increases the problems of training, material, communications, and command increases. Lessons from the earlier operations, at Guadalcanal, Port Moresby, Milne Bay, Noumea, and others, have been studied carefully in laying plans for subsequent large scale overseas operations from the initial assault through the landing of combat troops, the seizure or construction of air fields, and the subsequent supply of large forces on beaches where there are none of the conventional port facilities. Rear Adm. Francis W. Rockwell, U.S. Navy, Commander, Amphibious Forces, Pacific Fleet, points out that:

In no other type of operation does the coordination and cooperation of all branches of all the various services play so vital a part. Landing Forces have been composed of troops from the U.S. Army, Marines, Australians, New Zealanders, and Canadians (sometimes jointly, sometimes singly). Attack transports and landing ships are manned both by the Navy and Coast Guard. Supporting transports and cargo ships have been manned by the Merchant Marine. Air support has been given by land based Army, Navy, and Marine planes of all types and by carrier based striking and covering forces. Naval task forces including all types of combatant vessels from battleships to converted yachts have been assigned to the various operations. Planyachts have been assigned to the various operations. Planning, command, and communications have indeed been "joint" in the finest sense of the word.

During the year amphibious operations marked virtually all the assaults in the South and Southwest Pacific, in the Aleutians, which were finally cleared of Japanese, and in the Mediterranean, where last year's gigantic task of transporting and landing armies in North Africa was followed by the landing and seizing of Sicily, the crossing of the Straits of Messina, and the landing at Salerno to continue the fight up the Italian peninsula toward Rome. As the year closed discussion centered around the projected attack upon Europe itself, and to this end the Allied high command was being organized in England under the leadership of Gen. Dwight D. Eisenhower, U.S. Army, who conducted the campaigns into North Africa, Sicily, and Italy. Lieut. Gen. Jacob L. Devers, U.S. Army, was transferred from his post as Commanding General, European Theater of Operations, U.S. Army, to be Deputy Supreme Commander of Allied Forces in the Mediterranean Area, under Gen. Sir Henry M. Wilson, British Army. Prior to leaving Eng-land, General Devers described the training of U.S. Ground forces there, emphasizing their amphibious character:

After the Allied troops under command of General Eisenhower embarked for Africa, other Ground Forces be-Eisenhower embarked for Africa, other Ground Forces began to arrive in the United Kingdom, and the training was started for cross-Channel operations. This training included extensive maneuvers, in which American and British troops participated. These exercises took advantage of lessons learned in Africa and elsewhere. Axiomatically, any operation against the Continent from this Theater will be of an amphibious nature at the outset. Therefore, amphibious and combined operations occupy a large part of the intensive training program pow in force and by inamphibious and combined operations occupy a large part of the intensive training program now in force, and by incorporating the experiences of our own task forces and those of our Allies in this training schedule, it is believed that the American soldier in the United Kingdom today is prepared to equal or even better the brilliant record of amphibious operations which have been carried through in other parts of the globe.

The activation of an assault training center during the past summer was for the purpose of carrying forward this amphibious work to a point heretofore hardly imagined. Men are trained day and night in every phase of these difficult operations. The training is repetitious and thorough, so that under great stress men will act automatically in safeguarding themselves while destroying the enemy.

Some of the training in England has been in the Combined Training Centers operated by the British Combined Operations Command under Lord Louis Mountbatten and later under Mai. Gen. R. E. Laycock. The work of the Combined Operations Command has been primarily that of a laboratory for Allied forces, in which experimental work, the development of tactical methods and specialized material, and the training of troops for future operations and armed reconnaissance pro-

ceeded continuously.

Communications. The faster moving type of warfare and the fact that organizations that formerly worked rather independently now must work as one has vastly increased and complicated the problem of communications. Land, sea, and air forces must be in closest touch with each other and the force commander must be in constant communication with all. The fact that the commander's headquarters usually must be shifted from ship to shore during the course of combat adds further difficulties. Communications units must be trained and equipped to go everywhere the landing units go. There must be constant communications between the landing parties and the incoming ships and landing craft. Air observation must be linked with naval bombardment while later there must be close liaison between the artillery units ashore and the naval gunnery officers afloat. The British Combined Operations Command worked out a system whereby artillery officers, termed Forward Observation Officers, are landed with the first or second wave of the assault, accompanied by signal detachments. Other artillery officers, termed Bombardment Liaison Officers, sail in the cruisers or destroyers which will carry out the bombardments. The Forward Observation Officers select targets and signal their map references to the bombardment liaison officers who communicate them to the naval gunnery officers. Corrections in aim-

ing and changes in targets are similarly effected. In the United States, the Army Signal Corps, under Maj. Gen. Harry C. Ingles, Chief Signal Officer, has worked in its own laboratories, with industry and with the Office of Scientific Research and Development to design and produce the many types of communications equipment needed in the

large quantities required.

The new "walkie-talkie" has been of particular value to the infantry and artillery. It packs a powerful radio station in a unit on the back of one man. The five-pound "handie-talkie" puts a five tube transmitter and receiver, batteries and telescopic antenna, all compact in the grip of a scout's hand, especially valuable for front line reconnaissance. From these small sets radio equipment ranges up to huge truck sets. The Signal Corps has been particularly pleased with the rolling radio station identified as SCR-299, complete with its own power unit, capable of sending messages hundreds of miles either when stationary or when in motion. Each tank and tank destroyer, too, has its own radio station, designed to withstand the vibration and hard usage of combat. Such refinements as push-button tuning simplify the task of the operator and save precious time in combat. For fliers forced down at sea, a new portable transmitter has been devised which automatically emits distress calls by the turning of a crank.

A sound-powered telephone operated without batteries proved a most useful piece of Signal equipment. Power in the telephone is generated by the human voice. It is capable of carrying its messages as far as ten miles under favorable conditions and has a range of five miles under almost any circumstances. Commercially developed, the sound-powered telephone was adopted to war communications by the Signal Corps. The equipment was found particularly advantageous on Guadalcanal because of the lack of batteries, which have been found susceptible to deterioration from the humidity and dampness of the South Pacific. In addition, it is considerably smaller, more compact, and more durable than battery-powered telephones. The orally-powered telephone equipment was installed on Guadalcanal for fire control of infantry mortars and within infantry companies. See also Communications; Physics

Relationship of Land and Air Forces. A new doctrine defining the command and employment of air power and its relation to the land forces was approved by the Chief of Staff of the Army, Gen. George C. Marshall, on July 21, 1943, and published in a revision of Field Manual 1–5. This doctrine sets forth clearly that the "command of air and ground forces in a theater of operations will be vested in the superior commander charged with the actual conduct of operations in the theater, who will exercise command of air forces through the Air Force commander and command of ground forces through the Ground Force commander." The pertinent text of this new doctrine is as follows:

1. Relationship of Forces. -Land power and air power are coequal and interdependent forces; neither is an auxiliary of the other. 2. Doctrine of employment.—The gaining of air superiority is the first requirement for the success of any major land operation. Air forces may be properly and profitably employed against enemy sea power, land power, and air power. However, land forces operating without air superiority must take such extensive security measures against hostile air attack that their mobility and ability to defeat the enemy land forces are greatly reduced. Therefore, air forces must be employed primarily against the enemy's air forces until air superiority is obtained. In this way only can destructive and demoralizing air attacks against land forces be minimized and the inherent mobility of modern land and air forces be exploited to the fullest.

3. Command of Air Power.—a. The inherent flexibility of air power, is its greatest asset. This flexibility makes it possible to employ the whole weight of the available air power against selected areas in turn; such concentrated use of the air striking force is a battle winning factor of the first importance. Control of available air power must be centralized and command must be exercised through the air force commander if this inherent flexibility and ability to deliver a decisive blow are to be fully exploited.

the air force commander if this inherent flexibility and ability to deliver a decisive blow are to be fully exploited. Therefore, the command of air and ground forces in a theater of operations will be vested in the superior commander charged with the actual conduct of operations in the theater, who will exercise command of air forces through the air force commander and command of ground forces through the ground force commander. The superior commander will not attach army air forces to units of the ground forces under his command except when such ground force units are operating independently or are isolated by distance or lack of communication.

b. Aviation directly under command and control of other commanders. (The Commanding General, Army Air Forces, has such technical command of this aviation as is necessary for the control and supervision of training and the supply and maintenance of equipment peculiar to the Army Air Forces.) This category consists of air forces assigned to theater or task force commanders.

The principle of united command exercised through commanders of forces assigned to the general operation is carried out all along the line. In his biennial report, issued Sept. 8, 1943, General Marshall, Chief of Staff of the Army, pointed out:

A development of the Joint Chiefs of Staff and Combined Chiefs of Staff organizations is the unity of command for a contemplated operation under one commander directly responsible to the Joint Chiefs of Staff or the Combined Chiefs of Staff. When a joint or combined force commander has been designated and the units composing his force assigned, his command responsibilities are the same as if the force involved were all of one service or one nation. He exercises his command through the commanders of forces which have been assigned him, and normally in operations this will consist of the assignment of their respective missions. In carrying out its mission the tactics and technique of the force concerned are the responsibilities of the commander of the subordinate force.

See Combined and Joint Chiefs of Staff. For air forces, Air Transport Command, etc., see Aero-NAUTICS

Army Organization. A number of modifications in Army organization, including new tables of organization for armored divisions, were announced to the service by the War Department in October. Some of the changes, such as the reduction in size of the infantry division, reduction in size of staffs of units of all sizes, creation of a light division and transfer to the field army of many functions and units formerly held in the corps, had been under

way for some months previously.

Pointing out that the "organization of ground combat and supporting service units was being revised extensively," the War Department set forth i- reasons for the reorganization as follows:

(a) To secure the maximum use of available manpower.
(b) To permit transport overseas of a maximum of

(b) To permit transport overseas of a maximum of fighting power.

(c) To provide greater flexibility in organization in keeping with the principle of economy of force and massing of military strength at the decisive point.

(d) To reduce headquarters and other overhead in order that command functions may keep pace with modern communication and transport facilities.

(e) To provide commanders with the greatest possible amount of offensive power through reduction in passive defense elements.

The Armored Division. Newest and most sweeping of the changes ordered by the Army was the modification of the armored division. Formerly this division, numbering nearly 14,700 officers and enlisted men, consisted of a headquarters, two armored regiments (each consisting of two medium tank battalions and one light tank battalion), an armored infantry regiment of three battalions, three field artillery battalions armed with 105-mm. howitzers, a large division service train, a reconnaissance squadron, and the usual supporting unitsmedical, military police, signal, etc.

Under the reorganization, size of the division has been reduced and regimental organization abolished in the infantry and tank units.

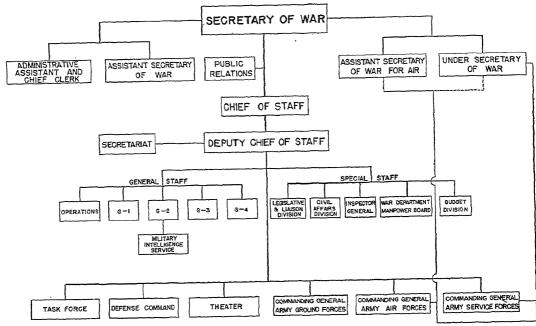

Instead of six tank battalions, grouped into two

the principle that armored and infantry divisions will operate together in a corps."

Aside from a slight reduction in personnel due to increased economy in employment of troops, and the addition of a few medium tanks to the division's field artillery, little change was made in the artillery organization.

The reconnaissance squadron of the armored division and separate reconnaissance squadrons were made identical, except that an additional reconnaissance troop and an additional assault gun platoon were included in squadrons of the armored division, thus permitting interchange of units where necessary.

Abolition of the two armored regiments and the infantry regiments released three colonels for

ORGANIZATION OF THE ARMY

regiments, there are now three enlarged tank battalions, each with one light tank company and three medium tank companies. These battalions are interchangeable with tank battalions of the General Headquarters Reserve permitting the latter to be assigned to armored divisions for the support of infantry divisions and as replacement units for armored divisions. Although the number of tanks has been reduced, heavier armament gives the division greater fire power than under the old organization.

The old infantry regiment has been abolished, and each of its three battalions enlarged and made a separate battalion.

The division's old organic supply battalion has been eliminated from the division since its battalions, both infantry and tank, have been made more self-sustaining. Part of the supply battalion has been absorbed in the battalions, the remainder eliminated from the division.

"The new organization of the armored division," the War Department stated, "is in accordance with

other assignments. Two of these were removed from the division, reducing the total of colonels from seven to five. One of the two brigadier generals also was removed.

The new organization contemplates a major general commanding, a brigadier general commanding one of the combat groups, and a colonel commanding the other. A second colonel commands the reserve combat elements. Other colonels include a chief of staff of the division, the commander of the division train, and the commander of the division artillery.

Two combat command headquarters, each capable of controlling a variable number of tank and infantry battalions, are included in divisional headquarters. One of these combat commands, as stated is normally headed by the brigadier general, and the other by a colonel.

Infantry Divisions. Without changing the basic organization, the infantry division has been reduced by approximately 8 per cent in strength and 14 per cent in motor vehicles. Despite these reductions, fire power of the division has been increased.

The motorized divisions were eliminated and the transportation formerly a part of these divisions is held in pools to meet special situations. The infantry division can be moved at need by a troop trans-port battalion. Training of all infantry divisions will include movements by means of the troop transport battalions.

A new type of light division suitable for amphibious, airborne, mountain, and jungle opera-tions has been organized. This light division is smaller than the infantry division, but firepower in small arms and automatic weapons is approximately the same. Artillery is of types that can be manhandled. Transport consists essentially of hand carts, pack animals, and quarter-ton trucks. Supply and service elements of the light division have fewer personnel than those of the infantry division.

In respect to divisions generally, certain signal and engineer units were moved to higher echelons.

The strength provided the division engineers is being held to a minimum, the War Department pointing out that "all types of divisions are relatively mobile units and the nature and extent of engineer operations under such conditions must necessarily be limited." Where additional engineer strength is required, engineer units, including combat battalions, ponton companies, and bridge trains, will be provided from the army pool, thus reinforcing or relieving division engineers of projects beyond their means.

Corps and Field Army. In accordance with a trend of long standing, corps headquarters were divested of administrative functions, permitting the corps to concentrate on tactical and training functions. The field army continues as a tactical and administrative unit, relieving its assigned corps of administrative functions.

The organic elements of the corps now include a headquarters and headquarters company, military police platoon, signal battalion, headquarters and headquarters battery and corps artillery, and a field artillery observation battalion.

Functions of a corps in an army are now primarily tactical. The functions of a separate corps will necessarily be both tactical and administrative, since the separate corps is in effect a small

Other units may be assigned to a corps in accordance with its combat mission. These include divisions, groups, or battalions of field artillery, anti-aircraft artillery, tank, tank destroyer, engi-neer, and cavalry reconnaissance elements. "In combat, nondivisional units must be employed most effectively either as a group or under divisional control," the War Department told the Service. "Grouping of battalions during training provides essential supervision by higher commanders. However, such training must not preclude the combined training of battalions and groups with divisions. Permanent attachment of battalions to divisions is undesirable from the point of view of maximum flexibility.

In a reduction of the supply forces of divisions and similar units, the field army is charged with responsibility and is being provided with the means of placing supplies within convenient reach of regiments, separate battalions, and smaller units. The army handles all supplies upon arrival in the combat zone and establishes and maintains supply points. Using units do not require personnel for loading supplies at the supply point since army personnel are provided for this duty.

The Army's statement of modifications in organizations further emphasized: That in communications zones, large consolidated supply and repair depots, even though dispersed over a considerable radius, are more efficient than small depots; that the communications zone should make provision, through establishment of a general depot and necessary camps, for rapid clearing of ports of debarkation; and that ships be unloaded at a rapid rate, augmenting the port organization by using

all available troops, including combat troops.

Reduction in Staffs. In March, orders were issued by Lieut. Gen. Lesley J. McNair, Commanding General, Army Ground Forces, to reduce the size of staffs of all echelons. Experience gained is resulting in a general reduction of staffs to provide only sufficient personnel for combat needs since operations cannot be swift and effective if staffs are large. The reductions are effected by curtailing the number of assistants in the various subdivisions of the staff. In the armored division, for example, the personnel on duty has been reduced about one-third.

Discussing the duties of staffs, the Department has stated:

The staffs have been provided to meet the general concept that field orders should habitually be oral or in message form for all elements of the division and frequently for the corps. Liaison officers of a high type should be trained and used for dissemination of orders, where possible, rather than following the general practice of assembling subordinate commanders for issuance of orders, thus taking them away from their units at critical times with a consequent delay in operations.

Groups and Brigades. Pooling of units is being emphasized in Army organization. General Headquarters pools include battalions or the equiva-lent—self-administered—of field artillery, anti-aircraft artillery, tank destroyers, reconnaissance, cavalry, engineers, and tanks.

Group headquarters are provided for field artillery, tank destroyer, engineer, cavalry, anti-aircraft artillery, and tank units. Brigade headquarters are

provided in a limited number of cases.

The group, a tactical unit, consists of a headquarters and a varying number, usually three or four, of separate battalions or squadrons. The brigade is retained in certain cases for command of a number of groups, usually three or four. No battalions will be assigned organically to a group and no groups will be assigned organically to a brigade. Control headquarters similar to group headquarters are provided for service units in a

ratio of one to four or six small units.

"The flexibility of the new organization," the Department stated, "makes it readily possible to form task forces without reorganization of units or disruption of the old fixed regimental organization and at the same time permits a massing of

means as required by the situation.

For the Army air forces, see AERONAUTICS. Weapons. Foremost development in arms and armament was in the comparatively new field of rocket propelled projectiles. On March 27 the War Department announced the "Bazooka"—the name applied by the soldiers to the rocket projector developed by the Army Ordnance Department. It is a new type of weapon, hurling a high explosive projectile, and can be carried by two men at a dog trot or can be carted about in a jeep. Also during the year the Germans began the use of rockets against the U.S. Air Force bombing planes over Europe. The German launching tubes are fastened below the wings or below the fuselage of two-engine fighter craft. The projectile itself looks something like a mortar bomb. It is designed to be launched while out of range of the bombers' guns and to explode within the formation of bombers. The Russians, too, are reported to be using a rocket

bomb. According to the British publication, *The Aeroplane*, the Russian bomb is launched from a guide rail running along the underside of the wing of the launching plane. The Germans also are reputed to have large numbers of long range rocket guns emplaced along the French side of the English channel.

The rocket projectile of the U.S. Army's "Bazooka," it was reported, is capable of penetrating the armor of any enemy tank which has been in action against the United Nations' forces. It is being supplied in quantity by the United States to American and other United Nations' troops. It has been in action for several months on various foreign fronts, where it has proved as destructive against thick brick walls, rock masonry, structural steel, and railroad rails as it has against enemy tanks. During the North African campaign, "Bazookas" of one U.S. Army division alone were reported to have destroyed at least six enemy tanks. The "Bazooka" launcher, or gun, is a metal tube

The "Bazooka" launcher, or gun, is a metal tube somewhat more than 50 inches long and less than 3 inches in diameter. It is open at both ends. Attached to the tube are a shoulder stock and front and rear grips for the firer, together with sights and an electric battery which sets off the rocket propelling charge when the launcher trigger is squeezed. There also are safety devices.

The launcher is operated by a two-man soldier team—one the firer, the other the loader. When the launcher is held in firing position, the loader is at the right and rear of the firer. The launcher may be fired from any position which may be used normally by a rifleman in combat. After the loader has inserted the rocket in the launcher, he turns a contact lever to the "fire" position, signals "ready" to the firer, and then drops down and away from the rear end of the launcher and grasps a new rocket. When the firer squeezes the trigger, the rocket propelling charge is ignited and flashes from the rear of the launcher tube.

The rocket itself is heavier than the hand grenade and is nearly two feet long. Its appearance is that of a small, elongated aircraft bomb. Its components are an explosive head, propelling charge powder tube and finned tail, the latter providing accuracy in flight.

The "Bazooka" supplements, rather than supersedes, other weapons. It is standard equipment for certain classes of troops. Raiding groups, tank-hunting parties, and reconnaissance elements have reported it highly effective. It has been used with success by landing parties in neutralizing pillboxes. In defensive action, "Bazooka" teams may be recruited from among chauffeurs, truck drivers, ammunition bearers, orderlies, clerks, and mess personnel.

The Germans, in the battle for Tunisia, employed a number of 62-ton tanks. While their appearance created some public discussion, little has been heard of them since. The U.S. War Department reported that the Germans had built 45 of them. The U.S. Army Ordnance Department had earlier experimented with a 60-ton tank, but the Armored Forces found such a huge vehicle to be too heavy, too large a target, and of too little gun power for its weight. It was, therefore, not put into quantity production. On the other hand the Armored Forces asked for a larger gun with great maneuverability. Accordingly the Ordnance Department developed the M-7 self-propelled mount, carrying a 105-mm. howitzer. This weapon was quite successful at El Alamein.

The year 1943 saw the production levels begin to decline for tanks and small arms ammunition as well as for rifles, machine guns, bayonets, and similar small arms materiel. Artillery levels moved downward, but the production of artillery ammunition moved upward. Great production of combat planes was considered necessary. Heavy trucks are needed in greater number. See Business Review for charts on Armament Production.

Production shifts, which will continue throughout the duration of the war, not only are the result of tactical changes in the fighting and the conclusion of the training phase for large portions of our troops, but also result from the movement of more and more soldiers overseas and the shifting of the geographical location of the battle.

ing of the geographical location of the battle.

Expansion of Army posts, camps, and stations in this country reached a peak in July, 1943, when continued large-scale movements of troops to overseas theaters began to exceed the number of new troops inducted. Requirements for housing and training facilities will continue to decline as the continental strength of the Army falls off.

continental strength of the Army falls off.

Readjustments in specific categories of the war production program have been influenced by various factors. An over-all yardstick cannot be laid upon the program. For example, tank production during the latter part of the year has leveled downward by approximately 36 per cent from earlier 1943 production levels. This was due in part to the greater need for ships. Available steel had to be diverted from other items. Too, there was a declining need from our Allies for tanks as supplied through lend-lease (q.v.). The rise in effectiveness of antitank weapons also affected the relative importance of the tank as a weapon in various types and places of battle.

Closing of several small arms ammunition plants was announced near the end of the year. Some are turning to other production, some being kept in a standby position in the event future developments require a resumption of production. This program at the end of the year was tapering to-ward a decline of about 36 per cent, on a dollar volume basis, from the totals of 1948. In this connection, as in a number of other cases, the explanation is one of mass production hitting its stride. Starting from virtually nothing in the way of facilities, this country when attacked needed to build an immediate stockpile of ammunition for defense and for troop training. There was need for all types of facilities that could quickly turn out small arms ammunition. Once facilities were built and working, it was possible to produce such ammunition in great amounts. With a backlog built up, the War Department considered it possible to cut the rate to replacement levels, releasing certain facilities for other uses. A similar situation exists in small arms. Rifles and machine guns lend themselves to huge mass production once facilities are created. During the year, through November, production of small arms material rose about 80 per cent from the January level. As the year closed it was starting downward to a level of 30 per cent below the November, 1943, peak produc-

The artillery production rate was off more than 18 per cent in November as compared with January and continued to drop. This largely reflects the shift from defense to offense. A sharp reduction has taken place in the output of anti-aircraft guns for home protection. With the increase in the United States' airpower less anti-aircraft artillery was deemed necessary in defense installations. Thus, the production rate on anti-aircraft was cut approximately in half from previous peak levels. See Munitions. For aircraft, see Aeronautics.

#### EYES TURNED TO THE FORTHCOMING INVASION OF HITLER'S FESTUNG EUROPA

Above: Members of the Supreme Command, Allied Expeditionary Force, named to direct second front operations. Seated, left to right, Air Chief Marshal Sir Arthur Tedder, Deputy Supreme Commander; Gen. Dwight D. Eisenhower, Supreme Commander; Gen. Sir Bernard L. Montgomery, Commander British Land Armies. Standing, left to right, are: Lt. Gen. Omar N. Bradley, Commander American Ground Forces; Admiral Sir Bertram Ramsey, Naval Commander in Chief; Air Chief Marshal Trafford L. Leigh-Mallory, Air Commander in Chief; and Lt. Gen. Walter B. Smith, Chief of Staff. Below: Nazis prepared to defend the Atlantic Wall, alleged to be the greatest fortification of all times. Shown left is a picture which appeared in the Munich Illustrated Press with the caption "Camouflaged Exit of an Army Bunker." Right, German infantrymen occupying a new bunker position along the Atlantic Coast during training maneuvers.

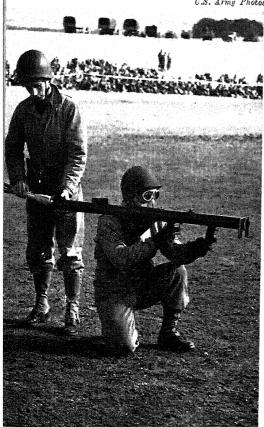

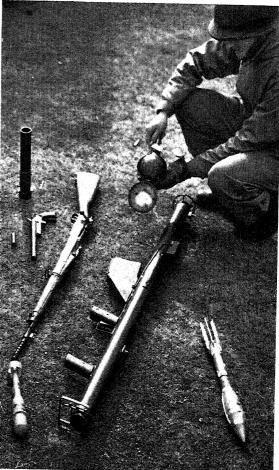

Photo by U.S. Army Signal Corps

Small enough to be carried in an ordinary brief case, the M-3 sub-machine gun, a 45-caliber weapon, fires 450 rounds a minute, is little affected by rain or salt spray, and accuracy improves with use.

U.S. Army Photos

NEW SMALL ARMS FOR U.S. SOLDIERS

At left, the "Bazooka," a rocket gun, as held in proper firing position. The standing soldier is loading a rocket. An anti-tank weapon. At right, the "Bazooka" and its rocket compared with the rifle grenade launcher and its missile. Also shown are a Very pistol and a flare projector. At upper right, a launcher-adaptor attached to an ordinary Army rifle to propel a high powered rifle grenade. Especially effective against pill-boxes and for ranges greater than hand grenades and lower than mortars.

Campaign Lessons. Taking the actual reports of the Tunisian Campaign while the participants were available, Allied Headquarters in North Africa compiled in August a training memorandum sum-marizing the lessons learned. The digest later was transmitted to the War Department and issued to the service in this country to aid in their training program.

It was reported that the outstanding general lesson of the campaign was the failure to use the armored division in sufficient strength or in concentrated mass. The one armored division that participated was not employed as a unit until the last phases of the battles for Mateur and Bizerte. Previous to these actions the armor "arrived piecemeal and was used piecemeal throughout." stated by the commander of one of the combat commands, "Offensive action by American (ar-mored) troops was marked by a dispersal of effort." Mass action was in fact precluded by the necessity of spreading the armored division over a wide front because it was the only force available with sufficient mobility and power to meet sudden thrusts over a long and thinly held line. The abovementioned employment, though justified by necessity, should be recognized as contrary to established doctrine, the Training Memorandum pointed out. The principle of mass action with armor, employed in depth on a narrow front and directed against a weak segment of the hostile line, should be the guiding formula in major offensive armored action. Dispersal of strength or piecemeal employment, it was emphasized, should be avoided.

In the use of tank destroyers it was pointed out that the main lesson resulted from misconception of the idea of "offensive action." Destroyers must not be used to "hunt tanks." Neither can they be used as tanks in a fire fight with tanks without dis-

astrous losses.

The campaign demonstrated that the maneuver of tank destroyers largely depends on the existence of concealed routes of approach, and on the de-gree of enemy observation from both observation posts and direct firing antitank guns. The concept of "seek, strike, and destroy" must be modified to meet existing conditions and the capabilities and limitations of the destroyers as applied to the situation of the destroyers as a specific the situat tion and mission. As stated by the commander of the destroyer group which participated in the campaign, "An individual destroyer has not the means to accomplish vigorous reconnaissance to locate tanks." Likewise experience has shown that tank destroyers, unless in coordination with other arms, can seldom strike at vital objectives. The best method of employment in the campaign was found to be that of establishing a base of fire and giving close direct support to other antitank elements from hull-down positions. Destroyers must not chase tanks. They should reconnoiter for the approach of enemy tank formations and be prepared to meet them with defensive fire from selected hull-down positions. Every effort must be made to establish tank traps into which the hostile tanks may be drawn and destroyed.

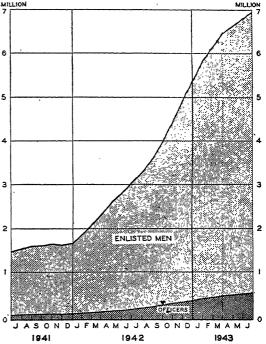

Mines and booby traps played a larger part in the North African campaign than had generally been anticipated. Experience showed that mine warfare has assumed far greater tactical importance than had been previously realized. As developed in the present war, the land mine and the various types of booby traps have proved to be most formidable and powerful weapons and serious obstacles in the advance and operations of all arms. Much has been learned from the Tunisian campaign, and this experience will be utilized in future operations. The outstanding lesson has been the realization that detecting, disarming, and clearing mines and booby traps is no longer a special or exclusive function of the Engineers. Although these operations are primarily functions of engineer troops and have expanded with current developments in the war, it has been learned by experience that travers it has been learned by experience that travers it has been learned by experience that travers in the same travers in the sa perience that troops of all arms must be proficient in mine warfare. In many instances Infantry, Artillery, and other organizations must take care of the mine problem in their own areas, since it often becomes impossible for Engineer troops to cover every area where mines have been laid. Exposure to mines and booby traps in the numbers encountered in the Tunisian Campaign necessitates the distribution of mine detectors to all arms. The general experience of the Infantry divisions has led to their recommendation for the allotment of one or two detectors per company, battery, or troop.

Composition of the Army. The only authentic figures on the distribution of the Army made public during the year were those given to the Senate Military Affairs Committee on September 15 by Lieut. Gen. Joseph T. McNarney, Deputy Chief of Staff. He reported that the original allotments for the 1943 Army provided in round numbers for:

a. Air Forces and supporting arms and services including anti-aircraft artillery for the defense of operating airdromes. . . . . . . . 2,800,000 b. Defense of the continental United States, Panama, the Caribbean bases, Alaska, and the .530,000

.350,000

.400,000

Biennial Report of the Chief of Staff, 1943

utilities—power, light, heat, water—perform local guard and do all of the other necessary chores so that Field Force units can devote their entire attention and time to intensive training. 400,000 g. Ground striking force organized into combat divisions and supporting units, a material part of which is in action overseas.........3,118,000

This allotment of forces contemplated a total of 8,248,000 by the close of 1943. However, decision was made to keep the over-all total at 7,700,000. What changes were made in the above distribution has not been announced, except for the fact that the Air Forces would be retained at 2,-

800,000 during 1944.

On Jan. 27, 1944, the Army Air Forces Training Command issued statistics on the number of graduates of the nationwide network of flying and technical schools. (These were the first statistics of the kind authorized by the War Department since Pearl Harbor.) The categories included 100,799 pilots, 20,086 bombardiers, 18,805 navigators, 107,218 aerial flexible gunners, and 555,891 ground and air combat crew technicians graduated between Jan. 1, 1939, and Nov. 30, 1943. The 555,891 technicians represented the graduates of basic courses and not the total number produced. The pilots are qualified as either fighter or bomber pilots with the exception of 3,491 glider pilots, 2,348 liaison pilots, and 444 women pilots. The

Command uses about 29,000 training planes, and fatalities, for 11 months of 1943, averaged one per 25,600 hours flown.

CHINE BUILDING; MINES, BUREAU OF; NATIONAL BUREAU OF STANDARDS; WAR PRODUCTION BOARD.

MINERALS BUREAU, MINERALS RESOURCES AND CO-ORDINATING DIVISION. See WAR PRODUCTION BOARD.

MINES. See MILITARY PROGRESS under Campaign Lessons.

MINES, Bureau of. Millions of tons of domestic minerals were charted and metallurgical processes were tested and improved in pilot plants and laboratories during 1943 as the Bureau of Mines continued to direct all of its facilities toward the successful prosecution of the nation's war program. As the relative criticalness of the various metals and minerals changed, the Bureau geared its activities to meet each new challenge.

Equally important wartime assignments were completed in fuel conservation and utilization, research on the production of high-octane gasoline from petroleum, increased output of helium, explosives research and control, protection of manpower and equipment, compilation of authentic data on mineral economics and statistics, and the dissemination of essential research material.

Mineral Exploration and Research. The Bureau's exploration for critical metals and minerals extended over most of the States and Alaska. Several million tons of concentratable chrome ore were marked out in Montana and smaller deposits were found in other States and Alaska. The program was instrumental in increased fluorspar production from the Illinois-Kentucky field; and in finding of substantial tonnages of cobalt-copper ore in Idaho. Seven tungsten projects were completed in Idaho, Colorado, Nevada, Wyoming, New Mexico, and Alaska, with more than 500,000 tons of low-grade ore indicated.

Working in many areas simultaneously, the Bureau conducted vanadium projects in the Colorado-Utah field and the potentially important Idaho-Wyoming area; charted more than 800,000 tons of copper ore in 17 exploratory projects; revealed 8,000,000 tons of zinc and zinc-lead ores in 20 exploratory projects in 14 States; increased known reserves of mercury ore by 600,000 tons; established the largest known reserves of tantalum ore in the United States in New Mexico; tested beryl-bearing pegmatites in New England and a rare helvite deposit at Iron Mountain, New Mexico; furthered its search for tin in Alaska and sought additional deposits in seven States; increased known reserves of bauxite by several million tons, and charted 100,000,000 tons of aluminabearing clays; and developed a process to produce magnesia from a 400,000,000-ton dolomite deposit near Las Vegas, Nev., in the Boulder Dam area.

In addition to marking out many beds of unexploited ore suitable for production, the Bureau's engineers and metallurgists successfully demonstrated many practical methods for mining, recovering, and processing ores. Beneficiation methods were studied with ore samples submitted by the Bureau's own crews and by individuals and other Government agencies. Nonmetallic investigations included research on the availability of mica for radio condensers and certain types of airplane spark plugs, domestic tales for high-frequency insulators in military radio equipment, asbestos for fireproof coverings, magnesia for refractories, cement, gypsum, mineral wools, flake graphite, mineral pigments for camouflage paints, and celestite (strontium) for tracer bullets and flares. Exploration of flake graphite in Alabama alone proved

the existence of 1,174,000 tons of measured ore.

Helium. Continuing to maintain United States
world monopoly on the production of helium, the Bureau last year increased the output of this lightweight, noninflammable gas to about 25 times that of prewar days. The Bureau completed a new helium plant in Texas, modified and supplemented the equipment of its Amarillo plant in Texas, and rushed construction of three other helium plants in the Southwest. Despite greatly increased de-mands for helium for the Navy's anti-submarine blimps, for meteorological balloons of the Army, Navy, and Weather Bureau, and for Army barrage balloons, the Bureau of Mines was able to provide considerable quantities of helium for medical purposes, in diving and caisson work, and in the welding of magnesium airplane parts by a new process. In recognition of this remarkable production of helium, the Army and Navy "E" award was presented to the Bureau's Amarillo and Exell, Texas helium plants. (See Machine Building.)

Petroleum and Natural Gas. The Bureau's longrange studies in petroleum and natural gas proved helpful to industries seeking new production rec-ords in special lubricants, high-octane aviation gasoline, materials for synthetic rubber, and similar byproducts. Petroleum engineers undertook special tasks at the request of the Petroleum Ad-ministration for War (q.v.) and provided data on crude oil for war needs, improved methods for producing petroleum, and new and additional sources of petroleum byproducts. Work was started on thermodynamics of hydrocarbons and derivatives, primarily as an aid to the synthetic rubber program. Aviation gasoline research was expanded to include both natural and synthetic components and exacting analyses were made on crude oils, condensates, and natural gasolines to find new sources of aviation gasoline, toluene, and

Coal Research. As the nation depended more heavily on solid fuels, the Bureau's valuable knowledge and experience in fuel testing and research facilitated production of high-quality metal-lurgical coke of uniform grade, increased the efficiency and power of Federally-operated plants, solved many problems involving the storage of coal, and successfully demonstrated the use of colloidal fuel (a mixture of pulverized coal and petroleum) in a commercial plant.

In a 12-month period nearly 23,000 samples of coal were analyzed relative to the purchase of millions of tons of fuel by the Army, Navy, and other Government agencies. Bureau coal-sampling trucks visited 500 mines in 18 States to obtain more than 1,500 specimens for analysis.

Increased emphasis centered on the Bureau's research in producing synthetic liquid fuels from coal, resulting from the continuing decline in the discovery of new oil pools in the United States, heavier wartime consumption of natural petroleum, and increased transportation difficulties. Experiments progressed in the operation of the laboratory-scale pilot plant for the direct hydrogenation of coal and investigations were begun on the indirect process for making synthetic liquid fuels from water-gas derived from coal.

Bureau-made synthetic gasoline was successfully used in a history-making airplane flight from Morgantown, W.Va., to Washington, D.C., on Nov. 6, 1943, proving conclusively that synthetic gasoline made from American coal can be used in aircraft, thus adding an important chapter in synthetic liquid fuels research.

Earlier Bureau tests on 14 American and Alaskan coals revealed that fuel oil, Diesel oil, motor gasoline, and aviation gasoline could be obtained from them by hydrogenation. Two members of the Bureau's staff visited coal-liquefaction plants and research laboratories in England, and a measure was introduced in Congress proposing the construction and operation of demonstration-size plants by the Bureau to pave the way for ultimate commercial production of synthetic liquid fuels by private industry.

Explosives Control. Maintaining its strict surveillance over the manufacture, purchase, sale, storage, use, and possession of nonmilitary explosives and ingredients, the Bureau in 1943 issued about 350,000 licenses to vendors, purchasers, and foremen under the wartime Federal Explosives Act. The Bureau examined and acted upon 4,000 additional applications from manufacturers, schools, and laboratories, and investigators reported on

more than 9,000 stores of explosives.

Economics and Statistics. Information provided by the Bureau regarding domestic and foreign production, distribution, consumption, and uses of minerals and metals helped war agencies in their allocation, financing, production, and procure-ment programs. Special studies by commodity experts provided up-to-date economic and statistical facts sought by the Army, the Navy, the Metals Reserve Company, the War Production Board, Defense Plant Corporation, Office of Price Administration, the Petroleum Administration for War, the Solid Fuels Administration for War, and the Board of Economic Warfare. The Bureau last year was given the responsibility of technical direction of mineral attaches in foreign countries and the publication for Government use only of economic facts regarding mining conditions

Plant Protection. Strengthening home front production and supply plants against losses due to sabotage, subversive activities, injuries to workers, fires, floods, and other eventualities, the Bureau's trained engineers in 1943 inspected nearly 2,000 mines, mills, smelters, and related industries under the Facility Security program. Working in close cooperation with the Army, the Office of Civilian Defense, and other agencies, the Bureau also acted for the War Department in inspecting mines and related facilities.

Health and Safety. The Bureau of Mines health and safety program assisted in protecting life and property in the face of accelerated production, longer hours, and shortages of labor and equipment. Federal coal mine inspectors, who visited nearly 1,200 mines in virtually all of the coalmining States and Alaska (representing a combined annual production of 293,218,266 tons of coal or 46 per cent of the 1942 output) reported the adoption of many Federal recommendations resulting in safer working conditions and increased efficiency. These mines employed a total of 233,-

The Bureau trained 45,952 employees of the mining and associated industries in first aid, increasing the total to 1,584,774. As a link in the civilian defense training, about 675 persons were qualified as first-aid instructors bringing the total number trained to 16,500. Basic mine-rescue training was given to 2,498 mine workers, and 154 persons completed the advanced course. Bureau personnel participated in mine-rescue and recovery work following mine explosions and fires.

The prevention of occupational disease and improved efficiency and morale of workers through better hygienic conditions were stressed. Approxi-

mately 12,000 air samples from anthracite mines and from zinc, manganese, and ordnance plants were analyzed; approximately 10,000 air samples were analyzed for Federal coal mine inspectors and other field workers; 500 air samples were analyzed for the Army and Navy, and 1,500 sam-ples were tested as a part of the research work regarding the safety of electrical mining equipment, respiratory protective devices, and similar equipment.

The inflammability characteristics of metallic and nonmetallic dusts were studied, and special emphasis was placed on the prevention of explosions involving butadiene, a principal constituent in the manufacture of synthetic rubber. The dusts of aluminum, antimony, cadmium, chromium, copper, magnesium, tin, zinc, and other war metals were tested and industries advised regarding pre-cautionary measures which should govern their

handling.

Publications and Films. Although all publications not compatible with the prosecution of the war were eliminated, the Bureau issued 551 bulletins, technical papers, handbooks, Minerals Yearbook chapters, and contributions to technical journals. The heavy demand for technologic and statistical data and other informative material regarding all phases of the mineral industries prompted the Bureau to issue a series of confidential reports for restricted circulation among war agencies and certain producers of war minerals.

In constant demand by the Army, the Navy, the Office of Civilian Defense, foreign agencies, and industrial training classes, were the Bureau's free educational motion pictures, produced in cooperation with industry. In addition to various branches of the United Nations' armed services, they were shown in South American republics, in Canada, China, South Africa, and in Great Britain. Millions of school children and students at industrial training centers also viewed the films, which were shown to audiences estimated at 7,928,201 persons on 95,876 occasions in 1943. Since 1922, the Bureau's films have been exhibited to audiences totaling 103,584,650 persons on 957,936 occasions.

MOLYBDENUM. A sharp downward trend in molybdenum requirements during 1943 radically transformed a critical production-consumption relationship early in the year to one of abundance by late fall.

In mid-year, Climax Molybdenum Co., which produces about 75 per cent of United States output at its Colorado mines, was the top name on the national mine labor priority list. Molybdenum, which had replaced tungsten no longer available from China at the outbreak of war, was being replaced in alloy steel melting ratios by tungsten from domestic mines.

Then in July and August, consumption showed a decrease of about 17 per cent from the January-June average, putting an entirely different complexion on the situation. By the end of October, the War Production Board estimated over-all use at 52,400,000 lb. for the full year compared to an anticipated production of 62,800,000 lb.

The most important factor in reducing demand was lower export requirements. The United Kingdom which normally had been getting about two million lb. of molybdenum a quarter, reduced its original request for the fourth quarter by 1,500,000 lb. In the third quarter of 1942, allocations for lend-lease and Canada were 4,386,000 lb., compared with 3,445,000 lb. in the third quarter of 1943. Russia was getting 340,000 lb. monthly in the latter part of 1943, according to the WPB, the balance going to Great Britain and Canada, with small amounts to Australia.

As consumption dropped, mine output was rising. In the first six months of the year, molybdenum output in usable form totaled 31,200,000 lb. or 5,200,000 lb. monthly, made up approximately 93 per cent of domestic production and 7 per cent imports. In July and August output amounted to 10,700,000 lb., or 5,300,000 lb. a month, representing a gain of approximately 2.7

per cent.

For 1944, the WPB estimates that 44,561,000 lb. will be required comprising 11,093,000 lb. for the first quarter; 11,122,000 lb. for the second quarter; 11,123,000 lb. for the third quarter; and 11,223,000 lb. for the fourth quarter. Molybdenum

was removed from allocation Jan. 1, 1944.

By the end of August, 1943, stocks had reached nearly what the WPB ferro-alloy branch felt should be a minimum stockpile objective, 24 million lb.—about the equivalent of a six-month stockpile of virgin molybdenum at the current con-sumption rate. Because such a large proportion of molybdenum is mined domestically, and waterborne concentrates are a minor factor, the necessity of a larger inventory was felt to be questionable.

The lower requirements for molybdenum during 1943 reflected directly a sharp decline in highspeed steel production, which is the principal product for which molybdenum is required. In March, 1943, the United States produced somewhat more than 1,250,000 ingot tons of alloy steel; by November, this rate had decreased to 1,050,000 tons. Moreover, large quantities of alloy scrap were available, and by the end of the year about 40 per cent of the molybdenum being used in the production of alloy steel came from scrap

CHARLES T. POST.

MOLZAHN CASE. See Law under War Decisions.

MONACO. A Mediterranean principality surrounded in its land sides by the French department of Upes-Maritimes. Area, 370 acres; population 1939), 23,973. Chief towns: Monaco (capital), a Condamine, Monte Carlo. During peacetime he main sources of revenue were the tourist traffic and the gambling concession at Monte Carlo. Budget (1939): 38,892,921 francs (franc averaged \$0.0251 for 1939). A ministry assisted by a council of state administers the country under the authority of the Prince. Legislative power rests with the Prince and the national council of 12 members elected by universal suffrage for a four-year term. The election scheduled to be held during 1942 was suspended as "inopportune, considering present circumstances." Ruler, Prince Louis II (succeeded June 26, 1922).

MONEY, MONETARY UNITS. See BANKS AND BANKING; FINANCIAL REVIEW; the countries under Finance.

MONGOLIA. An extensive, vaguely defined region of east-central Asia, bordered by the Soviet Union and Tannu Tuva on the north, Manchuria on the east, China proper on the south, and Sinkiang (Chinese Turkestan) on the west. It is divided by an irregular east-west line through the Gobi desert into Outer Mongolia, on the north, and Inner Mon-

golia, on the south.

Inner Mongolia. Following the establishment of the puppet state of Manchukuo in Manchuria in 1931, the Japanese added to it the Inner Mongolian Province of Jehol in 1935 and the six north-ern counties ("hsien") of the Inner Mongolian Province of Chahar in 1936. The Inner Mongolian area remaining under direct Chinese jurisdiction then consisted of the 10 southern counties of Chahar and the provinces of Suiyuan and Ningsia. Beginning in 1937 the Japanese occupied this part of Chinese Inner Mongolia to a point west of Paotow, the western terminus of the Peiping-

Suiyuan Railway.

With the cooperation of some Mongol and Chinese leaders, the Japanese established at Kalgan on Nov. 22, 1937, the so-called Federated Council of Meng Chiang under the leadership of Prince Teh Wang, leader of the "young Mongol" move-ment and a lineal descendant of Genghis Khan. The Council assumed general supervisory func-tions over Chinese and Mongol communities within the 10 southern counties of Chahar, practically all of Suiyuan, and 13 counties in northern Shansi Province of China proper. This region was divided into "federal autonomous governments." On Sept. 1, 1939, the Meng Chiang Federated Council was reorganized as the "Federal Autonomous Govern-ment of Mongolia." It claimed jurisdiction over an area of about 200,000 square miles in Inner Mongolia and China proper, with a population of 5,000,000 to 7,000,000 Chinese and Mongols, and about 36,000 Japanese civilians. Budget expenditures for 1941 were estimated at 177,000,000 Meng Chiang yuan (1 yuan = 1 yen).

Stock raising and agriculture are the chief ocsupations in Inner Mongolia. Sheepskins are the most important trading commodity; the output is estimated at about 1,000,000 matured pelts and 300,000 lamb pelts annually. Livestock owned by some 2,000,000 Mongols in Inner Mongolia was estimated as follows in 1939: Cattle, 560,000; morses, 500,000; sheep, 3,955,000; camels, 52,000. Rye, potatoes, buckwheat, and wheat are the main rops. Exports passing over the Peiping-Suiyuan ailway in 1940 were reported at 113,308,000 yuan; mports, 157,700,000 yuan. The Japanese have

built military highways into Inner Mongolia and on June 1, 1940, opened direct telephone service between Kalgan and Japan.

Outer Mongolia. The area is estimated at 622,200 square miles and the population at from 540,000 to 2,000,000. The inhabitants are mainly Mongols but there are Russian and Chinese minorities. The capital, Ulan Bator Khoto (Urga) has about 70,-

000 residents; Albanblak, 20,000.

Outer Mongolia is a soviet republic, the independence of which is guaranteed by the Soviet Union under a mutual assistance pact signed Mar. 12, 1936. However the Soviet Union in 1924 recognized the suzerainty of the Chinese Republic over the region. The political and economic systems were reorganized on the soviet model. Ownership of lands, forests, mineral resources, and factories was collectivized. Foreign and domestic trade is a monopoly of People's Central Cooperative; foreign trade is carried on exclusively with or through the Soviet Union. Soviet instructors are said to have trained and equipped with modern arms a Mongol army of 250,000 men. The government is in the hands of the Mongolian People's Revolutionary Party. The only political party permitted, it had about 12,000 members in 1939 and was controlled by the Comintern. Supreme authority rests in an elective assembly (Great Huruldan), which meets at least once annually and while in recess delegates executive powers to a Little Huruldan of 30 members, which in turn appoints a Premier and executive committee.

Stock raising, game hunting, agriculture, manufacturing, and mining, in the order named, are the chief occupations. Meat, milk products, hides and skins, wool, furs, wheat, rye, millet, and coal are the main products. Extensive mineral resources remain undeveloped. State factories, all erected since 1924, produce machinery, washed wool, wool textiles, felt, leather, sheepskin coats, shoes, and elec-

tric power.

The first railways in Outer Mongolia—connecting Ulan Bator Khoto with the Nalaiha coal mine 22 miles distant and linking Kiakhta with the Trans-Siberian Railroad at Ulan Ude—were reported to have been completed in 1939. The capital in the capital state of the cap tal is conected with Ulan Ude by truck road and airline. Steamers ply the Selenga and Orkhon Rivers. However caravans still handle the bulk of internal transport. There is a state banking and monetary system, the unit of currency being the tukrik containing 17 grams of pure silver.

History. A delegation from the Mongolian Peo-

ple's Republic, headed by Premier Marshal Choibalsan, spent more than two months in Moscow during the winter of 1942—43 and was entertained by Premier Stalin at the Kremlin on February 3. It presented substantial gifts to the Red Army. Chungking reported in April that the Japanese were building defense works in Inner Mongolia and had transferred all departments of the Chahar provincial government south of the Great Wall. On September 12 the Chinese Central News Agency reported a clash between Outer Mongolian and Japanese troops on the border between Outer and Inner Mongolia. See CHINA under History.

MOROCCO. A former Moslem empire of northwestern Africa, still under the nominal rule of a sultan, but divided since 1912 into French and Spanish protectorates. The city and district of Tangier on the Strait of Gibraltar were internationalized and demilitarized by a series of agreements beginning in 1906, but were incorporated in Spanish Morocco, over the protests of Great Britain and the United States, on Nov. 23, 1940 (see TANGIER). The Sultan resides in the French Zone, usually at Rabat, seat of the French administration. Capital of the Spanish Zone, Tetuán.

Area and Population. The area of French Morocco is estimated at 153,870 square miles and the civilian population at 7,983,473 (March, 1941). The population at the 1936 census was 6,298,528 (5,874,888 native Moslems, 173,533 French, 161,-312 native Jews, and 59,058 other Europeans). Excluding Tangier and the enclaves of Ifni and Cabo Jubi (Cape Juby) in southwestern Morocco. the Spanish Zone has an area estimated at 8,108 square miles and an estimated population (1936) of 795,202 (about 738,000 Moslems, 44,379 Euroof 795,202 (about 738,000 Moslems, 44,379 Europeans, 12,918 Jews). Estimated populations of the chief cities in 1941: Casablanca, 453,000 (131,000 Europeans); Rabat, 171,600 (83,600 Europeans); Meknes, 109,500 (15,000 Europeans). Populations at 1936 census: Fez, 144,424 (9,623 Europeans); Marrakech, 190,314 (6,849 Europeans). In the Spanish Zone, the principal towns were: Tetuán, 49,535 (1936); Alcazar, 30,762; Larache, 29,477. The Spanish garrison towns of Ceuta (1941 populations). The Spanish garrison towns of Ceuta (1941 pop., 59,115) and Melilla (77,192) on the African Mediterranean coast are not included in the protectorate. French and Spanish are the official and business languages in the French and Spanish Zones, respectively, but the natives speak mainly Moorish-Arabic and the various Berber dialects.

Production. Agriculture and stock raising are the chief occupations of the French Zone. Yields of the chief crops were (in metric tons): Wheat, 653,-000 in 1940; barley, 2,128,000 in 1939; oats, 76,000 in 1939; corn, 217,400 in 1938; olive oil, 15,000 in 1940–41. Linseed and wine grapes are

other leading crops. The 1941 wine output was other leading crops. The 1931 wine output was 500,000 hectoliters (of 26.42 gal.). The 1938 wool clip was 20,300 metric tons. Livestock in 1942 included 12,000,000 sheep, 6,950,000 goats, 2,155,-000 cattle, 719,000 donkeys, 202,000 horses, 154,-000 mules, 164,000 camels, and 175,000 swine. The sea fisheries in 1938 yielded 30,300 metric tons of fish, valued at 33,300,000 francs. Estimated output of the principal minerals in 1940 in the French and Spanish Zones was (metric tons): Coal, 100,000; iron ore, 1,600,000; manganese ore, 90,000; tungsten, 16; zinc, 1,000; antimony, 200; molybdenum ore, 280; petroleum, 25,000 bbl. French Morocco in 1939 produced 1,492,000 metric tons of natural phosphates. Industries include flour mills, breweries, cement factories, soap works, sardine and tuna canning plants, Moorish handicraft. See Manganese.

The Spanish Zone raises much the same crops as the French Zone, but in limited quantities. Iron ore (805,000 metric tons in 1938), lead, and some antimony are exported. Stock raising and fishing are other occupations. The four active fisheries caught

3,012 metric tons of fish in 1940.

Foreign Trade. Publication of trade statistics for French Morocco was suspended upon the outbreak of the World War. Merchandise imports in 1938 were 2,184,900,000 francs; exports, 1,512,400,000 francs. France supplied 733,343,000 francs of the imports and took 676,248,000 francs of the exports. Imports into the Spanish Zone in 1938 were valued

at 123,146,184 pesetas; exports, 71,143,224 pesetas.
Finance. The 1939 budget estimates for the French Zone were: Receipts, 1,185,054,070 francs; expenditures, 1,184,958,430. The Moroccan franc was unpegged from the French franc after June, 1940, and fluctuated widely in accordance with supply and demand until the American landings of Nov. 8, 1942. Thereafter the franc was pegged at 300 to the pound sterling (later revised to 200 to the pound). The expenditure budget for Spanish Morocco was 562,361,322 pesetas in 1948 (480,-234,171 pesetas for defense).

Transportation. French Morocco in 1942 had about 1,150 miles of railway line, 4,842 miles of highways and roads. In 1938, 3,352 vessels of 5,640,397 tons entered French Moroccan ports. In the Spanish Zone there were about 72 miles of

railway and 1,400 miles of roads.

Government. The Sultan Sidi Mohammed ben Youssef (proclaimed Nov. 18, 1927) maintains a separate government in French Morocco, headed by a Grand Vizier. However all effective authority is exercised by the French Resident General, who is Foreign Minister to the Sultan and head of the French administration at Rabat. Gen. Auguste Noguès, the Resident General during 1936-43, adhered to the Vichy Government after the Franco-German armistice of June 22, 1940, and then to the Darlan regime established at Algiers Nov. 12, 1942. In the Spanish Zone the Sultan delegates his authority to a Khalifa, named by him from a list of two candidates submitted by the Spanish Government. Actual authority is exercised by a Spanish High Commissioner (Lieut. Gen. Luis Orgaz Yoldi) residing at Tetuán. Khalifa for the Spanish Zone, Sidi Muley Hassan Ben el Mehedi. See below for 1943 developments.

#### HISTORY

Political developments in French Morocco during 1943 were largely determined by the evolution of the Giraud regime at Algiers toward democratic republicanism and its amalgamation with the Fighting French movement in the French Committee of National Liberation early in June (see France under *History*). The prodemocratic trend at Algiers and Allied victories in Tunisia rendered untenable the position of General Noguès and other high French military and civil officials in French Morocco, who had maintained the Fascist principles and policies introduced by the Vichy Government even after the landings of American troops and the adhesion of the Darlan-Giraud regime to the United Nations' cause.

American correspondents visiting Morocco during the first quarter of 1943 reported that General Noguès was continuing repressive measures against de Gaullists, Freemasons, Jews, and other pro-United Nations' elements, with the approval and support of some leading industrialists, and of some army, church, and governmental officials. The pro-Fascist and at times pro-Axis activities of the Vichy-created Legion of Veterans were encouraged by the Noguès regime, while leaders of the de Gaullist veterans organization (Fédération des Anciens Combatants) were imprisoned or otherwise restricted in their activities. Among the French populace generally, there was widespread political apathy, profiteering, and lack of faith in a United Nations' victory. The corporative economic controls introduced by Vichy, known as the groupment system, were used to fight republicanism and discriminate against prodemocratic elements.

In February the Bank of Morocco attempted to send some \$750,000 worth of gold to Germanoccupied France, the move being blocked by Giraudist authorities. General Noguès was slow in carrying out the decrees for the restoration of republican laws issued by General Giraud in Algiers. American military and economic officials in Morocco likewise encountered obstructionism and noncooperation from some French civil officials. When Gen. Charles de Gaulle became co-chairman of the Committee of National Liberation, he insisted upon the dismissal of Noguès. The latter submitted his resignation on June 5 in response to a written request from General Giraud, and was permitted to leave for Portugal. He was replaced by Gabriel Puaux, former Fighting French High Commissioner in Syria and Lebanon. This appointment was followed by a general reorganization of the French administration in Morocco along lines dictated by the republican policy of the Committee for National Liberation.

With the slow elimination of Axis influence in Morocco, the Moslem and Arab nationalists were reported to be turning from Germany to the United States in search of aid and moral support for their claims to a larger measure of independence. The Sultan of Morocco, stating that he regarded the French protectorate as having lapsed, indicated that he would welcome the joint protection of the United States, Great Britain, France, and possibly Spain.

Meanwhile there was steady improvement in the difficult economic situation that existed at the time of the American landings (see 1943 Year Book, p. 425). The provision by the Allies of consumer goods and of farm machinery and parts aided the resumption of production and exchange, and a bumper cereal crop was harvested.

An important ten-day conference attended by President Roosevelt, Prime Minister Churchill, and the Anglo-American Combined Chiefs of Staff took place in Casablanca January 14–21. During his stay in Morocco, President Roosevelt made an inspection trip to Rabat and Port Lyautey and journeyed by automobile with Prime Minister Churchill to Marrakech. He also inspected Gen. Mark W.

Clark's U.S. Fifth Army, stationed in Morocco since the landings of Nov. 8, 1942. While undergoing advanced training for its subsequent invasion of Italy, this army secured the Allied lines of communication through Morocco to Algeria and Tunisia against disruption by hostile natives or by the Spanish forces based in Spanish Morocco. General Clark made an official call upon the High Commissioner of Spanish Morocco in April and on June 3 entertained the High Commissioner with a battle demonstration by his troops at the Fifth Army headquarters. Casablanca became a naval operating base of the U.S. West African Sea Frontier Force. American naval salvage units recovered most of the 10 French warships, 2 floating docks, and 7 freighters sunk at Casablanca during the American invasion. Most of the 12 freighters sunk at Port Lyautey also were raised.

sunk at Port Lyautey also were raised.

The ex-Sultan of Morocco, Mulai Abdul Aziz, who was deposed in favor of his brother in 1908, died in Tangier June 9, 1943. A series of "dahirs" (decrees) issued by the French authorities in July and August raised income taxes, taxes on agricultural production, and fees for the registration of various documents. The object was to meet increased local governmental expenses, aid the French war effort, and absorb excess spending power. A Sherifian Office of Commerce with the Allies was established in the French Zone by a "dahir" and residential order of Aug. 13, 1943. The office was empowered to supervise and regulate the furnishing of supplies to Morocco by the Allies and exportation from Morocco to the Allied countries.

MOTION PICTURES. There were few outstanding films in 1943, but the general standard of excellence was remarkably high. Despite the fact that several of Hollywood's finest directors, players, and writers were in the armed forces and producers displayed extreme caution in the treatment of new material, the screen weathered the second war year with good sense and prosperity. Productions dealing with the global conflict bulked large in terms of quality and popularity. They were happily free from the hysterical underlining that marked war photoplays twenty-five years before. Meanwhile there were a number of first-rate escapist shows to demonstrate that a transition into the postwar period will not prove too awkward.

period will not prove too awkward.

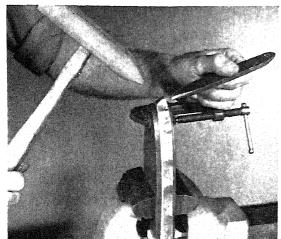

Realism was the keynote of battle picture technique. Taking a cue from the brilliant documentary, or fact films, produced by American, British, and Russian units, producers made a valiant effort to keep material literal and convincing. Such a picture as Air Force, for example, made a heavy bomber the true hero of a perilous flight across the Pacific. Written tersely and simply by Dudley Nichols, directed with spectacular effects by Howard Hawks and enacted by a uniformly fine cast including John Garfield, John Ridgely, George Tobias, and others, it proved an engrossing entertainment as well as a grim reminder of the early defeats of the war.

THE MOTION PICTURE AS A MEDIUM FOR TRAINING IN WAR PRODUCTION

placed a camera inside a submarine and followed it into the harbor of the Japanese capitol, where it rendered invaluable service for the famous Doolittle air raid, the first offensive blow we threw at the Nipponese. Cary Grant and a hand-picked cast saw to it that the piece had dramatic power, in addition to credible factual reporting. News stories and news pictures were carefully scanned to make the subject matter echo in the minds of spectators. The treatment, as in the case of Air Force, was expansive, but explicit. There is little question that Noel Coward's brilliant screen account of a British destroyer, In Which We Serve, shown in 1942, constituted a pattern for 1943 Hollywood war films.

In addition to the two striking offerings already cited there should be mention of *Corvette*, K-225, which celebrated the exploits of the tiny ships which protected the Atlantic life line at the critical period of U-boat depradations. Richard Rossen directed it with suspense, tension, and a feeling for its maritime background. Land fighting was signalized by such sturdy and provocative motion pictures as So Proudly We Hail, a tragic and glorious accolade to the nurses on Bataan, made with great feeling and imagination by Mark Sandrich; Sahara, written by John Howard Lawson and Zoltan Korda and admirably performed by Humphrey Bogart and his supporting cast; and *Five Graves to Cairo*, a prophetic account of Rommel's ill-fated African

War films were not all cast in the same mold. One of the most trenchant of them all was Watch on the Rhine, which avoided the obvious manifestations of armed conflict to mirror the effect of imminent fighting on this country. Made from Lillian Hellman's stirring play of the same name, it had great performances by Paul Lukas and Bette Davis and a remarkable burden of meaning in addition to its taut melodramatic outline. The Human Comedy, written in somewhat mannered fashion by the eminent playwright, William Saroyan, also had an oblique approach to the war, but it rarely faltered in its attempt to give film-goers a notion of what we are fighting for and

why. The other films dealing with martial subject matter represented a wide variety of approaches to the business of informing and propagandizing the public. Spitfire, in which the late Leslie Howard made his final screen appearance, celebrated the inventive genius of the British airplane designer who contributed so much to the sternest crisis of the war. Action in the North Atlantic was a rousing screen accolade to the Battle of the Atlantic; The North Star was an attempt on the part of Hollywood to dramatize the magnificent struggle that Russia has put up against the Wehrmacht, and Guadalcanal Diary documented the terrible struggle of Marines to turn the tide of

battle in the Pacific.

Of those pictures which did not treat directly with some aspect of the contemporary war, one of the finest was For Whom the Bell Tolls, which, in dealing with the Spanish civil war, became curiously prophetic about the shape of subsequent events. Adapted by the afore-mentioned Dudley Nichols from Ernest Hemingway's celebrated novel, it boasted extraordinary suspense and violent action as well as a splendid gallery of performances. While Gary Cooper, as an American champion of liberty, and Ingrid Bergman dominated the se-quences, the portrayal of Pilar by Katina Paxinou made her a contender for top acting honors of the

The stage, as usual, contributed more than one

plot to Hollywood, from Watch on the Rhine to the excellent transmutation of *Claudia*, directed with fine feeling by Edmund Goulding and played to perfection by Dorothy McGuire, Robert Young, and Ina Claire. There can be no question that it provided a certain relief from the long succession of war films which stretched through the year. Holy Matrimony, Nunnally Johnson's brilliant refurbishing of Arnold Bennett's comic novel, Buried Alive, was a delightful escapist entertainment, giving Monty Woolley and Gracie Fields something of a field day in the line of acting. The More the Merrier, the last picture staged by George Stevens before he donned uniform was a particularly enjoyable high comedy dealing with housing and romantic problems in wartime Washington.

In the same category with the escapist shows already noted was the absorbing story of a collie dog, Lassie Come Home, which, by its very simplicity and straightaway screen outline, showed that the field of motion picture make-believe is virtually limitless. Princess O'Rourke; Madame Curie, star-ring Greer Garson and Walter Pidgeon of Mrs. Miniver fame; Heaven Can Wait, and The Constant Nymph were other nonwar program pictures which stood out above the general level of Hollywood offerings. The inherent problems of democracy were touched on only lightly. The Ox-Bow Incident, a stern account of lynching splendidly staged by William Wellman, was a notable exception. It was considered the best film of the year

by the National Board of Review.

Documentaries were so fine that several of them ranked with the best of the fabricated photoplays. Desert Victory, the English picture which celebrated the Eighth Army's victorious Libyan campaign, was a brilliant compilation of newsreel clips, maps, and shots of desert warfare. Report From the Aleutians, made by the Army Signal Corps under the supervision of John Huston, was another firstclass example of significant camera rapportage and editing. The Battle of Russia, put together by the corps from a series of newsreels taken on the German-Russian front, was a magnificent record of Soviet resistance to invasion.

Even Walt Disney turned his animated cartoon technique to a collation of factual material in Victory Through Air Power, a striking celebration of the power of planes in modern conflict. The great screen cartoonist also contributed an informative and entertaining salute to our good neighbor policy with South America in Saludos Amigos, a combination of animated caricatures and straight photography. He continued his short subjects but produced no new feature length film.

With many of the leading male stars in the armed services, films depended less on individual performances than on balanced performing. Paul Lukas, Monty Woolley and Gracie Fields, Ida Lupino, who rescued an ordinary picture called The Hard Way by the sheer power of her acting, Katina Paxinou, and Charles Coburn in The More the Merrier stood out particularly among their colleagues for their expert make-believe. Among the most promising of the new-comers to Hollywood's ranks were Sonny Tufts of So Proudly We Hail and Dorothy McGuire of Claudia.

Directing played a less important role in screen excellence than in former years. John Ford, Frank Capra, John Huston, and Garson Kanin, to name only a few, were engaged in making training films and documentaries, and George Stevens, except for the appearance of his brilliant comedy, The More the Merrier, was lost to Hollywood film-making for the duration. On the other hand, writing took on

a new importance in giving flavor and quality to screen shows. Nunnally Johnson, with Holy Matrimony, demonstrated that a fine script, honestly produced, could define a photoplay, in no uncertain terms. Dudley Nichols wrote eloquently and well for Air Force and For Whom the Bell Tolls and Lillian Hellman did a masterly job of converting her play, Watch on the Rhine, to a motion picture.

From a business standpoint, the screen industry flourished. Several million-dollar pictures were made and production was not critically disturbed by the second year of wartime restrictions. Technical ingenuity sufficed to make up for loss of physical material while the absence of stars and other craftsmen did not affect the public appeal of offerings. For the first time in years RKO showed a profit, while the other studios found that epics and minor program fillers alike returned big dividends. At the close of the year some fifty feature pictures were in production simultaneously. A new firm called International Pictures was formed with William Goetz and Nunnally Johnson as key executives. Independent units were formed in United Artists, including David Selznick's Vanguard Productions, Producing Artists, Inc., and Producers Corporation of America.

Great Britain. Chief of the English films to reach the United States were the documentaries devoted to an exposition of that country's war effort. Desert Victory was outstanding, with The Silent Village another notable offering. Regular program pictures

were not allowed to be made.

U.S.S.R. As in the case of Great Britain, the Soviet studios concentrated on fact films. Heroic Stalingrad, a grim report of the last ditch defense of the

Russian city, was the finest of them all.

Awards. The New York Film Critics selected Watch on the Rhine as the best English language film of the year. Paul Lukas was adjudged the best actor of the year for his professions in that best actor of the year for his performance in that picture. Ida Lupino's portrayal in *The Hard Way* was considered the best feminine acting. George Stevens won honors for his direction of The More

the Merrier and a special award was given to the United States Signal Corps for its documentaries. For documentary films and training films, as used by the armed forces and industry, see the topics listed under those headings. See also Pho-

HOWARD BARNES.

MOTORBOATING. Wartime priorities held our daring motorboat racers in "drydock" during 1943. Strict gasoline rationing prevented any competition and most "Sunday skippers"—those men who keep boats only for the pleasure of cruising leisurely on inland waters—didn't even bother to remove the tarpaulin from their sleek craft.

THOMAS V. HANEY.

## MOTOR CORPS. See RED CROSS.

MOTOR VEHICLES. Having turned from peacetime output to wartime production, the automotive industry added another record in 1943 to its many achievements. Virtually every branch of the armed forces of the Allied Nations received armament, munitions, and other units from plants operated by the manufacturers who had been engaged in constructing motor transportation.

War equipment made by the automotive industry during the year, almost double that of the conversion period of 1942, accounted for \$8,850,-000,000 of supplies which the armed forces sent flying into the skies, rolling over the ground, and darting across the seas. It was an output 100 per cent above the value of civilian goods manufactured by the industry in 1941, one of the top peacetime years. At the current rate, automotive assembly lines are delivering tanks, guns, planes, and scores of other war products, valued at more than \$10 billion annually, a total which represents one-sixth of all war goods produced by all metal working industries in the nation.

As the industry entered 1944, it was almost entirely tooled-up for its war production jobs; with a few exceptions, all of its plant capacity was provided for; and, its mass production techniques were being given full expression. Three months before, in October, 1943, it had passed a mile-stone, set by WPB Chief, Donald Nelson, in the dark days following Pearl Harbor, when he predicted to the nation that the automotive industry would ultimately reach a war production rate of a billion dollars a month. In terms of physical volume, this billion-a-month rate was achieved fifteen months later, though price reductions and voluntary refunds to the government made in the interim reduced somewhat the actual dollar volume figures reported. In all, the manufacturing effi-ciencies effected by the industry shaved at least two billion dollars a year off the cost of making war goods, so that, in effect, twelve armored divisions are being equipped for the Army at the cost of ten.

With the numerous plants operated by General Motors, Chrysler, Ford, Packard, and Hudson, and the sub-assembly units which come under their jurisdictions working at peak performance some of the goods produced were in excess of require-ments. This situation was met by change-over methods which maintained the smooth flow of

output to meet war needs.

Limited production rates prevailing just before the nation went to war, when "defense" orders were mentioned in terms of millions rather than billions, have been completely overshadowed by the torrent of military goods now going to our armies and our allies. Aircraft production by the automotive industry is eleven times the pre-Pearl Harbor rate; gun production has increased tenfold; tanks by eight times. Some 1,038 principal plants are engaged in this war work, and subcontractors are located in 1,375 cities in 44 States.

The nature of the war the Allies are fighting is

emphasized by aircraft orders now on the booksthey comprise nearly 50 per cent of the industry's forward production job. Deliveries of airframes, aircraft engines, and aero equipment are going ahead at the rate of \$11 million a day—for an annual rate of \$4 billion. Some measure of comparison is afforded when this figure is contrasted with the 1941 peacetime peak of \$3,703,000,000 peasesper cars and trucks or the 1929 high spot passenger cars and trucks, or the 1929 high spot

of \$3,413,000,000.

Staggering production totals have been achieved in all departments of the industry's war production, despite frequent interruptions to plant working schedules occasioned by design changes, material shortages, and cut-backs in contracts. Shifts in the strategy of war showed up on automotive production lines throughout the year. Early in 1943, an increased emphasis upon offensive weapons and a corresponding de-emphasis on defensive armament resulted in cut-backs in the schedules of anti-aircraft guns, tanks, certain types of shells, and other products. Taking up this slack were increased orders for fighting planes and their engines, tank destroyers, and naval equipment. A reflection of the 1944 strategy is seen in the fact that medium bombers are giving way to long-range super bombers, which can reach the heart of Japanese defenses. Production of heavy trucks is given the green light, presumably to provide our invasion forces with sturdy vehicles for maintaining supply lines on 1944's European battlefronts.

Early in the year, material shortages provided frequent deterrents to continuous output, but, as the year advanced, many of these difficulties were ironed out through the refinements of the Controlled Materials Plan, and the Plan's general adoption by most of American industries. Automotive material experts and purchasing men held frequent consultations with government officials during the year, at which they repeatedly urged the adoption of realistic production schedules. When the principle of balancing schedules with materials available became recognized by the WPB and the services, and as paper work was simplified, many of the shortages were eliminated. In fact, by the fourth quarter of 1943, an actual surplus of steel and other materials began to develop, and the once ominous materials crisis appeared to be over for the duration.

The year of 1943 brought, too, a surplus in some types of finished war products, which gave the armed services a problem of disposing of jeeps, trucks, and other supplies for which there was no immediate military need, either because the goods already were obsolete, or because there existed a surplus of the particular types put up for sale.

Abundance of some types of equipment on hand was reflected, too, in the cancellation of war contracts throughout American industry. By the third quarter of 1943, more war contracts had been terminated than had been curtailed at the end of World War I. The largest contract affected in the automotive industry involved production of a medium tank. This cancellation called for the stoppage of tank work in the plants of 500 suppliers which were furnishing parts and equipment to the prime contractor, and demanded the taking of detailed inventories which consumed months of time. As a result of this, and numerous other cases, the Automotive Council for War Production set up a Contract Termination Committee, composed of first-rank executives from representative automotive companies, to point out to responsible governmental officials the importance of the problem, and to urge the establishment of an orderly procedure for handling the physical and financial aspects of terminations.

The paradox of too much war equipment of the same types and not enough of others was the reality that the automotive industry faced in the early stages of 1943. With a backlog of war orders totaling \$15 billion, leaders of the industry had a strong awareness of the huge tasks ahead, and intensified their efforts to keep war production

charts moving upward.

At present the automotive industry is producing complete, ready-to-fly assemblies of four different types of aircraft, and is preparing to start work on two more. In addition it is fabricating parts and subassemblies for 11 other types of combat craft and is producing 12 different types of aircraft engines. Four major plants and their network of suppliers have taken on the production of airframes for the new heavy bomber, the B-29, in place of a medium bomber, a change which involved rearrangement of production lines, shifts in equipment, and other dislocations comparable to the conversion-period turmoil. Included in the four complete aircraft is the four-motored Lib-

erator bomber, which is carrying the brunt of the heavy bombing in the Mediterranean theater and over the Pacific. The Grumman Wildcat and the Grumman Avenger torpedo bomber, both carrier based planes, also are being turned out on auto-

motive assembly lines.

Thousands of Boeing Flying Fortresses, North American Mitchell medium bombers, and Martin Marauders now in front line action are assembled from fuselage and wing sections built in automotive plants. The same is true of great fleets of Douglas Boston fighter-bombers and the Vought Kingfisher naval scout planes. The Army's Republic P-47 Thunderbolt and the Navy's Vought Corsair get their wings from automotive body plants and their engines from other plants in the industry. The Consolidated Vultee Liberator Express, the Curtiss Commando, and the Douglas Skymaster -the mainstays of the Air Transport and Troop Carrier commands—receive their major assemblies from the automotive industry.

The twelve engine types now being delivered in tremendous quantities by former automobile manufacturers range from 90-horsepower jobs for aerial jeeps to the powerful Pratt and Whitney Double Wasp, the Wright Cyclone, and the Allison liquid-cooled. Included in the power-plant section is the British Rolls-Royce Merlin which is going into American Mustang fighters and British Lancaster and Mosquito bombers, as well as the RAF

Spitfire fighter.

In addition, the industry is turning out such aero equipment as power-driven gun turrets, turbo-superchargers, propellers, bombsights, automatic pilots, gyroscopic flight instruments, parachutes,

aerial cannon, and aerial torpedoes.

Of the three medium-tank producers remaining in the field, two are in the automotive industry. Light tanks and tank destroyers are built as well. The services depend heavily upon the automotive industry for guns of various sizes, ranging from Naval artillery to carbines for paratroopers, for shells, and for many types of Diesel equipment for land and sea use. The industry is still, of course, the only American source of all jeeps, ambulances, light, medium, and heavy military trucks.

In contrast with the pre-Pearl Harbor turmoil of getting into production on weapons which they had never before seen, the automotive engineers and production men have worked out techniques of exchanging information on war production which enables them to overcome bottlenecks and to apply their knowledge concertedly to common tasks. This is particularly true in the aircraft field, where under the guidance of the Central Aircraft Council, the one-time competitors in the automotive industry voluntarily swap production information and know-how on aircraft engine and airframe production. Untold additional quantities of war materials have been added to the nation's arsenal as a result of this free and easy interchange of technical data

With the bottlenecks in machines, materials, and methods broken, one by one, with the progress of the war, only manpower remained late in 1943 as a potential limiting factor on war production. In this field, too, voluntary mechanisms were established to solve problems of absenteeism, transportation, child care, under-utilization of la-bor, recruiting of women workers, and other fac-

tors affecting the production picture.

Among the most effective remedies offered in the effort to avert a manpower shortage were the industrial training films issued by the U.S. Office of Education (q.v.) and given nationwide distribution through Castle Films, Inc. (See photographs p. 385.) So great was the success of these sound motion pictures in reducing the training period in plants, by visual and oral explanation of mechanical operations, that their use was extended to England, Australia, New Zealand, South Africa, India, Russia, and other areas of the world where war equipment is being manufactured for the Allied Nations.

In Dayton, Ohio, where several automotive plants and scores of suppliers operate, a community-wide effort to handle problems locally was instrumental in lifting Dayton from a Class One critical labor area. In Detroit, establishment of the Victory Council in the autumn, brought community leaders together to work on the area's manpower problems, and a far reaching program was launched to overcome a predicted labor "deficit" in the community in 1944.

There were 835,000 wage earners on the payrolls of principal automobile plants in December, employed by plants that formerly manufactured motor vehicles and bodies. In addition, several hundred thousand men and women were employed by parts companies. The average paycheck in the industry totaled \$58.47 a week.

Standards covering the health and safety problems of women workers and of rehabilitated war veterans have been drafted by the automotive in-dustry, through its Medical Panel of plant physi-cians. The Panel was convoked some time ago by the Automotive Council for War Production, as a means of pooling the experience and knowledge of the industry. It is studying such matters as industrial fatigue, prevention and cure of dermatitis, standards in dealing with pregnancy of women workers, and the rating of industrial jobs suited to employment of disabled war veterans and handicapped persons. The practice of sharing and exchanging medical and health information among the member companies is merely an extension of the industry's general wartime policy of pooling ideas. As in the case of exchange of data on manufacturing practices that has so greatly contributed to output of war products, this new collaboration to promote the well-being of workers is one that is expected to profit the nation as a whole.

On the highway side, more than 24,000,000 cars continue to operate, supplying essential transportation needs, nearly two years after the production of passenger cars was suspended. Evidence of the necessity of passenger cars was pointed up by a survey of employees in 94 war plants, which showed that 73 per cent of them drove to work. About 85 per cent of the mileage chalked up by war workers is necessary driving, with more than half of it expended in going to and from work.

With the rationing of gasoline because of demands for high-octane fuel, and other exigencies of war, improvements have been brought about in petroleum products utilized for motor transport that eventually will prove of benefit to the motorists. (See CHEMISTRY.) Outstanding among these is the fluid catalytic cracking process which the M. W. Kellogg Company had an important share in developing. Indications are that these improvements will make for a more economical motor fuel in the postwar period. (Also see Petro-LEUM ADMINISTRATION.)

Despite trouble in getting replacement parts, and in the face of growing personnel needs, motor trucks made possible the maintenance of hundreds of essential services. One of the important links between the war goods manufacturer and his subcontractors, the nationwide system of motor transport remained an integral part of America's transportation system. More than 54,000 communities not served by railroads are dependent entirely upon the motor truck for their daily needs. In 1943, motor transport hauled 87 per cent of the cattle going from farm to packer, it brought half of the nation's fruits and vegetables to market, and delivered all of the milk to 34 largest cities in the United States.

In view of rationing and other restrictions on passenger car movements, the nation's buses hauled a higher load during the year, intercity bus travel being 150 per cent above 1941. City bus and

street-car use was up 60 per cent.
Owners of motor vehicles shouldered \$2,034,-000,000 of the nation's tax load (see Taxation) through payments for registration certificates, and because of gasoline taxes, local taxes, and tolls.

For statistics on numbers of motor vehicles, fuel consumption, etc., see the table under ROADS AND STREETS. See also Accidents; Defense Transpor-TATION, OFFICE OF; FEDERAL BUREAU OF INVESTI-CATION (for thefts); INSURANCE; RAILWAYS (for competition); RAPID TRANSIT (for busses); RUB-BER (for tires); STATE LEGISLATION.

BERT PIERCE.

MOZAMBIQUE (Portuguese East Africa). Area, 297,654 square miles. Population (1940 census), 5,081,266, including 5,027,591 natives and 27,488 Europeans. Chief towns: Lourenço Marques (capital) 47,390 inhabitants in 1936, Beira 12,988. In 1941 there were 691 primary schools with 92,757 students, a high school with 528 students, and 44 professional schools with 4,074 students.

Production and Trade. The chief products are groundnuts, copra, sesamum, sugar, sisal, cotton, maize, and gold. Livestock (1941): 563,223 cattle, 266,997 goats, 70,135 sheep, and 58,387 pigs. Trade (1942): imports 566,640,000 escudos; extended to the imports 566,640,000 escudos. ports 339,000,000 escudos. Most of the imports came from Portugal, Great Britain, United States, and the Union of South Africa. The chief export markets were Portugal, Northern and Southern Rhodesia, Union of South Africa, and British India. There is a large transit trade in the ports of Lourenço Marques and Beira for the Transvaal, Swaziland, Northern and Southern Rhodesia, Belgian Congo, and Nyasaland. During 1941 some 947 ships of 3,598,816 tons entered the ports of Beira,

Lourenço Marques, and Mozambique.

Communications. Railways (1940): 1,250 miles.

Roads (1940): 17,545 miles. In 1941 there were
7,633 miles of telegraph line, 225 telegraph sta-

tions, and 6,402 miles of telephone line.

Government. Budget estimates (1942) balanced at 488,214,423 escudos. Public debt (Dec. 31, 1941) 3,884,591 escudos. The territory of Manica and Sofala (51,881 sq. mi.) which had been under charter to the Mozambique Company for 50 years reverted to the Portuguese Government at the conclusion of the charter on July 19, 1942, and was incorporated as a fourth province of the colony with Beira as its capital. The Government of Mozambique is under the control of a governor general, assisted by an executive council, and a government council made up of officials and elected representatives of the commercial, agricultural, and industrial branches of the community. Governor General, João Tristão de Bettencourt.

MUSIC. The second year of the United States war against the Axis powers brought no one sensational or outstanding musical event to parallel the much publicized and highly dramatized performance of the Shostakovitch Seventh Symphony in the summer of 1942. However, many occurrences of various natures proved to be not lacking in interest and, taking into consideration the dislocations caused by inductions into the armed forces, musical affairs during the year 1943 in this country showed a remarkable and gratifying vitality.

Perhaps the most significant happening of the year was the unionization of the Boston Symphony Orchestra whose 105 musicians and their conductor, Serge Koussevitsky, became—after holding out for many years—members of Local No. 9 of the American Federation of Musicians. From the early days of its founding by Major Higginson the organization has struggled valiantly against unionism, and of all the great symphony orchestras in the United States the Boston Symphony, alone among about

sixty such, retained its independence.

While this capitulation constituted a major triumph for "the Little Caesar of American Music" as James C. Petrillo has been called, the latter's victory had something of a Pyrrhic quality about it owing to the insistence upon certain discretionary powers by the Trustees of the great New England orchestra. Important concessions were obtained by this Board, among the most important being that of the right to engage musicians from any part of the country and not just those under the jurisdiction of the local union. This concession was an important and a far-reaching one as it entailed the revision of certain by-laws of the Federation itself—a revision which from now on will allow not only the Boston Symphony but all other major orchestras of this country the privilege of hiring such players as they see fit, regardless of whether or not they happen to be under any specific local control.

The liquidation of the Work Projects Administra-

The Inducation of the Work Projects Administration throughout the country caused the disbanding of many orchestral organizations, large and small. The United Service Organizations, however, have been able to absorb many musicians released by those groups, many of which had already been seriously depleted by inductions into the armed forces of the country, and numerous orchestras and bands have been established at or near the more important Army and Navy training centers. This branch of the U.S.O. not only assembles orchestras and bands but trains conductors for them in addition to arranging tours of the various camps for top-ranking musical artists as well as those of lesser renown.

The celebration of its diamond jubilee by the Peabody Conservatory of Music in Baltimore was an event of prime interest in the annals of Musical Education in the United States. Founded in 1868 by George Peabody, this institution has never deviated from the high standard established by its first Director, Lucien R. Southard. It is interesting to record that the sum allocated for its annual up keep at that time was five thousand dollars! Mr. Southard was succeeded three years later by Asger Hamerik of Copenhagen, formerly associated with Hector Berlioz in Paris whose only pupil he claimed to be. The Conservatory soon rose to musical prominence under Mr. Hamerik's direction, such renowned musicians as Anton Rubinstein and Peter Ilyitch Tchaikowsky personally conducting their works at a series of concerts given by the conservatory. Resigning in 1898, Sir Asger Hamerik (knighted by the King of Denmark for his services to music) was succeeded by Harold Randolph who remained its Director for nearly thirty years until his death in 1927. Among the distinguished members of the faculty under his regime were Otis B. Boise, Emmanuel Wad, Ernest Hutcheson, Howard Brockway, Harold Phillips and Gustav Strube. Otto Ortmann was chosen to succeed Mr. Randral Control of the Control of th dolph, continuing in office until 1941 when the present incumbent, Reginald Stewart, took his place. Long recognized as the principal musical institution in the South, the Peabody Conservatory of Music still carries on the tradition and holds to the high ideals of musical education originally formulated by its distinguished Founder.

The American Federation of Musicians, having succeeded in unionizing the Boston Symphony, signed a contract in October with four Radio Transcription firms releasing them from the ban on making recordings imposed upon all firms during the summer of 1942 by Mr. Petrillo. This ban, it will be remembered, forbade all Federation musicians from making mechanical reproductions, transcriptions, and records for radio broadcast, Mr. Petrillo's argument being that increased facilities for mechanical reproduction and the popularity of the ubiquitous Juke-Box were seriously interfering with the chances for professional employment among musicians. The ban caused such widespread indignation that even Elmer Davis, Director of the OWI, endeavored to get Little Caesar to rescind the order but without success. The Department of Justice, charging violation of the Sherman Anti-Trust Act, applied for an injunction against the enforcement of the order, but the suit was dismissed on the ground that this was a

labor dispute.

The transcription firms which signed the above-mentioned contract are C. P. MacGregor, Lang-Worth Feature Programs, Inc., Standard Radio, Inc., and Associated Music Publishers, Inc., of which Muzak, Inc., is an affiliate. A few weeks previously the A.F. of M. had come to an agreement with Decca Records, Inc., and its transcription-making affiliate, the World Broadcasting System, Inc. Both the Decca and the newer contracts call for payments to the union's Employment Fund—3 per cent of the gross revenues of the business, which Mr. Petrillo claims is what he has been demanding all along. Two other transcription firms,

the Empire Broadcasting Corporation and the WOR Recording Studios, have also signed contracts

with the union.

The whole business has been, and still is, both complicated and exasperating. In spite of the undoubted justice of some of the claims put forward by Mr. Petrillo, the high-handed, dictatorial, and irritating methods employed by him have antagonized thousands of music-lovers throughout the country—press and public uniting to protest against the methods and manners of the man who considers himself the Czar of American Music.

The New York Philharmonic Symphony after two years of being lobbed from one conductor to another will once more have a maestro of its very own. The new occupant of its historic podium is none other than Artur Rodzinski who for the last ten years has directed the Cleveland Orchestra. In his announcement of this appointment on Dec. 28, 1942, Marshall Field, president and chairman of the board of directors of the Philharmonic-Symphony Society, stated that Dr. Rodzinski would asume not only the duties of Conductor but those of Musical Director as well. This represents a departure from recent practice as all Philharmonic conductors of the last few years have been responsible to the board of directors in matters per-

taining both to programs and personnel.

To patrons of the Philharmonic this change in policy was most welcome. During the last two years this orchestra has had no less than 12 conductors—a situation fraught with peril for any first-class body of players; continually pulled this way and that, these musicians have had a difficult time of it, being forced to adapt themselves overnight, so to speak, to brand-new conductors, each of whom had his own interpretations to put forward. The result was exactly what might have been expected—the musicians soon lost all sense of being an entity and speedily developed into rugged individualists, so much so in fact that the Philharmonic began to get an unfortunate reputa-

tion among visiting conductors. That such conditions actually existed was made clear to the public by the blast of publicity given to the dismissal of fourteen high-ranking players in an announcement made by Mr. Field in February, 1943, in which he stated that these dismissals were being made in accordance with specific recom-mendations of the new musical director, Dr. Rodzinski. The manner of the announcement brought a storm of protests from certain of these artists, among them Mishel Piastro who had for many years been Concertmaster of the orchestra. Mr. Piastro was quoted as saying that he was being used as a scapegoat for the management's past mistakes. A formal complaint was made to Local 802 of the American Federation of Musicians demanding a union trial for Dr. Rodzinski, the charges being that he had disparaged the reputations of fellow union members. As conviction on such charges would have debarred Dr. Rodzinski from conducting any union orchestra in the country, the situation was a delicate one, even for the A.F. of M., which was reluctant to become involved in a dispute with the Philharmonic directors. After several weeks of discussion a settlement was reached, the Union sustaining the right of the Philharmonic not to renew the contracts in question, and the board of directors reinstating at Dr. Rodzinski's request 5 of the 14 musicians slated for dismissal. Mr. Piastro, however, was not one of these, and the post of concertmaster was given to John Corigliano, his former assistant. With its present distinguished conductor and musical director, it is expected that the reorganized Philharmonic will not be long in regaining its former

high estate.

The New York Music Critics' Circle gave its second annual award for the finest orchestral work by an American composer performed in New York during the 1942–43 season to Paul Creston for his Symphony No. 1, Op. 20. This work was one of the five selected by the Circle for reperformance, these compositions being broadcast by the N.B.C. Orchestra at two concerts on May 23 and 30 respectively with Frank Black conducting. Mr. Creston's symphony was first presented in New York by the Philadelphia Orchestra at Carnegie Hall under the direction of Eugene Ormandy. The composer had also been awarded a grant of \$1,000 by the American Academy of Arts and Letters the month before.

In connection with the New York Music Critics' Circle, it is interesting to note that, although only two years old, its recommendations of works for reperformance has aroused such interest throughout the country (particularly since the Broadcast Concerts above mentioned) that plans are being considered whereby affiliated Music Critics' Circles may be formed in the various larger cities with the idea of their participation in the selection of works for rehearing and the conferring of the final awards. The plan, while it presents many practical difficulties, is one well worthy of consideration and it will be interesting to see if it can be satisfactorily worked out.

The first Pulitzer prize in Music was awarded to William Schuman for his "Secular Cantata No. 2—A Free Song." This work was performed by the Boston Symphony and has been published by G. Schirmer, Inc. The award was a cash prize of \$500 instead of the scholarships previously granted and is only one of many awards and citations won by Mr. Schuman, among them being the first Town Hall League of Composers award in composition (1939), two successive Guggenheim fellowships (1939–40), and the first annual award of the New York Music Critics' Circle.

Guggenheim Fellowships were granted to five musicians: Normand Lockwood, Arthur Kreutz, and Harry Patch, for composition; Bertrand H. Bronson, to prepare a study of English and Scottish popular ballads, and Colin McPhee, to complete a book on the music of Bali. In addition, Martha Graham was awarded a fellowship to compose dances on American themes to music by Aaron Copland and Carlos Chavez, both former Guggenheim Fellows.

Artists. The return of Marjorie Lawrence to the operatic and concert field after nearly two years of absence was an event of outstanding interest in musical circles. Stricken with infantile paralysis in Mexico City while rehearsing for the opera season there in 1941, she has fought her way back to health with indomitable courage, her first concert last winter at the Town Hall being a genuine personal triumph, as was her reappearance on the stage of the Metropolitan Opera House as Venus in Tannhaeuser, a role in which she can remain seated throughout as she does when appearing in concert or as soloist with the orchestras. At a testimonial dinner given in her honor at the Town Hall Club a letter arrived by special messenger from the White House—a letter of congratulation "from an old veteran to a new recruit" signed by Franklin Delano Roosevelt.

An important debut at the Metropolitan Opera House was that of James Melton who made a successful first appearance there as Tamino in *The*  Magic Flute. An unknown young singer, Marie Wilkins, though not officially of the company at the time, made an "emergency debut" in the title role of Lakme owing to a sudden indisposition on the part of Lily Pons, achieving thereby a well-

deserved success.

Death took a heavy toll among the Musical Great in 1943. The famous Russian composer, conductor and pianist, Sergei Rachmaninoff, died in New York three days before his seventieth birthday. Albert Stoessel, composer, conductor, and violinist, collapsed and died on the stage while directing a concert at the American Academy of Arts and Letters. Among other well-known musical figures who succumbed this year were: Alice Nielsen, famous star of both light and grand opera at the turn of the century; Milka Ternina, the great Wagnerian singer and the Metropolitan's first Kundry; Maria Gay Zanatello, artist and teacher, whose Carmen shocked and delighted New Yorkers years ago; Sigrid Onegin, the Swedish contralto, former Metropolitan artist; Clara Novello Davies, English singer, teacher, and conductor; Henry E. Dixie, light opera star of the eighties and nineties, later known as an actor; Victor Harris, conductor, teacher and composer; Elsie Houston, the Brazilian soprano, unrivalled for her interpretations of South American folk-songs; Arturo Buzzi-Peccia, Italian composer and teacher; Timothée Adamowski, former first violinist of the Boston Symphony and founder of the Adamowski Quartet; Nathaniel Dett, Negro composer and conductor, former head of the music department at Hampton Institute, Virginia; Arthur Finley Nevin, composer, whose *Poia* based on an Amerind legend was the first American opera to be performed at the Berlin Royal Opera.

Opera. That opera still retains its hold on the great public notwithstanding the steadily increasing popularity of ballet was clearly demonstrated during the 1942-43 season—not only in such established operatic centers as New York, Philadelphia, Chicago, and San Francisco, which for years have supported an opera season, but among the smaller cities in which various enterprising impresarios have offered their operatic wares. It would be hard to overestimate the awakening interest aroused throughout the country by the Saturday afternoon broadcasts from the Metropolitan Opera House, and those musical snobs who have been decrying music-drama as a bastard form of art, long since dead, must be somewhat embarrassed by the antics of this extremely lively corpse.

Interest in native American operas, despite the Olympian indifference evinced towards them by our country's premier lyric theater, has sprouted and grown to such an extent that musical institutions and independent groups have taken matters into their own hands and are staging on their own numerous operatic works by native-born American composers. While many of these productions are restricted for lack of financial resources to bare essentials of scenery and costumes, many are expertly staged and sung, frequently with some distinguished opera-singer as guest-artist. This is all to the good, and even the layman is beginning to question the oft-repeated dictum to the effect that American composers cannot write serious operas—particularly when, once outside one or two of our principal opera-houses, he sees them popping up like mushrooms all over the countryside.

The Metropolitan Opera House in New York has at long last begun to realize that the old order has changed and that a new type of audience has arisen. Gone is the ancient glamor of the Golden Horseshoe and (except for Opening Night

and a very few gala performances) dinner-coats for men and simpler evening frocks for women have now become the order of the day. Wartime restriction on private cars and the difficulty of procuring taxis have much to do with all this, it is true, but the change goes deeper than such externals—the great music-loving public has discovered the opera and intends to keep it.

Last season at the Metropolitan proved this. Not for many years have the audiences there been as large and as obviously interested in what was going on on the stage. Night after night during the latter part of the season, capacity houses and standees packed in like sardines reminded old stagers of the days of Enrico Caruso, Geraldine Farrar, and Toscanini—and that despite the fact that the Metropolitan has no such vivid personalities to offer at the moment. Interest was not confined to any one type of opera or composer. Mozart's Figaro, Don Giovanni, and The Magic Flute (the last sung in English and a success for the first time in years) shared popularity with the operas of Wagner, Verdi, and Puccini; Carmen took a new lease on life, Rosenkavalier was heard four times, and that former outcast of the house, salome, reestablished herself, if not as a respectable woman, at least as an undoubted box-office attraction as sung, acted, and danced by Lily Djanel.

Lucia di Lammermoor was dusted off and treated to new costumes and scenery. Boris Godunoff was revived with Ezio Pinza (released from governmental duress) in the title-role which was also sung later on by Alexander Kipnis. Tristan und Isolde, after a season's absence, brought forward Helen Traubel, whose Irish princess was superbly sung but less convincing dramatically. A complete "Ring-Cycle" was given as well as two performances of Parsifal—the anti-Nazi sentiments of the audiences not extending to the works of German composers or their language as was the case in 1917–18. The opera receiving the largest number of performances was Verdi's La Traviata (seven altogether) with Puccini's La Boheme not far behind. Wagner led in the number of his operas performed, which was seven, though Verdi, with four works presented, tied with him—each receiving a total of twenty performances.

Among the Metropolitan conductors, Sir Thomas Beecham, Bruno Walter, and Erich Leinsdorf held their own, while two newcomers, Cesare Sodero and George Szell, proved valuable additions to the organization, the latter by his brilliant reading of the Salome score having had much to do with the

success of that opera.

The season extended to sixteen weeks with the addition of a supplementary week, after which the company made its annual tour, its appearances in Philadelphia, Chicago, Cleveland, and Rochester being among the most successful ever undertaken by the Metropolitan. In New York, the reduced admission prices were considered partly responsible for a "broader popular appeal" according to the report of Edward Johnson, general manager of the Metropolitan Opera Association. "In point of entusiasm," he stated in his annual report to the board of directors, "as well as general artistic achievement the season just ended has been the most successful of the present administration."

The New Opera Company, entering into its second season, scored a smash hit with its production of Rosalinda, the Reinhardt-Korngold version of Johann Strauss's Fledermaus. Produced outside the regular subscription series, this operetta is now in its second year as a straight-run Broadway spectacle. Carried over from its first season were The

Queen of Spades by Tchaikowsky and Offenbach's La Vie Parisienne, both in English, and Verdi's Macbeth, sung in Italian with Fritz Stiedry conducting. Walter Damrosch's opera The Opera Cloak and a revised version of The Fair at Scroschinsk by Moussorgsky, also given in English, completed the company's repertoire, Pergolesi's La Serva Padrona, in a special English version by Felix Brentano, and Paul Hindemith's curious little operatic work *There and Return* being presented as extra-curricular offerings at "A Five O'Clock Concert" on the stage of the 44th Street Theatre between regular performances of Rosalinda. Also sponsored by the New Opera Company is the current production of Lehar's Merry Widow, a sumptuous revival with choreography by George Balan-chine, which bids fair to equal the success of the Johann Strauss operetta.

Other operatic productions in New York included three works by American composers—The Mother by Joseph Wood and Solomon and Balkis by Randall Thompson, both put on by the Juilliard School of Music, and Ernst Bacon's A Tree on the Plains, a story of cowboy life, presented by the Columbia Theatre Associates at Brander Matthews Hall. Also of note was the radio broadcast of Italo Montemezzi's newest opera L'Incantesimo with words by Sem Benelli, which was performed by the N.B.C. Orchestra in October, this broadcast

being the first hearing of the work.

The Chicago Opera Company—after a five-week season last year which enlisted the services of numerous Metropolitan artists, and during which was presented a novelty, Moniusko's *Halka*, sung in Polish—has suspended activities for the current season, the difficulty of assembling an adequate company of first-rank singers plus the disintegra-tion of the Chicago opera chorus being given as the reason for this action. The resignation of Fortune Gallo who has been general manager of the company for the last two years was another factor in the situation, Mr. Gallo feeling that his own organization, the San Carlo Opera Company, required his entire attention. Plans are reported afoot for a season in 1944.
San Francisco's War Memorial Opera House was

filled to capacity for the opening of that city's 21st annual opera season in October, 1943; the initial offering was Samson et Dalila and, as heretofore, artists from the Metropolitan were predominant. The Philadelphia Opera Company under the artistic direction of Sylvan Levin not only gave opera in its own habitat but is taking certain of its more popular productions on tour. Established six years ago, this organization devotes its energies to opera in English at popular prices with casts composed of young American singers, emphasis being placed upon coordinated ensemble rather than a

star system.

Operatic road companies scored notable successes up, down, and across the country during 1943, and prospects seem even brighter for the present season. Among these roving troupes are those of Charles Wagner, Salvatore Baccaloni, the Nine O'Clock and La Scala opera companies, together with the Philadelphia and San Carlo organ-

izations mentioned above.

Ballet and Dance. Ballet, long an adjunct of opera, has now established itself as a distinct art-form. Curiously cold to it for many years, the American public (which stayed away in droves when the great Nijinsky was appearing with the original Diaghileff company at the Metropolitan Opera House in 1916) has now taken ballet to its bosom. Two top-ranking troupes carried Russian, Ameri-

can, and other ballets the length and breadth of the land in 1943—the Ballet Theatre and the Ballet Russe de Monte Carlo. The former, an all-American organization at the start, now possesses many of the finest dancers of the original Monte Carlo group, including Leonide Massine—these artists having come over to the Ballet Theatre soon after the internecine war which split the Monte Carlo company in two. One of the greatest ballet organizations in the world today, the Ballet Theatre played two long and brilliantly successful engagements at the Metropolitan Opera House during 1943, among the new works presented being Romeo and Juliet with the Delius score, Dim Lustre, danced to music by Richard Strauss, Fair at Soroschinsk, a dance-version of the Moussorgsky opera which would considerably astonish the composer were he alive, and *Pictures of Goya*, a series of Spanish dances by Argentinita and her own

group with music by Granados.

The Monte Carlo troupe, headed by David Lichine, was on view at the Broadway Theatre and toured the country with great success in a repertoire of classic and modern ballets such as Giselle, Les Sylphides, St. Francis, and Rodeo, and have announced four new productions for the present season. Katherine Dunham and her company in a Tropical Revue, Carmen Amaya and her Gypsy Dancer Troupe, Argentinita and Pilar with their Spanish Dance Ensemble, Martha Graham and her group, Jacques Cartier, actor-dancer, Carola Goya, Paul Draper and Larry Adler, dancer and harmonica-virtuoso respectively, and numerous other dancers and dance-groups are drawing large and enthusiastic audiences in New York and elsewhere, proving beyond a doubt the tremendous popularity of what is perhaps the oldest form of entertainment known—The Dance.

Orchestras. Orchestral activity was tremendous throughout the country last season and that of 1943-44, now well under way, bids fair to equal it. Apart from the better-known orchestras, symphonic groups are springing up everywhere, particularly in the smaller communities. Curtailment of their annual tours by many of the major orchestras due to wartime travel restrictions may quite possibly have something to do with this. American works are becoming more and more popular with conductors and audiences, the playing of compositions by local composers by the smaller organizations throughout the country serving to bring these works to the conductors of the more established orchestras. An interesting experiment is being conducted by Dr. Rodzinski of the New York Philharmonic Symphony, who is devoting certain periods of rehearsaltime to the reading through of unplayed works by native American composers before small audiences of specially invited individuals, the names of the composers being withheld, after which a straw vote is taken as to whether or not (in the opinion of those present) these works merit public performance. While exact statistics are not available as to the number of native works performed in the 1942-43 season, reports from 19 major orchestras reveal that out of 1,398 works played by them during the season 151 were by American composers—the New York Philharmonic, under various conductors, leading with 25.

The summer season of 1943 was an unusually

healthy one. Open-air concerts of symphonic works, operas, and ballets drew large audiences from coast to coast, these performances having come to be considered an important factor in the morale of the armed forces and civilians alike. The Stadium Concerts in New York drew thousands, the new

stage being a great improvement over the one blown down last year. Other performances were those of the Robin Hood Dell in Philadelphia, Ravinia Park near Chicago, the Hollywood Bowl, and the Watergate Concerts in Washington. Boston, Chicago, Cleveland, and various other cities had their usual summer series of symphonic concerts, and summer opera was on view in St. Louis, Chautauqua, and the Cincinnati Zoo.

The State of North Carolina, through its senators and representatives in Raleigh, voted in March to subsidize the North Carolina Symphony. This organization, now ten years old, is unique in that its personnel is drawn from fifteen communities throughout the State and includes music-teachers, students, writers, housewives, and factory-workers; these players are rehearsed as sectional units by the conductor, Benjamin Swalin, who brings them together for final all-unit rehearsals a few days before

each concert.

A grandiose scheme, hatched out by James Petrillo with the blessing of President Roosevelt, to present all of the nation's major orchestras in union-sponsored concerts in small communities encountered opposition, ironically enough, from a branch of Mr. Petrillo's own organization—700 members of Local 802 in New York City signing a petition demanding that these concerts be played by unemployed or partially unemployed musicians rather than by members of leading orchestras already earning good wages. Another snag was met when the New York Philharmonic, backed up by other major orchestras, stipulated as one condition for participation the lifting of Mr. Petrillo's ban on symphonic recordings. One concert, however, was given in Poughkeepsie, N.Y., in September, and another in Kingston, both with the Philharmonic orchestra.

Contracts providing for commercial sponsorship of their radio broadcasts were made by two of the nation's leading orchestral organizations, the New York Philharmonic-Symphony Society and the N.B.C. Orchestra, while rumors are in the air that the Boston Symphony and the Philadelphia Orchestra soon may follow suit. Big business firms are recognizing the prestige to be gained from association with such famous organizations and the orchestras in their turn will reap a much-needed financial benefit. Just to what extent advertising will be allowed to intrude during these broadcasts remains to be seen—and heard; so far such sponsors have displayed heroic and gratifying restraint.

In Canada, the Toronto Philharmonic under the direction of Sir Ernest MacMillan gave, in addition to its regular subscription series, a season of concerts during the summer. Together with the Mendelssohn Choir (of which he is also conductor), Sir Ernest presented several major choral works, among them Handel's Messiah and Verdi's Requiem Mass. Visiting orchestras augmented the symphonic concerts and numerous distinguished artists were heard as soloists or in recital. Montreal's music festival was dominated by its opera performances, the most important being Sir Thomas Beecham's presentation of *Tristan und Isolde* with Marjorie Lawrence as Isolde, certain departures from the usual dramatic procedure for the singer's benefit in no wise marring the performance as a whole, in which she achieved a notable artistic triumph. Jeanette MacDonald, the popular screen favorite, was heard as Juliette in the Gounod opera, and The Marriage of Figaro was also done under the direction of Sir Thomas Beecham. In addition the Montreal Festival sponsored a dramatic version of Bach's St. Matthew Passion, staged by Dr. Graf who based his action on Albrecht Durer's pictures of the Trial and Crucifixion of Christ.

In Buenos Aires, the Teatro Colon's official grand opera season came to a successful close in September with a performance of Strauss's Elektra, the company being largely made up of artists from the New York's Metropolitan. The Colon Orchestra functioned as usual under Albert Wolff, Fritz Kleiber, and other conductors, and Shostakovitch's Seventh Symphony was given its Buenos Aires première. Orchestral concerts were given in Rio de Janeiro by the Brazilian Symphony Orchestra under the direction of Eugen Szenkar, while for its opera season it depended, like Buenos Aires, to a great extent upon singers from the Metropolitan Opera House.

In Mexico City, Carlos Chavez and his Mexican Symphony Orchestra presented numerous native works as well as compositions by American composers; assisting Mr. Chavez this year were three prominent Mexican conductors and composers—Blas Galindo, Jesus Reyes, and Edwardo Hernandez Moncado. An opera season was held under the auspices of the National Opera Association of Mexico, just founded, of which Emilio Portes Gil, former president of Mexico, is the president; this season was opened with Beethoven's Fidelio under the musical direction of Erich Kleiber. The Havana Philharmonic, of which Massimo Freccia is musical director, gave a series of fifteen concerts, Eugene Ormandy of the Philadelphia Orchestra making a guest appearance while Artur Rubinstein and Mischa Elman were among the soloists heard.

Choral and Chamber Music. Two presentations of Bach's St. Matthew Passion, surprisingly different in character, were given during the same week in New York City-one under the musical direction of Leopold Stokowski at the Metropolitan Opera House, the other under the aegis of Bruno Walter at Carnegie Hall. Mr. Stokowski's version was done in collaboration with Robert Edmond Jones and George Balanchine, scene-designer and choreographer respectively, the purpose being to present the work as a "miracle-play" with settings and costumes, together with about forty mimes headed by Lillian Gish. The work was much cut and, needless to say, critical opinion was divided over what was to many a touching and impressive performance. The concert version of Mr. Walter was given uncut, lasting from 6:30 until 10:30 p.m. with a 45-minute intermission between the first and second. parts. He had the great advantage of having the Philharmonic Symphony plus the Westminster Choir supplemented by the Junior Choirs of the Pius X School of Liturgical Music, while Mr. Stokowski had the student orchestra of the Juilliard School and players from the High School of Music and Art and Columbia University to train and direct, to which was added the Collegiate Chorale, whose excellent work under Robert Shaw has made it an organization of the first rank.

A simple and appealing presentation was the same composer's Passion According to St. John, directed by Paul Boepple and sung by the Dessoff Choir and the Chapel Choir of Princeton University at Carnegie Hall—a performance which, without benefit of a virtuoso orchestra, enlisted among other well-known musicians the distinguished harpsichordist, Ralph Kirkpatrick. The New York Oratorio Society gave its annual Messiah under the late Albert Stoessel's direction at Carnegie Hall, and the People's Chorus of New York held its fifteenth yearly festival under Mr. Camilieri's leadership at that auditorium Christmas Night.

Chamber Music groups were active in New York

and throughout the country, among them being the Budapest, Busch, and Kolisch Quartets, the Washington Chamber Music Guild Quartet, and the famous Pro Arte players, formerly of Belgium and now affiliated with the University of Wisconsin. A series of five concerts devoted to American chamber music was presented at the Museum of Modern Art in New York under the joint sponsorship of the Juilliard School and the Society for the Publication of American Music. The New Friends of Music, restricting their programs to the classics, had a prosperous season at the Town Hall and launched an all-Beethoven series for 1943–44. The Serenade Concerts at the Museum of Modern Art brought forward many interesting novelties by Virgil Thomson, Paul Bowles, the late Silvestre Revueltas, and others, while Frederique Petrides and her Orchestrette were again heard at the Carnegie Chamber Music Hall. The Radio Corporation of America through its RCA Victor Division is offering two prizes of \$1,000 each for two string quartets—one by a composer from the United States or Canada, the other by a Latin American.

Festivals. Although the International Society for Contemporary Music had to abandon its festival planned for Los Angeles, and the Berkshire Music Festival could not be held on account of gasoline rationing and the ban on motor-travel, there was no dearth of other festivals. The 36th Bach Festival was held in Bethlehem, Pa., in May—the B Minor Mass and two programs of shorter works being given. Ann Arbor's Golden Jubilee Festival, also in May, attracted large crowds with the Philadelphia Orchestra and many distinguished soloists, among them Fritz Kreisler. Verdi's Manzoni Requiem (which closed the first festival 50 years ago) was given at the final concert, being sung by the Choral Union of 300 mixed voices whose director, Hardin Van Deursen, shared honors with Eugene Ormandy. Chicago's fifteenth annual festival was held in Soldier's Field before an audience of close to 100,000 in August, a feature of this festival being a band of 1,000 accordionists in addition to American and Canadian military bands and choral groups. These and countless other festivals throughout the country testified to the ever-increasing interest in music which wartime conditions have in no way diminished.

Music in Europe. In wartime England, the National Gallery's lunch-hour concerts organized three years ago by Dame Myra Hess, continued their almost phenomenal success. In spite of being blitzed, leaking roofs, and the myriad inconveniences encountered since their inception, these concerts are more popular than ever with the democratic audiences which support them. Up to the spring of 1943, over 800 concerts had been given before well over 340,000 persons—above \$64,000 having been paid out from the proceeds to members of the musical profession, the greater part of this sum coming from the nominal admission fee of 20 cents.

The Promenade Concerts with the BBC Orchestra under Sir Henry Wood and his two associate conductors, Sir Adrian Boult and Basil Cameron, went into their 49th summer season, attracting large crowds night after night. Musical activities in the provinces seem to have exceeded even those of last year. Touring orchestras, operatic companies, and distinguished artists covered large areas from Land's End to John O'Groat's—the dislocations due to wartime conditions appearing to have increased rather than to have diminished the musical energies of the British. In Manchester, the famous Hallé Orchestra, blitzed out of its own concert hall, is entering its 86th year under its newly-appointed

permanent conductor, John Barbirolli, who will direct the majority of the 200 concerts scheduled at home and on tour. Opera was in view at Sadlers Wells Theatre in London, while from Wales came news of its annual Eisteddfod, a festival of choralmusic and drama, which was given there in August.

Little musical news seeped out from the Axis and Axis-occupied countries. From Italy came the sad news of the destruction of Milan's famous and irreplacable opera-house, La Scala, bombed by air forces of the United Nations before the capitulation of that country. Rumors to the effect that the San Carlo Theatre in Naples had been demolished by the retreating Nazis are still unconfirmed. From Occupied France comes the report (via German-controlled radio) that Raoul Laparra, composer of the well-known La Habanera and other operas, was killed last spring in the American bombing raid on the Renault Works just outside Paris.

Soviet music, having celebrated its twenty-fifth anniversary in 1942, has now become a most important factor in European music. Symphonic works and operas reflecting the artistic and political philosophy of revolutionary Russia are achieving enormous success. While Dmitri Shostakovitch continues to hold the spotlight outside Russia, other composers, less internationally known, are rising to almost equal prominence within the Soviet Union. Serge Prokofieff and Nicolas Miaskovsky might be called old-timers, but among the younger com-posers, Aram Khatchaturian, Ivan Dzerzhinsky, Tokhon Khrennikoff, Michael Gnessin, Dmitri Kabalevsky, and Maximilian Steinberg, son of Rimsky-Korsakoff—to name only a few—are making Soviet musical history. Older composers such as Reinhold Glière, Alexander Goedicke, and Sergei Vassilenko, now in their late sixties, have joined the younger generation in the united effort to develop the new Soviet music. Operas and symphonies are being turned out by the dozen while cinema music is enlisting some of the finest talent available, an outstanding name in this field being Issaac Dunajevsky whose scores form an integral part of the film they accompany; Nikolai Krukoff is another composer whose work in this line has achieved distinguished success.

The Royal Opera in Stockholm has given Sweden a marked prominence in European operatic circles, such internationally famous singers as Gertrud Wettergren, Nanny Larsen-Todsen, and Jussi Björling—Swedish artists well known here—being members of this organization. In Switzerland, Zurich and Basle report musical seasons, and scattered information from various sources brings news of musical activities in Axis and Axis-controlled countries—news which, meager as it is and perhaps unreliable, gives ground for the belief that music is not entirely dead in the occupied areas.

The Palestine Orchestra entered upon its seventh season in Tel Aviv while operas and operettas, sung in Hebrew, were presented by the Palestine Folk Opera; new works by native composers were heard, among them being Joseph Kaminsky's Ha'-Alijah, a composition in variation form on a traditional Jewish theme. Other musical activities consisted of chamber music concerts and numerous recitals. See Philanthropy under Juilliard Foundation; Radio Programs.

NARCOTIC DRUGS CONTROL. Decisions announced on Nov. 9, 1943, by the Netherlands and the British Governments, to suppress opium smoking in their far eastern colonial empires following liberation of these areas from Japanese domination, constitute a major development in the field of international drug control. This action should cut off illicit traffickers from postwar access to what have in the past been leading sources of supply.

Recognizing the necessity of stringent control

Recognizing the necessity of stringent control to prevent a possible postwar increase in addiction such as occurred after the first world war, the United States Covernment is pressing diplomatic discussions looking to an international agreement prohibiting the cultivation of the opium poppy except for medical and scientific needs.

International control over legal movements of narcotic drugs continues to function through the two independent narcotic bodies operating under International conventions, the Supervisory Body and the Permanent Central Opium Board. The headquarters of these bodies are located in Geneva, Switzerland, but branch offices have been maintained in Washington since the outbreak of the war.

National Control. Strict measures for control by the Treasury Department's Bureau of Narcotics of distribution of war-essential narcotic drugs was instituted on May 31, 1943. The Bureau's conservation Order No. 1, issued on a War Production Board directive, permitted assignment of quotas for civilian requirements to primary extractors, manufacturers, and wholesalers, as well as specific quotas for meeting military needs.

Court decisions in 1943 greatly strengthened the Bureau in its efforts to prevent diversion of medicinal narcotics into the illicit traffic. The U.S. Circuit Court of Appeals and subsequently the U.S. Supreme Court upheld conviction of a distributor who sold directly to a physician engaged in illegal dispensing of narcotics to addicts.

There was an increase in the amount of illicit narcotics seized in internal traffic during 1943, as well as an increase in the amount of these drugs seized at ports and borders. The combined total of seizures (for the fiscal year 1943) was 9,933 ounces, as compared with 2,445 ounces seized in the 1942 period. However, seizures in 1942 were abnormally low, and the increased seizures for 1943 were considerably smaller than the volume of a few years ago. There was a slight increase in the number of persons arrested for violation of the Federal narcotic laws, from 1,777 in 1942 (fiscal year) to 1,794 in 1943.

The relative scarcity of narcotics in the illicit trade continues. Because of the shortage of smuggled drugs, robberies, and burglaries of stocks from pharmacies or other registered establishments continue to be a problem. Cooperation of registrants in protecting this critical war material and other special measures which were taken served to reduce losses, however. There were numerous cases involving the forgery of narcotic prescriptions by addicts in attempts to obtain drugs.

Smugglers have resorted to illicit drug sources in the Republic of Mexico to an increasing degree in efforts to supply the demand in this country, and intensified enforcement efforts have been made at border points. The Government of Mexico is cooperating in the fight against this traffic. Numerous seizures, mostly in small quantities,

have been made at ports as a result of searches on vessels engaged in wartime shipping out of Asiatic ports. Oriental crew members of the vessels have been mainly responsible for this traffic.

been mainly responsible for this traffic.

Marihuana. There was a slight decrease in the seizures of bulk marihuana, from 14,709 ounces in 1942 (fiscal year) to 14,315 ounces in 1943. There was a decrease in the number of marihuana cigarettes from 33,954 in 1942 to 26,408 in 1943. The number of persons arrested for marihuana violations decreased from 1,090 in 1942 to 777 in 1943. In continuation of a marihuana eradication program in cooperation with State and local authorities and land owners, an estimated 4,747 acres of growing marihuana were destroyed during the fiscal year, compared to 9,742 acres the previous year.

During the year the Bureau of Narcotics supervised large plantings of marihuana to provide hemp for the U.S. Navy, and policed this project to prevent its becoming a source for illicit traffickers. See Customs, Bureau of; League of Nature

NATIONAL ADVISORY COMMITTEE FOR AERONAUTICS. An independent Committee of the U.S. Government which coordinates and conducts aeronautical research. The principal research laboratories of the Government are the Langley Memorial Aeronautical Laboratory at Langley Field, Va., and the Ames Aeronautical Laboratory at Moffett Field, Calif. The first unit of an aircraft engine research laboratory at Cleveland, Ohio, was placed in operation in May, 1942. Chairman: Jerome C. Hunsaker.

NATIONAL ARCHIVES, The. An independent establishment of the U.S. Government, created in 1934, which accepts and preserves Government records. Archivist in 1943: Solon J. Buck.

NATIONAL BUREAU OF STANDARDS. This Bureau was established by act of congress March 3, 1901. Its functions are the development, construction, custody, and maintenance of the reference and working standards used in science, engineering, industry, and commerce. The Bureau's services are available to the national and State governments and under certain conditions to private firms and individuals. It acts as one of the principal testing laboratories of the Federal government in connection with the purchasing of supplies (other than food and drugs), and conducts research in cooperation with governmental agencies and with engineering societies and trade associations.

The Bureau is made up of nine scientific and technical divisions, three divisions dealing with commercial standardization, and a special division set up as a war measure and concerned wholly with military problems. The regular divisions are the following: electricity, weights and measures, heat and power, optics, chemistry, mechanics and sound, organic and fibrous materials, metallurgy, clay and silicate products, simplified practice, trade standards, and codes and specifications. Each division consists of five to ten sections which are the working units covering specialized fields.

working units covering specialized fields.

The Bureau's staff consists of approximately 2,300 employees and 50 research associates. The annual appropriation for the regular work of the Bureau is approximately \$2,400,000. However, the war has affected all the Bureau's activities, the majority of which are now paid for by the military

agencies. An increasing proportion of the personnel and of laboratory facilities has been transferred to war projects until it is estimated that 90 per cent are so employed. However, certain normal activities have proved fully as useful in war time as in peace. This has been true, for instance, of the standard frequency radio broadcasts which have been extended and improved, largely for the benefit of the military services. The testing of weighing and measuring equipment has increased very greatly; 30,000 master length gages, and 32,000 pieces of glass volumetric apparatus were measured and certified. The scarcity of many engineering and construction materials has been reflected in the problems submitted to the Bureau. Substitutes for metals are being sought in wood, concrete, and the plastics. Recent buildings erected at the Bureau have been fabricated from concrete and wood, using very little steel.

Following inspections of the roofs of Army buildings in many parts of the country, instructions were prepared by the Bureau outlining the conditions under which re-roofing was indicated and giving detailed methods of maintenance and repair. It is believed that several million dollars have been

saved as a result of this survey.

The Bureau has demonstrated that quite often a scarce metal can be replaced by one not so high on the priorities list, possibly treated in some way to give it special properties for the work in hand. An example is the development of exhaust pipes for airplane engines made of steel coated with vitreous enamel to replace the scarce stainless steels. The necessity of conserving fuel oil has been the cause of many tests of "conversion grates" intended to make possible the use of coal in oil-burning heating boilers. Recently, tests have been made of stoves constructed wholly of ceramic materials instead of

The scarcity of alcohol and glycerin, customarily used in anti-freezing mixtures for automobiles, led to the marketing of various salt solutions and hydrocarbons. On the basis of tests at the Bureau which made clear the harmful effects of these materials, their manufacture was banned by the War Produc-

tion Board.

The complete elimination of the usual sources of jewel bearings for electrical and other instruments has resulted in a synthetic sapphire industry in the United States. The Bureau has aided manufacturers in overcoming their many problems, and one company alone is now producing over 2,000,000 carats of spinel and sapphires a month. Crystalline quartz for the manufacture of oscillators is being tested in large quantities; 500,000 pounds were inspected during June, 1943. Supplementing this work, a research project has been started to insure maximum utilization of all grades of crystals. The number of standard samples of pure substances (used as controls in industrial laboratories) ordered during the year was 24,000; more than 150 standards are now available.

A new publication on the physical properties of metals and alloys has been prepared to replace a circular issued in 1924 and still in demand. It should be of great value to engineers who are forced to use unfamiliar construction materials during the emergency. The Bureau of the Mint was assisted in the development of new alloys and production methods for its one-cent and five-cent

Many determinations of the properties of synthetic rubbers have been made, and samples of articles manufactured from these materials have been tested. The Bureau is developing standard

test procedures by which to evaluate the products of the new synthetic rubber plants, so that full utilization of every grade of material will be insured. The rubber laboratory at Belem, under the direction of a member of the Bureau's staff on loan to the Brazilian Government, is now actively engaged in a research program for increasing the yield and improving the quality of natural rubber from the Amazon district. It is believed that both the network and are the research program for increasing the yield and improving the program for increasing the yield and improve the program of the natural and synthetic products will find increasing applications.

In the course of the Bureau's work on plastic windows and enclosures for aircraft, it has been shown that a common constituent of sun-tan lotions, when incorporated in the plastic, will greatly reduce deterioration from the ultraviolet rays in sunlight and will protect the airplane's crew against

sunburn.

Certain alkaline methods have been found feasible for treating low-grade bauxites and common clays so as to recover alumina of sufficient purity to meet the rigid requirements of the aluminum industry. At the Bureau's branch laboratories over 18,000,000 barrels of cement were tested for use

on Government construction projects.

The War Production Board and Office of Price Administration (qq.v.) have requested the Bureau's assistance in developing simplification programs intended to conserve materials and manpower. The Bureau has been associated with WPB in the development of 130 limitation and 25 conservation orders. Twenty-one Commercial Standards have been translated into Spanish and Portuguese in the interests of our Latin-American trade. An important standard affecting domestic business covers the retreading of automobile tires.

Four circulars on elevator maintenance during the war period have been prepared by a special committee and published by the Bureau. Other results of the year's work have appeared in 222 papers by members of the staff—152 in the Bureau's own series and 70 in scientific and technical journals.

The Army-Navy production award was renewed from January 1 and again from July 1, 1943. Three stars are now carried on the Bureau's "E" pennant.

ars are now carried on the Bureau's "E" pennant. The Director, National Bureau of Standards, was one of the United States delegates to the First National Congress of Physics at Puebla, Mexico, May 3 to 8, 1943. Warren E. Emley, for over 30 years a member of the Bureau's staff and since 1926 chief of the division of organic and fibrous materials, retired Oct. 1, 1943. He was succeeded by Archibald T. McPherson, chief of the rubber section. LYMAN J. BRIGGS.

NATIONAL DEBT. See Public Finance; countries under Finance.

NATIONAL DEFENSE, Council of. A Council composed of the Secretaries of War, Navy, Interior, Agriculture, Commerce, and Labor, originally created by Act of Congress, Aug. 29, 1916. The Act authorized appointment of an Advisory Commission to the Council, composed of seven persons having specialized knowledge in certain fields. Such an Advisory Commission was appointed May 29, 1940, and constituted the beginning of the National Defense Program for World War II; its functions were subsequently absorbed by the units of the Office for Emergency Management, the Office of Price Administration, and the Office for Agricultural War Relations.

NATIONAL GALLERY. See ART.

NATIONAL HOUSING AGENCY (NHA). In 1943, as in 1942, the primary concern of the National Housing Agency was war housing-the provision of housing accommodations for the workers who migrated to war industry centers. Concentration of its efforts on that problem was reflected in substantial gains during the year in the volume of war housing produced. During the first ten months of the year, 489,329 units of war housing were completed and, during October alone, 33,354 additional units were placed under construction, thus bringing the ten months' total of units started in 1943 to 392,423.

With this increase in war housing production, together with the greater use that has been made of existing structures for war housing purposes, it is possible now to say that the war housing program has reached an advanced stage. Since the start of the emergency in mid-1940, some 1,350,000 units of war housing have been completed, another 200,000 are in various stages of construction, and over 1,500,000 in-migrant war workers have been housed in existing private structures. In many localities it is possible also to say that war housing has caught up with the

immediate demand.

These accomplishments were possible because during 1943 still greater integration of housing with the total war program and virtually complete conversion of the housing industry to a wartime basis were achieved. The year 1943 was the first full year of operation under the consolidated National Housing Agency, which had been formed tional Housing Agency, which had been formed early in 1942 to focus and direct the urban housing activities of the Federal Government. (See 1943 Year Book.) The new set-up has represented a streamlining of the organization on a functional basis. The Office of the Administrator performs the over-all, fact-finding, and planning functions which currently consist primarily of formulating war housing policy and programming war housing, including its postwar disposition. The three major constituents of the Agency perform three major constituents of the Agency perform their traditional functions, with special attention now to their relation to war housing. They are the operating arms of the Agency through which the war housing program is executed.

Federal Home Loan Bank Administration. This unit

of the NHA supervises three agencies in the field

of thrift and home finance.

(1) The Federal Home Loan Bank System functions as a credit reservoir for its 3,774 member savings and loan associations and other financial institutions which make loans for the construction, purchase, and refinancing of homes. In spite of the virtual stoppage of nonwar home building, during 1943 total lending activity of member institutions of the System exceeded that in 1942, because of an increase in loans to finance the purchase of existing houses. Member institutions strengthened their position during 1943, increasing their combined assets from \$5,658,000,000 to \$6,238,000,000, although the number of members declined slightly because of mergers. The 12 regional Federal Home Loan Banks of the System are in the strongest position in their history. Their reserves and paid-in capital rose substantially during the year and on Nov. 30, 1943, they reported the highest volume of cash and government investments since their establishment in 1932.

(2), The Federal Savings and Loan Insurance Corporation protects the savings of investors (up to \$5,000 each) in all Federal savings and loan associations and in State-chartered thrift associations which have applied for and been approved for this safeguard. The 2,439 insured institutions, which hold the savings of about 3,600,000 persons, generally improved their condition during 1943. Over the year the Federal Savings and Loan Insurance Corporation itself increased its assets from \$138,797,000 to \$145,619,000, and its reserves and unallocated income from \$35,025,000

to \$43,350,000.
(3) The Home Owners' Loan Corporation (HOLC), established in 1933, is continuing its liquidation program which began in 1936. Original loans of HOLC, plus later advances and miscellaneous costs, totaled \$3,486,000,000. As of Oct. 31, 1943, HOLC had reduced this investment to \$1,500,000,000—or by 57 per cent through collections on its loans and the sale of its acquired properties. Of the total of 196,000 properties securing its loans, which the Corporation has been obliged to take over since it began operations, more than 91 per cent have been sold. HOLC is also handling the publicly financed "conversion" program of NHA's wartime Homes Use Service, described below.

Federal Housing Administration (FHA). The FHA insures mortgage loans made by approved lending institutions for the purchase and construction of homes which meet its location requirements and standards of construction. It also has facilities for insuring loans for home modernization and repair. and for rental properties in large projects. Activity in these categories during 1943 was curtailed as housing swung over almost exclusively to the provision of accommodations for war workers. In order to make the insurance feature available for war housing, the National Housing Act was amended in 1941 by liberalization of the terms of obtaining FHA insured loans and by extension of mortgage insurance to specific war production areas. Authorization under this legislation has been increased to \$1,600,000,000 and war workers are given occupancy priority in the structures made available through such insured mortgages.

During 1943 construction of approximately 138,-000 new dwelling units was started by private builders under FHA inspection and in conformity with FHA minimum construction requirements. All of these were in critical war housing areas. Also during the year insured loans for repairs, maintenance, and remodeling of existing structures as well as for fuel conservation through oil-burner conversion and the installation of insulation were made in the amount of approximately \$96,000,-000, involving 308,000 individual properties. Total loans of all types insured during 1943 amounted to \$942,000,000 and of this amount approximately \$600,000,000 financed new dwelling construction almost exclusively for war workers.

The FHA is also the agency which processes applications for preference rating orders for the War Production Board (q.v.). During 1943 the field offices of the FHA processed applications representing more than 300,000 dwelling units in proposed privately financed projects for war workers. See Sanitation.

Federal Public Housing Authority (FPHA). This unit of the NHA is authorized to provide housing for persons engaged in war activities in localities in which the President finds that an acute shortage of housing exists or impends which would impede war activities, and that such housing would not be provided by private enterprise when needed. This includes housing for workers engaged in in-dustries essential to the war effort, for certain military and naval personnel, and for certain employees of the Government whose duties are essential to the war effort.

The Federal Public Housing Authority is authorized to acquire land and to construct and op-erate projects to provide such war housing, including family housing, dormitories, and trailers. The Federal Public Housing Authority is authorized to utilize local public housing agencies in the construction and operation of such war housing

projects.

The Authority also is authorized to revise contracts for financial assistance which had been entered into with local public housing agencies in connection with low-rent housing and slum clearance projects located in areas where there is a shortage of housing for persons engaged in war activities, so that these projects can be used during the war to provide necessary public housing for war workers.

Pursuant to the United States Housing Act of 1937, as amended, contracts for financial assistance (in the form of capital loans and annual subsidies during administration) to aid local public housing agencies in the development and administration of low-rent housing and slum clearance projects were entered into by the United States Housing Authority. (See 1942 Year Book, pp. 264-5.) The Federal Public Housing Authority now is administering these contracts under Executive Order 9070. As a result of the war, the construction of further low-rent housing and slum clearance projects has been suspended for the duration. To assist the war effort, projects originally constructed for low-rent housing and slum clearance purposes are being used where possible for war housing purposes.

The Authority also administers nonfarm housing

projects developed by the Farm Security Administration, including three "greenbelt" communities, and some 40 rural or suburban projects for families not deriving their principal income from operating or working on farms.

As of Oct. 31, 1943, FPHA's war-housing program totaled 573,892 dwelling units, of which 430,561 were completed and under management. The total consisted of 462,834 family dwelling units; 71,268 dormitory units; and 39,790 trailers. These units represent approximately 80 per cent of the total publicly financed war housing program. The low-rent program consisted of 132,-

376 family dwellings.

Coordination of war housing with the total war effort has meant complete integration of the war housing program with the basic programs of war production and war manpower. As an instrument of the manpower program, war housing is entirely correlated with the policies and findings of the War Manpower Commission (q.v.). If the Commission certifies that in-migration of war labor is essential in any given community, it is the responsibility of the National Housing Agency to provide housing for those in-migrants, according to their family and financial status. Finally, where the Commission determines that the local labor supply is sufficient for the war manpower needs, the NHA does not schedule any new housing and the War Production Board does not permit use of critical materials for housing in that community.

Similarly on the materials front, the war housing program has been integrated with the materials allocation system of the War Production Board to assure that the critical materials made available to housing will be used only for the most essential war purposes. The National Housing Agency cannot schedule new construction in

any locality except to the extent that its housing needs cannot be met through use of existing structures.

Where new construction is unavoidable, the NHA is the spokesman for the industry in obtaining the necessary materials for the total war housing program. Under WPB's Controlled Materials Plan, the NHA is a claimant agency, a status which puts housing on a par with other war production industries in seeking and obtaining materials. This status for war housing is contingent upon the NHA's effort to make maximum use for housing purposes of existing structures, and to that end the NHA has intensified its efforts through its Homes Use Service.

Conversion of the house building industry to a complete war basis has taken several forms. One of the most important has been the conservation of critical materials. Because housing competes with direct war industries for many of the materials used in its construction, the war effort has dictated that even the most essential war housing use only the absolute minimum quantities of the materials needed for ships, planes, guns, and tanks. The NHA therefore has worked closely with the industry and with other governmental agencies to eliminate every unessential use of metal, particularly, in housing construction and wherever possible to develop substitutes for the most critical items. As a result of these efforts, savings ranging from 60 to 80 per cent in use of critical metals as compared with prewar levels have been accomplished in the war housing construction program. These savings apply to both privately and publicly financed war housing accommoda-

A second method of putting war housing on an all-out war basis has been the increased use that has been made of existing structures for housing purposes. The Homes Use Service was organized in the National Housing Agency for this special purpose and has pursued this objective by promoting an intensive campaign to get people to share their homes with in-migrant war workers, and by promoting the conversion of existing buildings into additional accommodations for war workers. During 1943 the Homes Use Service perfected the lease arrangements for publicly financed conversions; improved techniques for cooperation with private real estate brokers, as a result of which more properties are being offered for conversion; developed closer working arrangements with local communities which have resulted in increased sharing of homes and more conversions of private properties; established some 170 War Housing Centers which are clearing houses of in-formation about local housing accommodations and are the places where vacancies may be registered and applications for accommodations filled, thus facilitating the meeting of demand and supply in a given area

Also, during 1943, NHA's policy of encouraging private building enterprise to do as much of the war housing job as it could and was willing to do under the limitations as to materials, prices, and rents dictated by the war economy has been further implemented. The NHA has cooperated closely with private industry and private finance, to obtain their maximum participation in the war housing program. This has included joint efforts to save critical material by revised construction practices and the development of substitutes; constant consultation on mutual problems and the development of as great a degree of certainty in operating conditions as can be attained in war-

time. The NHA has secured equal access to critical materials for qualified private projects through the AA-3 preference ratings now assigned by the WPB to all war housing. It has cooperated also in the revision of war housing construction standards to simplify the alignment of private activity with war housing requirements. By thus clarifying the role of private enterprise and the condi-tions controlling its participation in the war hous-ing program, the resources and cooperation of the private building industry have been mobilized to supply almost all of the war housing for which a continuing postwar need is indicated.

Since the beginning of the housing emergency in mid-1940 private builders had completed, up to Nov. 1, 1943, approximately 600,000 new family dwelling units under the war housing program and had more than 80,000 additional units under construction. This includes close to 300,000 units built without priorities in the earlier period of the emergency but serving war housing needs, and more than 380,000 units started with priorities assistance under local war housing quotas.

The final major move toward a complete war basis for housing has been the progressive shift of publicly financed housing away from permanent and toward temporary construction. This policy has been dictated by the necessity for maximum conservation of critical materials; besides, it is more economical, permitting more units out of given funds. Another important consideration has been time. Reference already has been made to the sharp reductions achieved in the use of critical materials. With respect to cost, the shift to temporary construction for publicly financed war housing has resulted in savings approaching \$400,000,000 in the cost of family dwelling units alone. The working out of a conversion technique, whereby family dwelling units can be produced at half the cost of even a temporary new dwelling, will result in the saving of another \$75,000,-000. As for the time factor, resort to temporary construction has been a major factor contributing to the record of more than 1,000 new units of daily production for the publicly financed program.

Of the total publicly financed war housing program to date, almost precisely two-thirds of the units provided as of July 31, 1943, had been of nonpermanent construction. These units included both temporary and demountable types as well as stop-gap or trailer accommodations. The actual percentages are as follows: 33.3 per cent permanent; 61.5 per cent temporary, including demountable; and 5.2 per cent trailer units.

NATIONAL INVENTORS COUNCIL. Created in August 1940, by the Secretary of Commerce, the Council is a central clearing house for inventions and suggestions deemed valuable to the war effort. Since its creation, more than 170,000 inventions have been carefully examined and evaluated, a surprisingly large number of which have proved meritorious and useful.

Dr. Charles F. Kettering, President of the General Motors Research Corporation, is Chairman and other members include eminent scientists, invent ors, Government officials, and business men well versed in the application of new devices, all of whom serve without compensation. The Council staff of approximately 50 employees, includes a corps of competent engineers and technical experts each a specialist in his own field. For further detail, see 1942 YEAR BOOK.

CHARLES F. KETTERING.

NATIONAL LABOR RELATIONS BOARD (NLRB). Activities of the National Labor Relations Board during its eighth year of operations reflect the continued rise in resort to the Board's election machinery for the orderly determination of collective bargaining representatives. Of the 9,543 cases filed with the Board during the year, 6,140, or 64 per cent, involved such determinations of bargaining agents, while 3,402 cases filed with the Board during the year, 6,140, or 64 per cent, involved such determinations of bargaining agents, while 3,402 cases are such as the property of the propert while 3,403, or 36 per cent, concerned unfair labor practice charges; the election cases represented the greatest number filed in any one of the Board's eight years, the unfair labor practices the lowest number in the last five years. Although still not a majority, the number of cases that involved formal procedures increased significantly over the previous year. Cases closed before formal action constituted 78 per cent of all cases closed; cases closed after formal action accounted for 22 per cent, compared with 16 per cent for 1942. This change can be attributed, in part, to the changing character and complexity of these cases in a wartime economy. (For an explanation of the work of the Board in conjunction with the war effort, see 1943 Year Book.)

The work of the National Labor Relations Board is not to be confused with that of the National War Labor Board (q.v.) whose function is essentially that of mediation and arbitration. The latter agency deals with disputes over wages, hours, or other conditions covered by the terms of union contracts. A sample of the coordination between this Board and the WLB is evidenced by the fact that an NLRB certification of a collective bargaining agency often has been a first necessary step to the settlement by the War Labor Board of disputes involving wages, union security, and other

substantive labor agreement provisions.

As noted last year, the increased membership of organized labor, division, and competition within the labor movement and the giving up of the right to strike, combined to increase the work of the Board. In addition, 1943 has seen difficult investigation problems in a large group of cases arising in the presence of fluctuating employment, widespread in war industry. In earlier years, the question of representation usually arose in plants that had been previously unorganized, so that there were no existing bargaining rights to be protected or contract rights asserted, and the issue could frequently be resolved by agreement of the parties. Today, many cases are more complex. For example, some cases involved such groups of workers as militarized guards, inspectors, and commission workers of questionable employee status. Investigation of these cases is relatively difficult and time consuming because new and novel questions are raised.

Of the 9,453 cases filed during the year, 4,287, or 45 per cent, were filed by affiliates of the Congress of Industrial Organizations and 3,729, or 39 per cent, by American Federation of Labor unions; 1,535, or 16 per cent, were filed by unaffiliated

unions, employers, or individual workers.
On July 1, 1942, the Board had on its docket 1,086 representation cases—i.e., cases concerned with petitions filed by employees or employers re-questing Board investigation and determination of units and freely-chosen representatives for the purposes of collective bargaining. With the filing of 6,140 new election cases, the Board's preoccupation with a total of 7,226 such cases reached within a hundred of the all-time high. Over 1,400,000 workers were eligible to participate in the 4,153 elections and pay-roll checks conducted during the year, an average of 13 such elections daily; 2,755 of these were conducted upon agreement of the parties, 1,162 were directed by the Board, and 236 followed stipulations providing for Pacad cartification upon consent elections.

Board certification upon consent elections.

Workers cast 1,126,501 valid votes in the 4,153 elections. The A.F.L. was designated as bargaining agent in 1,398 elections, the C.I.O. in 1,766, and unaffiliated unions in 416. No union was successful in obtaining a majority in 573 elections. Expressed in terms of valid votes cast for labor organizations, the A.F.L. received 267,118 votes, the C.I.O. received 515,271 votes, unaffiliated unions polled 140,780 votes, and 203,000 votes were cast against representation by unions. The C.I.O. won 75 per cent of the 2,350 elections in which it participated; the A.F.L. won 69 per cent of its 2,018 elections, and unaffiliated unions won 56 per cent of the 745 elections in which they appeared on the ballot. In 513 electoral contests between the A.F.L. and C.I.O., the C.I.O. won 52 per cent, the A.F.L. 41 per cent. Both the A.F.L. and the C.I.O. won a majority of the contests with unaffiliated unions.

The Board carried over from last year 1,744 unfair labor practice cases. With the 3,403 new cases filed, the total number to be handled was 5,177. Of these 3,848, or 74 per cent, were closed by the Board. As in previous years the predominant allegation of unfair labor practice charges received—in 2,256 cases—concerned employer discriminatory discharge or demotion. The complaint of refusing to bargain collectively arose in 756 cases, as compared to 1,550 in 1942. Charges alleging company domination of a union declined from 613 in 1942, to 337 in 1943.

The Board's speedy and peaceful resolution of

The Board's speedy and peaceful resolution of disputes involving employer unfair labor practices is evidenced by the fact that 3,806 of these 3,848 unfair labor practice cases closed, or 86 per cent, were closed without resort to formal action; 1,298, or 33 per cent, were settled by agreement of all parties; 1,488, or 39 per cent, were withdrawn without formal action. Regional Directors of the Board refused to issue complaints in 520 cases, or 14 per cent.

In the remaining 14.2 per cent of the unfair labor practice cases closed, the Board resorted to formal procedures provided by the Act. Decisions and orders were issued by the Board numbered 405—265 in cases contested by the parties and 140 based upon stipulation and consent decrees, an increase of 40.6 per cent above 1942. Four hundred complaints charging unfair labor practices were issued, an increase of 11.4 over the previous year; 365 hearings were held on such charges, resulting in the issuance of 261 Intermediate Reports by Trial Examiners (an increase, respectively, over last year of 29 and 30 per cent). In its work of remedying unfair labor practices

In its work of remedying unfair labor practices during the year the Board ordered 8,361 workers reinstated. Of these, 2,717 were members of the A.F.L., and 5,079 were members of the C.I.O. Back pay awarded to 5,115 workers illegally discharged or otherwise discriminated against totaled \$2,284,593, and 1,100 notices of compliance with the Act were posted by employers.

The 9,543 new cases filed with the Board during the fiscal year 1943 involved plants covering at

least 8 million workers. As was the experience in preceding years, most of the cases, 7,560, or 79 per cent, of all those received involved manufacturing industries. However, during the last year, the impact of war production increased the frequency with which these industries figured in Board cases: 50 per cent were concentrated in seven major industries, all essential to the war effort. These were iron and steel, machinery, aircraft, food, shipbuilding, chemicals, and electrical machinery. Wholesale trade, which had ranked high in 1942, dropped from 744 cases to 295.

craft, food, shipbuilding, chemicals, and electrical machinery. Wholesale trade, which had ranked high in 1942, dropped from 744 cases to 295.

Covering the 8-year period from passage of the Act in July, 1935, through June 30, 1943, 58,-318 cases have come before the Board, 32,306, alleging unfair labor practices and 26,012 involving questions of employee representation. During this time the Board issued 7,034 decisions, 2,213 in unfair labor practice cases and 4,821 in election cases. It has conducted 15,210 elections in which 4,389,860 votes were cast. The courts have passed upon 488, or 22 per cent, of the Board's decisions in 2,213 unfair labor practice cases. In the Supreme Court, of the 42 Board orders reviewed, 2 were denied enforcement. In the Circuit Court of Appeals, 446 Board orders were reviewed and 380, or 85 per cent, of them were enforced. For 1943 court decisions, see LAW.

The year 1948 saw added duties given to the Board. In March, Congress amended the Communications Act of 1934 and gave the Board the responsibility of protecting the rights and privileges of telegraph employees which might be affected by the merger of the Western Union and Postal Telegraph companies. Further, with the passage in June of the War Labor Disputes Act, the Board was given the responsibility of conducting strike ballots as provided in that Act and certifying the results of such ballotings to the President. In the first six months of this law, 654 strike notices were filed, 444 were withdrawn, 117 strikes yotes were held.

NATIONAL MEDIATION BOARD. A nonpartisan independent Board of the U.S. Government whose duty is to mediate differences between the railroads, the express and Pullman companies, and the airlines on the one hand and their employees on the other. Chairman in 1943: Wm. M. Leiserson.

See RAILWAYS.

NATIONAL PARKS AND MONUMENTS. For the National Park Service the year 1948 was one of continued cooperation in the war program, further curtailment of personnel, and last, but most important, continued protection of that segment of the Federal estate known as the National Park System so that present and future generations, through the preservation of these sites of significance in natural and human history, will be able to see the untamed America that was, and understand the compelling influences that built and strengthened this nation.

At the close of 1943 the National Park System consisted of 168 units (national parks, national monuments, and allied areas) having a combined area of approximately 22,000,000 acres. Two of these units—Jackson Hole National Monument, Wyoming, and the Thomas Jefferson National Memorial located on the shores of the Tidal Basin in the Nation's Capital—were added to the System in 1943. Establishment of the 221,610-acre Jackson Hole National Monument marked the completion of a program initiated nearly two decades

ago to preserve for posterity this outstanding scenic, historic, and wildlife region adjoining scenic, historic, and wildlife region adjoining Grand Teton National Park. Approximately 92 per cent of the monument land is Federally owned or has been purchased by John D. Rockefeller, Jr., for donation to the Federal Government. All valid existing rights on the approximately 8 per cent of privately owned land within the monument are protected by the Proclamation of President Roosevelt establishing the monument.

Under authority of the Historic Sites Act of Aug. 21, 1935, the Secretary of the Interior designated the Independence Hall group of structures in Philadelphia, Pa., and St. Paul's Church, Eastchester, N.Y., as national historic sites on May 14, 1943, and July 5, 1943, respectively. These sites are in non-Federal ownership, hence are not administered as units of the National Park System.

Due to the exigencies of war, travel to the various national parks, monuments, and allied areas continued to decline, visitors during the travel year ended Sept. 30, 1943, totaling approximately 8,000,000 as compared with an estimated 10,700,000 during the 1942 season and an all-time high of approximately 21,000,000 during the prewar 1941 season. Members of the armed forces visiting parks and monuments in 1943 totaled nearly ing parks and monuments in 1943 totaled nearly 2,000,000.

Intensified cutting of trees on private and national forest lands to meet war requirements made that much greater the Service's responsibility to preserve the magnificent virgin forests entrusted to its care. Only 1 per cent of the 630,000,000 acres of forested land in the nation is under Service jurisdiction, a small fraction to hold inviolate for the benefit of present as well as future

generations of Americans.

Because of a critical need for certain types of wood for airplane construction, the magnificent Sitka spruce forests of Olympic National Park, Washington, appeared for a time to be in jeopardy. Fortunately, however, subsequent cancellation of plans for some types of wooden planes, increased spruce aircraft lumber production in British Columbia and Alaska, and greater availability of aluminum for airplane manufacture made it unnecessary to invade the Olympic forests. The War Production Board advised that, barring unforeseen developments, Sitka spruce requirements through the first quarter of 1944 can be met from supplies available outside the Olympic region.

Approximately 300 authorizations for wartime use of parks and monuments were granted by the Service in 1943. Partial use of these areas by the military for recreation, camping, and troop training purposes continued throughout the year. In June the famous Ahwahnee Hotel in Yosemite National Park, California, was converted by the

Navy into a convalescent center.

Despite the extensive wartime use of Service areas since the outbreak of hostilities there has been little sacrifice of park values. Greater sacrifice may be imperative as the war progresses, but the Service feels that it will emerge from this conflict with the basic idea intact that national parks and monuments must be protected.

NATIONAL WAR FUND. Born of war, and linked to the peace by effective association with local home agencies for health, welfare, and recreation, the National War Fund is a philanthropic federation of 17 war-related agencies with three simple aims: first, to determine the nature and the extent of the war-related needs; second, to see that everybody has a chance to contribute to the funds required; and third, to channel the sums raised for its member agencies wherever American help is currently most needed—enough and on time. This undertaking springs from the desire of the country at large for an orderly, systematic, economical, and efficient way of carrying forward the agencies of war philanthropy. It was created with the approval of the President's War Relief Control Board, but as a wholly voluntary agency operating under the control of officers and directors representing the whole country.

Organized in January, 1943, the National War Fund launched a nation-wide campaign during October to raise \$125,000,000 to meet the needs of its 17 member agencies. The campaign organization was created in 10,000 cities, towns, and counties, and wherever there were established organizations such as community or war chests National War Fund cooperated with these organizations. The 17 member agencies and the budgeted needs until Oct. 1, 1944, out of a total national goal of \$125,-000,000, are as follows:

Service to the Forces: United Service Organizations (q.v.), \$61,227,000; United Seamen's Service— Rest Homes and convalescent centers, for merchant sailors, \$4,125,000; War Prisoners Aid—Educational, spiritual and recreational service in prison camps, \$2,320,000; and through other agencies, packages of food and medical supplies for Greek, Yugoslav, French, Polish, Czechoslovak, and Belgian prisoners of war.,

Aid for Unoccupied Areas: Russian War Relief—Chiefly medical supplies and clothing, \$10,155,000; United China Relief, \$9,873,000; British War Relief Society—Support for hospitals, nurseries, chil-

dren's homes, ambulance units, etc., \$5,698,000.

Relief for Occupied Countries: Food and medical supplies, so far as distribution permits, for Greek War Relief Association, \$5,122,000; Polish War Relief, \$3,750,000; United Yugoslav Relief Fund, \$2,238,000; French Relief Fund, \$2,183,000; Belgian War Relief Society, \$325,000; United Czecho-slovak Relief, \$234,000; Queen Wilhelmina Fund, \$200,000; Norwegian Relief, \$200,000; Friends of Luxembourg, \$121,000.

Refugee Relief. Refugee Relief Trustees-Aid for special groups of refugees requiring private relief, \$2,809,000; U.S. Committee for the Care of Euro-

pean Children, \$812,000.

National War Fund Expenses—For Campaign and Administration, \$800,000.

Contingent Fund—To meet needs which are certain to arise because of military operations, particularly as a result of its reoccupation of Allied countries that are now under Axis domination, \$12,808,000.

Officers: President, Winthrop W. Aldrich; Secretary, Ralph Hayes; Treasurer, Gordon S. Rentschler; Vice-presidents, Jean B. Adoue, Jr., Prescott S. Bush, Robert M. Hanes, Francis P. Matthews, Walter Rothschild, Edward L. Ryerson, Robert G. Sproul, and Henry M. Wriston; Chairman of Budget Committee, Gerard Swope. Headquarters: 46 Cedar Street, New York 5, N.Y.

See United Service Organizations.

NATIONAL WAR LABOR BOARD (WLB). The National War Labor Board was established by Executive Order 9017 of Jan. 12, 1942, as final arbiter of wartime labor disputes under the no-strike, no-lockout pledge, made by labor and management representatives at the White House ten days after Pearl Harbor. Under the Anti-Inflation Act of Congress, passed on Oct. 2, 1942, the President issued Executive Order 9250 of October 3, giving the Board the added responsibility of stabilizing all wages, and most salaries under \$5,000 a year, at Sept. 15, 1942, levels. Additional statutory authority was given to the Board by Congress in the War Labor Disputes (Smith-Connally) Act of June 25, 1943. This Act authorized the WLB to settle all labor disputes affecting the war effort and to "provide by order the . . . terms and conditions . . . governing the relations between the parties which shall be in effect until further order of the Board."

Tripartite in nature, the 12-man Board is composed of four representatives each of labor, industry, and the public. The members are named by the President, who also designates the chairman from among the public members. The President by Executive Order 9395A of Nov. 20, 1943, authorized appointment of alternate public members; from the beginning there had been alternate in-dustry and labor members. The WLB's twelve Regional Boards and five industry commissions, also tripartite in composition, have power to make final decisions in local labor disputes and in voluntary wage and salary adjustment cases, subject to appeal to the National Board. Cases of national importance are handled in Washington. Field offices of the Wage and Hour Division (q.v.) of the Department of Labor receive voluntary wage adjustment applications for the Board. Labor disputes, the other major type of cases handled, are certified to the WLB by the Conciliation Service (q.v.) of the Department of Labor, or may be taken by the Board on its own motion.

Between January and November, 1943, the Board and its agencies issued final rulings in more than 109,246 voluntary applications for wage and salary adjustments involving about 6,000,000 employees. By the end of 1943, voluntary wage and salary cases were being decided at the rate of about 3,000 a week. Wage increases approved by the WLB from Oct. 3, 1942, to Oct. 1, 1943, raised the average factory hourly wage rate only sixtenths of one cent. Only four in every thousand wage increases approved required a raise in price ceiling. From January through November, 1943, the Board decided over 3,700 labor dispute cases, involving over 3,500,000 workers. During 1942, it handled 500 dispute cases involving 2,500,000 workers.

In 1943, the Board's wage stabilization policy developed within the framework laid down by the Act of Oct. 2, 1942; Executive Order 9250 of Oct. 3, 1942; Executive Order 9328 of Apr. 8, 1943 (the "Hold-the-Line" Order); and a policy directive issued by the Director of Economic Stabilization (q.v.) on May 12, 1943.

Under this policy the Board may approve increases on the following grounds: (1) General increases related to the cost of living will be limited to a total of 15 per cent above the average straight-time hourly rates paid in January, 1941the amount due under the Little Steel Formula. (2) Gross inequities between plants may be corrected up to the minimum of the "sound and tested going rates" being paid for the job in the same labor market area. Regional Boards determine these sound and tested rates. (3) In rare and unusual cases where necessary for effective prosecution of the war, rates may be raised above the "minimum sound and tested going rates." The Board granted such increases in only a half-dozen cases during the first year of the stabilization program. (4) Wage inequities between jobs within a plant may also be corrected. (5) Substandard-of-living wages may be corrected up to a rate not above 50¢ an hour as set for each area by the Regional War Labor Board. (6) Requests for approval of new incentive plans are judged according to this policy: Such plans must have the joint approval of the company and the union if a union is the recognized or certified bargaining agent for the employees involved. The Board will not judge an incentive plan on its technical production merits, but only on whether it is within the stabilization program. The plan must not increase unit labor costs. The Board will require periodic review of each plan after it has been put into operation in order to appraise its conformance to the stabilization program.

In addition to the above increases which may be made with Board approval, WLB has ruled that several kinds of increases may, under certain conditions and rules, be made without Board approval. Among these are (a) increases to equalize rates paid to women for work of the same quality and quantity as work done by men in the same plant; (b) increases to bring rates up to 40¢ an hour; (c) individual increases for merit, length of service, promotion, or reclassification; (d) payment of customary bonuses or commissions.

The Board held firmly to its wage policy in ruling on the wages of the United Mine Workers who struck four times during 1943, and had their mines seized twice by the government. The miners originally requested a \$2 a day increase with no increase in production time. In the end they agreed to one hour's more productive work each day, for which they were paid \$1.50, the amount they were entitled to under the overtime provision of their old contract. An additional \$2.60 a week may be earned by miners who work a full six day week under a portal to portal system, approved by the Board. This amount becomes due under the overtime provisions of the Fair Labor Standards Act when travel time is included in computing the 40-hour work week, as required under a court ruling. The WLB approved the wage agreement signed by Secretary Ickes, on behalf of the government, and the UMW, for the period of government operation. A proposed agreement between the union and the operators for private operation was pending before the Board on Dec. 81, 1943.

Time lost through strikes in the first six months of 1943 was <sup>1</sup>%<sub>100</sub> of 1 per cent of the time worked. Three-fourths of the loss was due to coal miners'

strikes. Strike idleness in 1942 was  $\%_{100}$  of 1 per cent of time worked, and in 1941 was  $^{3}\%_{100}$  of 1

per cent.

Developing policies of the WLB on the disputes front during 1943 included adoption of the posi-tion that a company cannot take advantage of labor's no-strike pledge to abandon in wartime a closed or union shop already established by a prior contract reached through collective bargaining. This policy was first stated in the Harvill Aircraft case, February, 1943, with industry members dis-

Voluntary maintenance-of-membership provisions, which the Board frequently awards as a compromise of the closed-shop—open-shop issue, were standardized in form. Since Dec. 1, 1943,

the provision reads in part as follows:

All employees who, on (insert date—fifteen days after date of directive order), are members of the Union in good standing in accordance with its constitution and by-laws, shall, as a condition of employment, maintain their membership in the Union in good standing for the duration of the collective agreement in which this provision is incorporated, or until further order of the Board.

The Union, its officers and members, shall not intimidate or coerce employees into joining the Union or continuing their membership therein.

The provision provides, further, for arbitration of disputed union membership under the maintenance

clause.

In November, 1942, the Board had emphasized its intention of giving workers genuine freedom of choice under maintenance-of-membership provisions when it passed a resolution designed to protect the workers from union or employer interference with their freedom to withdraw or not withdraw from the union during a 15-day period without losing their jobs. In November, 1943, the Board approved a statement explaining the rights of workers under a maintenance clause, for posting in plants or publishing by the company or union. It explains that union members have the choice of remaining in the union or withdrawing during the 15-day "escape" period and that no employees are required to join the union to retain their jobs. Those who choose to remain members after the 15-day period thus agree to maintain their membership as a condition of employment.

The Board has acted frequently on the policy that the protection of membership maintenance should not be granted to unions which have shown themselves irresponsible. In the Chrysler Case, August, 1943, the Board denied maintenance of membership and a checkoff clause to the United Automobile Workers, C.I.O., because of repeated strikes, with the proviso that the union could renew its request after six months on showing of increased responsibility. The WLB also ordered appointment of an arbitrator to settle grievances arising under

the contract

The Board acts promptly on actual and threatened strikes within its jurisdiction, telephoning, or telegraphing the parties, and often sending a me-

diator to compose differences.

The compliance powers of the War Labor Disputes Act were augmented by Executive Order 9370 of Aug. 16, 1943. This Order authorizes the Economic Stabilization Director to direct other Government agencies to apply appropriate sanctions against employers, unions, or individuals who refuse to comply with WLB orders.

The Board has ruled that wage differentials based solely on difference in sex or race are without validity, and ordered their abolition where the quantity and quality of work is equal. (Southport

Petroleum case, June, 1943.)

The sanctity of contracts arrived at through collective bargaining is respected by the Board, which urges management and labor to settle the details of their agreements through the normal channels of collective bargaining before bringing their case to the Board. The Board also encourages prompt settlement of grievances within plants, and has many times directed parties to a dispute to choose an arbitrator, impartial chairman, or umpire to make final rulings on grievances. On July 1, 1943, the Board unanimously urged parties to all labor agreements "to install adequate procedures for the prompt, just, and final settlement of the day to day grievances involving the interpretation and application of the contract" and "to make the full functioning of the grievance procedure a major responsibility under the no-strike, no-lockout agreement for maximum production to win the war." AND NATURALIZATION.

NAURU. An atoll in the Pacific (166° E. longitude and 26 miles south of the equator), which, until its occupation by the Japanese in 1942, was administered under a mandate conferred on the British Empire and confirmed by the Council of the League of Nations on Dec. 17, 1920. Area, 8.22 square miles. Population (Jan. 1, 1941), 3,352, including 1,761 Nauruans, 1,350 Chinese, 192 Europeans, and 49 other Pacific islanders. The chief product is phosphate (808,400 tons exported during 1940); a small amount of copra is exported. Trade (1940): imports £192,749 (foodstuffs and machinery were the chief items); exports £541,-168. Shipping (1940): 123 vessels aggregating 592,794 gross tons entered and cleared. Finance (1940): revenue £27,104; expenditure £26,223. During 1943 the island was repeatedly bombed by U.S. Army planes.

NAVAL PROGRESS. In wartime the actual naval operations have obviously an all-important bearing on naval developments. The fighting on sea and shore serves as a great laboratory in which new weapons, methods, and tactics are tried out, improved, or discarded with a speed undreamed of in time of peace. Furthermore, the war operations constantly create changed conditions, with new requirements and shifted emphasis in construction

Surrender of Fleets. Such a change has been brought about by the Mediterranean operations of 1942-43, as a result of which the two important fleets of France and Italy have passed from potential or actual enemy status and joined with the United Nations, while at the same time the Middle Sea has been set free for operations in Southern Europe and as a shorter communications line to the East. The surrender of the two fleets, the composition of which is given more fully later in the data on national navies, placed at the disposal of the western sea powers upwards of 100 Italian and nearly 50 French combatant ships, including 8 battleships, a carrier, and 15 to 20 serviceable cruisers. Whether or not all these are put to use, this freeing of the Mediterranean eases the pressure for construction of new major units, especially for the British who have borne the brunt of the Mediterranean war, and promises the release

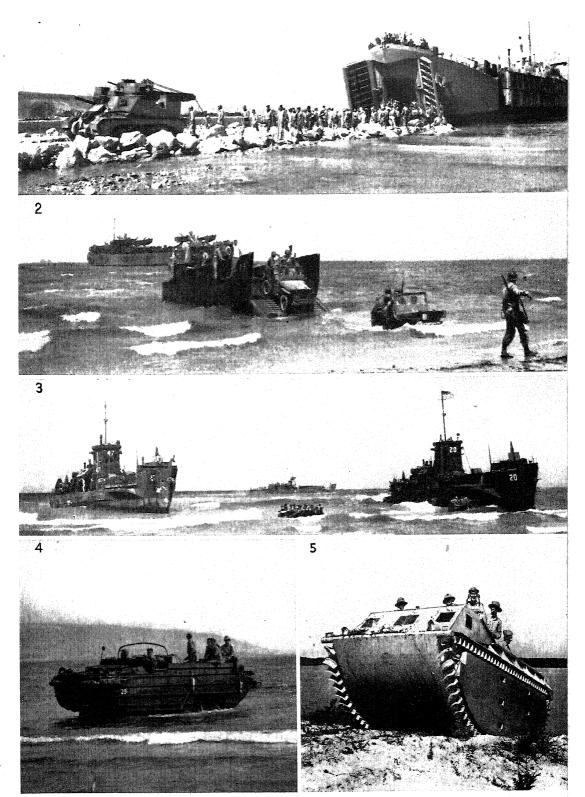

of increased forces for the Pacific theater. Even without the French and Italian ships, and allowing a safe reserve of 6 or 8 first line units in British home waters, an Anglo-American force of about 30 battleships may now be put into the Pacific conflict—a superiority over Japan of roughly three to one, together with about 14 American and 6 British airplane carriers against 6 to 8 for the Rising Sun. Such a margin of superiority in both sea and air will be needed to clear and maintain the long Pacific lines of communication, break those of Japan, and hasten decisive results with economy of manpower. These new possibilities are undoubtedly a chief factor in plans for speeding the Eastern war.

The Part of Sea Power. The Mediterranean operations serve to illustrate the continuing and indeed greatly increased significance of sea communications in this intercontinental war. In the African fighting, on the European fronts established or to be established, in Asia, and everywhere in the Pacific, the fighting forces, their guns, tanks, munitions, fuel, and supplies—two tons or more for every fighting man—must be moved and kept moving by surface transport overseas. Aircraft, some 2,500 or more, have been borne by American surface carriers to the battle areas. Even in the land war on the Russian front a factor essential to success has been the great quantities of aircraft, munitions, and rolling stock carried by sea to Murmansk and the Persian Gulf. Not in this war, or in the envisagable future, can this heavy traffic be carried economically by other means. Nor is it easy to see how, over the vast ocean spaces, airpower unsupported by surface fleets can strike a decisive blow. The scope of planning and the quantities of shipping and protective cover called for in these overseas operations may be illustrated by the 3,266 ships and boats of all types employed in the Si-

cilian landings alone. Amphibious Warfare. Both the Pacific and the Mediterranean campaigns have stressed amphibian operations, and the closest possible cooperation of sea, land, and air forces. Thus at Salerno British and American battleships were given cover by carrier-based aircraft, the carriers were covered by land-based aircraft, while both aircraft and naval vessels ranging from battleships to destroyers and PC boats bombed and shelled the beaches and afforded protection to troops before and after they were put ashore. To make possible these landing operations, the construction of landing craft in American shipyards was given high priority throughout 1942 and the first half of 1943. By July of this year, about 13,000 landing boats aggregating 610,781 tons had been completed in American yards, and in December a supplementary appropriation of \$5,300,000,000 provided for 1,000,000 additional tons of landing craft, as well as 2,500,000 tons of invasion craft and auxiliary vessels of varied types. The largest of the landing craft are the LSTs (landing ships, tanks) and LCIs (landing craft, infantry). The former are 327 feet in length, of over 5,000 tons displacement, and capable of carrying not only tanks but all types of smaller landing craft. The LCIs are also seagoing vessels 100 to 150 feet in length, Then there are all manner of smaller motorized craft, built of steel, wood, and rubber, including the LCPs or Higgins boats, about 30 feet long and carrying up to 50 men, and the LVTs (landing vehicles, tanks), armored and unarmored, among which are the amphibian "alligators" and 2½ ton "ducks" that have played a notable part in Pacific island attacks. Typical of these boats are their shallow draft, protected steel sides, and big doors and ramps at the bow for quick unloading. For landing operations large amphibious forces have been organized and trained on both the At-

lantic and Pacific coasts. Naval Losses. The vulnerability of surface transports to air attack was illustrated most forcibly in the Bismarck Sea actions of last March, in which, striking at a Japanese convoy of 12 transports and 10 escorts, General MacArthur's planes sank 18 ships, inflicted a loss of 15,000 men, and destroyed 74 enemy planes, while losing only 4 of their own. With increasing weakness in the air, the Japanese have suffered severely in similar efforts to throw reinforcements into their beleaguered island bases. Speaking in October, Adm. E. J. King put their plane losses in combat with American forces in a ratio of four to one. Reports of surface engagements indicated ship losses in something like an equal ratio. From June 30, the date of the first American moves against New Georgia, to August 8, the Japanese lost certainly 23 (probably 26) cruisers and destroyers, and these losses again rose in November as an outcome of the American invasion of Bougainville and the severe bombings of Rabaul. In the Aleutian naval actions involved in the recapture of Kiska and Attu, in the advance northward through the Solomons during the summer and autumn, and in the more recent operations in the Gilberts and Marshalls, American naval forces appear as a rule to have inflicted far more serious damage than they received. Their first notable loss of the year was the heavy cruiser Chicago, crippled late in January by torpedo-planes in a night attack south of Guadalcanal (the first night attack made by Japanese planes in the war), and sunk by the same weapons next day. Other American losses include the 9,700 ton cruiser Helena, sunk July 6 in the Kula Gulf action after sharing in the destruction of two enemy cruisers and ten destroyers; the destroyers Strong and Aaron Ward, lost in the same waters; the Gwin, 1,630 tons, which went down after a hard-hitting action on July 13; the destroyers Maddox, Ro-wan, Buck, Bristol, and Beatty, sunk in Italian waters; the Borie, a destroyer escort, knocked out in a melee with submarines in the Atlantic; the destroyer Chevalier, put out of action October 6 at Vella Lavella Island; and the auxiliary carrier Liscombe Bay, torpedoed November 24 by a submarine in the capture of the Gilberts. Throughout the year American submarines have continued their destruction of Japanese shipping. At the end of December the record stood at 386 ships sunk, 36 probably sunk, and 114 damaged—a total of 536. At this date the total of Japanese ships sunk by submarines and other forces was put at 937. Secretary of the Navy Knox estimated in September that the Japanese had about 6,369,000 tons of shipping at the outbreak of war, had acquired a million tons since, and had lost 2,500,000 tons, or about one-third of the total. Of 16 U.S. submarines sunk other than by accident since Pearl Harbor, the ones lost this year are, in sequence, the Argonaut, Amberjack, Grampus, Triton, Pickerel, Grenadier, Dorado, Runner, Wahoo, and Gray-

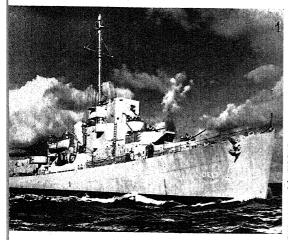

Anti-Aircraft Defense. While some of the naval losses listed in the preceding paragraph were inflicted by torpedo-planes, the year's record for surface ships (if we except the Japanese) shows in general more attention to air cover and more alert and effective gunnery defense. In the bombing of Rabaul, November 5–6, an American carrier beat off 72 enemy torpedo-planes and bombers, and

in the Gilberts another carrier, with her air cover, shot down 46. On the other hand, the sinking of the Italian Roma on September 11, probably by glider bomb from German aircraft, shows little, perhaps, other than the defects of Italian ship design. Recent British and American construction has achieved a high degree of protection by means of better compartmentation, heavier and better distributed deck and side armor, and vastly increased anti-aircraft armament. In British battleships of the King George V class the weight of armor is over 14,000 pounds, with 16-inch thickness at the water-line. American official reports in July stated that the anti-aircraft power of our battleships to-day is 100 times as great as three years ago, and that no less than 97 per cent in value of our recent gun production has been in weapons of 20 mm. and 40 mm. anti-aircraft and 3-inch 50 caliber and 5-inch 38 caliber double purpose guns, all types employed for anti-aircraft fire. At the same time, air power has been given adequate recogni-tion by the official description of it as "the spear-head of the offense," and by a construction program which gave the navy over 18,000 planes at midyear and 65 new carriers, 11 of them of the fleet type, by the year's end.

Submarine Warfare. At the beginning of 1943 the German U-boat effort to strangle Atlantic supply lines remained the chief naval menace of the war. An upsurge of U-boat activity in March, with German claims of 851,000 tons of shipping sunk, raised fears that the spring months might repeat the critical losses of the two previous years. But later months brought reassurance. In April, though traffic was heavy and contacts with U-boat were more frequent than ever, the German claimsand in fact the actual losses-were cut in half. May was the best month since American entry into the war, and the sinkings showed a marked downward trend through the rest of the year. For the first six months of 1943 the ratio of ships sunk to U-boats destroyed was only half that of the six months preceding, and only one-fourth that of the first six months of 1942. Ship construction up to July showed a net gain over all losses of 3,000,-000 tons. In May-July the U-boats destroyed numbered 90, of which the Americans accounted for 29—24 sunk by the navy and 5 by army air squadrons. In August-October the record was 60. During these last months the tonnage losses were reduced by half as compared with the preceding three months, and in November the figures continued to improve. Increased assurance that the submarine menace was under control appeared in the American decision in October that, to hasten the landing boat program, construction should be suspended on 305 destroyer escorts, 60 patrol craft escorts (180-footers), 50 steel patrol craft 173-footers), and 12 wooden sub-chasers (110-foot-

The decline in shipping losses in late summer was attributed in part to a withdrawal of U-boats for improved radar and other equipment and rearmament, especially against aircraft. Both before and after this period the submarines showed an increased tendency to stay on the surface and shoot it out with their air assailants, but without much advantage in the result. In a typical convoy attack in early December, the Admiralty reported 5 U-boats sunk and 3 crippled out of 20 in a two-day series of attacks, in which United States planes from Iceland, British and Canadian planes from England, escort carrier planes, destroyers, and frigates combined to make the kills. Only 3 planes were lost and 99 per cent of the convoy came

through safely. As illustrated by this action, the U-boats continued their wolf pack or mass tactics, in which frequently one boat engaged an escort ship and thus sought to draw off the convoy protection, while the rest, with decks awash and hatches open for better observation, awaited the signal to subject the convoy to concentrated attack. Current estimates still placed the total number of U-boats at about 400, but with declining production and mounting losses, which have caused a severe drain on trained and capable personnel. For cheaper and faster construction, but at a cost in vulnerability, the newer boats were built without the former protection of double hulls. They ranged from 750 to about 1,500 tons, with a number of supply submarines or "milch cows," used to provide combat craft with fuel and perhaps also a fresh stock of torpedoes at sea.

The decreased effectiveness of the U-boats may be attributed to a number of causes—the increased numbers and range of land-based aircraft brought against them; the increased protection of convoys by destroyer escorts, corvettes, frigates, and escort craft of all types; the increased use of escort carriers; the destructive bombing of operational bases in France and production bases in Germany; and finally, the introduction of heavier depth bombs, powerful new searchlights, improved detection methods, and other weapons still kept se-cret. Both aircraft of the British Coastal Command and Liberator bombers of U.S. Army Anti-Submarine Squadrons, operating from British bases, were used for long range patrols in the Atlantic and Bay of Biscay and along the Spanish coast, where in a single nine day period in July they were reported to have made 12 attacks and sunk or damaged 8 boats. In November this work of the army fliers was taken over wholly by the navy. On the American coast the blimps, increased to twelve 4-ship squadrons and with many others under construction, continued to prove their value for inshore patrol. The blimps are of two types, the small Ls used chiefly for instruction, and the larger K type with crews of eight to ten men. It is stated that no ships have been lost under lighter than air escort, but in July the first blimp was shot down by a submarine. Both the British and Americans have put into service numerous aircraft carriers converted from merchant vessels, of which the United States expected to complete over forty by the end of the year. The aircraft from carriers are especially valuable for the 400 or 500 miles of mid-Atlantic not covered by landbased planes. In general they serve the purpose of keeping the submarines beneath the surface in daylight, and at sufficient distance from the convoy to prevent their attaining position for night attack. The effect of the bombing raids on French submarine bases is indicated by the estimate that L'Orient base was reduced to 20 per cent effectiveness by destruction of docks, repair facilities, and similar installations, though apparently the concrete submarine pens have escaped serious damage. Bombings of Germany have blasted Hamburg to ruins along with its eight big shipyards, and have caused similar damage to other coastal bases and inland production centers.

Among the surface escort types, the most noteworthy is the DE or destroyer escort, of which 800 were called for in the original American program and about 260 were completed during the year. Built on simplified destroyer lines, about 300 feet in length by 36 feet beam, the great advantage of the DE is that it can be constructed by mass production for about \$3,500,000, or half the cost

¹ Includes 6 Alaska Class, 27,000-ton super-cruisers. 45,000-ton Wisconsin has been launched. Does not include 58,000-ton Montanas whose construction has been suspended. ² Includes 8 of the 25,000-ton Essex Class, 3 converted cruisers, plus the Saratoga, Enterprise, and Ranger. Does not include an undisclosed number of converted merchant ships, probably over 40. ³ Building of three 45,000-ton aircraft carriers was announced; many merchant ships are being converted into carriers; a number of carriers of a new type, having a very small turning circle, are being built. ⁴ Under the 1942 program 500,000 tons of cruisers, heavy and light, are to be built. 32 light cruisers of the Cleveland Class were ordered in 1940—and many additional units since. This is the largest group of cruisers of a single design ever authorized. ⁵ Under 1942 program 900,000 tons of destroyers and escort vessels are to be built. Previously 80 new destroyers had been authorized. This figure includes over 200 destroyer escorts (DE's) built or building. • 120 more submarines of 1,525-ton Gato Class have been ordered. No information concerning the latest submarines has been released, but it is probable that they will be of the same general type as the Gato Class to facilitate building.

¹ One more 35,000-ton battleship was under construction at Nikolaiev but was destroyed prior to German occupation. Swedish reports claim 4 battleships now building. Germans claim to have bombed and wrecked 23,000-ton battleship, August, 1941. ² The Krasnoe Znamya, launched 1939, may have been completed. Existence of second carrier, the Voroshilov, regarded as doubtful. A carrier, the Stalin, reported in Black Sea, probably a seaplane carrier. ³ Germans claim that 7,000-ton light cruiser Chervonaya Ukraina was sunk off Sevastopol in February, 1942. ⁴ Germans claim capture of light cruiser Orjonikidze, also sinking light cruiser in Black Sea. ⁵ Germans and Finns claim loss of 11 Russian destroyers and torpedo boats. ⁶ Germans claim 36 subs. lost. ¹ Includes smaller patrol types rated as torpedo boats.

of a destroyer, and in four months, or less than half the time. Both American and Canadian shipyards have also produced numerous large frigates (about the size of destroyer escorts), smaller corvettes, and the patrol craft and sub-chasers which have long proved useful against the sub-marine. About 2,000 American merchant ships have been armed in 1943, bringing the total to well over 4,000. As a result of the heavy losses early in the year, a conference at Washington in April, headed by Admiral King, effected a reorganization of anti-submarine defense in the Atlantic, with more definite areas for British, Canadian, and American aircraft coverage, and the appointment of a Canadian officer, Rear Adm. L. W. Murray, as commander in chief in the Northwest Atlantic. During the summer U-boat opera-tions largely avoided this northern area, and according to Prime Minister Churchill not an Allied ship was sunk there in the four months ending September 18. Better patrol of the Central Atlantic sea lanes was made possible by Portugal's agreement in November to permit airplane bases in the Azores.

Small Torpedo Craft. Squadrons of fast American motor torpedo boats (MTBs) have continued to harass Japanese supply lines in the Solomons area, and many boats of this type have been supplied to Cuba, Brazil, and other Latin American countries for anti-submarine patrol. Despite their notable achievements against capital ships in the first World War, the Italian motor torpedo boat

flotilla in this war accomplished relatively little, their attacks on the British at Alexandria, Malta, and elsewhere being described as more of a nuisance than a serious menace. In the Channel and its approaches British motor gunboats—72-footers with two to four torpedo tubes—engaged in numerous melees with E-boats, as the German 105footers are called. In an action in October, aided by British destroyers, they sank four out of 30 E-boats and damaged 7 others. A few days earlier, on October 23, the British lost the light cruiser Charybdis, 5,420 tons, and the destroyer Limbourne in an engagement with German light forces on the French coast. British employment of another miniature type, the midget submarine, was brought to world attention when in September a large force of these craft attacked the battleship Tirpitz some 50 miles up Alten Fjord in the extreme north of Norway. Considerable damage to the Tirpitz was indicated by air photographs showing repair operations under way and a big oil slick extending two miles. Three of the submarines were lost. Long based at Trondheim, Norway, with the Scharnhorst and a force of cruisers and destroyers, the Tirpitz was at sea during the German raid on Spitzbergen early in September and then retreated into Alten Fjord. In the Norwegian bases this German fleet in being served a useful strategic purpose in containing much larger British forces, including an American task force, which were held in constant readiness to prevent a sortie. Repeated efforts failed to entice the Ger-

¹ Includes reported loss of Hosyo which cannot be confirmed plus 4 seaplane carriers. ² Reports of Japanese cruiser losses have been conflicting and inaccurate. Many cruisers reported as sunk were probably large destrovers. ³ Includes 2 new 40,000-ton battleships, Yamato and Musashi, formerly believed to be the Nissin and Takamatu. ⁴ Includes four 15,000-ton battleships of Tithu Class, believed to be similar to German 'pocket battleships.'' ⁵ Of these the 7,000-ton Ryuzyo may have been sunk. ⁵ Claims of cruiser losses and new construction are so varied and conflicting that it is impossible to state with accuracy how many Japan has built or of what tonnage. Also impossible to give underage and overage figures. ² Exclusive of torpedo boats. ⁵ Does not include midget submarines.

<sup>&</sup>lt;sup>1</sup> Since names of destrovers and submarines are not known it is impossible to determine age or tonnage.

mans into action, until finally the Scharnhorst was sunk, December 26, in a convoy attack.

Relative Naval Strength. Further information on naval developments of the year is given in the accounts of the naval activities of various nations following and in the accompanying table showing the relative strength of the belligerent nations as of Jan. 1, 1943, together with new construction and losses up to the close of the year. Since full details of losses and new construction have not been published, some of the figures must be regarded as approximations only. It is evident, further, that as a result of the present stress on amphibian operations, anti-submarine warfare, and air warfare, the old yardsticks of naval strength by tonnage of major units has largely gone by the board, and the sea power of a nation, aside from its shipping, must be reckoned in a vast number of surface, air, and sub-surface craft, of bewildering variety and size.

Australia. Since her heavy losses of cruisers in the first year of the war with Japan, Australia has used her smaller fleet units constantly in protection of supply lines to New Guinea and other island bases. The heavy cruiser Shropshire, presented by Britain to Australia to replace the Canberra, will retain her present name, since the United States has given the name Canberra to a new cruiser launched April 19. The tribal class destroyer Arunta, added to the fleet at the close of last year, is the largest naval vessel built in

home yards in the past twelve years. The corvette *Wallaroo* was lost by collision on June 20.

Brazil. Among recent additions to the Brazilian navy are 10 steel sub-chasers turned over by the United States in the first half year. They are 35-knot boats of 335 tons. To take care of the needs of the expanding fleet, the Government has provided modern installations in the navy yard at Ilha das Cobras, placed powder magazines at various points, established the naval posts of the Amazon and of Recife, and constructed a base at Natal with a dry dock 460 by 85 feet. U.S. Air Force technicians are available at Natal and Recife, and full use of the facilities are granted to United States aircraft.

Canada. From its prewar strength of 15 ships and 1,700 men, the Canadian navy has expanded to over 550 units and over 67,000 men. The ships include 15 destroyers, four of them transferred from the British in June and renamed Athabascan, Huron, Haida, and Iroquois; 80 corvettes, of which 54 were built in Canadian yards; and about 100 minesweepers and 40 MTBs. Four destroyers and numerous frigates are under construction. It has been stated that in the 18 months up to July Canadian ships provided nearly half the convoy protection in the North Atlantic. Seventeen Canadian corvettes were in the movement to North Africa and 5 operated with United States forces in the Aleutians. In the Mediterranean the corvettes were credited with destroying 3 submarines. One of

the corvettes, the Weyburn, was sunk near Gibraltar. The destroyer St. Croix (ex-U.S. McCook), was sunk September 9 in a 3-day convoy battle in the Atlantic, with a loss of all but one of her 147 men.

Denmark. An end came to the small Danish Navy in early August when to escape seizure by the Germans most of its 45 units were sunk or demolished by their crews. Among these were the coast defense vessel *Niels Juel*, 3,800 tons, sunk off Isefjord, and the *Peder Skram*, 3,500 tons, scuttled at Copenhagen, together with 3 torpedo-boats, a minelayer, 8 submarines, and a repair ship. Elsewhere, a minelayer and 3 old torpedo-boats were likewise disposed of. Two small sweepers, a torpedo-boat, and 9 MTBs were all that escaped to Sweden. The ships seized intact by the Germans were the new destroyer Najaden, the Nympen (nearly completed) a torpedo-boat, a survey vessel, and others not mentioned.

France. Four French ships from North Africa were sent in February to the United States for refit and repair. They were the battleship Richelieu, the big cruiser-destroyers Fantasque and Terrible of 2,569 tons, and the 7,600 ton cruiser Montcalm. By November or earlier the first three were in service as part of the French Navy in Algiers. It was reported that both the *Richelieu* and the Jean Bart had received or would receive a new secondary battery of twenty 5-inch dual purpose guns and numerous smaller anti-aircraft weapons. Including the ships taken over in North Africa, at Alexandria, and in the West Indies, it was estimated that after refitting the French Navy might have available 3 battleships (Richelieu, Jean Bart, and Lorraine), one aircraft carrier (Bearn), 3 heavy and 6 light cruisers, 4 large and 5 smaller destroyers, 10 or 12 sloops, 14 submarines, and many auxiliaries. Of the ships at Toulon, it appeared unlikely that the Germans would find opportunity or means to put any back in service.

Fighting French Forces, now under the Committee of National Liberation, consisted early in the year of nearly 50 units and 6,600 men. They have been active in Atlantic convoy protection, and French cruisers, destroyers, and submarines had a part in the reoccupation of Corsica. In April the corvette Aconit was rammed and sunk by a U-boat.

Germany. For nearly two years the battleships Tirpitz and Scharnhorst, with the pocket battle-ship Luetzow and a number of other cruisers and destroyers, remained at Trondheim and other Norwegian bases. The Tirpitz had a share in a raid on Spitzbergen early in September and later took refuge in Alten Fjord, where she was damaged by British midget submarines. The Scharnhorst was cornered and sunk in an attempted convoy raid on December 26. Little use has been made of the aircraft carriers Peter Strasser (perhaps still unfinished) and Graf Zeppelin, though in October the latter was reported damaged on a voyage to Norway and forced to return to Stettin for repairs. In November the heavy cruiser Hipper was reported laid up in the Baltic, the Gneisenau in use as an anti-aircraft training ship at Gdynia, and the Luetzow also at Gdynia for overhaul. The results of a Flying Fortress raid on Gdynia October 8 were given as 8 ships sunk and 15 or 16 damaged, including one identified as a pocket battleship. Of the mutinous disturbances among submarine and other crews in Norway, during the summer and early autumn, little has been heard subsequently, though unquestionably the crews have suffered a decline in morale.

Great Britain. Of Britain's three 23,000 ton car-

riers under construction, the Indomitable, Implacable, and Indefatigable, the last two are near completion and have perhaps already joined the six in commission, Indomitable, Formidable, Illustrious, Victorious, Furious, and Argus. The Formidable and Illustrious were used in covering the Salerno landings, and the Victorious operated for many months with American forces in the Pacific. Britain has at least 15 first-line battleships—4 new 35,000 ton ships of the King George V class, the 33,900 ton Nelson and Rodney, the 32,000 ton battle cruiser Renown, 4 Queen Elizabeths, and 4 Royal Sovereigns. As compared with the 15- and 16-inch guns on the older ships, the King George V class carry ten 14-inch guns and sixteen 5.25. Four battleships, the Nelson, Rodney, Warspite, and Valiant, were used at the Salerno landings, together with the two fleet carriers mentioned, 5 auxiliary carriers, 3 light cruisers, and 7 destroyers. Of the completion of the four 40,000 tonners -Lion, Temèraire, and two unnamed-little has been revealed, but it is evident that British con-struction has been chiefly in the all-important mine, patrol, and escort types for commerce protection. The fleet includes 122 corvettes averaging about 1,000 tons each and carrying crews of 75 officers and men, drawn mostly from the naval reserve. Sloops number about 40, and there are 28 or more frigates of 1,600 tons. Numerous new escort carriers have been built in both British and American yards. The American-built Battler has a flight deck 450 by 80 feet and carries a complement of 75 officers and 450 men. Following the death of Sir Dudley Pound, Adm. Sir Andrew Cunningham on October 4 was appointed First Sea Lord of the Admiralty.

Greece. The Greek forces operating out of Alexandria include a cruiser, 10 destroyers, 3 torpedoboats, 2 submarines, and 4 corvettes, under command of Rear Adm. C. Alexandris, former naval attaché in London. One of the 4 Hunt class destroyers turned over by the British has been renamed Themistocles in honor of the ancient Greek naval leader. The submarine Katsonis was torpedoed in the Aegean September 22 by a German sub-chaser, and the destroyer Vasilissa Olga was lost off Malta. Early in the year a 335-ton steel PC boat was presented to the Greek Navy by the

United States.

India. The Indian Navy, which before the war numbered only 7 ships and a few hundred officers and men, has increased ten-fold in personnel and has shared largely in patrol work from the Arabian Sea to the Dutch Indies. A new torpedo and anti-submarine school at Bombay is the largest in the British Commonwealth outside the United Kingdom.

Italy. At the fall of Mussolini the Italian fleet which joined with those of the United Nations numbered upwards of 100 units. They included 5 battleships, Italia (former Littorio) and Vittorio Veneto of 35,000 tons, and the older Andrea Doria, Caio Duilio, and Giulio Cesare of 24,000; the converted seaplane carrier Guiseppe Miraglia of 5,000 tons; about 8 light cruisers; 19 submarines; and 27 destroyers large and small, together with 12 torpedo-boats, 6 corvettes, and other auxiliaries. The battleship *Impero*, unfinished in a northern Adriatic port, fell into German hands, and the flagship Roma was sunk by German aircraft in the Strait of Bonifacio, while attempting escape. Of the 7 heavy cruisers with which Italy entered the war, only the Bolzano and Gorizia survived, too badly damaged to leave port. Aside from the Impero, not much of value seems to have remained for the

Germans. The Octaviano Augusto, damaged in November by Flying Fortresses at Ancona, was spoken of as the only Italian cruiser in German service. Italy lost a cruiser and 9 destroyers in April and May before the fall of Tunis and still others in the Sicilian operations. A report from Rome put the number of Italian submarines lost in the war at 84, or two-thirds of the total; up to January, 1943, the admitted loss was 43.

Japan. For Japanese naval strength, recourse may be had to the accompanying table, with allowance for uncertain data on both losses and additions. It is commonly estimated that Japan entered the war with 9 carriers, has lost 5 or 6, and with 4 new ones may now have 7 or 8, plus converted auxiliaries; that of battleships she has 10, including two new ones, with another nearing completion. This battleship estimate omits two lost in the Battle of Guadalcanal in November, 1942. The new battleships are powerful vessels of 40,000 to 46,000 tons with nine 16-inch guns and 40-knot speed. In cruisers the problem is puzzling, for Japan was credited at the beginning of the war with 38 cruisers, very moderate estimates have put her losses at 11 heavy and 18 light cruisers for a total of 29, yet she is believed to have still in operation as many as 30 to 35. Accepting these figures as a safe upper limit, we must assume that Japan's original strength was understated, her losses were overestimated, and her damage control and salvage were excellent. Moré recent Japanese losses have been noted. In general, the year's operations show a steadily mounting United Nations superiority in the Pacific theater.

Netherlands. Largest of the six "free" navies operating with the British, the Netherlands fleet has about 80 ships, with officer strength recruited from cadets who escaped from the naval college at Den Helden and also from a school at Surabaya. Among the ships added this year are a frigate, four new minesweepers, and a corvette, the latter received from the British and renamed Friso after a gunboat lost at the time of the German invasion. A new submarine, the Dolfin, built in Britain, embodies some Dutch ideas in her design.

Norway. The Norwegian Navy began the year with about 60 vessels manned by 4,500 officers and crews, an increase of 2,000 over last year, and commanded by Rear Adm. Elias Corneliussen. Only 13 naval craft escaped from Norway, but to these the British added 4 ex-U.S. flush-deck destroyers and last year a new destroyer and a submarine, together with numerous corvettes and MTBs. Losses this year include the destroyer Eskdale, April 28, and a new submarine, the Uredd, in March. Nearly 1,000 Norwegians are manning guns on merchant ships.

Poland. Today the Polish Navy is limited to 6 destroyers and 3 submarines with 2,000 personnel. The loss of the destroyer Orkan was announced in October. The destroyers Piorun, Slazak, and Krakowiak were in the Italian operations, and the submarines Sohol and Dzik have scored successes

in Mediterranean waters.

Sweden. Among the few remaining neutrals, Sweden is the only one with both means and incentive to build up a considerable naval force, designed wholly for coastal defense. According to the 1944 Marinekalendern (the Swedish Jane), the fleet now has 182 units as compared with 115 in 1939, and has 11 ships building, which include two 7,000 ton cruisers and a destroyer. The chief components of the fleet are 7 heavy coast defense ships (the three largest with 12-inch guns), 27 destroyers, 21 gunboats, and 26 submarines. Boats

completed this year include two 1,145 ton destroyers and the *Alvsnabben* of 4,200 tons, classed as a minelayer but to be used also as a mother ship for minesweepers and submarines. Two submarines, *U4* and *U5*, have been launched, and the submarine *Ulven*, sunk in April by German mines in Swedish waters, has been salvaged. Sweden also has a naval air force of 1,500 planes in 66 flotillas.

Union of Soviet Socialist Republics. The Pacific fleet of the Soviet Navy at Vladivostok, though inactive, has been maintained at its former strength of 60 to 70 submarines and about 50 MTBs. In the Arctic, operating out of Murmansk, both surface craft and submarines have been constantly occupied. In the Baltic base of Kronstadt and at Leningrad Swedish sources report that in spite of siege conditions a surprising amount of new construction is under way, including three or four big battleships and two 12,000 ton carriers. The old battleship Red October has been fitted with a new anti-aircraft battery of British pom-poms, and the large force of submarines has operated successfully against German shipping in the Baltic. Late in December a German report told of a 50-mile net, of unprecedented size, spread across the Culf of Finland to check their exit. In the Black Sea the Russians have retaken the excellent harbor of Novorossiisk and have maintained their fleet at something like its former strength. British sources describe it as consisting of a 26,000 ton battleship, 4 modern light cruisers and an older one, 27 destroyers, 50 submarines, and 50 MTBs.

United States. The June Naval Appropriations Bill for \$27,637,226,198, the largest in history, provided about 9 billion for building and replacement of ships and 4½ billion for 29,000 more planes. In the three years ending July 1, 1943, there were added 333 combatant ships and 15,043 auxiliary types aggregating 2,218,000 displacement tons. The total navy at midyear amounted to nearly 5,000,000 tons, with 613 combat ships and about 18,000 planes. The number of planes was over 27,000 by December. Naval losses in the two years of war to the end of December, 1943, numbered 134 in all, including 1 battleship, 5 carriers (counting the auxiliary carrier Liscombe Bay), 6 heavy and 3 light cruisers, 39 destroyers, 16 submarines,

and 64 of miscellaneous types.

Battleship strength includes four 35,000 ton ships commissioned in 1942, the South Dakota, Indiana, Massachusetts, and Alabama; the North Carolina and Washington of 1941; and two of 52,000 tons deep load displacement, the Iowa and New Jersey, commissioned this year. A third, of the Iowa type, the Wisconsin, is nearing completion. The Iowas are probably the most powerful ships afloat, with nine 16-inch guns, twenty 5-inch, and decks bristling with anti-aircraft armament. They are 880 feet over all, 108 feet in beam, and have a speed of 32 to 35 knots. The six battleships damaged at Pearl Harbor have been repaired, and with other older ships bring the total to 22.

To the three carriers left at the end of 1942, new construction has added eight 25,000 ton carriers of the Essex type, the Essex, Lexington, Bunker Hill, Yorktown, Intrepid, Wasp, Hornet, and Franklin. Nine smaller carriers have been launched and some of them are in commission; they are the Independence, Princeton, Belleau Wood, Cowpens, Monterey, Cabot, Langley, Bataan, and San Jacinto. Some 20 or more auxiliary carriers converted from merchant ships will also be operating by the year's end. Secretary Knox announced in October that work would begin immediately on three 45,000 ton carriers, to be ready

by 1945, heavily protected and providing a flight

deck for the largest bombers.

In round numbers, in view of rapid increases, the navy now has at least 55 cruisers heavy and light, about 600 destroyers counting DEs, and about 180 submarines. Among new cruiser types are six 27,000 ton Alaskas, some of which will probably be finished next year; several 13,000 ton cruisers, of which the *Baltimore* is one of those recently completed, with eight 8-inch guns and twelve 5-inch; and numerous 10,000 ton *Mont*peliers, with twelve 6-inch and twelve 5-inch. The Florikan is a new type for submarine rescue work, and the new minelayer Terror, 6,000 tons, has been given the unusual speed of 25 knots. Building time for all types has been reduced from 25 to 60 per cent, as has also the time for repair work, which has been carried out not only on our own ships but on over 1,200 ships of our allies. Civilian naval workers have increased from 245,000 in 1941 to 677,000 in 1943. Merchant ship construction in 1943 surpassed the goal of 16,000,000 tons, or double that of last year, and amounted to about 19,000,000 tons. The bulk of this construction was in 11-knot, 11,500-ton Liberty ships, built by mass production, but with an increasing proportion of 15 to 17-knot Victory ships, C-type cargo ships, and fast tankers. In next year's 20,000,000 ton program about 500 of these are to be built. See SHIPBUILDING; SHIPPING.

The number of officers and men in the Navy increased during the year from 1,239,000 to 2,388,-000. The Construction Battalions, recruited to their allotted strength of 200,000, are organized in 196 battalions, with 25 special battalions for cargo handling overseas. In July about 80,000 youths began the Navy V-12 program of college study in training for officer rating. The naval aviation training is now organized to produce 30,000 pilots and 100,000 mechanics each year. Naval personnel losses up to December 10 were 10,711 killed, 3,012 wounded, 8,337 missing, and 2,293 prisoners—a total of 24,353. The total for the Marine Corps

was 13,553, and for the Coast Guard 439. In April it was announced that the fleet commands of the Navy had been increased from three to seven. They have since been further increased and now include, in addition to the general Pacific command of Admiral Nimitz and the Atlantic command of Admiral Ingersoll, separate commands in the Southwest Pacific, South Pacific, Southeast Pacific, North Pacific, and North and South Atlantic. In July the growing importance of naval aviation was recognized by creating the office of Deputy Chief of Naval Operations (Air) and shifting Rear Adm. John S. McCain, former Chief of the Bureau of Aeronautics, to this new office with the rank of vice admiral. The former bureau divisions of planning, personnel, training, and information were also transferred to Operations. This means that aviation spokesmen will now have a larger and more direct share in planning and general naval strategy. Still another organizational change early in the year was the restoration, after 40 years, of the active rank of commodore, for stations of more limited responsibility than those assigned to a rear admiral.

For special branches of the service, see AERO-NAUTICS; COAST GUARD; PHOTOGRAPHY; also, COM-BINED CHIEFS OF STAFF. For training programs, see DENTISTRY; EDUCATION; LIBRARY PROGRESS; UNI-VERSITIES. For outlays on the U.S. Navy, see Pub-LIC FINANCE; UNITED STATES under Appropriations. See also Ports and Harbors and the topics listed under ARMED Forces and Munitions.

For naval warfare, see WORLD WAR. Compare AERONAUTICS; MILITARY PROGRESS.

ALLAN WESCOTT.

NAVY, U.S. The principal discussion of the U.S. Navy is under Coast Guard, Naval Progress, and World War. See those articles and the topics there referred to.

NAZISM. See GERMANY, NETHERLANDS and the other occupied countries of Europe, under History.

NEBRASKA. A west north central State. Area: 77,237 sq. mi. Population: 1,315,834 (1940 census); 1,198,202 (1943 nonmilitary estimate).

Statistics. Statistical information pertaining to

each of the 48 States and the District of Columbia has been assembled in comparative tables which appear in the following articles. Acricultures; Mineral Production; Roads and Streets; Schools; Social Security Board; Taxation; Universities; and Vital Statistics. The census of manufactures has been suspended for the time being; for the latest information, see 1941 YEAR Воок, р. 430.

Elections. See the article Elections in the UNITED STATES; also, for incumbents, House of Representatives and Senate.

Legislation. See the separate article on STATE

LEGISLATION

Officers. The Governor is Dwight Griswold (Rep.), inaugurated in January, 1943, for his second two-year term; Lieutenant Covernor, Roy W. Johnson; Secretary of State, Frank Marsh; Attornev General, Walter R. Johnson.

NECROLOGY. The following is a list of notable per-

sons who died during the year 1943.

Abd-El-Aziz, Muley. Sultan of Morocco from 1894 to 1908 when he abdicated; died in Tetuan, Spanish Morocco, June 9, 1943; born, 1877.

Aberhart, William. Canadian Premier of Alberta,

Canada, since 1935 and proponent of social credit; died in Vancouver, B.C., Canada, May 23, 1948; born in Kippen, Ont., Canada, Dec. 30, 1878.

Adamowski, Timothée. Polish-American violin virtuoso and first violinist and soloist for the Boston Symphony Orchestra during 1884–1908; died in Boston, Mass., Apr. 18, 1943; born in Warsaw Poland, Mar. 24, 1858.

Allen, Edgar. Educator and chairman of the department of anatomy of the Yale School of Medicine, Yale University, since 1933; died in New Haven, Conn., Feb. 3, 1943; born in Canon City, Colo., May 2, 1892. Dr. Allen was noted for his contribution to the knowledge concerning female sex hormones.

Allen, Edmund T(urney). Noted test pilot and director of flight and aerodynamics for the Boeing Aircraft Company, Seattle, since 1939. Died in an airplane crash in Seattle, Wash., Feb. 18, 1943; born in Chicago, Jan. 4, 1896.

Ameringer, Oscar. Publisher, author and leader of the Socialist party in Oklahoma for 30 years; and ollahoma for 30 years; and ollahoma for 30 years.

died in Oklahoma City, Okla., Nov. 5, 1943; born in Laubheim, Germany, 1870. In 1940 he published his autobiography, If You Don't Weaken.

Ames, Joseph Sweetman. Physicist, president of Johns Hopkins. University during 1929–35, there-

after president emeritus, and chairman of the National Advisory Committee for Aeronautics from 1927 to 1939; died in Baltimore, Md., June 24, 1943; born in Manchester, Vt., July 3, 1864. Graduating from Johns Hopkins in 1888, he began his pedagogical career at the same institution, becoming successively assistant, associate professor and professor of physics; he was appointed provost in

1926, arising to the presidency, 1929.

Although he spent half a century in the educational field, Dr. Ames was better known for his research work in the field of aeronautics. He was responsible for the development of numerous devices for safety and efficiency in all types of aircraft. In 1935 he was awarded the Langley Gold Medal of the Smithsonian Institution for "recogni-tion of the surpassing improvement of the performance, efficiency and safety of American air-craft resulting from the fundamental scientific re-searches conducted by the National Advisory Committee for Aeronautics under the leadership of Dr. Ames.

Author: Theory of Physics (1897), Free Expansion of Gases (1898), Elements of Physics (1900), Prismatic and Diffraction Spectra (1898), Text-Book of General Physics (1904), and The Constitution of Matter (1913).

Anderson, John. Drama critic of the newspaper New York Journal-American since 1928, and author and playwright; died in New York City, July 16, 1943; born in Pensacola, Fla., Oct. 18, 1896.

Andrews, Charles McLean. Educator and historian: Andrews, Charles McLean. Educator and historian; died in New Haven, Conn., Sept. 10, 1943; born in Wethersfield, Conn., Feb. 22, 1863. Graduated from Trinity College, Conn., with a B.A. degree in 1884, he went to Bryn Mawr College as an associate professor of history in 1889, becoming a full professor before leaving in 1907 to join the faculty of Johns Hopkins University as professor of history, 1907–10. During 1910 he went to Yale University as Farnum professor of American history, retiring in 1931 as professor emerities tory, retiring in 1931 as professor emeritus.

Considered the leading authority on the history of the American Colonies, he received a Pulitzer Prize in 1935 for the first volume of the monu-mental work, The Colonial Period of American History. Volume two was published in 1936, volume three 1937, volume four 1938. Among his other publications may be mentioned. The River Towns publications may be mentioned. The River Towns of Connecticut (1889), The Old English Manor (1892), Development of Modern Europe (2 vols., 1896, 1898), Contemporary Europe, Asia and Africa, 1871–1901 (1902), Colonial Self-Government 1652–1689 (1904), The Colonial Background of the American Revolution (1904, 1921). ground of the American Revolution (1924, 1931).

Andrews, Frank M(axwell). Lieutenant general, U.S. Army; commander of United States forces in European theater since Feb. 5, 1943; died in an airplane accident in Iceland, May 3, 1943; born in Nashville, Tenn., Feb. 3, 1884. During World War I General Andrews served in the Air Division at Washington. With the reorganization of the Army Air Corps in 1934-35, he received command of the General Headquarters Air Force. Subsequently (1939) he became Assistant Chief of Staff for Operations and Training; thence returning to active duty in 1940 as head of the Panama air forces; and finally receiving command (1941) over all Army forces at Panama, in addition to the Caribbean Defense Command, involving all units. In November, 1942, he was promoted to head the American forces in the Middle East; from where he went to the European scene of operations.

For years General Andrews had been a strong advocate of a powerful Army air arm. It was under his supervision that the American Flying Fortresses were developed, and during his tenure as commander of the General Headquarters Air Force laid the foundation for the present air force.

Andrews, John B(ertram). Economist; secretary of the American Association for Labor Legislation since 1909, founder (1911) and editor of the American Labor Legislation Review, and prominent

figure in the field of social and labor legislation; died in New York City, Jan. 4, 1943; born in South Wayne, Wis., Aug. 2, 1880. A contributor to The New International Year Book since 1925, Dr. Andrews was the author of numerous writings on labor subjects, including Labor Problems and Labor Legislation (1922), Administrative Labor Legislation (1936), British Factory Inspection (1937), Labor Laws in Action (1938), State Insurance Funds (1939).

Angus, Samuel. Irish theologian and educator; died in Sydney, Australia, Nov. 17, 1943; born in Ireland, Aug. 27, 1881. Author: The Environment of Early Christianity (1914), The Mystery-Religions and Christianity (1925), Jesus in the Lives of Man (1928). Fenerally Christianity (1928) of Men (1933), Essential Christianity (1939).

Antisdel, C(larence) B(aumes). President of Benedict College, South Carolina, from 1921 to 1930, thereafter emeritus; died in Columbia, S.C., Oct. 27, 1943; born in Afton, Wis., Nov. 18, 1863.

Appleyard, Rollo. British cable engineer, physicist and inventor; died in London, England, Mar. 1, 1943; born, Jan. 1, 1867. The inventor of a meter for the measurement of electrical conductivity and various aeronautical and other instruments, he also did research work in dielectrics, alloys, thermometry, and surface tension.

Armitage, Albert Borlase. British Arctic explorer; died in London, England, Nov. 2, 1943; born in Balquihidder, Perthshire, Scotland, July 2, 1864. Captain Armitage was second in command of the Jackson-Harmsworth North Pole Expedition of 1894-97, and of the British National Antarctic Expedition in 1901-04. Author: Two Years in the Antarctic (1905), Cadet to Commodore (1925), Cold Lands (1931).

Aronson, Naoum. Russian Jewish sculptor whose works are displayed in museums throughout Europe; died in New York City, Sept. 30, 1943; born in Kreslawka, Russia, 1872. Considered one of the preeminent artists of modern times, he was particularly noted for his bronze busts of Foch, Pasteur, Beethoven, Tolstoi, Rasputin, and Lenin.

Babb, Max W(ellington). President of the Allis-Chalmers Manufacturing Company, Milwaukee, during 1932–42, thereafter chairman of the board; died in Milwaukee, Wis., Mar. 13, 1943; born in

Mt. Pleasant, Ia., July 28, 1874.

Bull, Elmer Durwin. Entomologist and Assistant United States Secretary of Agriculture in 1920–21; died in Pasadena, Calif., Oct. 5, 1943; born in Athens, Vt., Sept. 21, 1870.

Ball, Frank C(layton). President of the Ball Brothers Company, largest manufacturers of Mason jars, industrialist and philanthropist; died in Muncie, Ind., Mar. 19, 1943; born in Greensburg, O., Nov. 24, 1857.

Barbour, Percy E. Consulting mining engineer and world authority on the economics of copper, gold

world attendity on the economics of copper, gold and silver; died in Lima, Peru, May 4, 1943; born in Portland, Me., Aug. 1, 1875.

Barbour, W. Warren. Republican Senator from New Jersey; died in Washington, D.C., Nov. 22, 1943; born at Monmouth Beach, N.J., July 31, 1888. He was appointed a member of the U.S. Senate on Dec. 1 1931 to fill the yearney caused by ate on Dec. 1, 1931, to fill the vacancy caused by the death of Dwight Morrow. In the general elections of 1932, he was elected to the Senate for the term expiring 1937; elected, November, 1938, to fill the vacancy for term ending Jan. 3, 1941; re-elected, Nov. 5, 1940, for a full term. Senator Barbour was recognized as a liberal

statesman. He decried centralization of government and government control of private industry. He was a severe critic of the New Deal's agricultural policies because he considered it based on the erroneous principle of scarcity rather than the theory of abundance. On the other hand, he supported such Administration measures as the Social Security Act, the Wagner-Ellenbogen Housing Bill, and the Railroad Retirement Act.

Barker, Lewellys Franklin. International authority on eugenics, heredity and neurology, and professor of medicine at Johns Hopkins University during 1905-13, thereafter professor emeritus; died in Baltimore, Md., July 13, 1943; born in Norwich, On-

tario, Canada, Sept. 16, 1867.

Barton, Pamela. British holder of both the British and American women's golf championships in 1936 and again British title-holder in 1939, and since 1941 a member of the British Women's Auxiliary Air Force, in which she was a flight officer; died in a plane that crashed on taking off from an RAF field in Kent, England, Nov. 13, 1943; born in England, 1917.

Beatry, Sir Edward (Wentworth). Canadian president of the Canadian Pacific Railway Company from 1918 to 1942; died in Montreal, Canada, Mar. 23, 1943; born in Thorold, Ontario, Canada, Oct. 16,

1877.

Beers, Clifford Whittingham. Founder of the National Committee for Mental Hygiene (1909), a movement which spread throughout the United States and the world to secure better treatment for the mentally ill; died in Providence, R.I., July 9, 1943; born in New Haven, Conn., Mar. 30, 1876. Himself incarcerated in a mental institute for some years, Beers recovered to devote the rest of his life to improving the treatment of the mentally unbal-anced. In 1928 he founded the American Foundaanced. In 1920 he rounded the American Foundation for Mental Hygiene, serving as secretary of the organization thereafter. Author: A Mind That Found Itself (autobiography, 1908, 24th ed. 1939).

Bell, Edward Price. London (England) correspondent of The Chicago Daily News during 1900-23

and a nominee for the Nobel Peace Prize in 1930; died in Gulfport, Miss., Sept. 23, 1943; born in Parke Co., Ind., Mar. 1, 1869. A proponent of world peace and especially of closer relations between the United States and Great Britain, his publications include World Chancelleries (1925), Europe's Economic Sunrise (1927), Primary Diplomacy (1938), Studies of Great Political Personalities (1938).

Benét, Stephen Vincent. Author and poet; died in New York City, Mar. 13, 1943; born in Bethlehem, Penn., July 22, 1898. He was graduated from Yale University in 1919; M.A., 1920. While a Freshman student at Yale he published Young Adventure (1918) and went the Lake Mondally. (1918), and won the John Masefield poetry prize. These early poems displayed a precocious facility which later developed into the whimsical and bizarre expressions at which he was so able.

His two most famous works are John Brown's Body (1928) and The Devil and Daniel Webster (1937). The former, for which he won the Pulitzer Prize in 1928, is a swiftly-moving narrative poem of the Civil War and was considered "a nationalizing influence which filled an important gap in the nation's cultural tradition and which tended to knit all Americans closer together." The other work is a delightful New England fantasy and folk story which was made into a folk-opera and subsequently into a motion picture, entitled All That Money Can Buy.

His other published works include Heavens and Earth (1920), The Beginning of Wisdom (1921), Jean Huguenot (1923), Tiger-Joy (1925), Spanish Bayonet (1926), Ballads and Poems (1931), A Book of Americans (with Rosemary Carr Benét, 1933), James Shore's Daughter (1934), Burning City (1936), Thirteen o'Clock (1937), Johnny Pye

and the Fool Killer (1938), Tales Before Midnight (1939), Nightmare at Noon (1940), and The Selected works of Stephen Vincent Benét (1942)

Among the many honors awarded him was the Roosevelt Medal (1933), the honorary degree of Litt.D. from Yale (1937), and membership in the American Academy of Arts and Letters (1938).

Bernie, Ben. Stage, screen and radio star; died in Beverly Hills, Calif., Oct. 20, 1943; born in Ba-yonne, N.J., May 30, 1891, or in New York City, 1892. Since 1922 the "Old Maestro" had been the leader of a popular dance band. His theme song was one of the most sentimental and best-liked of any: "Au revoir," he vocalized, "A fond cheerio, a bit of toodle-oo, God bless you, and plea-sant dreams.

Bevan, Edwyn Robert. British historian and archeologist; died in England, Oct. 19, 1943; born in

London, England, February, 1870.

Bidou, Henry. French drama critic; died in France, Feb. (?), 1943; born, 1873. Author: L'année dramatique (1912); La terre héroïque (1919); Chopin (1926); La Château de Blois (1931).

Bikaner, Maharajah of, Sir Ganga Singhji Badhadur. Indian ruler of Bikaner, a State of India, since 1887; died in Bombay, India, Feb. 2, 1943; born, Oct. 13, 1880. The Maharajah was one of the first Indian princes to offer his troops to England in World War I and his famous Ganga Risala (camel corps) helped maintain the British control of the Suez Canal. He was the first Chancellor of the Chamber of Princes (1921–26), and represented the Ruling Princes of India at the League of Nations in 1924.

Binyon, Laurence. British poet and writer; died in Reading, England, Mar. 10, 1943; born in Lancaster, England, Aug. 10, 1869. Although the author of some 20 volumes, Dr. Binyon was best known by the four lines from his ode For the Fallen, written during the first World War:

They shall grow not old, as we that are left grow old: Age shall not weary them, nor the years condemn. At the going down of the sun and in the morning We will remember them.

Birch, Reginald Bathurst. British-American artist and illustrator, who was best known for his illustrations of Frances Hodgson Burnett's Little Lord

Fauntleroy; died in New York City, June 17, 1943; born in London, England, May 2, 1856.

Blackie, Ernest Morell. British Bishop, dean of Rochester since 1937 and honorary chaplain to the late King George V in 1914–18, chaplain to that coversion during 1918, 30, died in Pachester Face sovereign during 1918–30; died in Rochester, England, Mar. 5, 1943; born, Aug. 19, 1867.

Blake, Edgar. Methodist Church Bishop (1920-40); died in Coral Gables, Fla., May 26, 1943; born in Gorham, Me., Dec. 8, 1869. One of the most progressive leaders of Methodism, Bishop Blake was ordained in the Church in 1899.

Blanco Galindo, Carlos. Bolivian head of the military junta which ruled Bolivia during 1930-31 and Minister for National Defense since November, 1940; died at Cochabamba, Bolivia, Oct. 2, 1943; born there, Mar. 12, 1882. Gen. Blanco Galindo was chief of the General Staff in 1920, and in 1932, during the Chaco War with Paraguay, was director-general of supplies. His publications include Historia militar de Bolivia; Campañas de Napoleón con sus cartas; Crónicas del año.

Blatchford, Robert. British Socialist, journalist, and author of numerous works, including Merrie England, Tommy Atkins, Dismal England, A Book About Books (1902), Not Guilty, A Plea for the Bottom Dog (1905), My Eighty Years (1931); died in Sussex, England, Dec. 17, 1943; born in

Maidstone, England, Mar. 17, 1851.

Bledsoe, Jules. Negro opera and musical comedy baritone, who sang Ol Man River in the play Show Boat (1927); died in Hollywood, Calif., July 14, 1943; born in Waco, Tex., Dec. 29, 1898.

Boris III. King of Bulgaria, succeeding his father,

King Ferdinand, on the latter's abdication, Oct. 3, 1918; the eldest son of King Ferdinand and Princess Marie Louise of Bourbon-Parma, he was a great-grandson of King Louis Philippe of France; on Oct. 25, 1930, he married Princess Giovanna, daughter of King Victor Emmanuel III of Italy; reportedly assassinated by German agents at a small railway station outside of Sofia, Bulgaria, August 24, died, Aug. 28, 1943; born in Sofia, Jan. 30, 1894.

King Boris was born in the Roman Catholic faith, but in 1896 his religion was changed, for political reasons, to Orthodox. He received his education in Bulgaria by tutors and at the Mili-tary Academy at Sofia. Subsequently he was aide-de-camp to the King and several generals and was a major in the first Balkan War (1912). During the second Balkan War (1913) and World War I he served on the staff of his father. Upon his accession to the throne, he was a general and commander of the Fourth Infantry, Fourth Cavalry, and Third Artillery Regiments.

Up to the beginning of developments that led to World War II, Boris acted strictly as a constitutional king, keeping in the background of politics. For activities of Boris during World War II,

see YEAR BOOKS for 1940-43 under Bulgaria. Boris Vladimirovitch, Grand Duke. Russian cousin of Czar Nicholas II, son of Grand Duke Vladimir Alexandrovitch and grandson of Czar Alexander III; died in Paris, France, Nov. 8, 1943; born in St. Petersburg, Nov. 12, 1877.

Bosworth, Hobart Van Zandt. Screen actor in more than 550 pictures, director, and producer; died in Glendale, Calif., Dec. 30, 1943; born in Marietta, Ohio, Aug. 11, 1867. The dean of motion picture actors, he became identified with the screen in 1909, after a successful theatrical career that dated from 1885 to the early 1900s. In 1909 he starred in The Sultan's Power, the first movie made in Hollywood. Among the silent pictures in which in Hollywood. Among the silent pictures in which he appeared prominently were Behind the Door, Woman of Affairs, King of the Mountain; two of his most famous roles were the Patriarch in *The Miracle Man* and General Lee in *Abraham Lincoln*. Some of Mr. Bosworth's pictures since 1929 were Hurricane; Eternal Love; DuBarry, Woman of Passion; The Devil's Holiday; A Man of Peace; Dirigible; Shipmates; Bad Timber; and County Fair.

Boutens, Pieter C. Dutch poet and translator of Aeschylus and other Greek poets; died at The Hague, the Netherlands, Mar. 18, 1943; born at Middleburg, Isle of Walcheren, Feb. 20, 1870.

Bowring, Sir Edgar Rennie. British High Commissioner for Newfoundland in 1918–22 and 1933–34;

died in London, England, June 23, 1943; born in St. John's, Newfoundland, Aug. 17, 1858.

Bracco, Roberto. Italian dramatist and novelist; died in Naples, Italy, Apr. 21, 1943; born in Naples, 1862. He was the author of 40 plays and six volumes of stories.

Bragg, Caleb. S. Prominent figure in the aviation, automobile and motorboat field; died in New York City, Oct. 24, 1943; born in Cincinnnati, Ohio, Nov. 26, 1886.

Bridgman, George B. Art teacher, famous for his books on anatomical drawing, including Constructice Anatomy (1920), Life Drawing (1925), and The Seven Laws of Folds (1942); died in New Rochelle, N.Y., Dec. 16, 1943; born in Bing, County of Monk, Canada, Nov. 5, 1864. For 38 years, until his retirement in September, 1943, he taught at the Art Students League in New York.

Brown, William Adams. Presbyterian minister, professor of applied theology at Union Theological Seminary, New York City, during 1930–36, being associated with the Seminary from 1895, and member of the Yale Corporation during 1917–34, acting as provost of Yale University from 1919 to 1920; died in New York City, Dec. 15, 1943; born there, Dec. 29, 1865. Dr. Brown had held many prominent positions in the Presbyterian Church and was the author of over 15 religious works.

Bruce, Edward. Lawyer, artist, and chief of the fine arts section of the U.S. Public Buildings Administration since 1933, which he inaugurated in

ministration since 1933, which he inaugurated in that year for the relief of unemployed artists; died in Hollywood, Calif., Jan. 27, 1943; born in Dover Plains, N.Y., Apr. 13, 1879.

Bryan, George Sands. Editor and author; died in Mount Vernon, N.Y., Dec. 22, 1943; born in Matteawan, N.Y., Sept. 6, 1879. In 1900 he was on the editorial staff of The New International Year Book and during 1900–03 was an editor for The New International Encyclopedia. His publications New International Encyclopedia. His publications New International Encyclopedia. His publications include Sam Houston (1917), The Man and His Work (1926), Yankee Notions (verse, 1926), The Great American Myth: The True Story of Lincoln's Murder (1940), Mystery Ship (1942), The Spy in America (1943).

Bryon, Arthur. Noted stage and screen actor and

president of Actors' Equity Association in 1938; died in Los Angeles, Calif., July 16, 1943; born in Brooklyn, N.Y., Apr. 3, 1872.

Bumpus, Hermon Carey. Educator, biologist, and zoologist; died in Pasadena, Calif., June 21, 1943; born in Buckfield, Me., May 5, 1862. Dr. Bumpus was director of the American Museum of Natural History, New York, from 1902 to 1911, and was president of Tufts College, Mass., during 1914-19.

Bunge, Alejandro E. Argentine engineer, statistician and economist; died in Buenos Aires, Argentina, May 24, 1943; born in Buenos Aires, Jan. 8, 1880. Author: Riqueza y renta; Ferrocarriles argentinos; Problemas económicos del presente; Las industrias del Norte.

Burns, John. British Member of Parliament from Battersea from 1892 to 1918; died in London, England, Jan. 24, 1943; born in London, Oct. 20, 1858. The first workingman to become a member of the British Cabinet, he was president of the Board of Trade in 1914, resigning in protest against Britain's declaration of war on Germany.

Cajander, Aino Kaarlo. Finnish statesman, Prime Minister in 1922-24 and again 1937-39, resigning upon the outbreak of war with Russia in November; died in Helsinki, Finland, Jan. 21, 1943;

born, 1879.

Calder, Frank. British-Canadian president of the National Hockey League since its foundation in 1917; died in Montreal, Canada, Feb. 4, 1943; born in Bristol, England, Nov. 17, 1877.

Cannon, Sylvester Q(uayle). Presiding Bishop of the Church of Latter-day Saints from 1925 to 1938; died in Salt Lake City, Utah, May 29, 1943; born in Salt Lake City, June 10, 1877.

Capps, Frank L. Inventor, who pioneered in the

American phonograph-recording industry and was the holder of more than 50 patents in that field, died in New York City, June 2, 1943; born in Illiopolis, Ill., 1867.

Carlyle, Alexander James. British religious leader and authority on English literature, economics, and political science; died in Holywell, Oxford, England, May 28, 1948; born, July 24, 1861. Dr.

Carlyle was the author of numerous religious and historical works.

Carver, George Washington. Negro educator and scientist; died in Tuskegee, Ala., Jan. 5, 1943; born on a farm near Diamond Grove, Mo., 1864. His parents were slaves. In infancy he and his mother were stolen and carried into Arkansas. His father succeeded in ransoming him for a race horse valued at \$300. His mother was not returned and was not heard of again; the father died shortly after in an accident. Dr. Carver eventually worked his way to Minneapolis, Kan., where he put him-self through high school and later through the Iowa State College of Agriculture and Mechanic Arts; B.S. Agr., 1894, M.S. Agr., 1896. Upon his graduation, Dr. Carver was elected a member of the State College faculty and placed in charge of the college greenhouse, where he devoted particular attention to bacterial laboratory work in systematic botany. In 1896 he made the acquaintance of the late Booker T. Washington who at once called him to the Tuskegee Institute. As director of the Department of Agricultural Research at Tuskegee, Dr. Carver stayed there the remainder of his life, devoting himself to the development of hundreds of new uses for agricultural products.

From extensive study and experiment with the peanut he developed from it more than 300 synthetic products, including milk, butter, cheese, coffee, various oils, dyes, soaps, flour, ink, and cosmetics. From sweet potatoes he produced over 118 substances, including starch, vinegar, shoeblacking, flour, library paste, and candies. He also produced dyes from clay, dandelions, onions,

beans, tomato vines, and trees.

A great deal of the credit for developing the peanut into large-scale production in the South must go to Dr. Carver. In 1921, in support of a tariff on peanuts, Dr. Carver appeared before the House Ways and Means Committee, and displayed and lectured on the numerous synthetics produced from the peanut. The Committee termed it "a most wonderful exhibition"; and the measure when passed carried the tariff on peanuts.

Dr. Carver was somewhat of a unique scientist in that he professed to believe that all his products were the work of God, rather than of science. He never attempted to patent any of his discoveries, instead he gave freely to every one who would learn about them, saying in defense of his attitude, "My discoveries come like a direct revelation from God."

In 1923 the National Association for the Advancement of Colored People awarded him the Spingarn Medal for discoveries that would change the economic life of the South. In 1934 he was made collaborator in the Bureau of Plant Industry of the U.S. Department of Agriculture, division of plant mycology and disease survey.

Cattani-Amadori, Federico. Italian Roman Catholic Cardinal since 1935; died in Rome, Italy, Apr. 12, 1943; born in Marradi, Italy, Apr. 17, 1856.

Cavallero, Ugo. Italian Commander in Chief of the Italian Armed Forces and head of the General Staff until the surrender of Italy to the Allies (World War II) on Sept. 8, 1943; died, according to the Italian Stefani news agency, by suicide, probably in Rome, Italy, September (?), 1943.

Chaptal, Emmanuel Anatole. French ecclesiastic, Titular Bishop of Isionda and Assistant Cardinal-Archbishop of Paris since 1922; died in Paris, France, May 28 (?), 1943; born in Paris, Dec. 25,

Cherington, Paul Terry. Prominent authority on marketing and distribution, who had been a partner in McKinsey & Company, New York, management consultants, since 1939; died in Philadelphia, Apr. 24, 1943; born in Ottawa, Kan., Oct. 31, 1876. Author: The First Advertising Book (1916), The Elements of Marketing (1920), College Education for Business (1925), People's Wants and How to Satisfy Them (1935).

Chittenden, Russell Henry. Distinguished scientist and world authority on nutrition, who made valuable discoveries in chemistry; died in New Haven, Conn., Dec. 26, 1943; born there, Feb. 18, 1856. Dr. Chittenden graduated from the Sheffield Scientific School of Yale University in 1875, the same year in which he isolated glycocoll and glycogen in scallops—the first time that a free amino acid had been isolated in living tissue—later recognized as protein. In 1877 he became an instructor in chemistry at Yale, studied in Heidelberg, in 1878–79, and received his doctor's degree at Yale in 1880. From 1882 to 1922 he held the position of professor of physiological chemistry at Yale, thereafter emeritus, and during 1898–1922 was director of the Sheffield Scientific School. He was lecturer on physiological chemistry at Columbia University in 1898–1903.

Dr. Chittenden was the author of several standard works, including Digestive Proteolysis (1895), Physiological Economy in Nutrition (1905), Nutrition of Man (1907), History of the Sheffield Scientific School (2 vols., 1928), and Development of Physiological Chemistry in the United States (1930). He served as editor for the four-volume

Studies in Physiological Chemistry (1884, 1901).

Choynski, Joe. One of the last great fighters of the bare knuckle era of prize fighting, who fought such greats as Jack Johnson, Jim Jeffries, and Jim Corbett; died in Cincinnati, O., Jan. 24, 1943; born in San Francisco, Nov. 8, 1869.

Church, Samuel Harden. President of the Carnegie

Institute since 1914; died in Pittsburgh, Pa., Oct. 11, 1943; born in Caldwell Co., Mo., Jan. 24, 1858. Dr. Church was undoubtedly best known for his proposals of extreme measures against the wartime leaders of Germany, both in World War I and II. For a period of one month, May, 1940, Dr. Church offered a reward of \$1,000,000 for the capture of Hitler, alive and unhurt. He was one of the earliest to raise his voice against the prohibition heresy. He became assistant secretary of the Pennsylvania Railway Company in 1920, holding the rank of vice-president when he retired in

A distinguished historian, his publications include Cromwell, a History (1894), John Marmaduke (1897), Corporate History of the Pennsylvania Railroad Lines West of Pittsburgh (15 vols., 1898–1920), The Liberal Party in America (1921)

(1915), The Liberal Party in America (1931).

Cline, Pierce. President of Centenary College,
Louisiana, since 1933; died in Shreyeport, La., Oct.

25, 1943; born in Waleska, Ga., Feb. 17, 1890.

Cootes, Joseph Gordon. New Zealand statesman,
Prime Minister during 1925–28, member of the
War Cabinet in World War II since 1940, and Minister of Armed Forces and War Coordination from July 1, 1942; born in Matakohe, New Zea-land, 1878; died in Wellington, New Zealand, May 27, 1943.

Coffroth, James W. (Sunny Jim). Dean of American boxing promoters and former horse-racing figure; died in San Diego, Calif., Feb. 6, 1943; born in Sacramento, Calif., Sept. 12, 1872.

Colles, Henry Cope. British music critic of The

Times of London since 1911; died in London, Mar. 5, 1943; born at Bridgenorth, Salop, England, 1879. Author: Brahms (1908), The Growth of Music (1912-16), Voice and Verse (1928), The Royal College of Music (1938), On Learning Music and Other Essays (1940).

Collingwood, Robin George. British educator and authority on the Roman occupation of England; died, Jan. 11, 1943; born, 1889. Author: Religion and Philosophy (1916), Roman Britain (1921), Archaeology of Roman Britain (1930), Human Nature and Human History (1936), and The New Leviathan (1942)

Collins, James J. (Jimmy). Star baseball player; died in Buffalo, N.Y., Mar. 6, 1943; born in Niagara Falls, N.Y., 1869. Generally regarded as the greatest third baseman of all time, Collins played in the motion during 1805 1907. He storad in the majors during 1895–1907. He starred in the National League for the Boston Braves during 1896– 1900, and, when the American League was organized in 1901, joined the Boston Red Sox, where he piloted the Sox to pennants in 1903 and 1904 and to victory over the Pittsburgh Pirates in the first world series, 1903. Collins had a lifetime batting average of .296 and a fielding average of .929.

Connaught, Alastair Arthur, Duke of. Great-grandson of Queen Victoria, son of Duchess of Fife and Prince Arthur of Connaught, and second cousin once removed of King George VI of England; died in Ottawa, Ontario, Canada, Apr. 26, 1943; born,

Aug. 9, 1914.

Coriat, Isador Henry. Psychiatrist and neurologist, pioneer in the field of the psychoanalysis of stammering; died in Boston, Mass., May 26, 1943; born in Philadelphia, Dec. 10, 1875. Author: Abnormal Psychology (1910), The Meaning of Dreams (1915), What Is Psychoanalysis? (1917), Stammering (1928).

Cotsworth, Moses B. British maker of new calendar which divided the year into 13 months of 28 days.

which divided the year into 13 months of 28 days each, with an odd "Year Day" added to December, and a like addition to June, also without a weekday name, for leap year; died in Vancouver, B.C., Canada, June 5, 1943; born in Willitoft, near York, England, Dec. 3, 1859.

Cottenham, 6th Earl of, Mark Everard Pepys. British automobile race driver and author of several books on motoring; died in London, England, July 20, 1943; born, May 29, 1903.

Cremonesi, Carlo. Italian Roman Catholic Cardinal; died, Nov. 25, 1943; born in Rome, Italy, 1866. Cardinal Cremonesi was formerly secret eleemosynar, or supervisor of the distribution of

papal charities, and Vatican official.

Crile, George (Washington). Surgeon and scientist; died in Cleveland, O., Jan. 7, 1943; born in Chili, O., Nov. 11, 1864. In 1905 Dr. Crile performed the first direct blood transfusion, and also during that year discovered that adrenalin could make the apparently dead breathe again and publicly resuscitated a dog which had "died" some minutes before. He perfected important features in the present blood-transfusion technique and performed the first successful thyroid operation, a type of surgery in which he was supreme. He successfully treated one kind of high blood pressure by severing sympathetic nerves, announced that similar denervation of the adrenal glands relieved hyperactivity of the thyroid.

Dr. Crile's most important discovery was nerveblock anesthesia. Using nitrous oxide and novo-cain, he shut off an operated area from the brain and by so depriving it of feeling eliminated the perilous nervous exhaustion that is surgical shock. In 1921 Dr. Crile and others founded the Cleve-land Clinic for clinical and research activities.

Among his numerous publications were Surgical

Shock (1897), Certain Problems Relating to Surgical Operation (1901), Origin and Nature of the Emotions (1915), Notes on Military Surgery (1924), A Bipolar Theory of Living Processes (1926), Problems in Surgery (1928), The Surgical Treatment of Hypertension (1938), Intelligence

Power and Personality (1941).

Crumit, Frank. Radio singer and former musical comedy star; died in New York City, Sept. 7, 1943; born in Jackson, O., 1889. After his retirement from the stage in 1927, he entered radio, and in 1930 teamed up with his wife, Julia Sanderson, actress, to form the quiz program known as the "Bat-tle of the Sexes," which continued as a favorite program with the radio audience up to his death. Cudahy, John Clarence. Ambassador to Poland (1933–37), Minister to Ireland (1937–39), and Ambassador to Belgium and Minister to Luxembourg (1939-40); died when he was thrown from his horse while riding on his estate near Milwau-kee, Wis., Sept. 6, 1943; born in Milwaukee, Dec. 10, 1887.

Currell, William Spenser. President of the University of South Carolina, Columbia, from 1914 to 1922; died in Asheville, N.C., July 17, 1948; born in Charleston, S.C., May 13, 1858.

Dafoe, Allan Roy. Canadian medical doctor who attended the birth of the Dionne quintuplets on May 28, 1934; died in North Bay, Ontario, Can-

ada, June 2, 1943; born, May 29, 1883.

Darwin, Leonard. British scientist and last surviving son of Charles Darwin, author of The Origin of Species; died in Forest Row, Sussex, England, Mar. 26, 1943; born, Jan. 15, 1850. Major Darwin, Royal Engineers, was a Liberal Unionist Member of Pauliorent Justice 1800 ber of Parliament during 1892–95, and president of the Royal Geographical Society, 1908 to 1911, and the Eugenics Education Society, 1911 to 1928. Author: Bimetallism (1898), Municipal Trade (1903), The Need for Eugenic Reform (1926).

Davis, Jonathan M(cMillan). Democratic Governor of Kansas from 1923 to 1925; died in Fort Scott, Kan., June 27, 1943; born in Franklin Twp., Bourbon Ct., Kan., Apr. 26, 1871.

Debeney, Marie Eugene. French general (ret. 1930); died in Bourg-en-bresse, France, Nov. 9, 1943; born there, 1864. General Debeney was commander of the First French Army in World War I which won the Battle of Montdidier in 1918. He was commander of the High War School and Centre des Hautes Études Militaires (1920-24); Chief of Army Staff (1924-30); and member of the Supreme War Council (1930-34).

Delafield, E. M. (Mrs. Elizabeth Monica Dashwood).

British author of more than 40 books, most of them novels and best-sellers, including Tension (1920), Humbug (1922), What is Looe (1928), Diary of a Provincial Lady (1931), The Provincial Lady Goes Further (1932), The Provincial Lady in London (1933), The Provincial Lady in America (1934), Straw Without Bricks (1937), The Brontës (1938), The Provincial Lady in Wartime (1940), No One Now Will Know (1941); died in Cullompton, Devenshire, England, Dec. 2, 1943; born, 1891.

De Leath, Vaughn. Singer and composer, who was the first woman whose singing voice was heard over the radio (1920); died in Buffalo, N.Y., May 28, 1943; born in Mount Pulaski, Ill., Sept. 26, 1900. Known as "The First Lady of Radio," she was generally credited with introducing the "crooning" style of singing. She wrote more than 500 songs, among them Don't You Care, Heigh-Ho Silver, I Wasn't Lying When I Said I Loved You, Madonna's Lullaby, and It's a Lonely Trail.

Dennis, Charles H(enry). Reporter, foreign correspondent, managing editor (1892-1901), and editor (1925-34) during his 62 years (1882-1943) on The Chicago Daily News; died in Chicago, Sept. 25, 1943; born in Decatur, Ill., Feb. 8, 1860.

Denny, Collins. Bishop of the Methodist Episcopal Church, South, from 1910 to 1934; died in Richmond, Va., May 12, 1943; born in Winchester, Va., May 28, 1854. Author: Analysis of Davis's Elements of Deductive Logic and of His Elements of Psychology (1916), A Manual of the Discipline of

the Methodist Episcopal Church, South (1920).

Diaz, Rafaelo. Tenor and member of the Metropolitian Opera Company from 1918 to 1936; died in New York City, Dec. 11, 1943; born in San An-

tonio, Tex., May 16, 1888.

Dickinson, Luren D(udley). Republican Governor of Michigan from Mar. 17, 1939, to Jan. 1, 1941; died in Charlotte, Mich., Apr. 22, 1943; born in Niagara Ct., N.Y., Apr. 15, 1859. Throughout his long public life Governor Dickinson constantly orated agianst sin, gambling, and "high living," and claimed that a "pipeline to God" guided him in his administration. in his administration.

Dickinson, 1st Baron, of Painswick, Willoughby Hyett. British statesmen and one of the originators of the League of Nations movement in 1915; died in Painswick, England, June 1, 1943; born Apr. 9, 1859. A Member of Parliament from 1906 to 1918, Lord Dickinson was chairman of the League of Nations Society, 1915-18; vice-president of the League of Nations Union in 1924, and president of the International Union of League of Nations Societies, 1925.

Ditter, J. William. Republican Congressman from Pennsylvania since 1933; died in the crash of a Navy transport plane into a hillside some 10 miles from Lancaster, Penn., Nov. 21, 1943; born in Philadelphia, Penn., Sept. 5, 1888.

Dixey, Henry E. Famous matinee idol of the 1880's and 1890's, who was best known for his performance in Adonis during 1884-86; died in Atlantic City, N.J., Feb. 25, 1943; born in Boston, Mass., Jan. 6, 1859.

Dobie, Charles Caldwell. Author of books delineating the color of an earlier San Francisco and its Chinatown, including Blood-Red Dawn (1920), Broken to the Plow, Less Than Kin (1926), Portraits of a Courtezan (1934); died in San Francisco, Calif., Jan. 11, 1943; born in San Francisco, Mar. 15, 1881. He also wrote numerous short stories.

Doret, Gustave. Swiss composer and conductor; died in Lausanne, Switzerland, Apr. 19, 1943; born

in Aigle, Switzerland, Sept. 20, 1866.

Duff, Edward A(loysius). Roman Catholic Chief of Chaplains of the U.S. Navy from 1937 to 1939; died in Philadelphia, Feb. 11, 1943; born in Philadelphia, Jan. 5, 1885

Duncun, Sir Patrick. British colonial administrator, Governor General of the Union of South Africa since 1937; died in Pretoria, U.S.A., July 17, 1943;

born, Dec. 21, 1870.

Du Pont, Richard C(hichester). Noted glider expert and special assistant to Gen. Henry H. Arnold, chief of the Army Air Forces, in the air forces glider program (World War II) since April, 1943; died in a glider crash at March Field, Calif., Sept. 11, 1943; born in Wilmington, Del., Jan. 2, 1911. He had been president of All American Light and Calif. can Aviation, Inc., a company that served the U.S. Post Office Department in the transport of air mail and air express, since 1938.

Eastman, Lucius Root. President of Hills Bros. Company, food manufacturers of New York, during 1906-38 and chairman of the board thereafter; died in Scarsdale, N.Y., Mar. 14, 1943; born in Framingham, Mass., July 29, 1874.

Ely, Richard Theodore. Noted economist; died in Old Lyme, Conn., Oct. 4, 1943; born in Riply, N.Y., Apr. 13, 1854. Dr. Ely, whose liberal views inveighed against "iron laws," insisted that economic institutions suitable in one place might not jibe in another, and fought what he considered the excesses of unrestricted competition, held professorships at Johns Hopkins University (1881–92), University of Wisconsin (1892–1925), Northwestern University (1925–33), and was honorary associate in economics at Columbia University since 1937.

During his tenure at Johns Hopkins, Dr. Ely wrote Labor Movement in America (1886) and because of the views there expressed was charged with subversive ideas and the recall of his professorship; and in 1894 an unsuccessful attempt was made to depose him from his chair at Wisconsin for teaching Socialistic doctrines. He was one of the first professional economists to break with the nation that government interference in economic affairs is always an evil, and in his writings he frequently advocated state interference as a means of regulation. Dr. Ely was one of the principal founders of the American Economics Association (1885) and was president from 1899 to

1901. His publications came to more than 50 volumes including French and German Socialism in Modern Times (1883), Introduction to Political Economy (1889), Studies in the Evolution of Industrial Society (1903), Elementary Economics (with G. R. Wicker, 1904), Ground Under Our Feet (1938), Land Economics (with George S. Wehrwein, 1940).

Engel, Joseph W. Pioneer in the motion-picture industry and founder of the early Paramount and Metro-Goldwyn companies; died in New York City, Apr. 18, 1943; born in New York City, 1882.

Englebright, Harry Lane. Republican Congressman from California since 1926 and Republican whip in the House since 1933; died in Bethesda, Md., May 13, 1943; born in Nevada City, Calif., Jan. 2, 1884.

Engleman, J(ames) O(zro). President of Kent (O.) State University from 1928 to 1938 and thereafter professor emeritus of educational administration; died on a fishing trip on Lake Erie; born in Jeffersonville, Ind., Sept. 13, 1873.

English, Robert Henry. Rear admiral, U.S. Navy; commander of the Pacific submarine force; died in

an airplane accident in California, Jan. 21, 1943. Erb, Donald M(ilton). President of the University of Oregon since 1938 and associated with that

of Oregon since 1930 and associated with that institution from 1927; died in Eugene, Ore., Dec. 23, 1943; born in Brooklyn, N.Y., Aug. 3, 1900.

Evarista, Mother Mary (Anna Harks). President of Notre Dame College, South Euclid, Ohio, since 1922; she supervised the organization and founding of that institution, died in Cleveland O ing of that institution; died in Cleveland, O., Aug. 1, 1943; born, 1868.

Ewing, James. Foremost authority on cancer and a pioneer in the treatment of the disease with radium; died in New York City, May 16, 1943; born in Pittsburgh, Penn., Dec. 25, 1866. Author: Clinical Pathology of Blood (1900-03), Neoplastic Diseases (1919–27).

Folconer, Sir Robert Alexander. Canadian educator and president of the University of Toronto from 1907 to 1932, thereafter president emeritus; died in Toronto, Ont., Canada, Nov. 4, 1943; born in Charlottetown, Prince Edward Island, Canada, Feb. 10, 1867. Author: The German Tragedy and Its Meaning for Canada (1915), The United States as a Neighbour (1925), Immortality and Western

Civilization (1930).

Farrell, James A(ugustine). President of the United States Steel Corporation from 1911 to 1932; died in New York City, Mar. 28, 1943; born in New Haven, Conn., Feb. 15, 1863. He was a founder of the National Foreign Trade Council in 1914, and as such continuously advocated for foreign trade principles that would maintain world peace and break down the barriers of preferential trading sys-

Feist, Sigmund. German philologist and author of works represented in research libraries throughout the world; died in Copenhagen, Denmark, Apr. (?), 1943; born in Mainz, Germany, June 12, 1865.

Fenlon, John F. Provincial of the Society of St. Sulpice and president of the St. Mary's Seminary and University, Baltimore, since 1925; died in Holland, Mich., July 31, 1943; born in Chicago, June 23, 1873.

Fish, Bert. Minister to Egypt from 1933 to 1941 and to Portugal from Feb. 11, 1941; died in Lisbon, Portugal, July 21, 1943; born in Bedford, Ind., Oct. 8, 1875.

Fitzroy, Edward Algernon. British Speaker of the House of Commons since 1928 and Conservative Member of Parliament for Daventry during 1900– 06 and since 1910; died in London, England, Mar.

3, 1943; born, July 24, 1869.

Fitzwilliam, 7th Earl of, William Charles de Meuron Wentworth-Fitzwilliam. British peer, soldier, political figure, and industrialist; died in Rotherham, Yorkshire, England, Feb. 15, 1943; born in Canada, 1872. Lord Fitzwilliam was one of the wealthiest persons in England, and was governing director of four companies with a value of \$14,000,000.

Focillon, Henri. French-American educator and world authority on medieval art and architecture; died in New Haven, Conn., Mar. 3, 1943; born in Dijon, France, Sept. 7, 1881.

Fontes, Antonio (Cardoso). Brazilian physician, noted for researches dealing with tuberculosis and tropical diseases; died in Rio de Janeiro, Brazil, Mar. 27, 1943; born in Petropolis, Brazil, Oct. 6,

Ford, Edsel (Bryant). Automobile manufacturer, president and treasurer (1921) of the Henry Ford Company, one of the most fabulous industrial empires of all time, since 1919; died in Detroit Mich., May 26, 1943; born in Detroit, Nov. 6, 1893. Identified from the beginning of his active career with his father, Henry Ford, in the manufacture of automobiles, he was considered not merely a collaborator but an originator. He was credited with the change from the famous model T "tin lizzie" to the Model A and subsequent development of the V-8 and Ford Lincoln Zephyr. An aviation enthusiast, he influenced his father toward his own air-mind-ness, and when the United States made its en-trance into World War II the Ford Company had already spent millions of dollars in preparation for mass plane production.

Fortoul, Jose Gil. Venezuelan public man, diplomat, and President of Venezuela during 1918-14; died in Caracas, Venezuela, June 15, 1943; born in El Tocuyo, Venezuela, 1862. He was the author of 30 novels and historic treatises, the best known of which was The Constitutional History of Ven-

ezuela.

Franco, Mello Afranio de. See MELLO FRANCO, AFRANIO DE.

Freeman, James E(dward). Episcopal Bishop of

Washington, D.C., since 1923, noted as the prime spirit behind the building of the National Cathedral in Washington which he hoped would be the American equivalent of Westminster Abbey; died in Washington, D.C., June 6, 1943; born in New York City, July 24, 1866.

Freeman, Richard Austin. British author of the "Dr. Thorndyke" detective novels and numerous other mystery stories, including The Red Thumb Mark (1907), The Great Portrait Mystery (1918), The Puzzle Lock (1925), When Rogues Fall Out (1932), The Jacob Street Mystery (1942); died in Gravesend, England, Sept. 30, 1943; born, 1862.

Fremantle, Sir Francis Edward. British surgeon, author, and a Conservative Member of Parliament for St. Albans since 1919; died in Hertfordshire,

England, Aug. 26, 1943; born, 1872.

Fuqua, Stephen O(gden). Major general, U.S. Army (ret. 1938); died in New York City, May 11, 1943; born in Baton Rouge, La., Dec. 25, 1874. During World War I he rose to the rank of colonel, experiencing service as head of the First Army troop movement section, and as the First Division's chief of staff. In March, 1928, he was promoted to chief of infantry of the U.S. Army, assuming the temporary rank of major general. Upon completion of duty in the latter position in March, 1933, he was assigned to Spain as a military attaché, where he ended his military career. Since 1939 General Fuqua had been the land-military analyst for the magazine Newsweek, contributing a weekly column, "War Tides."

Gager, C(harles) Stuart. Botanist, director of the Brooklyn (New York) Botanic Garden since 1910; died in Waterville, Me., Aug. 9, 1943; born in Norwich, N.Y., Dec. 23, 1872. Author: Errors in Science Teaching (1901), Fundamentals of Botany (1916), Laboratory Guide for General Botany (1916), The Relations between Science and Theology (1925), The Plant World (1931).

Gainford, 1st Baron, of Headlam, Joseph Albert Pease. British coal mine owner, Liberal statesman, and expert on finance; died in Darlington, England, Feb. 15, 1943; born in Darlington, Jan. 17, 1860. Lord Gainford was chairman of the British Broadcasting Company from 1922 to 1926.

Galway, 8th Viscount, George Vere Arundell Monckton-Arundell. British Governor General of New Zealand from 1935 to 1941; died in London, Mar. 28,

1943; born, Mar. 24, 1882.

Gaselee, Sir Stephen. British librarian and keeper of the papers at the Foreign Office since 1920; died in London, England, June 15, 1943; born, Nov. 9, 1882. Author: Stories from the Christian East (1918), Anthology of Medieval Latin (1925), The Language of Diplomacy (1939).

Geenzier, Enrique. Panamanian journalist, diplomat, and public man; died in Colon, Panama, Sept. 21, 1943; born in Chitré, Panama, July 12, 1888. The poet laureate of Panama, his publications include Salmo de vida (1916), La tristeza del vals

(1931), Poesías (1933).

Geer, Gerard de. Swedish geologist, professor of Geology at the University of Stockholm during 1897-1924, founder of the Geochronological Institute there, and author of numerous works on glacial and post-glacial problems; died in Stockholm, Sweden, August (?), 1943; born in Sweden, 1859.

Giannini, A(madeo) P(eter). Banker and motionpicture executive; died in Los Angeles, Calif., Feb.

7, 1943; born in San Jose, Calif., May 6, 1870.

Gillet, Louis. French art critic, noted for his numerous books on French and Italian art, including Les primitifs français (1904), Watteau (1921), Histoire de l'art français (1922), L'art au nouveau monde (1929), Londres et Rome (1936), Rayons et ombres de l'Allemagne (1937); died in France, July (?), 1943; born, 1876. M. Gillet was elected to the French Academy in November, 1935

Gillmore, Frank. Actor and co-founder (1913) of the Actors Equity Association and president of that union organization from 1929 to 1937; died in New York City, Mar. 29, 1943; born in New York City, May 14, 1867.

Glaser, Curt. German art historian and director of the State Art Library of Berlin Museums from 1924 to 1933; died in Lake Placid, N.Y., Nov. 23, 1943; born in Leipzig, Germany, 1879. A noted authority on Chinese and Japanese art, he was the author of numerous books on the subject, including Die Kunst Ostasiens (1913), Die Graphik der

Neuzeit (1922).

Glyn, Mrs. Clayton (Elinor). British author of the little red-bound volume Three Weeks (1907) which created a sensation as the first so-called "sex novel"; died in London, England, Sept. 23, 1943; born in Jersey, the Channel Islands, Oct. 7, 1864. Although the novel was castigated by some ecclesiastical and lay authorities, but immensely popular elsewhere, she produced a novel called It in 1927, a word which became synonymous with sex appeal. Her other publications include The Visits of Elizabeth (1900), The Vicissitudes of Evangeline (1905), The Philosophy of Love (1921), This Passion Called Love (1926), Love's Hour (1932), Adventure (1936).

Grand, Sarah (Frances Elizabeth Clarke). British novelist, pioneer in the British votes-for-women movement, and six times (1923, 1925–29) Mayor of Bath; died in Calne, England, May 12, 1943; born in Ireland, 1854. Author: Singularly Deluded; The Heavenly Twins (1893); The Beth Book (1897); The Modern Man and Maid (1898); Emotional Moments (1908); Variety (1922).

Gray, George Kruger. British painter and designer, noted for his designs of seals, coins, and medals; died, May 4, 1943; born in Kensington, England,

Dec. 25, 1880.

Grosvenor, Graham Bethune. Pioneer in air transportation and, at his death, special assistant to the portation and, at his death, special assistant to the president of Pan American Airways Corp.; died in New York City, Oct. 28, 1943; born in Dubuque, Ia., July 22, 1884. He was president of the Fairchild Airplane Manufacturing Corp. and vice-president of the Fairchild Aviation Corp. in 1928; and president of The Aviation Corp., 1929–30.

Guiterman, Arthur. Poet and playwright; died in Pittsburgh, Penn., Jan. 11, 1943; born in Vienna, Austria, Nov. 20, 1871. Author: Betel Nuts (1907), Cuest Book (1908). The Laughing Muse (1915),

Austria, Nov. 20, 1871. Autrior: Detect trues (1901), Guest Book (1908), The Laughing Muse (1915), Ballads of Old New York (1920), A Poet's Proverbs (1924), Wildwood Fables (1927), Song and Laughter (1929).

Hall, Raddyffe. British novelist and poet whose best-seller novel The Well of Loneliness (1928)

was originally banned as obscene in England but later found recognition as a studious dissertation and a sociological and psychological study of sexual abnormality; died in London, England, Oct. 7, 1943; born in Bournemouth Hants, England, 1886. Other publications by Miss Hall include The Forgotten Island; The Forge (1924); A Saturday Life (1925); Adams Breed (1926); The Master of the House (1932); The Sixth Beatitude (1936).

Hall, Sir (William) Reginald. British admiral (ret. 1919), and head of the British Naval Intelligence Service in World War I from 1914 to 1918; died in London, England, Oct. 22, 1943; born, June 28, 1870 England, Oct. 22, 1943; born, June 28, 1870 England, Oct. 28, 1870 England, Oct. 29, 1943; born, June 28, 1870 England, Oct. 29, 1943; born, Oct. 29, 1943; born, Oct. 20, 1944; 1870. Sir Reginald was a Member of Parliament, 1919–23, 1925–29.

Hammerstein-Equord, Kurt von. German Commander in Chief of the German Army during 1930-33; died, Apr. 24, 1943; born, 1878. Fearless in voicing his anti-Nazi opinions, General Hammerstein-Equord was forced to resign his position when Hitler came into power.

Handelsmann, Marceli. Polish historian; murdered, according to reports from Poland, by German agents, September (?), 1943; born, 1882. Dr. Handelsmann, had hald professional to the control of the contr delsmann had held professorial posts at Warsaw and Cracow universities, where he specialized in modern history. Later, he became a member of the Polish Academy of Science and president of the Polish Society for International Affairs. His publications include Napoléon et la Pologne (1909); Historyka (1928); Czartoryski: Nicolas Ier et la question du Proche-Orient (1934); Czartoryski and the Ukrainian Question (1938).

Hardinge, Hal Williams). Consulting engineer and inventor of the Hardinge conical mill for grinding ores (1906), the reverse air separator, the Telthermoscope and fire-damp detector for coal mines (1888), and numerous other devices; died in New York City, Sept. 15, 1943; born in San Antonio, Tex., Sept. 30, 1855.

Harrington, Gordon S(idney). Canadian Premier of Nova Scotia during 1930–33; died in Halifax, Nova Scotia, July 4, 1943; born in Halifax, Aug. 7, 1883. Hart, Albert Bushnell. Historian, associated with Harvard University since 1883 and professor of the science of government from 1910 to 1926, thereafter professor emeritus; died in Boston, Mass., June 16, 1943; born in Clarksville, Penn., July 1, 1854. Dean of American historians, he was the author and editor of over 100 works dealing with American history, government, and foreign policy. He identified himself particularly with the introduction and development of the method of studying history from the original sources, both in sec-ondary schools and in colleges, and his influence was felt throughout the United States.

was felt throughout the United States.

Among his better-known books are Formation of the Union (1892), Guide to the Study of American History (1897), Foundations of American Foreign Policy (1901), Essentials of American History (1905), Manual of American History, Diplomacy and Government (1908), New American History (1917), School History of the U.S. (1917), and We and Our History (1923).

Included among the notable works that he edited are American History Told by Contemporaries (5)

are American History Told by Contemporaries (5 vols., 1898–1929); American Citizen Series (7 vols., since 1899); The American Nation (28 vols., 1903-18); American Patriots and Statesmen (5 vols., 1916), and American Year Book (1911-20, 1926-32).

Hart, Lorenz (Larry). Noted song writer; died in New York City, Nov. 22, 1943; born there, 1895. Since 1919 Hart had combined his lyrics with the music of Richard Rodgers in one of the most successful collaborations of the American stage. Hart cessful collaborations of the American stage. Hart and Rodgers produced an estimated 1,000 songs and more than 25 musical shows. They provided such song hits as With a Song in My Heart, Isn't It Romantic?, Soon, It's Easy to Remember but So Hard to Forget, My Heart Stood Still, Small Hotel, Where or When, Blue Moon, and I Didn't Know What Time It Was. They wrote music for such stage hits as The Poor Little Ritz Girl, Dearest Enemy, On Your Toes Bakes in Arms I'd. est Enemy, On Your Toes, Babes in Arms, I'd Rather Be Right, I Married an Angel, The Boys from Syracuse, and Pal Joey. Hart's last contribution was the 1943 stage revival of the Hart-Rodgers hit of 1927, A Connecticut Yankee.

Hartley, Marsden. Painter, whose marines and

landscapes won him international note; died in Ellsworth, Me.; Sept. 2, 1943; born in Lewiston, Me., 1878.

Hawkes, H(erbert) E(dwin). Dean of Columbia College, affiliate of Columbia University, since 1918; died in New York City, May 4, 1943; born in Templeton, Mass., Dec. 6, 1872. Author: Advanced Algebra (1912), Plane Geometry (1920), College, What's the Use? (1927).

Hayashi, Senjuro. Japanese Premier in 1937 and during World War II one of the most powerful of military leaders; died in Japan, Feb. 4, 1943; born, 1875. As War Minister during 1934–35, General Hayashi was responsible for the expansion and reorganization of the army along modern military lines.

Henry, Charles Arsène. French Ambassador to Japan since 1936; died in Tokyo, Japan, Nov. 14, 1943; born, 1881. In the French diplomatic service since 1906, he was Minister to Thailand, 1928–30; to Canada, 1930–34; and to Denmark, 1934–36.

Henrys, Paul Prosper. French major general, commander of the French armies on the eastern front in 1918 (World War I); died in Paris, France, Nov. 10, 1943; born in Neufchateau, Vosges Province, France, Mar. 13, 1862.

Herriot, Édouard. French statesman; died, according to a German announcement, in a sanitarium near Paris, France, Oct. 17, 1943; born in Lyons, France, July 5, 1872. He was educated at the Ecole Normale Supérieure, and at the conclusion of his studies became a professor of rhetoric and literature at the Lycee of Lyons, and an instructor at the university there. He entered politics and was successively counselor general of the Rhone Department, Mayor of Lyons (since 1905), Senator (1912), Minister of Public Works in Briand's government (December, 1916, to March, 1917), and deputy (1919–40).

After the armistice of World War I, he opposed the reparation policies of the Nationalist groups in France and favored a rapprochement with Germany and Russia. He was president of the Federation of Radical and Radical Socialist parties, and was one of the leaders of the Parliamentary opposi-tion to the *bloc national*. The elections of May, 1924, led to his premiership, supported by parties of the left bloc, from June of that year to April of the following. His policy was conciliatory to-ward Germany, putting into effect the Dawes plan. He stood strongly against inflation, so when it was discovered that the Government had surreptitiously resorted to it, the ministry was forced to resign. Painlevé, the President of the Chamber, became Premier, and Herriot was chosen President in his place; on July 20, 1926, he left the speaker's chair to overthrow the Briand-Caillaux government. However, the attempt proved abortive as his cabinet was defeated on its first appearance before the Chamber. (Actually, he was Premier for one day.) Herriot then became Minister of Public Instruction in the Poincaré government (1926-28)

From June through December, 1932, Herriot was again Premier. With the fall of his ministry, he assumed the Cabinet rank of Minister of State in the Doumergue and Flandin Cabinets, 1934–36; and was President of the Chamber of Deputies, 1936–40.

With the fall of France to Germany in June, 1940, he devoted his full energy to maintaining resistance against the Nazis and their French adherents. As President of the Chamber he led that body in taking a defiant stand against the totalitarian Vichy constitution. In 1941, after the Chamber had been suspended by the government by

Marshal Pétain, he led a rump parliament that met in Vichy in overt opposition to the government. In 1942 he published a statement warning the Pétain government against forcing France into a war with "our allies," England and the United States. On Oct. 2, 1942, he was arrested because of his failure to leave France, and on Sept. 7, 1943, was committed to the sanitarium, where he apparently died.

As a man of letters, Herriot was noted for his works on political economy, literature, and musical subjects: Philon le Juif (1897), Précis d'histoire des lettres françaises (1905), La Russie Nouvelle (1922), Sous l'Olivier (1930), Betthoven (1932), La France dans le Monde (1933), Orient (1934). Among his essays was The Wellsprings of Liberty (1940).

Herzog, Rudolph. German author, noted for his prolific writings, including the novels Der Graf von Gleichen (1901), Die Wiskottens (1905), Die Burgkinder (1911); died, Feb. 4, 1943; born in Barmen, Germany, Dec. 6, 1869. In addition to his novels he wrote many poems, critical essays, and dramas.

Heward, Leslie Hays. British musician and composer; died in Birmingham, England, May 8, 1943; born in Liversedge, Yorkshire, England, Dec. 8, 1897.

Hewart, 1st Viscount of Bury, Gordon. British Lord Chief Justice from 1922 to 1940; died in Totteridge, Hertfordshire, England, May 5, 1943; born in Bury, England, Jan. 7, 1870. A Liberal Member of Parliament during 1913–22, he was appointed Solicitor General (1916–19) in Lloyd George's coalition government. Admitted to the Cabinet (1921–22), he gave material assistance in reconstruction legislation. Author: The New Despotism; Essays and Observations (1930); Not Without Prejudice (1937).

Hill, A(lbert) Ross. President of the University of Missouri from 1908 to 1921; died in Kansas City, Mo., May 6, 1943; born in Nova Scotia, Canada, Oct. 4, 1869.

Hinsley, Arthur. British Archbishop of Westminster and head of the Catholic Church in England since 1935; died in Buntingford, Hertfordshire, England, Mar. 17, 1943; born in Carleton, Yorkshire, England, Aug. 25, 1865. Created a Cardinal in 1937, he was the first English prelate to win the red hat in 27 years. During World War II he founded the Sword of the Spirit movement to "return to the principles of international order and Christian freedom" after peace has been achieved.

Hiraga, Yuzuru. Japanese educator and naval officer; died, Feb. 17, 1943; born in Hiroshima-ken, Japan, Mar. 8, 1878. Vice-Admiral Hiraga was the designer of many major Japanese warships. In 1939 he was appointed president of the Tokyo Imperial University.

Hirst, 1st Buron, of Witton, Hugo Hirst. British founder and chairman of the General Electric Company, Ltd. since 1910, and president of the Radio Manufacturers Association; died in Reading, England, Jan. 22, 1943; born, Nov. 26, 1863.

Hogun, Aloysius (Gonzaga) J(oseph). President of Fordham University from 1930 to 1936 and dean of the Graduate School of Georgetown University (Washington, D.C.) since June, 1936; died in Washington, D.C., Dec. 17, 1943; born in Philadelphia, Aug. 5, 1891.

Horwood, Sir William (Thomas Francis). British Commissioner of Metropolitan Police and chief of Scotland Yard from 1920 to 1928; died in West Mersea, Essex, England, Nov. 16, 1943; born, November, 1868. As provost marshal of the British Expedi-

tionary Force, in World War I, Sir William attained

the rank of brigadier general.

Hovey, George Rice. President of Virginia Union University, Richmond, from 1905 to 1919; died in Upper Montclair, N.J., Jan. 28, 1943; born in Newton Centre, Mass., Jan. 17, 1860. Author: Hebrew Word Book (1902), The Bible—Its Origin and Interpretation (1930), Christian Ethics for Daily Life (1932).

Howard, Leslie. British actor, motion-picture director and producer; died as a passenger aboard a British transport plane which plunged into the Bay of Biscay as a result of being attacked by an enemy plane (World War II), June 1, 1943; born in London, England, April, 1893. After being mustered out of the British Army in World War I, he turned to acting and toured England in Peg o' My Heart and Charley's Aunt, then made his London debut in The Freaks in 1918. He came to the United States in 1920 and subsequently appeared in numerous Broadway hits, including Aren't We All (1924), Outward Bound (1924), and The Green Hat (1925).

In 1930 he commenced his motion-picture career. He was an immediate success and appeared in such notable films as Smilin' Through, Of Human Bondage, The Petrified Forest, Pygmalion, Gone With the Wind, and Intermezzo.

With the outbreak of World War II (1939), Howard devoted his services to the British Ministry of Information, for which he wrote and directed propaganda films and gave weekly radio broadcasts. In April, 1943, he undertook an extensive lecture tour of Spain and Portugal for the British Council, and it was on this mission that death came.

Hrdlička, Aleš. World-distinguished anthropologist and curator of the division of physical anthropology, United States National Museum, since 1910; born in Humpolec, Bohemia, Mar. 29, 1869. After a preliminary education in Bohemia, he emigrated to the United States and took up studies in New York City at the Eclecti, Homoeopathic and Allopathic colleges, graduating in medicine in 1892 and 1894. His work led him to special studies of the insane and other defective classes, from which he became interested in physical anthropology. During 1896–99 he was associate in anthropology at the New York State Pathological Institute.

From 1899 to 1903 Dr. Hrdlička was director of physical anthropology in the Hyde expedition to Mexico and the southwestern United States. He accompanied anthropological expeditions to various parts of the United States, Mexico, Peru, South America, Egypt, the Balkans, Europe, Siberia, Russia, Mongolia, etc. He was appointed assistant curator of physical anthropology at the United States National Museum in 1903, becoming curator in 1910.

His almost 50 years devoted to the study of the origins and development of mankind convinced Dr. Hrdlička that the North American Indian is of Asiatic origin, proving the contention by much research work in the Aleutian Islands, reporting his findings in hundreds of articles: that the cradle of man's development was not in Asia but in Europe; and that man sprang not from some anthropoid ape, as Darwin postulated, but from some vanished creature more human. Dr. Hrdlička was vitally interested in an "Old American type," persons whose families ran back more than three generations, studying countless groups to prove that "an American type of man and woman has been developing appreciably," and that he is tall, frank, and jovial, and follows "the basic conception of 'Uncle Sam' and the 'Gibson girls.'" However, Dr. Hrdlička maintained that the "Old American type" could not remain static and was changing into a new American type.

A member of various distinguished American and foreign scientific societies, Dr. Hrdlička wrote exhaustively on his subject, including The Eskimo Brain (1901), Ancient Man in North America Brain (1901), Ancient Man in North America (1907), Ancient Man in South America (1912), Anthropological Work in Peru (1914), The Old White American (1917), Physical Anthropology (1919), Anthropometry (1920), Anthropology of Florida (1922), The Old Americans (1925), and his diary of his years in Alaska, published a few months before his death. He was the founder (1918) and editor of the American Journal of Physical Anthropology, thereafter, He was a Conference of the American Journal of Physical Anthropology, thereafter, He was a Conference of the Conference of the American Journal of Physical Anthropology, thereafter, He was a Conference of the Confere Physical Anthropology thereafter. He was a Contributing Editor to The New International Year Book in 1940 and 1941.

Ingram, William (Navy Bill). Noted Navy football player and coach; died in Los Gatos, Calif., June 2, 1943; born in Jeffersonville, Ind., 1896. A major in the procurement branch of the U.S. Marine Corps since January, 1943, he was head football coach at the University of Indiana during 1923–25, returning to his alma mater, Annapolis Naval Academy, in 1926 to coach his teams to 32 wins, 13 losses and four ties during five seasons there. He coached at the University of California from 1931 to 1935, retiring in the latter year.

Isham, Norman Morrison. Architect, who pioneered in the field of accurate studies of early housing of English colonies of America; died in Wickford, R.I., Jan. 1, 1943; born in Hartford, Conn., Nov. 12, 1864. Author: Early Rhode Island Houses, with Albert F. Brown (1895); Early American Houses, William (1928); Praise of Antiquaries (1931); Glossary of Colonial Architecture.

Jacobs, W(illiam) W(ymark). British author of stories about seafaring men, including Many Cargoes (1896), The Skipper's Wooing (1897), A Master of Craft (1900), Captains All (1905), Night Watches (1914), Deep Waters (1919), Sea Whispers (1926); died in London, England, Sept. 1, 1943; born in London, Sept. 8, 1863. He was also noted for his horror tales, particular The noted for his horror tales, particularly The Monkey's Paw.

Jaquith, Harold C(larence). President of Illinois College, Jacksonville, from 1933 to 1937; died in West Hartford, Conn., Apr. 20, 1943; born in Nashua, N.H., May 25, 1888.

Jespersen, Otto. Danish philologist and professor of English at the University of Copenhagen, Denmark, from 1893 to 1925; died in Roskilde, Denmark, Apr. 30, 1943; born in Randers, Denmark, July 16, 1860. Author: Growth and Structure of the English Language (1905), Modern English Grammar (5 vols., 1909–40), Philosophy of Grammar (1924), Efficiency in Linguistic Change (1941).

Jesschonnek, Hans. German colonel general and chief of staff of the German Air Force since 1939, according to German reports, although no announcement of the appointment was made until December, 1942; died at the headquarters of Reichsmarshal Hermann Goering, Aug. 20 (?), 1943; born, 1899.

Johnson, Paul B(urney). Governor of Mississippi from 1939 to Dec. 26, 1943 (his term of office expired on Jan. 17, 1944), and Democratic Congressman from Mississippi during 1919–23; died in Hattiesburg, Miss., Dec. 26, 1943; born in Hillsboro, Scott Co., Miss., Mar. 23, 1880.

Jones, Sir Robert Armstrong-. British surgeon and authority on diseases of the brain; died in Carnarvon, Wales, Jan. 30, 1943; born, Dec. 2, 1857.

Jules-Bois, H. A. French author and psychologist, noted for his theory of the "superconscious" mind, opposing Sigmund Freud's subconscious; died in New York City, July 2, 1943; born in Marseilles, France, 1869. Dr. Jules-Bois was the author of some 40 books based on his travels to India, Egypt, Greece, Crete, and the United States. In addition,

he was a much discussed poet and playwright.

Kellas, Eliza. Co-founder (1916) and president of
Russell Sage College, New York, from 1916 to
1928; died in Troy, N.Y., Apr. 10, 1943; born in

Mooers, N.Y.

Kellogg, John Harvey. Surgeon, health authority, originator of corn flakes, and founder of the food business which later became the W. K. Kellogg Company; died in Battle Creek, Mich., Dec. 14, 1943; born in Tyrone, Mich., Feb. 26, 1852. A crusader for "biologic Living"—meaning no meat in the diet, renunciation of tobacco, coffee, tea, and spices and use of foods derived from grains and fruits—he became superintendent of the Battle Creek Sanitarium in 1876 and developed that institution to an unprecedented degree, remaining as its head until his death. Soon after Dr. Kellogg became head of the Sanitarium he inaugurated the manufacture of breakfast foods, gaining recognition as the originator of health foods and coffee and tea substitutes.

In addition to his discoveries of health foods, Dr. Kellogg was a noted surgeon and inventor of medical devices, including the electric light bath. He discovered the sinusoidal current and the therapeutic value of the electric light. He was the author of many publications, including Plain Facts (1877), Home Book of Modern Medicine (1880), The Stomach (1896), Health Question Box (1917), Autointoxication (1918), Tobaccoism (1922), How to Have Good Health (1933).

Kelly, Howard Atwood. Surgeon, gynecologist and roentgenologist; died in Baltimore, Md., Jan. 12, 1943; born in Camden, N.J., Feb. 20, 1858. Dr. Kelly was educated at the University of Pennsylvania, where he graduated B.A. in 1877 and M.D. in 1882, and where he was associate professor of obstetrics in 1888–89. While in Philadelphia, he founded Kensington Hospital. During 1889 he joined the faculty of the newly organized medical school of Johns Hopkins University as professor of gynecology and obstetrics, serving as such until 1899, after which he was professor of gynecology, retiring in 1919 as professor emeritus. At Johns Hopkins Hospital he was gynecological surgeon, 1899–1919, and thereafter consulting gynecologist. With Sir William Osler, and Doctors Halstead and Welch he helped to make the Medical School of Johns Hopkins University the first great medical school in the United States and one of the foremost in the world.

Dr. Kelly blazed trails in gynecology, obstetrics, and abdominal surgery. In 1888 he devised the open cystoscope by which a light is introduced into the interior of the body to aid in diagnosis and operations, and he is credited with having been the first in the United States to use radium for the

treatment of cancer.

In addition to contributing some 500 articles to medical journals, he was the author of numerous medical books, including Operative Gynecology (2 vols., 1898, 1906), The Vermiform Appendix and its Diseases (1905), Medical Gynecology (1908), American Medical Botanists (1913), A Scientific Man and the Bible (1925), Gynecology (1928).

Kent, R(aymond) A(sa). President of the University of Louisville, Kentucky, since 1929; died in Louisville, Feb. 26, 1943; born in Plymouth, Ia., July 21,

Keppel, Frederick Paul. Dean of Columbia College during 1910-18 and president of the Carnegie Corporation of New York from 1923 to 1941; died in New York City, Sept. 8, 1943; born on Staten Island, N.Y., July 2, 1875. As head of the Carnegie Corporation, a corporation functioning for the advancement and diffusion of knowledge and understanding among the peoples of the United States, he disbursed millions of dollars in scientific, educational, and humanitarian projects. Since his retirement from the Corporation, he had been serving with the State Department in Washington as a member of the Board of Appeals on Alien

After graduating from Columbia University in 1898, he joined the faculty of that institution in 1900 as assistant secretary; in 1902-10 he served as secretary, becoming dean of the College in the latter year. With the entry of the United States into World War I he resigned his position (1918) to enter the War Department as Third Assistant Secretary of War. In this post he had charge of the life of the soldiers in all nonmilitary aspects. With the signing of the armistice he became director of all foreign operations of the American Red Cross (1919-20), and from 1920 to 1922 was the first commissioner for the United States International Chamber of Commerce in Paris.

His publications include: Columbia University (1913), Undergraduate and His College (1917), Some War Time Lessons (1920), Education for Adults (1926), The Foundation (1930), The Arts in American Life (with R. L. Duffus, 1933).

Kharitonoff, Fedor Mikhailovich. Russian lieutenant general; died May 27, 1943; born, 1898. General Kharitonoff was credited with the counter-offensive (World War II) against the Germans at Rostov, Russia, in November, 1941, which marked the beginning of the German retreat on the Eastern Front.

Kingsbury, Albert. Mechanical engineer, founder (1918) and president of the Kingsbury Machine Works, Philadelphia; died in Greenwich, Conn., July 28, 1943; born near Morris, Ill., Dec. 23, 1863. He was the inventor of the Kingsbury thrust bearing used on most American warships

Kinnick, Nile C. Jr. All-American halfback on the University of Iowa football team in 1939 and named athlete of that year; killed in action when his plane made a forced landing at sea (World War II), June 2, 1943; born at Adel, Ia., 1918.

Kisch, Frederick Hermann. British army officer and Zionist leader; died in action in Tunisia, Apr. 11, 1943; born in August, 1888. Brigadier Kisch, as Chief Engineer of the British Eighth Army, had been responsible for the North African fortifications at El Alamein and had administered the engineering program that enabled the swift British advance to Tripoli in World War II.

Knight, Eric. British-American novelist, who wrote Song on Your Bugles (1936), The Flying York-shireman (1938), You Play the Black and the Red Comes Up (1940), Now Pray We for Our Country (1940), This Above All (1941), Lassie Come Home (1942), Sam Small Flies Again (1942); died on active duty in World War II as a major in the IIS. Army in an airplane accident at Parathe U.S. Army in an airplane accident at Paramaribo, Surinam; born in Menston, Yorkshire, England, Apr. 10, 1897.

Kogo, Mineichi. Japanese admiral and Commander in Chief of the Japanese Fleet since the death of Admiral Yamamoto in April, 1943; died, according to the Chinese News Agency, during an Allied bombing of his flagship in the Southwest Pacific (World War II), July, 1943; born, 1885.

Ladd, George Tallman. Mechanical engineer, in-

dustrialist, and president and general manager of the United Engineering and Foundry Company, Pittsburgh, since 1928; died in Pittsburgh, Fenn., Oct. 3, 1943; born in Edinburgh, O., May 17, 1871.

La Fontaine, Henri. Belgian jurist and world peace advocate; died in Brussels, Belgium, May 26, 1943; born in Brussels, 1854. After studying law at the University of Brussels, he became a member of the International Peace Bureau in 1882 and was president of the Bureau from 1907. He became a professor of law at the University of Brussels in 1893 and a Senator of Belgium in 1895. Professor La Fontaine helped to organize the Hague Peace Conferences of 1899 and 1907, and as a result of his work for international peace was awarded the Nobel Peace Prize for 1913. After World War I he strove to lay the foundation for a strong League of Nations. He was the author of Les droits et les obligations des entrepreneurs des travaux publics (1885); Traité de la contrefaçon (1888); Pasicrisie internationale (1902); Bibliographie de la paix et de l'arbitrago (1904).

Landsteiner, Karl. Austrian-American authority on immunology, bacteriology, and pathology; died in New York City, June 26, 1943; born in Vienna, Austria, June 14, 1868. Graduated from the University of Vienna with the degree of M.D. in 1891, he turned to research on bacteriological and pathological problems. In 1900 he began the study of blood phenomena and in 1901 showed that human blood was of different types. During 1909-19 he taught pathology at the University of Vienna. In 1922 he came to the United States as a member of the Rockefeller Institute for Medical Research, where he continued as such until his retirement in

1939, thereafter emeritus.

The studies of Dr. Landsteiner brought immunity from the dangers of blood transfusion; he found that blood could be classified into four main groups and that transfusion could only be successful when blood donor and recipient belonged to the same blood-type group. Since 1914 his research work had been mainly on the chemical nature of the substances and processes controlling immunity, and as a result threw new light on how man resists infectious disease. His studies in the field of serology changed it to an important branch of chemistry by showing that the underlying causes of a variety of human ills were chemical. His discoveries brought him the Nobel Prize for 1930.

He contributed papers on immunology, bacteriology, and pathology, especially: Chemistry of Antigens; Human Blood Groups; Etiology of Polio-myelitis; Etiology of Paroxysmol Hemoglobinuria,

Studies of Syphilis.

Lane, Sir (William) Arbuthnot. British surgeon and authority on fractures; died in London, England, Jan. 16, 1943; born at Fort George, Scotland,

July 4, 1856.

La Puma, Vincenzo. Italian Roman Catholic Cardinal, titular archbishop of San Cosmos and Damian; died in Rome, Italy, Nov. 4, 1943; born in Palermo, Italy, Jan. 22, 1874.

Lenygon, Francis Henry. Authority on English interior decoration and furniture who had decorated Buckingham and Windsor Palaces and was a consultant in the restoration of Colonial Williamsburg, Va.; died in New York City, June 12, 1943; born in Lincoln, England, May 11, 1877. Leonard, Adna Wright, Methodist Bishop of Wash-

ington, D.C., since 1939; died in an airplane accident in Iceland, May 3, 1943, on the first lap of a mission as chairman of the General Commission of U.S. Army and Navy Chaplains (World War II), that had the twofold purpose of "letting the Protestant chaplains and service men overseas know that the churches at home are not forgetting them, and obtaining a first-hand picture of religious life among men under fire, in order that the churches may better serve these men"; born in Cincinnati, O., Nov. 2, 1874. Ordained in 1899, Bishop Leonard was the author of numerous works, including The Shepherd King, The Roman Catholic Church at the Fountain Head, Evangelism in the Remaking of the World, Hearthstone League Book of Remembrance, Decisive Days in Social and Religious Progress.

Lewis W(inford) Lee. Inventor of the poison gas, Lewisite, known as the deadliest of all war gases, and head of the department of chemistry at Northwestern University during 1919-24; died in Evanston, Ill., Jan. 20, 1943; born in Gridley, Calif.,

May 29, 1878.

Lindsey, Ben(jamin) B(arr). Jurist and social reformer; died in Los Angeles, Calif., Mar. 26, 1943; born in Jackson, Tenn., Nov. 25, 1869. In 1894 he entered upon the practice of law in Denver, Colorado and subsequently in 1900 he was appointed to a vacancy in the county court. His special preoccupation came to be the reform of the methods of dealing with children charged with delinquency. Through his efforts the juvenile court system was founded, which since as been copied throughout the world. In 1901 he was made judge of the Juvenile Court of Denver, serving as such until 1927.

Among other measures to which Judge Lindsey contributed his influence were a reform of the ballot; State provision for the support of the dependents of persons serving in prison; extension of the probation system for prisoners; and the organization of public baths and playgrounds in Denver. He carried on an active propaganda for the general adoption of the juvenile-court plan, and for political and social reform, through lec-

Author: Problems of the Children; The Beast and the Jungle (1910); The Doughboy's Religion (1919); The House of Human Welfare; The Companionate Marriage (1927); The Dangerous Life

(autobiography, 1931). lin Sen. President of China since Dec. 15, 1931; died in Chungking, China, Aug. 1, 1943; born in Foochow, Fukien, China, 1864. During his youth Lin Sen became a member of the Kuomintang, a secret society agitating the overthrow of the Manchu dynasty and the inauguration of a republic. When this aim was achieved in 1911, Lin Sen was elected to the Senate of the first Parliament in 1912, holding that post until 1923. In 1924 he was elected a member of the Central Executive Committee of the Kuomintang, now the governing party in China. In 1928 he became vice-president of the legislative Yuan, subsequently succeeding to the presidency.

Through his years as titular head of China, Lin Sen had comparatively little power or influence on the course of events, but he filled what was a ceremonial position with wisdom, honor, and reverence, serving as the symbol of national unity which was so sorely needed during the Japanese incur-

Livingstone, Colin Hamilton. Financier and an organizer and president of the Boy Scouts of America during 1910-25; died in Fisherville, Va., Feb. 1, 1943; born in St. John, New Brunswick, Canada, June 3, 1863.

Loftus, Marie Cecilia (Cissie). Outstanding figure in

the theatrical world since 1893 and one of the greatest mimics ever to appear on the British and American stage; died in New York City, June 12, 1943; born in Glasgow, Scotland, Oct. 22, 1876.

Love, Montagu. British-American stage and screen Love, Montagu. British-American stage and screen actor; died in Beverly Hills, Calif., May 17, 1943; born in Portsmouth, England, 1877. Entering the motion-picture field in 1916, he subsequently appeared in such noted films as the "silent" Rasputin the Black Monk; Lloyd's of London; The Prince and the Pauper; The Prisoner of Zenda; Dr. Ehrlich's Magic Bullet; and Tennessee Johnson. Lowden, Frank O(rren). Republican Governor of Illinois during 1917–21 and candidate for the Republican Presidential nomination in 1920 and

Republican Presidential nomination in 1920 and again, 1924; died in Tucson, Ariz., Mar. 20, 1943; born in Sunrise City, Minn., Jan. 26, 1861. He was a member of the U.S. House of Representatives from 1906 to 1911. As governor he reorganized State and municipal pension systems and helped develop the present inland waterway system from Chicago to the Gulf of Mexico.

Lowell, A(bbott) Lawrence. President of Harvard University from 1909 to 1933, and authority on government; died in Boston, Mass., Jan. 6, 1943; born in Boston, Dec. 13, 1856. Graduated from Harvard in 1877 and from the Harvard Law School in 1880, he practiced his profession in Boston until 1897. After that date he was connected with Harvard, as lecturer on government (1897–99); professor of the science of government (1900–09); and president of the minimum in the professor of the science of government (1900–09); and president of the minimum in the professor in the science of government (1900–09); and president of the minimum in the profession in the profession in Boston until 1880, he practiced his profession in Boston until 1897. (1900-09); and president of the university, succeeding Charles W. Eliot.

The administration of President Lowell was marked by expansion of the university; by thorough reorganization of the financial set-up; by encouragement of research on the part of the faculty, and by interest in the social life of the students and hence the establishment of the "house plan," a col-lege within a college, where student and tutors might live together. President Lowell succeeded his father as trustee of the Lowell Institute of Boston in 1900, served as president of the American Political Science association in 1909, was president of the League to Enforce Peace and later was a strong supporter of the League of Nations.

An international authority on the history and science of government, his publications include Essays on Government (1889), Governments and Parties in Continental Europe (1896), The Influence of Party Upon Legislation in England and America (1902), Public Opinion in War and Peace (1923), At War with Academic Traditions (1934), and What a College President Has Learned (1938).

Luckenbach, Edgar F(rederick). President of the Luckenbach Steamship Company, Inc., operator of freighters, since 1913; died in Sands Point, N.Y., Apr. 26, 1943; born in Kingston, N.Y., 1868.

Lutz, Frank E(ugene). Entomologist, chairman and curator of the Department of Insects and Spiders of the American Museum of Natural History since 1921; died in New York City, Nov. 27, 1943; born in Bloomsburg, Penn., Sept. 15, 1879. As a scientist and educator Dr. Lutz was particularly noted for his research work in biology and insect physiology and for his popularizing of entomology and nature study. In 1917 he published the Field Book of Insects, which in succeeding editions became the standard work for all entomological students. His other book, A Lot of Insects (1941), was written especially for the nonstudent.

McAdie, Alexander G(eorge). Noted meteorologist.

professor of meteorology at Harvard University and head of the Blue Hill Observatory of the university from 1913 to 1931, thereafter professor emeritus;

died in Hampton, Va., Nov. 1, 1943; born in New York City, Aug. 4, 1863. Author: Principles of Aerography; Cloud Atlas; Making the Weather; War Weather Vignettes; Man and Weather.

McCarrens, John S. Newspaperman, general manager of The Cleveland Plain Dealer since 1933 and president of the American Newspaper Publishers Association during 1939-40; died by assassination in Cleveland, O., July 24, 1943; born in Freeport, Penn., July 27, 1869.

McCarthy, Joseph. Writer of lyrics for many popular songs, including Irene, Alice Blue Gown, I'm Always Chasing Rainbows, Rio Rita, and You Made Me Love You; died in New York City, Dec. 18,

1943; born in Malden, Mass., 1885.

McIntyre, Marvin H(unter). Secretary to President Roosevelt since 1933; died in Washington, D.C., Dec. 13, 1943; born in LaGrange, Ky., Nov. 27, 1878.

Mack, Julian William. Judge of the U.S. Circuit Court of Appeals from 1911 to September, 1941, and prominent figure in world Jewry; died in New York City, Sept. 5, 1943; born in San Francisco, Calif., July 19, 1866. Judge Mack was president of the first American Jewish Congress in 1918–19 and was head of the Zionist Organization of America from 1918 to 1921.

Mackay, Ernest John Henry. British archeologist and writer; died at Monks Risborough, Bucks, England,

Oct. 5, 1943; born, July 5, 1880.

McKenna, Regincld. British statesman and financier; died in London, England, Sept. 6, 1943; born in London, July 6, 1863. He was educated at Kings College, London, and Trinity Hall, Cambridge, where he was a scholar, took honors in mathematical control of the co ics, and gained distinction as an oarsman, rowing in the university boat race in 1887. In the latter year he became a barrister and practiced his profession until 1895, when he was elected to the House of Commons from Monmouthshire (1895-1918). A member of the Liberal opposition, he failed to attract attention until the return of his party to power in 1905. He then obtained Cabinet rank as Financial Secretary to the Treasury (1905-07). In 1907 he rose to the presidency of the Board of Education, and introduced the unsuccessful "contracting-out" bill of 1908 which failed to become legislation.

From that latter year until October, 1911, he was First Lord of the Admiralty. And as such, at a period when England was disturbed over the rapid increase of the German fleet, strongly advocated the building up of the British fleet and maintaining a safe margin of superiority over potential enemy powers. In 1911-15 he was Home Secretary and in that position was prominent in the movement for Welsh disestablishment, introducing the bill of 1912. In the first Coalition ministry in 1915 he was made Chancellor of the Exchequer (1915-16) and during those two years was the chief financial offi-cer of the British Government. He introduced a new war loan and brought in the budget of September, 1915, which was recognized as an able attempt to deal with the financial conditions arising out of World War I. He retired from politics to assume chairmanship of the Midland Bank, one of the largest banks in the world, in 1919, and maintained that position thereafter. His only publication was Post-War Banking Policy (1928).

Mclaren, John. Horticulturist, who built the famous Golden Gate Park in San Francisco; died in San Francisco, Calif., Jan. 12, 1943; born in Scot-

land, 1846.

Macleay, Sir (James William) Ronald. British Minister to China in 1922-26, to Czechoslovakia in 1927-29, and Ambassador to Argentina, 1930-33; died in Hertford, England, Mar. 5, 1943; born,

McNabb, Vincent. British Roman Catholic ecclesiastic, essayist, and polemic; died in London, England, June 17, 1943; born in Portaferry, County Down, Ireland, 1867.

Madjaroff, Rashko. Bulgarian lawyer and politician; died in Sofia, Bulgaria, Oct. (?), 1943; born, 1874. Dr. Madjaroff has served as Minister of Agriculture (1918), of Justice (1924), of Railways, Posts, and Telegraphs (1924–25, 1928–31).

Madsen-Mygdal, Thomas. Danish Premier and Minister of Agriculture from 1926 to 1929; died in Copenhagen, Denmark, Feb. 23, 1943; born in Mygdal, Denmark, 1876.

Magee, John Benjamin. President of Cornell College, Iowa, since 1939; died in Excelsior Springs, Mo., Apr. 6, 1943; born in Albion, Ia., July 19, 1887. Dr. Magee was ordained a minister in the Methodist Church in 1910.

Makowski, Waclaw. Polish jurist and statesman, elected president of the Constitution Board of Sejm (House of Representatives) in 1928; died in Ru-

mania, Feb. 16, 1943; born, 1880.

Mandel, Georges. French politician, member of numerous Cabinets, and chief of cabinet to Clemenceau during World War I (1916); died, according to unconfirmed reports, in a German prison camp where he had been retained since the fall of 1942, June (?), 1943; born in Paris, France, 1885.

Mapes, Victor. Playwright, producer, and drama critic; died in Cannes, France, Sept. 27, 1943; born in New York City, Mar. 10, 1870. The stage manager of Daniel Frohman's Lyceum Theater in New York in 1897, he was the author of Duse and the French (1897), he was the author of Duss and the French (1897), Partners Three (1909), and Gilded Way (1911). His plays include La Comtesse de Lisne (1895), Capt. Barrington (1903), The Boomerang (with Winchell Smith, 1915), The Lasso (1917), The Hottentot (1919), The Amethyst (1925) (1925).

Marett, Robert R(anulph). British anthropologist and rector of Exeter College, Oxford, since 1928; died in Oxford, England, Feb. 18, 1948; born on the island of Jersey, June 13, 1866. Author: An-thropology (1912), Psychology and Folklore (1920), Man in the Making (1928), Head, Heart

and Hands in Human Evolution (1935).

Marin, Francisco Rodriguez. See Spanish Litera-

TURE.

Marmon, Howard C. Pioneer in the development of racing cars and designer of the first Marmon automobile (1902); died at Fort Lauderdale, Fla.,

Apr. 4, 1943; born in Richmond, Ind., 1876.

Marquis, Albert N. Founder of Who's Who in America; died in Evanston, Ill., Dec. 21, 1943; born in Brown County, O., Jan. 10, 1855. In 1899 he issued the first volume of Who's Who, which contained 8,602 sketches and was similar in both format and the nature of its contents to the 21 volumes that have succeeded it. He was the sole owner of the book until 1926 when the company was incorporated, and he then served as president during 1926-37. He acted as editor-in-chief of Who's Who from the founding until 1940, retiring as editor emeritus. The 22 and latest edition of the volume, 1942-43, contained some 31,692 sketches and sold over 60,000 copies, the standard reference for famous people in the United States. He also published Who's Who in Chicago, Who's Who in New England, Who's Who in Pennsylvania, and other regional biographical books.

Marshall, Tully. Veteran stage and screen character actor who appeared in 250 plays and more than 50 films; died in Hollywood, Calif., Mar. 10, 1943; born in Nevada City, Calif., Apr. 13, 1864.

Martin, Lillien Jane. Internationally recognized psychologist and pioneer in the rehabilitation of the aged and founder of the first child-guidance clinic in the United States; died in San Francisco, Calif., Mar. 26, 1943; born in Olean, N.Y., July 7, 1851. Associated with Stanford University from 1899 and rofessor of psychology during 1911–16, thereafter professor emeritus, Dr. Martin was the author of various works, including Personality as Revealed by the Content of Images (1917), Mental Training of the Pre-School Age Child (1928), Salvaging Old Age (1930), The Home in a Democracy (1937).

Marvin, Charles Frederick. Meteorologist, chief of

the United States Weather Bureau from 1913 to 1984; died in Washington, D.C., June 5, 1943; born in Putnam, O., Oct. 7, 1858. He was the inventor of many meteorological devices still in gen-

eral use.

Mee, Arthur. British author and editor of children's books and encyclopedias; died in London, England, May 29, 1943; born in Stapleford, Notts,

England, July 21, 1875.

Mei Lan-fang. China's most noted theatrical idol and one of the greatest Chinese actors, noted for his female impersonations; died, according to a report by the Central News Agency of China, by poison in Shanghai, China, Aug. 8, 1943; born in Kiangsu, China, 1893. In 1930 he appeared in the leading cities of the United States with popular

Melo Franco, Afranio de. Brazilian jurist, diplomat, and Foreign Minister from 1930 to 1933; died in Rio de Janeiro, Brazil, Jan. 1, 1943; born in State of Minas Gerais, Brazil, Feb. 25, 1870. A judge on the Permanent Court of International Justice at The Hague from 1923 to 1929, he was outstanding in his efforts in behalf of hemisphere solidarity.

Meloney, Marie Mattingly. Prominent journalist and editor of This Week, the Sunday magazine of the New York Herald Tribune, from 1934 to 1942; died in Pawling, N.Y., June 23, 1943; born in Bardstown, Ky. After experiencing several years (1900–04) of newspaper work, she turned to the magazine field, becoming editor of Woman's Magazine field, becoming editor of Woman's Magazine field, becoming editor of Woman's Magazine field. zine, 1914-20, also associate editor of Everybody's, 1917-20; editor of The Delineator during 1920-26, thereafter returning to newspaper work as a member of the New York Herald Tribune staff. Mrs. Meloney was the organizer, in 1930, of the annual Forum on Current Problems, held under the auspices of the *Herald Tribune*, with leading personalities of the day as speakers.

Merritt, Abraham. Editor of The American Weekly, widely published Sunday newspaper magazine, since 1937 and author of horror stories; died at Indian Rocks Beach, Fla., Aug. 21, 1943; born in Beverly, N.J., Jan. 20, 1884.

Merry del Val. Alfonso. Spanish Ambassador to

Great Britain from 1913 to 1931; died in San Sebastian, Spain, May 26, 1943; born, 1864.

Miliukov, Pavel Nikolaevich. Russian statesman and historian; died in Aix-les-Bains, France, Mar. 31, 1943; born in Moscow, Russia, Jan. 28, 1859. An outstanding leader of the Russian liberation movement, chief of the opposition in the Imperial Duma, and Foreign Minister in the Kerensky provisional government in 1917, he was forced to leave the country forever upon the accession to power by the Bolsheviks (1918). Among his works were State Economics of Russia in the First Quarter of the Eighteenth Century (1898), Russia's Catastrophe (1922), Russia To-day and To-morrow (1922), Sketches on History of Russian Culture (1925-32).

Millay, Kathleen (Kalloch). Author, poet, and sister Millay, Kathleen (Kalloch). Author, poet, and sister of Edna St. Vincent Millay, the poet; died in New York City, Sept. 21, 1943; born in Union, Me., 1897. Her works include: novels, Wayfarer (1926), Against the Wall (1929); fairy tales, The Very Little Giant and King's Beard (1934), Plup Plup's Housewarming (1935); verse, The Evergreen Tree (1927), The Hermit Thrush (1929), Of All the Animals (1932); plays, Persephone (1932), The Man Who Became a Bird (1935), Hollywood Wife (1939). (1939).

Millerand, Alexandre. French statesman, President of the Republic from 1920 to 1924; died in Versailles, France, Apr. 6, 1943; born in Paris, France, 1859. He was educated at the Lycée Vanves, the Lycée Henri IV, and at the University of Paris, where he studied for the bar. He began to practice in Paris in 1881, was counsel to the striking miners of Montceau-les-Mines (1882); was elected to the municipal council (1884), and as a Radical Socialist, to the Chamber of Deputies (1885). In the Chamber Millerand urged many reforms, especially relating to social legislation. In 1899, as leader of the Parliamentary Socialists, he was made Minister of Commerce in the Waldeck-Rousseau Cabinet. In this office he did much to pass legislation favoring the working classes. As the Cabinet went out of office, 1902, Millerand was also expelled from the Socialist party because he had taken office in a non-Socialist Cabinet.

He served in Briand's Cabinet as Minister of Public Works in 1909-10, and was Minister of War under Poincaré in 1912-18. He won great distinction in this office because of his energy in reorganizing the army and infusing it with enthusiasm. Upon the organization of the war cabinet under Viviani, August, 1914, he was again appointed Minister of War. Charged with lack of vigor in prosecuting the war, he resigned with the rest of the Viviani Cabinet in 1915; whereupon he resumed his law practice. As general commissioner of the Republic for Alsace and Lorraine (1919-20), he organized such a successful administration that it led to his succeeding Clemenceau as Premier (January-September, 1920) and upon the retirement of Paul Deschanel (September, 1920), taking over the presidency.

Moffat, J(ay) Pierrepont. U.S. Minister to Canada since June, 1940; died in Ottawa, Canada, Jan. 24, 1943; born in Rye, N.Y., July 18, 1896. In the diplomatic service since 1918, he was chief of the division of European affairs from 1937 to 1940.

Moisseiff, Leon S(olomon). Consulting engineer and world authority on bridge construction; died in Belmar, N.J., Sept. 3, 1943; born in Riga, Latvia, Nov. 10, 1872. He served as consulting engineer for the George Washington Bridge, the Triborough Bridge, the Bronx-Whitestone, and the East River bridges, all in New York City, and for the Ambassador Bridge, Detroit; the Maumee River Bridge, Toledo, and the Tacoma Narrows Bridge, Tacoma, Wash. The recipient of many awards for distinguished achievement in engineering, he was the author of several authoritative articles, including Deflection Theory for Design of Suspension Bridges; High Structural Steels for Bridges; Sus-pension Bridges Under Action of Later Forces.

Molike, Hans Adolf von. German Minister to Poland in 1931-33 and Ambassador during 1934-39, and Ambassador to Spain since January, 1942; died in Madrid, Spain, Mar. 22, 1943; born, 1884.

Mordacq, Henri. French army officer; died by suicide in Paris, France, Apr. 12, 1943; born at Clermont-Ferrand, France, Jan. 12, 1868. During World War I General Mordacq placed a conspicuous part

as Chief of Cabinet to Clemenceau (1917-19). As the biographer of Georges Clemenceau, he wrote Le ministère Clemenceau (1935), in addition to La mentalité allemande (1935), Les Legendes de la Grand Guerre (1935).

Morgan, John) P(ierpont). Banker and financier, son of John Pierpont Morgan (1837-1913); died in Boca Grande, Fla., Mar. 13, 1943; born in Irvington, N.Y., Sept. 7, 1867. Graduated from Harvard in 1889, he became a member of the firm of which his father was head, and later spent eight years with the London house J. S. Morgan and Company. Upon his father's death he inherited the major portion of the senior Morgan's great fortune, including his art collections, and succeeded him as

head of J. P. Morgan & Company.

During the first three years of World War I his firm helped France and England buy three billion dollars of war goods here. In 1915 the firm was appointed commercial agent of the British Government in the United States and conducted purchases of all munitions and supplies in the United States. That same year, a loan of fifty millions was made to the French Government, and he organized a syndicate of about 2,200 banks and floated a loan of \$500,000,000 to the Allies. In the postwar period of industrial expansion more than \$6 billion of domestic bonds and loans to foreign govern-ments were underwritten by "The Corner"—the familiar name by which the bank was known to Wall Street.

During these two decades J. P. Morgan & Company was the leading financial institution of the country. However, with the advent of the 1920's the influence of private banking waned. Therefore, it was necessary for the firm in 1940, previously headed by only the two J. P. Morgans to dissolve and merge into J. P. Morgan & Company, Inc., a corporation.

During the half century which Mr. Morgan spent as an officer of the firm, he became the country's best known banker. His institution became a symbol of the capitalistic enterprise which financed the country's tremendous industrial growth. It also served as one of the main links between industry in the United States and industry and governments

abroad.

Outstanding among Mr. Morgan's gifts to public museums and collections of the United States and England was the Pierpont Morgan Library; as an institution of research for scholars, and at the same time providing liberal endowment for it. In 1921 he gave the London residence of his father to the United States to house its Embassy to the Court of

Morton, James. British pioneer in the development of fast dyestuffs and chairman of Morton Sundour Fabrics, Ltd., Carlisle, England; died near Carlisle, Aug. 22, 1943; born, Mar. 24, 1867. In 1929 Sir James received the first Faraday Centennial Medal "in special recognition of signal service rendered to chemical science and industry by developing and extending manufacture of anthracene dyestuffs and . . . extending their application to silk and wool." He was the author of William Morris— An Appreciation; To Young Weavers; History of the Development of Fast Dyeing, and Dyes.

Mowinckel, Johan Ludwig. Finnish Prime Minister and Minister of Foreign Affairs during 1925–27, 1928–31, and 1933–35; died in New York City, Sept. 30, 1943; born, 1870. Dr. Mowinckel became a member of the Storthing, Norwegian Parliament, in 1906 and was president of the Liberal Left party for many years. He was Minister of Commerce in 1921 and Foreign Minister in 1923. He served as

president of the League of Nations Council in 1933. With the German invasion of Norway in 1940 Dr. Mowinckel went to England, where for the next two years he devoted himself to the operation of Norway's merchant marine. He came to the United States in June, 1942.

Nakano, Seigo. Japanese Nazi-Fascist political theorist and journalist; died by hara-kiri in Japan, Oct. 27, 1943; born in Fukuoka-ken, Japan, February, 1886. A Member of Parliament several times, it was said that his ambition was to become the

Hitler of the Far East.

Nemirovich-Dantchenko, Vladimir. Russian co-founder (1897) and director of the Moscow Art Theater, and novelist and dramatist; died in Moscow, Russia, Apr. 25, 1943; born at Tiflis in the Caucasus, 1857. He was one of the most colorful and influential figures in the history of Russian literature and drama.

Newsholme, Sir Arthur. British public health officer and author of numerous medical works; died in Worthing, Sussex, England, May 17, 1943; born,

1857.

Nielsen, Alice. Grand and light opera star; died in New York City, Mar. 8, 1943; born in Nashville, Tenn., June 7, 1876. She studied music under Mademoiselle Ida Valerga in San Francisco; from 1893 to 1902 starred in comic opera at home and abroad, during which time Victor Herbert wrote several operas for her; then went to Rome for study and appeared at La Scala, Milan, in 1903, and, as Marguerite in Faust, at the Bellini Theatre, Naples. During the next few years she sang in London, at the Covent Garden Theatre, singing opposite En-rico Caruso, and at the New Waldorf Theatre.

Subsequently she toured the United States with the Don Pasquale and San Carlo companies; was a member of the Metropolitan Opera Company during 1909; and star of the Boston Opera Company from 1910 to 1915. In 1917 she formed the Alice Nielsen Opera Company and again toured the United States and Canada, making her last public appearance in 1920 at the Symphony Hall

in Boston.

O'Brien, Frank Michael. Newspaperman from 1896 and editor of The New York Sun since Dec. 1, 1926; died in New York City, Sept. 22, 1943; born in Dunkirk, N.Y., Mar. 31, 1875. Author: The Story of The Sun (1918), New York Murder Mysteries (1932); also numerous short stories. In 1921 he won the Pulitzer Prize for an editorial on the Un-

known Soldier.

O'Day, Mrs. Carolin Goodwin. Democratic Conresswoman from New York from 1935 to 1943; died in Rye, N.Y., Jan. 4, 1943; born in Perry, Ga., June 22, 1875. Throughout her entire career Mrs. O'Day sought to advance three causes: the development of women's part in national politics; the social and economic betterment of working people; and the preservation of world peace

Ogilby, Remsen B(rinckerhoff). President of Trinity Ogithy, Remsen & (rinckerhoff). President of Trinity College, Hartford, Connecticut, since 1920; died by drowning at Weekapaug, R.I., Aug. 7, 1943; born in New Brunswick, N.J., Apr. 8, 1881.

O'Gorman, Jumes A. Democratic Senator from New York from 1911 to 1917; died in New York City, May 17, 1943; born in New York City, May 5, 1860.

Olds Rebest Major reports U.S. A.

Olds, Robert. Major general, U.S. Army; died in Tucson, Ariz., Apr. 28, 1943; born in Woodside, Md., June 15, 1896. An aviator in World War I and long an exponent of Army aviation develop-ment, General Olds was assigned in June, 1941, to organize and command the Ferry Command. As a result of his splendid achievement in this endeavor,

which paved the way for swift delivery of aircraft to England, he was appointed commanding general of the U.S. Second Air Force in May, 1942. Soon thereafter illness forced him into inactivity.

Oliver, John Rathbone. Psychiatrist, medical historian, and novelist; died in Waverly, Mass., Jan. 21, 1943; born in Albany, N.Y., Jan. 4, 1872.

Olivier, 1st Baron of Ramsden, Sydney. British colonial administrator; died in Bognor Regis, England, Feb. 15, 1943; born, 1859. Noted for his Socialistic principles, Lord Olivier was governor of Lamaion during 1907-18, and Secretary of State for Jamaica during 1907-13, and Secretary of State for India in 1924. Also, a poet, musician, and satirist, he was the author of numerous publications, including *Poems and Parodies* (1881): The Anatomy of African Misery; and Jamaica: The Blessed Island (1936).

Onegin, Sigrid. German-Swedish opera star, who made her debut with the Metropolitan Opera Company in 1922 and made many concert tours of the United States; died in Magliaso, Switzerland, June 18(?), 1943; born in Stockholm, Sweden, June 1,

Oppenheimer, Franz. German sociologist and political economist; died in Los Angeles, Calif., Sept. 80, 1943; born in Berlin, Germany, 1864. An advocate of the land reform theories of Henry George, Dr. Oppenheimer had held the chair of professorship at Berlin University (1917) and the University of Frankfort (1919–29). Dr. Oppenheimer came to the United States in 1940 as a refugee from the Jewish persecutions in Germany. His two most noted publications are The State (1908) and System of Sociology (8 vols., 1918–35); other works include Dia Siedling 1918–35. (1896), (1898) include Die Siedlungsgenossenschaft Grossgrundeigentum und Soziale Frage Grundriss der theoretischen Oekonomik (1926), Das Kapital, Kritik der politischen Oekonomie (1937).

Overman, Lynne. Stage and screen actor; died in Santa Monica, Calif., Feb. 19, 1943; born in Maryville, Mo., Sept. 19, 1887. A former jockey, minstrel man, stock company trouper, dance hall singer in Alaska, and vaudeville headliner, he made his first appearance on Broadway in 1916, subsequently starring in several vehicles. In 1934 he turned to the films, appearing in numerous pictures, including Union Pacific, Little Miss Marker, There's Magic in Music, The Forest Rangers, and Star-Spangled Rhythm.

Packard, Winthrop. Naturalist and writer; died in Canton, Mass., Apr. 1, 1943; born in Boston, Mass., Mar. 7, 1862. Author: Wildwood Ways (1909), Wood Wanderings (1910), Literary Pilgrimages of a Naturalist (1911), He Dropped Into Poetry

(1940).

Paddock, Charlie (Charles William). Track star, known during the Twenties as "the world's fastest human"; died in the crash of a Navy plane near Sitka, Alaska (World War II), July 21, 1943; born in Gainesville, Tex., Aug. 11, 1900. Commissioned a captain in the U.S. Marine Corps in July, 1943, Paddock was the holder of numerous world's rec-Paddock was the holder of numerous world's records during his track career. He set the record for the 100-yard dash in 1921, doing it in 9% seconds. He represented the United States in the Olympic Games in 1920, 1924, and 1928.

Parsons, Edward S(mish). President of Marietta College, Ohio, from 1919 to 1936, thereafter president emeritus; died in Cambridge, Mass., Apr. 22, 1948; born in Brooklyn, N.Y., Aug. 9, 1863. Dr. Parsons was ordained to the Congregational ministry in

1888.

Parton, Lemuel Frederick. Newspaperman and writer, since 1931, of the nationally syndicated column "Who's News Today"; died in New York City, Jan. 30, 1943; born in Platterville, Colo., 1879.

Patterson, Rufus Lenoir, 2d. Founder and president of the American Machine and Foundry Company, manufacturers of machinery used in the tobacco industry, during 1900-41, and developer of machines to weigh, pack, stamp, and label smoking tobacco, and to manufacture eigars; died in New York City, Apr. 11, 1943; born in Salem, N.C., June 11, 1872.

Pearce, H(aywood) J(efferson). President of Brenau College, Georgia, since 1893; died in Gainesville, Ga., May 1, 1943; born in Columbus, Ga., Aug. 26,

1871.

Pearson, T(homas) Gilbert. Ornithologist, wildlife conservationist, and president of the National Audubon Society from 1920 to 1934; died in New York City, Sept. 5, 1943; born in Tuscola, Ill., Nov. 10, 1873. One of the most widely known ornithologists in the world, Dr. Pearson was instrumental in incorporating the National Association of Audubon Societies (1920) for the conservation of wildlife. His continuance on this subject reached culmination in 1929 with the passage by Congress of the Norbeck-Andresen bill for national wildlife sanctuaries, which provided for establishment of a nation-wide system or refuges for migratory birds. In 1922 Dr. Pearson founded the International Committee for Bird Preservation, organized in 30 countries, and served as its president until 1938. His published works include Stories of Bird Life (1901), The Bird Study Book (1917), Adventures in Bird Protection—An Autobiography (1987). He was editor in chief of Birds of America (3 vols., 1917), Tales from Birdland (1918).

Pellegrinetti, Ermenegildo. Italian Roman Catholic Cardinal since 1937; died in Rome, Italy, Mar. 29, 1943; born in Camaiore, Italy, Mar. 27, 1876.

Perret, Frank Alvord. Distinguished volcanologist; died in New York City, Jan. 12, 1943; born in Hartford, Conn., Aug. 2, 1867. Dr. Perret lived at the foot of Mount Pelée in Martinique from 1929 until 1939, where (1933) he founded a volcano-logical museum, displaying relics dug from ruins of eruptions of Mount Pelée and other famous volcanoes. He was the author of several books on volcanoes, including *The Cycles of Vesuvius*.

Phelps, William Lyon. Lampson professor of English literature at Yale University (1901-33), author, lecturer, and critic; died in New Haven, Conn., Aug. 21, 1943; born in New Haven, Jan. 2, 1865. A nationally known literary figure and most-popular professor at Yale, Dr. Phelps graduated from that institution in 1887, Ph.D. 1891. He began his pedagogical career as an instructor of English at Harvard University (1891–92); returning to Yale as an instructor in English literature (1892–96), assistant professor (1896–1901), and Lampson professor until his retirement in 1933 as pro-

fessor emeritus of English.

The author of more than 25 books and innumerable essays, pamphlets, generally relating to English prose, poetry, and drama, his works include The Beginnings of the English Romantic Movement (1893), Essays on Modern Novelists (1910), Teaching in School and College (1912), Essays on Books (1914), The Advance of the English Novel (1916), The Advance of English Poster (1918) (1916), The Advance of English Poetry (1918), Essays on Modern Dramatists (1920), Some Makers of American Literature (1923), Adventures and Confessions (1926), What I Like in Poetry (1934), Autobiography with Letters (1939), Marriage

Phillips, John C. Republican Governor of Arizona from 1929 to 1931; died in Flagstaff, Ariz., June

25, 1943; born near Vermont, Ill., Nov. 13, 1870. Pihlblad, Ernest F(rederick). President of Bethany College, Kansas, from 1904 to 1941; died in Topeka, Kan., Dec. 9, 1943; born in Kansas City, Mo., Mar. 18, 1873. Dr. Pihlbald was ordained in the Lutheran ministry in 1894.

Plaisted, Frederick William. Democratic Governor of Maine from 1911 to 1913; died in Los Angeles, Calif., Mar. 4, 1943; born in Bangor, Me., July

26, 1865.

Plymouth, 2nd Earl of, Ivor Miles Windsor-Clive. British descendent of Clive of India and one of Great Britain's great landowners; died near Cardiff,

Wales, Oct. 1, 1943; born, Feb. 4, 1889.

Polak, Henri. Dutch politician and noted trade union official in the Dutch diamond industry; died in Laren, North Holland, where, being Jewish, he was confined by German occupation authorities, Feb. 18, 1943; born, 1868. Author: De Vakvereen-

iging (1925); De taal der arbeidersbeweging (1926), Het kleine land (1930).

Polk, Frank Lyon. Public official; died in New York City, Feb. 7, 1943; born in New York City, Sept. 13, 1871. He was counselor to the U.S. Department of State from 1915 to 1919, when he became Under-Secretary of State, 1919-20. In the absence of Secretary Lansing in 1918-19, he was Acting Secretary of State. He was appointed Commissioner of the United States to negotiate peace in 1919 and was head of the American delegation to the Peace Conference in Paris from July to December of that year. Thereafter he practiced law in New York City.

Pollock, Courtenay E. M. British sculptor, inventor, and writer; particularly noted for his World War I memorials; died in London, June 8, 1943; born in

Birmingham, England.

Pontoppidan, Henrik. Danish author and winner of the Nobel Prize for literature in 1917; died in Charlottenlund, Denmark, Aug. 21, 1943; born in Fredericia, Denmark, July 24, 1857. Among his publications are Village Tales, The Old Adam, Pierre Bonheur, The Empire of the Dead, From the Huts, Lykke Per.

Portland, 6th Duke of, William John Arthur Charles James Cavendish-Bentinck. British sporting peer and friend of five sovereigns; died at Welbeck Abbey, Nottinghamshire, England, Apr. 26, 1943; born, Dec. 28, 1857. Author: Fifty Years and More of Sport in Scotland (1933), Memories of Racing and Hunting (1935), Men, Women and Things (1937).

Poulton, Sir Edward Bagnall. British zoologist and advocate of the doctrines of organic evolution by natural selection, as first promulgated by Darwin; died in Oxford, England, Nov. 20, 1943; born in Reading, England, Jan. 27, 1856. Author: Charles Darwin and the Theory of Natural Selection (1896), Essays on Evolution, Oxford (1908), Charles Darwin and the Origin of Species (1909).

Pound, Sir (Alfred) Dudley (Pickman Rogers). British First Sea Lord (May 17) and Admiral of the Fleet (July) from 1939 to Oct. 4, 1943; died in London, England, Oct. 21, 1943; born, Aug. 29, 1877. A member of the Royal Navy for 52 years, Sir Dudley was Director of Plans Division at the Admiralty, 1922-25; Chief of Staff to Admiral Sir Roger Keyes, 1925–27; a Lord Commissioner of the Admiralty and Assistant Chief of Naval Staff, 1927–29; Rear Admiral commanding Battle Cruisers, 1929–31; Second Sea Lord and Chief of Naval Personnel, 1932–35; Chief of Staff, Mediterranean, 1935–36; Commander in Chief, Mediterranean, 1936–39.

Sir Dudley, a hero of the naval battle of Jutland in World War I, built his naval career around the

motto "Offense and Attack," and during World War II was generally considered the "father" of British naval strategy. Shortly before the latter conflict began Sir Dudley prophesied that "There's going to be a hell of a fight in the next two or three years.

Powers, James T. Former comedian, light-opera star, and matinee idol whose stage career covered 55 years; died in New York City, Feb. 10, 1943; born in New York City, Apr. 26, 1862.

Prezan, Constantin. Rumanian field marshal and chief of the General Staff during World War I (1917-20); died in the Moldavian district of Vaslui, Rumania, Aug. 27(?), 1943; born, 1861.
Rachmaninoff, Sergei Vasilyevitch. Russian-American

pianist, composer, and conductor; died in Los Angeles, Calif., Mar. 28, 1943; born in Novgorod, Russia, Apr. 1, 1873. He entered the Conservatory at Saint Petersburg at the age of nine, and in 1885 went to the Conservatory of Moscow, studying piano under Zvyerev and Siloti and composition with Taneiev and Arensky. His graduation thesis was the one-act opera Aleko, which was favorably received when produced in 1893. Subsequently he taught piano at a Moscow girls' institute (1893–1903), conducted the Moscow Private Opera for two seasons (1897–99), and the Moscow Imperial Theatre for two more (1904–06), thereafter severing all connections to give time to creative work and concert tours. From 1907 to 1909 he resided in Dresden, Germany, composing. He then returned to Moscow where he remained until 1917, conducting the Moscow Philharmonic concerts in 1911-13. In 1918 he took up residence in the United States, thereafter devoting his time mainly to recitals throughout the country and, after 1927, to com-

Regarded as one of the foremost Russian composers, Rachmaninoff's music is remarkable for rhythmic variety, richness of color, and harmonic effects, while in power of thematic invention, he effects, while in power or thematic invention, ne surpasses all Russian composers. His works comprise three operas, Aleko, The Niggardly Knight, and Francesca da Rimini; two symphonies; a symphonic poem, The Isle of Death; a fantasia for orchestra, The Cliff; a Bohemian caprice, Gypsy Capriccio; considerable chamber music, including the Elegiac Trio in memory of Tschaikowsky; three piano concertes and other music for the piano. piano concertos and other music for the piano; songs and mixed choruses, and two cantatas, Springtime and The Bells, the latter after Edgar

Allan Poe.

Rank, Joseph. British flour manufacturer and philanthropist; died at Reigate Heath, Surrey, England, Nov. 13, 1943; born in Hull, England, 1854. He was England's wealthiest man, with a fortune

estimated at over £20,000,000.

Ray, Charles. Actor and star of the silent motion pictures; died in Hollywood, Calif., Nov. 23, 1943; born in Jacksonville, Ill., Mar. 15, 1891. He was at the top of his popularity during World War I, and was famous for his portrayals of bashful, country-bumpkin roles. In the early 1920's he turned producer and through this decision subsequently went bankrupt. Included among his pic-ture successes were Hayfoot, Strawfoot; The Ol' Swimmin' Hole; String Beans; The Clodhopper; An Old-Fashioned Boy; The Girl I Loved.

Ray, Ted. British golfer, winner of the British open golf championship in 1912 and of the American open championship in 1920; died in Watford, England, Aug. 28, 1943; bom on the Channel Is-

land of Jersey, 1877.

Reinhardt, Max. Austrian theatrical producer; died in New York City, Oct. 31, 1943; born in Baden,

near Vienna, Austria, Sept. 9, 1873. He began his professional career in 1893 at the Stadt theater in Salzburg, where his portrayal of elderly roles brought him an engagement at the Deutsches theater, Berlin, in 1894, where he met with considerable success and subsequently became director. As such he produced nearly all the plays of Shakespeare, Molière, Goethe, Stridberg, Wedekind, Ibsen, Shaw, and others, as well as musical comedies and operas. In 1902 he opened his Kleines theater, and in 1906 his Kammerspielhaus. In 1919 he founded the Grosses Schauspielhaus, specializing in impressionistic mass effects. As a master of the new stagecraft, he toured the United States in 1923. In 1924 he presented *The Miracle*, one of the largest theatrical pageant spectacles ever produced, in New York City. For the next ten years he gave many productions in different European cities, and during the 1927-28 season presented several notable ones in New York City.

In 1933, as a result of Nazi anti-Jewish drives, he fled Germany, coming to the United States in 1934, where he immediately began work on a motion-picture scenario of A Midsummer Night's Dream. The production (1935) proved to be a financial and dramatic success. Later, he produced The Eternal Road (1937) and the Broadway comic press La Relle Helene.

opera La Belle Helene.

Reuter, Ludwig von. German vice-admiral (ret. 1920), who commanded the scuttling of the German Fleet at Scapa Flow on June 21, 1919; died

on Dec. 21, 1943; born, 1868.

Reventiow, Ernst zu. German politician and journalist; died in Munich, Germany, Nov. 21(?), 1943; born in Husum, Germany, 1869. A former Imperial German Naval officer, he was the writer of naval articles for the *Deutsche Tageszeitung*, during World War I, in which he enthusiastically supported the Von Tirpitz plan of submarine warfare. An early supporter of National Socialism and noted for his anti-Semitic and anti-capitalist views, he was, however, often at odds with Nazi policies. As editor of the weekly Der Reichswart, he sharply criticized the Hitler church policy, which resulted enticized the Hitler church policy, which resulted in the suspension of the paper in 1935. A member of the Reichstag since 1924, he was the author of numerous works, including Russisch-Japanische Krieg (3 vols., 1904–06), Die deutsche Flotte und ihre Aufgaben (1906), Kaiser Wilhelm II und der Byzantiner (1906), Deutschlands auswärtige Politik, 1888–1913 (1914), Der Vampir des Festlandes (1915), Die Politische Vorgeschichte des Grossen Krieges (1918), Grundlinien einer deutschen Aussenpolitik (1928).

Richards. laura Elizabeth). Author of the beloved

Richards, Laura E(lizabeth). Author of the beloved Captain January and other children's books, and daughter of Julia Ward Howe, who wrote *The Battle Hymn of the Republic*; died in Gardiner, Me., Jan. 14, 1943; born in Boston, Feb. 27, 1850. In all, Mrs. Richards wrote some 80 books, most of them for children, including the Toto and Hilde-garde stories. In 1931 she published her autobiog-

raphy under the title Stepping Westward.
Rickey, James W(alter). Chief hydraulic engineer of the Aluminum Company of America from 1907 to 1938; died in Washington, D.C., Apr. 19, 1943;

born in Dayton, O., Nov. 10, 1871.

Roberts, Sir Charles George Douglas. Canadian poet, novelist, and writer of animal stories, whose writings were associated with the early period of Canada's literary growth; died in Toronto, Ontario, Canada, Nov. 26, 1948; born in Douglas, New Brunswick, Canada, Jan. 10, 1860. His reputation rests chiefly on his poetry, the imaginativeness, insight and original forms. sight, and artistic finish of which have won dis-

criminating praise. Especially fine is his ode for the Shelley centenary. His novels show accurate observation and offer exquisite descriptions of nature in the Maritime Provinces, where for the most part the scenes are laid; but the characters are considered somewhat deficient in dramatic vigor. His animal stories are sympathetically conceived in the conviction that "we and the beasts are kin."

Sir Charles' volumes of verse include Orion and Other Poems (1880), Ave: An Ode for the Shelley Centenary (1892), The Book of the Native (1897), Collected Poems (1900). His novels, nature stories, and other works include The Canadians of Old (1889), Reube Dare's Shad Boat (1895), A History of Canada (1897), The Kindred of the Wild (1902), Red Fox (1905), Neighbors Unknown, animal stories (1911), Hoof and Claw (1914).

Robertson, William Bryan. Pioneer aviator and airplane manufacturer, president of the Robertson Aircraft Corporation, Robertson, Missouri; died in the crash of an Army glider at the St. Louis Municipal Airport, St. Louis, Mo., Aug. 1, 1943; born in Nashville, Tenn., Oct. 8, 1893. Major Robertson was a co-sponsor and financial backer of Charles A.

Lindbergh's flight to Paris in 1927

Rolland, Romain. French author; died, according to reports emanating from Paris and also the German news agency (later denied by the DNB), in a German concentration camp, Oct. 19 (?), 1943; born in Clamecy, Nievre, France, Jan. 29, 1866. He was educated at the École Normale Supérieure, where he was afterward professor of the history of art until called to a chair at the Sorbonne. His doctor's thesis, Les origines du thêâtre lyrique moderne (1895) was crowned by the Academy. Subsequently he wrote a number of plays, characterized by psychological analysis, style, and vigor. Among these are Aërt (1898), Le triomphe de la raison (1898), Danton (1901), Le 14 juillet raison (1898), Danton (1901), Le 14 futter (1902). He also published notable biographical and critical studies (largely of musicians) and other works: Beethoven (1903), Vie de Michelangelo (2 vols. 1907), Musiciens d'aujourd'hui (1908), Le théâter de la révolution (1909), Vie de Tolstoi (1911), Les maîtres de la musique (1012)

In 1915 his Jean Christophe (in three parts and originally in 10 volumes, 1904–12) brought him the Nobel Prize in literature. The author calls this work the tragedy of a generation that is about to disappear. The principal character of the book is a romantic medium through which Rolland presents his philosophy or world outlook. He takes a musician of genius, places him in contemporary society, and makes him feel all the emotions and experience all the trials that would be the lot of an artist and thinker. Although a great work, the enormous size of the book inevitably results in a

lack of cohesiveness, clarity, and proportion.

During World War I his pacifism, as expressed in Au-dessus de la Mélée (1915) and in Les pré-curseurs (1919), incurred the extreme displeasure of the French people, and he withdrew to Switzerland. However, his former popularity partially returned after the war, and he wrote the novels Pierre et Luce (1918), Colas Breugnon (1919), Clerambault (1920), and a series called L'âme enchantée, comprising Annette et Sylvie (1922), L'été (1924), Mère et fils (1926), and Beethoven the Creator (1929). Also the plays Lilulie (1920), Le jeu de l'amour et de la mort (1925), and Pâques fleuries (1926). Other works were Voyage Musical ou pays du passé (1920), Mahatma Gandhi (1924), Compagnons de route (1937).

Roosevelt, Kermit. Army officer, son of the late

President Theodore Roosevelt and his companion on several hunting trips and explorations; died in Alaska, June 4, 1943; born in Oyster Bay, N.Y., Oct. 10, 1889. A veteran of World War I, he enlisted in the British Army upon declaration of World War II (1939). As a major, he saw action at the British occupation of Narvik, Norway (1940), and served until the Allied evacuation. Upon the entrance of the United States into the conflict he transferred

to the American Army, being assigned to active duty in Alaska in July, 1942.

Major Roosevelt became interested in the shipping business after World War I, organizing the Roosevelt Steamship Company. In 1931 he merged his organization with the International Mercantile Marine Company, becoming vice-president. During this period he had taken part in numerous hunting and exploration trips: In 1922 he went hunting in Korea and China and in 1923 in the Philippines;

in 1925 he went to Asia in search of rare animals.

Major Roosevelt was the author of numerous publications upon his explorations and observations, including War in the Garden of Eden (1919), The

including War in the Garden of Eden (1919), The Happy Hunting Grounds (1920), East of the Sun and West of the Sun (1926), Cleared for Strange Ports (1927), and Trailing the Giant Panda, with brother Theodore (1929).

Roper, Daniel C(alhoun). U.S. Secretary of Commerce from 1933 to 1938; died in Washington, D.C., Apr. 1, 1943; born in Marlboro Ct., S.C., Apr. 1, 1867. A politician of the so-called old school—a dry, a conservative, and a power in the Methodist Church—he had held many appointive Methodist Church—he had held many appointive posts in the Federal Government, including U.S. Tariff Commissioner in 1917, and Commissioner of Internal Revenue during 1917–20. As Secretary of Commerce, he was a protagonist for partnership between the Government and business and was strong in his public reassurances of the fundamental conservativeness of the Administration's policies.

Rosenberg, Arthur. German-American educator and historian; died in New York City, Feb. 8, 1943; born in Berlin, Germany, Dec. 19, 1889. Author: The State of Ancient Italy (1913), Introduction and Sources of Roman History (1921), Birth of the German Republic (1931), Democracy and Societies (1932)

Socialism (1939).

Rosenfeld, Kurt. Prussian Minister of Justice during 1918-19 and prominent figure in the Weimar Republic; died in New York City, Sept. 26, 1943; born in Marienwerder, Germany, 1877. One of Germany's most distinguished lawyers, he was a member of the Reichstag from 1919 to 1933 and chairman of the Socialist Labor Party during 1931-33. A foe of Nazism, Dr. Rosenfeld was forced to leave Germany upon Hitler's accession to power, coming to the United States in 1934 and thereafter carrying on anti-Nazi educational and political activities.

Rowan, Andrew Summers. Colonel, U.S. Army (ret. 1909); distinguished for his feat in the Spanish-American War of carrying the "message to Garcia" (1898), telling that Cuban general the United States was ready to aid his fight; died in San Francisco, Calif., Jan. 11, 1943; born in Gap Mills, Va., Apr. 23, 1857. Author: The Island of Cuba (1898), How I Carried the Message to Garcia (1923).

Ruppin, Arthur. Palestinian (Jewish) politician and economist; died in Jerusalem, Palestine, Jan. 1, 1943; born, 1875. Professor of sociology of the Jews at the Hebrew University in Jerusalem since 1926 and head of the Economic Research Institute of the Jewish Agency, he was the author of The Jews of To-day (1913), The Agricultural Colonization of the Zionist Organization in Palestine (1926), The Jews in the Modern World (1934), Three Decades of Palestine (1936), and The Fate and Future of the Jews (1940).

Sadler, Sir Michael (Ernest). British educator and

international authority on secondary education; died in Oxford, England, Oct. 14, 1943; born in Barnsley, England, July 3, 1861.

Samper Ortega, Daniel. Colombian educator and

public official; died in Bogota, Colombia, Nov. 3, 1943; born there, 1895. Author of the following novels: Entre la niebla (1923), La Marquesa de Alfandoque (1923), La obsesión (1926), Zoraya (1931). Essays: Colombia (Madrid, 1929), Al galope (1930), La raza del romancero (1930), Otra taza de café (1933).

Sarraut, Maurice. French politician and publicist; died in Toylove.

died in Toulouse, France, December (?), 1943; born, 1869. A former Senator and president of the liberal Radical Socialist party of France, he was co-publisher of *La Dépêche de Toulouse*, a newspaper described as an "organ of democracy."

Schinz, Albert. Swiss-American educator and writer; died in Iowa City, Ia., Dec. 19, 1948; born in Neuchâtel, Switzerland, Mar. 9, 1870. Professor Schinz studied at the universities of Neuchâtel, Berlin, Tubingen, and Paris, coming to the United States in 1897 where he attended Clark University (1897–98), becoming an instructor in French at the University of Minnesota (1898–99), professor of French literature at Bryn Mawr College (1899–1913), at Smith College (1913–28), and professor of French at the University of Pennsylvania (1928-41), thereafter visiting professor at various educational institutions.

A contributor on "French Literature" for The New International Year Book since 1909, Professor Schinz was the author of various works on French literature, including Anti-Pragmatism, or Intellectual Aristocracy Versus Social Democracy (1909); Accent dans l'écriture française (1912); J. J. Rousseau et Michel Rey (1916); French Literature of the Great War (1919); Jean-Jacques Rousseau, interprétation nouvelle (1929); Etat présent des études Rousseauistes (1941). He had been the aditor of several Franch tortholle. editor of several French textbooks.

Schlesinger, Frank. Noted astronomer; died in Lyme, Conn., July 11, 1943; born in New York City, May 11, 1871. He was an observer in charge of the International Latitude Observatory, Ukiah, Calif., in 1899–1903; served as an astronomer at the Yerkes Observatory, 1903-05; director of the Allegheny Observatory, University of Pittsburgh, 1905-20; director of the Yale University Observa-

tory, 1920-41, and professor of astronomy at the University during 1929-41, thereafter professor

emeritus.

Dr. Schlesinger gained international recognition during his tenure at the Yerkes Observatory for the development of a method determining stellar distances by photography. Subsequently, to make his measurements more accurate, he devised a new type of measuring engine, which became standard equipment throughout the country. His work in other fields of astronomy included that of spectroscopic binaries and the history of astronomy. Dr. Schlesinger was the author of at least 200 monographs on reduction of astronomical photographs, stellar parallaxes, spectroscopic binaries, variables of the Algol type, and variations of latitude.

Scott, James Brown. Lawyer, educator, and author; died in Annapolis, Md., June 26, 1943; born in Kincardine, Ontario, Canada, June 3, 1866. Most noted of American experts on international law and a life-long advocate of world peace, he was special adviser for the Department of State, and

chairman of the Joint State and Neutrality Board (1914-17), and technical delegate to the Paris Peace Conference (1919). He had been president of the American Institute of International Law since 1915.

He was the writer of numerous volumes on international law, including The Hague Peace Conferences of 1899 and 1907 (2 vols., 1909); An International Court of Justice (1916); The United States of America (1920); The Catholic Conception of International Law (1984); Law, the State and the International Community (2 vols., 1939).

Sears, Richard D., Sr. First national amateur tennis champion of the United States in 1882 and winner of that crown the next six successive years; died in Boston, Mass., Apr. 9, 1943; born, 1861.

Selincourt, Ernest de. British authority on the English poets Keats, Wordsworth, and Spenser; died at Kendal, Westmoreland, England, May 22, 1943; born in Streatham, England, Sept. 24, 1870. Professor of English language and literature at the University of Birmingham from 1908 to 1935 and vice-principal during the last four years of that term, his most noted work was the collection, ar-rangement, and editing of the correspondence of William Wordsworth and his sister, Dorothy, published in a series of volumes during 1935-41

Shaffer, John C(harles). Newspaper publisher of The Indianapolis Star and The Muncie (Ind.) Star, and president and publisher of the old Chicago Evening Post during 1901-31; died in Evanston, Ill., Oct. 5, 1943; born in Baltimore, Md., June 5, 1853. He had also been president of the John C. Shaffer Grain Company of Chicago (1920–34), and at various times owned and published The Terre Haute Star, The Terre Haute Post, The Louisville Herald, The Rocky Mountain News, and The Denver Post.

Shaw, Mrs. George Bernard (Charlotte Frances Payne-Townsend). Irish wife of the famous playwright; died in London, England, Sept. 12, 1943. Mrs. Shaw had published translations of French plays, endowed several institutions, established scholarships and was a patron of the arts.

Shimazaki, Haruki (Toson). Japanese writer of poems, short stories, and novels; died at Oiso, Kanagawa Prefecture, Japan, Aug. 22 (?), 1943; born in Nagano-ken, Japan, Feb. 17, 1872. His A Collection of the Poetical Works of Toson had gone through 216 editions up to 1934.

Shiozawa, Koichi. Japanese admiral and member of the Supreme Military Council since September, 1941; died in Tokyo, Japan, Nov. 17, 1943; born

in Nagano-ken, Japan, March, 1883.

Sikorski, General Wladyslaw. Polish Prime Minister and Commander in Chief of the Polish Army (in exile) since 1939; died in an airplane accident en route to England, July 4, 1943; born in Tuszow, Poland, May 20, 1881. He was graduated from the Lwów High School in 1902 and was conscripted into the Austrian Army in 1905–06, leaving with the rank of lieutenant. Six years after his graduation from the Polytechnic Institute of Lwów (1908), he was called to the Austrian Legions, but subsequently was transferred to the Polish Legions with the rank of lieutenant colonel, becoming commander of the Third Regiment of the Legions (1916) on the Russian-Austrian front with the rank of colonel.

During the Polish-Ukranian War in 1919 and during the Polish-Russian War in 1920 he was commander of an army corps. His prestige was greatly strengthened in the Battle of Warsaw (1920) when he strategically forced the Bolsheviks into retreat. After the war in 1921 he became Chief of the General Staff, serving as such until the assassination of President Narutowicz on Dec. 16, 1922. Immediately General Sikorski was called upon to form a government. He accepted, took over as Prime Minister and Minister of the Interior, attempting to restore order in the country. Despite the fact that General Sikorski was successful in his endeavors and attained an apparent vote of confidence, the government's position was basically unstable, and on May 26, 1923 the Sikorski government was overthrown, resigning at once.

In the new (Grabski) regime he was made Minister of War (1924), and organized the Polish Army. He retired from active duty in 1926 and

devoted much of his time to writing.

With the commencement of World War II and the fall of Poland, he fled to Rumania and from there to France. In September, 1939, he was appointed chief commander of the Polish Legions. The next day he was made Premier of the "Polish Government of National Union" in exile. On Nov. 10, 1939, he was appointed generalissimo, continuing as Premier.

The works of General Sikorski include La Campagne Polono-Russe (1928); Le Probleme de la Paix (1931); La Guerre Moderne (1935); and

various other military and political publications. In a tribute to General Sikorski, Anne O'Hare McCormick, writing for The New York Times said: . . . If any man can be called indispensable to his country at a given moment of history, it was Sikorski at the time of his death. He emerged from the defeat of Poland and the obscurity in which he had lived because of his opposition to the policies of its pre-war Government as the national leader and authentic spokesman of a crucified and indestructible nation. . . .

Slemp, C(ampbell) Bascom. Republican Congressman from Virginia (1907–23) and secretary to President Coolidge from 1923 to 1925, serving as the Chief Executive's conciliator with Congress and taking over much of the party politics for him; died in Knoxville, Tenn., Aug. 7, 1943; born in Turkey Cove, Lee Ct., Va., Sept. 4, 1870.

Spasokukatsky, Sergeo I. Russian distinguished

surgeon and medical scientist; died in Russia, Nov. 18, 1943; born, 1870. Known as the father of stomach surgery, he achieved additional world renown as a specialist in the surgery of brain and lung cases. Dr. Spasokukotsky, winner of the Joseph Stalin award, was a member of the Russian Academy of Sciences and of the Moscow Soviet.

Spykman, Nicholas John. Educator, associated with Yale University since 1925 and Sterling professor of international relations from 1928; died in New Haven, Conn., June 26, 1943; born in Amsterdam, Holland, Oct. 13, 1896. Author: The Social Theory of Georg Simmel (1925), American Strategy in

World Politics (1942).

Steagall, Henry Bascom. Democratic Congressman from Alabama since 1915; died in Washington, D.C., Nov. 19, 1943; born in Clopton, Dale Co., Ala., May 19, 1873. At his death Representative Steagall was chairman of the House Banking and Currency Committee and was one of the leaders

in the fight against food subsidies.

Steams, Harold E(dmund). Author, critic, and foreign correspondent; died in Locust Valley, Long Island, N.Y., Aug. 13, 1943; born in Barre, Mass., May 7, 1891. His publications include Liberalism in America (1919), America and the Young Intellectual (1929), Rediscovering America (1934), The Street I Know (1935), America—A Re-Appraisal (1937).

Stefan, Paul. Austrian music critic and writer, noted as biographer of great musicians; died in New York City, Nov. 12, 1943; born in Bruenn, Czechoslovakia, 1880. An anti-Nazi refugee, Dr. Stefan escaped to the United States in 1941.

Stein, Sir Aurel. British Central Asia explorer and author of many archeological works, including Chronicle of Kings of Kashmir (3 vols.); Ruins of Chronicle of Kings of Kashmir (5 vols.); Ruins of Desert Cathay (2 vols.); The Thousand Buddhas; Maps of Chinese Turkestan and Kansu; On Alexander's Track to the Indus (1929); An Archaeological Tour in Gedrosia (1931); On Old Routes of Western Iran (1941); died in Kabul, Afghanish Cathalander (1942); here in Budanet Hungari tan, Oct. 28, 1943; born in Budapest, Hungary, Nov. 26, 1862.

Stevens, John F. Noted civil engineer, one of the key figures in the construction of the Panama Canal; died in Southern Pines, N.C., June 2, 1943; born in West Gardiner, Me., Apr. 25, 1853. Chief engineer of the Great Northern Railway system in 1895-1902 and general manager during 1902-03, he was the discoverer of the middle route, Marias Pass, where the railway crosses the Rocky Mountains in Montana.

Stimson, Frederic Jesup. Ambassador to Argentina from 1914 to 1921 and Special Ambassador to Brazil, 1919; died Nov. 19, 1943, in Dedham, Mass.; born there on July 20, 1855. Author: American Statute Law (2 vols., 1886), American Statute Law (2 vols., 1886), Stimson's Law Glossary (1890), The American Constitution (1906), The Western Way-American Democracy (1929), My United States (1931),

Critique of Pure Science (1938).
Stoessel, Albert. Noted choral and symphony con-

ductor; died in New York City, May 12, 1948; born in St. Louis, Mo., Oct. 11, 1894.

Strakosch, Sir Henry. British banker and authority on international economics and currency; died in Tadworth, Surrey, England, Oct. 30, 1943; born in Brno, Czechoslovakia, May 9, 1871. Author: The South African Currency and Exchange Problem; Monetary Stability and the Gold Standard;

The Crisis; The Road to Recovery.

Stuart, Charles Edward. Consulting engineer, who achieved international recognition for his work in reorganizing the Soviet Russian coal mining industry during the original Five-Year Plan; died New York City, June 20, 1943; born in Alexandria, Va., Aug. 29, 1881.

Swartwout, Edgerton. Architect, who designed notable structures in New York, Chicago, Boston, and other cities, and who sought unceasingly to safeguard the competition principle so that beginning architects would not be ignored; died in New York City, Feb. 18, 1943; born in Fort Wayne, Ind., Mar. 3, 1870, Author: The Classical Orders of Architecture (1918), and The Use of the Order in Modern Architecture (1920).

Taft, Mrs. William Howard. Widow of the former President and Chief Justice and mother of Senator Robert A. Taft; died in Washington, D.C., May 22, 1943; born in Cincinnati, O., 1861. Author: Recollections of Full Years (1914).

Talbot, Neville Stuart. British prelate, vicar of St. Mary, Nottingham, and rural dean of Nottingham cince. 1833. died at Henfield England. Apr. 3

since 1833; died at Henfield, England, Apr. 3, 1943. Author: The Mind of the Disciples (1914), Thoughts on Religion at the Front (1917).

Tesla, Nikola. Distinguished electrical inventor and designer; died in New York City, Jan. 7, 1943; born in Smiljan, Lika, a border county of Austria Hungary, July 10, 1856. After studying engineering at the Polytechnic School at Graz and the exact sciences at the University of Prague, he came to the United States in 1884.

Subsequently he devoted himself to experimental research and invention. He discovered the principle of the rotary magnetic field, applying it in a practical form to the induction motor; the discovery made possible the alternating current motor and the transmission of power by such current. In 1888 he brought forth the Tesla coil, or trans-former, which was the first effective system for utilizing alternating current transmission. Tesla invented many electrical appliances, including dynamos, transformers, induction coils, oscillators, and arc and incandescent lamps, and is principally known for his researches in alternating currents of high frequency and high potential. Since 1903 he had been engaged mainly in the development of telegraphy and telephony. During his lifetime he held more than 900 patents.

Thomson, Sir St. Clair. British laryngologist and writer; died in Edinburgh, Scotland, Jan. 29, 1943; born in Londonderry, Northern Ireland, July 28, 1859. Author: Diseases of the Nose and Throat (4th ed., 1926), The Cerebrospinal Fluid, Shakespeare and Medicine, A House-Surgeon's Memo-

ries of Lord Lister.

Tillett, Ben(jamin). British trades union leader and Member of Parliament from North Salford during 1917-24, 1929-31; died in London, England, Jan. 27, 1943; born in Bristol, England, 1860. The organizer of numerous trade unions, Tillett with Tom Mann and John Burns led the famous London dock strike (1889), through which far-reaching results in organizing unskilled workers and giving emphasis to the trades union movement were realized.

Trees, Joe Clifton. Noted oil magnate and one of the world's best known wildcatters; died in Pittsburgh, Penn., May 19, 1943; born in Westmoreland Co., Penn., Nov. 10, 1869.

Tresca, Carlo. Italian-American revolutionary syn-

dicalist writer, militant leader of Italian anti-fascists and prominent figure in American radical circles; died by assassination in New York City, Jan.

11, 1943; born in Pulmona, Italy.

Trygger, Ernst. Swedish Prime Minister from 1923 to 1924 and Minister of Foreign Affairs during 1928–30; died in Stockholm, Sweden, Sept. 24, 1943; born there, 1857. The leader of the Conservative party for many years, he was a member of the upper chamber of the Riksdag from 1898 to 1937. He was chancellor of the Swedish Universities and High Schools from 1926 to 1937.

Tussaud, John Theodore. British director of and artist to Madame Tussand's famous Waxworks Museum, London, since 1886; died in London, England, Oct. 13, 1943; born in Kensington, England, May 2, 1858. He contributed to the Exhibition over a thousand portrait models, many of them of the most eminent personages of the period. Author: The Romance of Madame Tussands (1919), The

Chosen Four (1928).

Ullstein, Herman. German publisher; died in New York City, Nov. 23, 1943; born in Berlin, Germany, 1875. He was the youngest of five brothers who owned the Ullstein Verlag, one of the world's largest and most prominent producers of newspapers, magazines, and books in pre-Hitler Germany. The Verlag was valued at \$20,000,000 in 1933. In 1934, during the Nazi anti-Semitic drives, the publishing house was seized and the Ullsteins fled Germany.

Underwood, Bert Elias. Photographer, founder, and president of Underwood & Underwood, photographers, from 1882 to 1925; died in Tucson, Ariz. Dec. 27, 1943; born in Oxford, Ill., Apr. 29, 1862. During World War I he commanded the photo-

graphic division of the U.S. Signal Corps, with a major's commission.

Upshur, William P(eterkin). Major general, U.S. Marine Corps; commanding general of the Marine Corps Department of the Pacific since Nov. 7, 1941; died in the crash of a Navy plane near Sitka, Alaska (World War II), July 21, 1943; born in Richmond, Va., Oct. 28, 1881. General Upshur had served in nearly all Marine barracks in the United States and almost everywhere else Marines have been stationed in the past 40 years. He held the Congressional Medal of Honor, which was awarded to him for heroic service in Haiti in 1915.

Valencia, Guillermo. Colombian agriculturalist, writer, and statesman; died in Popayan, Colombia, July 8, 1943; born in Popayan, Oct. 29, 1873. Author: Oraciones panegiricas (1915), Discursos (1915), Poemas (1917), Cuaderno de notas (1928?).

Van Dyke 2d, W(codbridge) S(trong). Motion-picture director of such distinguished cinemas as Trader Horn, Naughty Marietta, The Thin Man series, Rose Marie, San Francisco, I Married an Angel, and The Painted Veil; died in Hollywood, Calif., Feb. 5, 1943; born in San Diego, Calif., 1889.

Veiller, Bayard. Dramatic writer of murder mysterial for these and agrees including Within the

teries for stage and screen, including Within the Law (1912), The Thirteenth Chair (1916), The Trial of Mary Dugan (1927), and That's the Woman (1930); died in New York City, June 16, 1943; born in Brooklyn, N.Y., Jan. 2, 1869.

Vidal y Barraquer, François d'Assise. Spanish Roman Catholic cardinal; died in Fribourg, Switzerland, Sept. 14, 1943; born in Cambrils, Spain, 1868. Cardinal Vidal was ordained a priest in 1899, became titular Bishop of Pentacomie in 1913; Apostolic Administrator of Solsona, 1914; Archbishop of Tarragone, 1919; and created a Cardinal Priest of St. Sabine in 1921.

Vogt, Alfred. Swiss ophthalmologist, professor of ophthalmology at Zurich University since 1923, and author of several books on the subject, including Verfeinerung der Spaltlampenmikroskopie; Einführung des rotfreien Lichts in die Ophthalmoskopie zur Feinuntersuchung der Netzhaut; Ent-

deckung des Linsenkapselglaukoms.

Wakasugi, Kaname. Japanese counselor to the Japanese Embassy in Washington, from February, 1941, to Dec. 7, 1942, who participated in the negotiations undertaken by Japanese Ambassadors Kichisaburo Nomura and Saburo Kurusu before the attack on Pearl Harbor; died in Japan, Dec. 10, 1943; born in Kumamoto City, Japan, 1883. He had been Consul General at New York City

He had been Consul General at New York City from Dec. 21, 1936, to September, 1940.

Waldo, Richard H. President and editor of the McClure Newspaper Syndicate since 1928; died in New York City, June 11, 1943; born in New York City, Sept. 28, 1878. As general manager of Good Housekeeping Magazine during 1905–14, he established the Good Housekeeping Institute and founded its much-used "seal of approval." He was publisher of Hearst's International Magazine in 1921–23

Waldorf, Ernest Lynn. Methodist Bishop since 1920 and resident bishop of the Chicago area of the Methodist Church since 1932; died in Alexandria Bay, N.Y., July 27, 1943; born in South Valley, N.Y., May 14, 1876.

Wallenberg, Marcus (Laurentius). Swedish banker. head of the Wallenberg banking family, and director of the Stockholms Enskilda Bank during 1892–1920 and chairman of the board since 1938; died in Stockholm, Sweden, July 22, 1943; born in Stockholm, 1864. He was active for many years in

The Ballet Theatre

## SPOTLIGHT ON BALLET-IN A SEASON OF GRATIFYING MUSICAL VITALITY

The oldest known form of entertainment—the Dance—achieved tremendous popularity as a distinct art form. Notable performances by the Ballet Theatre included "Dim Lustre" (top left) with Nora Kaye and Hugh Laing and (lower right) "Romeo and Juliet."

international banking and industrial and commer-

Waller, Thomas W. (Fats). Negro composer and band leader, who wrote all or collaborated on nearly 400 songs, including Ain't Misbehavin', I've Got a Feeling I'm Falling, Honeysuckle Rose, Keeping Out of Mischief Now, Concentrating on You, and If It Ain't Love; died in Kansas City, Mo., Dec. 15, 1943; born in New York City, 1904. Recognized as a master technician of the classics as well as swing music, he first began to attract notice when he wrote the music for the Negro musical Keep Shufflin in 1927 and for Hot Chocolate in 1930. Two years later he achieved national fame as a jazz pianist by appearing on the early morning Rhythm Club program of radio station WLW in Cincinnati and later on the Columbia Broadcasting System. Soon after, he began his motion-picture career, appearing in *Hooray for Love* (1935), *King of Burlesque* (1936), and *Stormy Weather* (1943). Thereafter his renown was assured and with his band he was in demand throughout the nation, reaching the height of his popularity shortly before his death, when he composed the Broadway hit, Early to Bed.

Warren, Whitney. Architect, who designed New York City's Grand Central Terminal and the Louvian Library in Belgium; died in New York City, Jan. 24, 1943; born in New York City, 1865.

Watson, George A. Insurance news editor; died in Cranford, N.J., Jan. 14, 1943; born in Aberdeen, Scotland, 1870. Since 1919 he had been associate editor of The National Underwriter, weekly insurance newspaper. He had been a contributor to The New International Year Book since 1934.

Webb, Mrs. Sidney (Beatrice Potter). British Socialist; died in Liphook, Hampshire, England, Apr. 30, 1943; born in Gloucester, England, Jan. 22, 1858. Along with her husband, Mrs. Webb was instrumental in the development of the intellectual Fabian Society out of which gradually grew the British Labor party. In collaboration with her husband, she was the author of numerous publications, including The History of Trade Unionism (1894; new ed., 1902), English Local Government (1906-13), Minority Report of the Poor Law Commission (1909), English Poor Law Policy (1910), The State and the Doctor (1910), The Prevention of Destitution (1911).

Webster, Leslie Tillotson. Authority in epidemiology Medical Research since 1922; died in Scarsdale, N.Y., July 12, 1943; born in New York City, July 23, 1894.

Wedgwood, 1st Baron, Josiah Clement Wedgwood. British politician and strong proponent of Zionism; died in London, England, July 26, 1943; born, Mar. 16, 1872. Known as the "father of the British Labor party," Lord Wedgwood had been a Member of Parliament since 1906, and vice-chairman of the Labor Party during 1921-24. His publications include Indo-British Commonwealth (1922); The Seventh Dominion (1927); Local Taxation in the Empire (1928); History of Parliament, 1439–1509; and Memoirs of a Fighting Life (1940).

Wells, H(arry) Edward. Pathologist and authority on cancer; died in Chicago, Apr. 26, 1943; born in Hudson Falls, N.Y., Jan. 4, 1874.

Wertheimer, Max. German psychologist and philisopher; died in New Rochelle, N.Y., Oct. 12, 1943; born in Prague, Czechoslovakia, 1880. Dr. Wertheimer had held professorial posts at the University of Berlin (1922–26), and the University of Frankfort (1929–33). Since 1933 he had been professor of psychology on the graduate faculty of the School of Political and Social Science, New York City, a group known as the University in Exile, formed from German scholars driven from Germany. Dr. Wertheimer was the founder of the Gestalt School of Thought. He was the author of numerous monographs, in addition to a recently completed work, Productive Thinking.

West, Andrew F(leming). Educator, organizer, and dean of the Princeton University Graduate School from 1901 to 1928; died in Princeton, N.J., Dec. 27, 1943; born in Allegheny, Penn., May 17, 1853. Dr. West was graduated from Princeton in 1874 and obtained his doctorate of philosophy there in 1883, becoming, in that year, professor of Latin at the University and serving as such until his appointment as dean of the Graduate School. Recognized as the "Dean of Classical Studies in Amer-" Dr. West was the author of several educational works, including Latin Grammar (1902), The Proposed Graduate College of Princeton University (1903), American Liberal Education (1907), Education and the War (1919), American General Education (1932).

Wetzler, Hermann Hans. German-American composer and conductor; died in New York City, May 29, 1943; born in Frankfort, Germany, Sept. 8,

1870.

Whitehouse, Sir Harold Beckwith. British gynecologist and president of the British Medical Association; died in London, England, July 28, 1943; born in Ocker Hills, Staffordshire, England, Oct. 26, 1882.

Whiting, George. Writer of popular-song lyrics and oldtime vaudeville actor; died in New York City, Dec. 19, 1943; born in Chicago, 1882. His many song hits included My Blue Heaven, Believe It, Beloved, Strolling Through the Park One Day, Oh What I'd Do for a Girl Like You, High Up on

 a Hilltop, and That's My Idea of Heaven.
 Whiting, Kenneth. Captain, U.S. Navy (ret. 1940); pioneer in both the submarine and aviation services, noted as the first one to experiment with escape from a trapped submarine by entering the torpedo tube and swimming to the surface as the tube was opened; died in Bethesda, Md., Apr. 24, 1943; born in Stockbridge, Mass., July 22, 1881. At his death, Captain Whiting had returned to active duty as commanding officer of the U.S. Naval Air Station, Floyd Bennett Field, Brooklyn, N.Y.

Widener, Joseph E. Noted art connoisseur, financier, and turfman; died in Philadelphia, Penn., Oct. 26, 1943; born there, Aug. 19, 1872. In 1942 he presented to the National Gallery of Art, Washington, D.C., his collection of more than 300 paintings of European art, considered to be one of the finest private collections in the world. As a figure in horse racing, he built the Hialeah race track at Miami in 1931 and was principal owner of Belmont Park, N.Y. See Arr.

Wile, Ira S(olomon). Pediatrician, psychiatrist, and wie, ira sciomon). Feddatheran, psychiatrist, and proponent of birth control; died in New York City, Oct. 9, 1943; born in Rochester, N.Y., Nov. 29, 1877. Author: Sex Education (1912), The Challenge of Childhood (1925), Marriage in the Modern Manner (1929), Handedness—Right and Left, The Man Takes a Wife (1937). Editor: Sex Life of the Unmarried Adult; The Challenge of Adolescence: The Nervoy Child

cence: The Nervous Child.

Wiley, Henry Ariosto. Admiral, U.S. Navy (ret. 1929); died in Palm Beach, Fla., May 20, 1943; born in Troy, Ala., Jan. 31, 1867. Admiral Wiley was commander of the United States Fleet from November, 1927, to May, 1929. In 1934 he pub-

lished his autobiography, An Admiral from Texas.

Williams, Henry Smith. Physician and painter; died in Los Angeles, Calif., July 5, 1943; born in Durand, Ill., Mar. 4, 1863. Author: The Effect of Alcohol (1909), The Wonders of Science in Modern Life (19 vig. 1918). Story of Modern Editors. ern Life (10 vols., 1912), Story of Modern Science (1923), Drugs Against Men (1935), Etching Is the Ideal Hobby (1941).

Wood, Sir Kingsley. British statesman; died in London, England, Sept. 21, 1943; born, 1881. Sir Kingsley began his rise to political prominence in 1918 as a Conservative Member of Parliament from Woolwich West, a seat which he held thereafter. During 1919-22 he was parliamentary private secretary to the Minister of Health, acquiring essential experience in the routine of Cabinet procedure. In 1924 he was advanced to the post of Parliamentary Secretary for the Ministry, remaining as such until 1929. In this period he was responsible, in part, for the expansion of the health and social services of the nation.

He was made a Privy Councilor in 1928 and in 1931 became Parliamentary Secretary to the Board of Education. Later in that same year he became Postmaster-General, 1931–35. During 1935–38 he served as Minister of Health. In May of 1938 Sir Kingsley was made Secretary of State for Air. With the realization that the British air arm was pitifully inadequate, Sir Kingsley immediately expanded production of fighter and bomber planes. He saw the Spitfire and Hurricane types put into mass

production.

But with the inaugural of Winston Churchill as Prime Minister, Sir Kingsley was shifted in May, 1940, to the post of Chancellor of the Exchequer, remaining as such thereafter. In this position he bore the chief burden of financing Great Britain's enormous war expenditures and was charged with keeping the budget balanced. One of his final acts was to prepare a pay-as-you-go tax plan for the worker's income. His publications include Law of National Insurance; Law and Practice Relating to Housing in England and Wales (1921); National Health Insurance Manual; Relief for the

Ratepayer. Woollcott, Alexander. Author, journalist, and rac-onteur; died as a result of a heart attack suffered while participating in a radio broadcast, discussing the tenth year of Hitlerism in Germany, in New York City, Jan. 23, 1943; born in Phalanx, N.J., Jan. 19, 1887. He joined the staff of *The New York* Times in 1909, becoming dramatic editor in 1914 and remaining as such until 1922, with the excep tion of two years spent in France during World War I where he spent most of his service working in the editorial rooms of *The Stars and Stripes*, the weekly newspaper of the A.E.F. In 1922 he transferred his talents to the *New York Herald*, shifting to the New York Sun in 1924, and to the New York World during 1925-28. In 1929 he went on the radio, and in the next 11 years continued broadcasting with steadily increasing success. He also contributed frequently to leading magazines.

His publications include Mrs. Fiske—Her Views on Acting, Actors and the Problems of the Stage (1917), The Command Is Forward (1919), Shouts and Murmurs (1923), Enchanted Aisles (1924), The Story of Irving Berlin (1925), Going to Press (1928), Two Gentlemen and a Lady (1928), While Rome Burns (1934), The Woollcott Reader (1935), and Woollcott's Second Reader (1937). His yearning for the stage found fulfillment when he appeared in the plays Brief Moment (1931), Wine of Choice (1988), and The Man Who Came to Dinner (1940).

Worcester, Joseph R(uggles). Noted engineer in the design of steel and reinforced structures and foundations; died in Waltham, Mass., May 9, 1943;

born in Waltham, May 9, 1860.

Worsley, Frank Arthur. New Zealand arctic explorer, who commanded the ship Endurance in Sir Ernest Shackleton's South Pole expedition (1914—1914). 16), and was joint leader of the British Arctic expedition in 1925; died at Esher, Surrey, England, Feb. 1, 1948; born in Akaroa, New Zealand, 1872. Author: Shackleton's Boat Journey and Crossing South Georgia (1924), Under Sail in the Frozen North (1926), Endurance (1931), First Voyage

Yamamoto, Isoroku. Japanese naval officer; died apparently in the crash of a passenger plane into the sea between Singapore and Bangkok, Thailand, although other reports intimated that he committed hara-kiri because of his statement that he would take his own life than lose any Japanese territory; Apr. 7, 1943; born in Nagaoka, Japan, Apr. 4, 1884. Graduated from the Japanese Naval Academy in 1904, he rose through the ranks to the position of vice-minister of the Navy, chief of the Navy air force in 1930, and Commander in Chief of the fleet since 1939.

Admiral Yamamoto was notorious throughout the United States as one of the most unscrupulous Japanese, and as the arrogant boaster who remarked that he looked forward to "dictating peace to the United States in the White House at Washington." It was he who was principally responsible for the initiative and completion of the surprise air attack on Pearl Harbor in World War II.

Yaroslavski, Yemelyan. Russian publicist, politician, a member of the Russian Communist party's Central Committee and a deputy of the Supreme Soviet; died in Moscow, Russia, Dec. (?), 1943. In 1937, for his historical and other writings, he was elected to the Soviet Academy of Sciences. See Union of Soviet Socialist Republics under His-

Yon, Pietro Alessandro. Italian-American organist, composer and musical director of St. Patrick's Cathedral since 1927, New York City; died in Huntington, N.Y., Nov. 22, 1943; born at Settimo Vittone, Piedmont, Italy, Aug. 8, 1886. In 1921 he was appointed honorary organist at St. Peter's in Rome, the first time that this distinction had been conferred. Regarded as one of the greatest organists in the world, he had written more than 70 compositions, including The Triumph of St. Patrick, an oratorio based on the life of the patron saint of Ireland.

Young, Art (Arthur Henry Young). Cartoonist and author; died in New York City, Dec. 29, 1943; born near Orangeville, Stephenson Co., Ill., Jan. 14 1866. A satirical but kindly cartoonist he worked on several newspapers before coming to New York soon after the turn of the century, where he remained thereafter, contributing several notable series of cartoons to popular magazines and illustrating the late Arthur Brisbane's full-page Sunday editorials. For more than 50 years he had crusaded for better social conditions, being active in campaigns for woman suffrage, labor organization, racial equality, and abolition of child labor. Throughout his career he won renown for ironically censorious cartoons depicting the social evils, foibles, and weaknesses of mankind in general and Americans in particular.

Zeeman, Pieter. Netherlands physicist and winner of the Nobel Prize in physics in 1902; died in Amsterdam, the Netherlands, Oct. 9, 1943; born

in Zonnemaire, Zeeland, 1865. In 1885-90 he studied at Leyden, where he became assistant at the Physical Institute (1890-94); privat-dozent (1894-97) and lecturer at the University (1897-1900). In 1900 he was appointed professor of physics at the University of Amsterdam. Professor Zeeman is noted for his discovery in 1896 of the phenomenon known as the Zeeman Effect, which is on the splitting up of spectral lines in a magnetic field. More recently he had worked on the propagation of light in moving media. He was the author of several books on magneto-optics, and was elected to the French Academy of Science in

Zenatello, Maria Gay. Spanish contralto, who sang at the Metropolitan Opera House in New York from 1908 through 1912, winning acclaim for her role of Carmen; died in New York City, July 29, 1948; born in Barcelona, Spain, June 18, 1879.

## NEGRI SEMBILAN. See British Malaya.

NEGROES. The year 1943 marked noticeable progress and retrogression in race relations in the United States. America's second year of war with its casualty lists and its growing realization of the race question as being a world instead of a national one caused thoughtful and intelligent Americans to revise their concepts. But among others was to be noted a tightening of the determination to maintain the status quo for the Negro. Race riots in Detroit, Philadelphia, New York, Beaumont, Tex., and "zoot suit" riots in Los Angeles, were tragic examples of the latter trend.

There were three lynchings in 1943, as compared with five in 1942. Firm action by officers of the law prevented nine threatened lynchings, and private

citizens stopped a tenth.

Lubor. The Negro's status in war industry was accurately measured by the barometer of the Fair Employment Practice Committee created on June 25, 1941, by President Roosevelt's Executive Order 8802. Just before leaving for the Casablanca conference in January, 1943, the President ordered the indefinite postponement of the hearings scheduled by the FEPC on alleged discrimination by railroad unions and by 16 Southern railroads. The protests against postponement resulted in the rescheduling of the hearings, which were held during the month of September, 1943, in Washington. The findings of discrimination were subsequently issued by the Fair Employment Practice Committee. The 16 railroads promptly asserted that they would not comply with the directive of the FEPC to cease discrimination.

There was a considerable increase in employment of Negroes in war industry during the year, although, according to a statement by the War Manpower Commission in November, this employment was largely, except in the case of the Federal government, in the unskilled categories. Opposition to employment of Negroes, even in very tight labor markets where war production was being seriously curtailed by labor shortages, was fomented by anti-Negro and anti-labor organizations such as the National Workers League, the Ku Klux Klan, and others, many of which are under investigation by the Federal government for subversive activities.

Armed Services. Segregation of Negroes continued, though there were some modifications during 1943. The all-Negro 99th Pursuit Squadron saw active service in Sicily and Italy. In September the War Department announced that Negroes would be trained to fly medium bombers. Significant in this announcement was the fact that they would be trained in nonsegregated units as is the case in the training of officers in Officer Candidate Schools. The attitude of the Marines and Coast Guard in the training and promotion of Negroes offered a contrast to that of the Navy, which continued segregated training and refused to permit the training of Negroes as officers. Dorie Miller, a Negro messman who was one of the outstanding heroes of the attack on Pearl Harbor, was reported miss-

ing in action as the year closed.

Art. One of the outstanding successes of the Broadway season was the all-Negro version of Carmen Jones based upon Bizet's opera Carmen, staged beautifully by Billy Rose. Rivaling it both in attendance and critical acclaim was Othello

starring Paul Robeson.

On October 1 and 3 the United Nations Writers' Congress was held under the joint auspices of the University of California and the Hollywood Writers Mobilization in Los Angeles. Treatment of the Negro and other minorities on the screen, in radio, and in other media was one of the chief topics of discussion and action. A writers' credo was adopted, one of the three chief points being the ending of racial stereotypes, particularly those

of the Negro as a buffoon or menial. Roi Ottley's New World A-Coming, a lively and realistic appraisal of the Negro's status, was for many weeks a best seller. Other novels, books, magazine and newspaper articles by both white and Negro writers focused attention upon the problems of race, both nationally and globally. Among those which received widespread attention, whether they dealt wholly or partially with the problem of race, were Wendell Willkie's One World, Pearl Buck's American Unity and Asia, John Roy Carlson's Under Cover, Carey McWilliams Brothers Under the Skin, John Sanford's The People From Heaven, and Bucklin Moon's The Darker Brother.

The Political Field. Nationwide attention was centered during November upon the election of Justice Francis E. Rivers to the New York City Court on the Republican ticket, and of Benjamin J. Davis, Jr., to the New York City Council on the Communist ticket. The Negro vote was a determining factor in the election of other candidates. On November 20, representatives of the 20 most established mass organizations of Negroes met in New York City to draft and issue a "Declaration by Negro Voters" pointing out that the Negro vote holds the potential balance of power in some 17 States; that that vote is no longer the exclusive possession of any one political party; and that it is determined to use its strength independently and intelligently for the good of America as well as of the Negro.

Two important issues were vigorously pushed during the year affecting the right of Negroes to vote. Most important as far as Negroes were concerned was the test case which was carried to the U.S. Supreme Court involving the exclusion of Negroes from so-called white Democratic primaries in the one-party South. Re-argument was ordered by the Court to take place on Jan. 10, 1944. Coincident with this legal case was the campaign in the Congress for passage of a bill to outlaw the paying of a poll tax by which some 6,000,000 southern whites and 4,000,000 southern Negroes are disfranchised. The bill faced a filibuster at the year's end by Senators from states requiring pay-

ment of the poll tax. Education. A blow to the improvement of education, particularly in the poorer southern States was the defeat in November of the Federal Aid to Education Bill, which would have appropriated \$3,000,000 annually to raise the standards of education. Defeat of the bill by conservative forces in the U.S. Senate, particularly the manner of the defeat, created disappointment, but lessened none of the determination to secure such legislation. In practically every southern State cases involving the differential in salaries paid Negro and white teachers have been commenced. The seven-year campaign of such legal steps carried on by the National Association for the Advancement of Colored People has resulted in the reduction by \$2,000,000 of the differential of more than \$25,000,000 which existed when the campaign began.

WALTER WHITE.

NEJD. See Arabia under Saudi Arabia. NEOPRENE. See RUBBER.

NEPAL. An independent kingdom between Tibet and India. It contains some of the highest mountains of the Himalaya. Area, 54,000 square miles. Population, 5,600,000. Chief towns: Katmandu (capital), 108,805 inhabitants; Patan, 104,928; Bhatgaon, 93,176. The principal exports are jute, rice, hides, oilseeds, ghee, cattle, and lumber; the chief imports are cotton goods, yarn, salt, sugar, spices, and metals. There are valuable forests in the southern part of the country. The revenue for 1940 was estimated at 12,500,000 rupees (1.24 Nepalese rupees equal 1 British Indian rupee). Nepal's government is a military aristocracy based on birth. All power is in the hands of the prime minister, a member of the ruling family. Ruler, King Tribhubana Bir Bikram (succeeded Dec. 11, 1911); Prime Minister, Sir Joodha Shumshere Jung Bahadur Rana (installed Sept. 1, 1932). A Nepalese contingent of some 8,000 men, commanded by Gen. Sir Bahadur Shamshere Jung Bahadur Rana since 1940, fought with British and Indian forces in World War II.

NE STEELS. See IRON AND STEEL; NICKEL.

NETHERLANDS. A constitutional monarchy of north-western Europe, invaded and occupied by German military forces beginning May 10, 1940. Capital, Amsterdam; seat of the Government, The Hague (transferred temporarily to London, England, on May 13, 1940). Sovereign, Queen Wilhelmina, who succeeded to the throne Nov. 23, 1890, and was crowned Sept 6 1898

crowned Sept. 6, 1898.

Area and Population. The area, including water belonging to municipal territories, is 13,515 square miles. The population on Jan. 1, 1941, was estimated at 8,923,000 (7,935,565 at the 1930 census). About 94 per cent of the people dwell in communities of 2,000 or more. The live birth rate was reported at 20.9 per 1,000 inhabitants in 1942 (20.3 in 1941); death rate, including war losses, 9.5 per 1,000 in 1942 (10.0 in 1941). Estimated populations of the chief cities on Jan. 1, 1939, were: Amsterdam, 793,222; Rotterdam, 612,375; The Hague ('s Gravenhage), 494,773; Utrecht, 163,589; Haarlem, 137,507; Groningen, 120,010; Eindhoven, 111,188; Tilburg, 95,142; Nijmegen, 94,102; Enschede, 90,291; Arnhem, 88,996; Leiden, 77,009. The central section of Rotterdam was completely destroyed by German air attacks on May 14, 1940.

Colonial Empire. The colonial possessions of the Netherlands are treated elsewhere in the Year Book under the topics Netherlands East Indies (occupied by Japanese forces in 1942), Curaçao, and Surinam. The total area is 793,354 square miles; total population was estimated at 70,760,000 in 1941.

Education and Religion. There is practically no illiteracy. The school enrollment in 1938–39 was: Infant schools, 213,338; elementary, 1,242,778; secondary, technical, and vocational, 271,298; high schools, 3,199; universities, 9,395. German occupation authorities Nazified the educational system. Leiden University and a number of other schools closed in 1941 rather than accept the change. According to the 1930 census, there were 2,890,022 Roman Catholics, 2,732,333 members of the Dutch Reformed Church, 876,958 other Protestants, 111,917 Jews, 10,182 Jansenists, 169,575 belonging to other creeds, and 1,144,393 professing no religion.

Production. Agriculture, manufacturing, commerce, and mining are the principal industries. Yields of the chief crops in 1939 (in metric tons) were: Wheat, 416,500; barley, 146,000; rye, 603, 500; oats, 449,200; potatoes, 3,000,000; beet sugar (1939–40), 217,600; linseed, 22,500; flax, 21,300. Livestock (1939): 2,817,314 cattle, 1,553,413 swine, 322,152 horses, and 689,500 sheep. The yield of the sea fisheries in 1939 was 169,900 metric tons, valued at 15,700,000 guilders. The estimated 1940 mineral production was (in metric tons): Coal, 13,000,000; pig iron, 300,000; copper, 1,000; zinc (smelter) in 1939, 20,500. The 1939 output of rayon and staple fiber was about 11,000 metric tons; wood and straw pulp, 108,000; butter, 108,400; cheese, 120,600; margarine, 71,000; shipping tonnage launched, 117,000. Bricks, clothing, boots and shoes, engines, boilers, machinery, cotton and linen fabrics, alcoholic beverages, tobacco products, are other leading manufactures.

Immediately after the occupation, the Germans undertook to integrate the economy of the Netherlands with that of the Reich. Many Dutch factories were forced to work on German war orders, while other factories were closed and the workers transferred to war jobs in the Reich. The German Chamber of Commerce in the Netherlands estimated Dutch industrial production for Germany at 2,500,000,000 reichsmarks for the period May,

1940, to September, 1942.

Foreign Trade. Merchandise imports and exports were 1,516,651,000 and 966,215,000 guilders, respectively, for the calendar year 1939. No trade statistics were published after the German occupation. All Netherlands trade was handled through the Berlin clearing office in reichsmarks. According to the statement of the Netherlands Bank, claims on Germany created by German purchases of Dutch commodities and securities increased from 21,000,000 guilders on Apr. 30, 1940, to 138,000,000 guilders on Dec. 31, 1940, and 1,083,000,000 guilders on Dec. 31, 1941. For distribution of trade in 1939, see 1941 Year Book.

Finance. Budget receipts, as announced by the German-controlled administration, were (in millions of guilders): 925 in 1940, 1,219 in 1941, and 1,450 in 1942. Expenditures for the same period were reported as follows (millions of guilders): 1940, 1,395 (defense, 231); 1941, about 3,300 (occupation costs, 1,200); 1942, about 3,700. According to the controlled press in the Netherlands, the budget for 1943 showed a deficit of 19,500,000 guilders. The internal public debt increased from 4,218 million guilders on Dec. 31, 1939, to 8,951 millions on

May 30, 1943. Following the German occupation, the guilder (florin) was pegged to the reichsmark at 1 guilder equals 1.33 reichsmarks, or \$0.532 at

Transportation. The Netherlands at the beginning of 1940 had some 2,278 miles of railway line, 16,031 miles of highways, and 4,817 miles of navigable rivers and canals. This transportation network was badly damaged during the hostilities of May, 1940, but was reported to have been repaired in considerable part by the end of that year. The Royal Dutch Air Lines (K.L.M.) suspended its European services (except for the new London-Lisbon line) upon the German invasion. Control of K.L.M. was transferred to the K.N.I.L.M. (Royal Netherlands Indies Air Lines) with headquarters at Batavia. Upon the Japanese invasion of the Netherlands Indies, K.N.I.L.M. headquarters were moved to New York. In the autumn of 1943, the Netherlands Commission for Public Relations in Wartime relieved K.N.I.L.M. of control of K.L.M. It appointed five Netherlanders living in London as members of a new K.L.M. control board, preparatory to the expected return of the management of the company to Holland.

Except for some coastal trade with Germany, Belgium, and the Baltic countries, shipping from Netherlands ports was suspended following the German occupation. The Netherlands merchant fleet that escaped capture or destruction by the Germans entered the service of the United Nations; in July, 1941, there were 480 Dutch vessels of 2,250,000 tons under Allied control. Up to that date, 77 Dutch ships had been lost through enemy action. The losses were subsequently replaced in part by acquisitions of British and United States

Government. The Constitution of 1814, with its various amendments, vests executive power exclusively in the sovereign while legislative authority rests conjointly in the sovereign and the States-General (parliament). The States-General consisted of an upper chamber of 50 members, chosen by elected representative bodies in the several provinces for terms of six years; and of a lower chamber of 100 members elected for four years by general adult suffrage. In practice the cabinet was responsible to the States-General and the Premier was normally chosen by the sovereign from a political group commanding a parliamentary majority. The Premier proposed the members of his ministry to the sovereign. The Government-in-Exile, established in London May 13, 1940, represented a coalition of the Roman Catholic, Christian Historical, Social Democratic Labor, and Liberal Democratic parties. Premier, Dr. P. S. Gerbrandy (appointed Sept. 3, 1940). For war declarations by the Netherlands Government, see table under WORLD WAR.

Dr. Arthur Seyss-Inquart and Maj. Gen. Friedrich Christiansen were appointed by Reichsfuhrer Hitler as civil and military governors, respectively, of the Netherlands. They assumed office May 30, 1940. All of the Netherlands political parties, except the National Socialist (Nazi) movement led by A. A. Mussert, were dissolved by the German authorities during 1941. A decree of Aug. 12, 1941, scrapped what remained of the autonomy of the Netherland provincial and municipal councils. Dr. Seyss-Inquart announced Dec. 13, 1942, that Mussert had been recognized by Hitler as "leader of the Netherlands people." For developments during

1943, see below.

HISTORY

German Rule. During 1943 German efforts to impress the Netherlands into Hitler's new order, with the assistance of the Dutch Nazis under Anton A. Mussert, and the stubborn resistance of the great majority of the Dutch people followed the same pattern as in 1940-42. See the YEAR BOOKS covering 1940 to 1942 inclusive for an account of these de-

velopments.

Among the various German maneuvers to inveigle the Netherlanders into accepting national socialism were a January decree revising the Dutch inheritance law; the formation in March of financial concerns to encourage Dutch participation in the exploitation of German-occupied territories in Eastern Europe; and the declaration of a moratorium on payments of interest and amortization on loans contracted before the German occupation. The new inheritance law offered strong inducement for young farmers to enter Mussert's Nazi party. It provided that upon a farmer's death his lands should go to the "best farmer" among his sons, to be selected by the Nazi "Land Chamber," instead of being distributed equally among all the

As in previous years, the German occupation authorities made little progress along this line. Accordingly they resorted increasingly to open and violent coercion to achieve their aims. As German military prospects darkened, they were spurred to greater violence by two additional factorsthe greater need for manpower to maintain German war production and the urge to smash the Dutch resistance organizations in advance of the threatened Anglo-American invasion of Western Europe. The desperate intensity with which the Germans and Dutch Nazis strove to put these programs into effect and the equally violent reaction of the nation indicated that the struggle was approaching a climax.

Labor Conscription. The drafting of Netherlanders for forced labor in the Netherlands and Germany had been carried on in the first years of the occupation by indirect means, such as the withholding of ration cards. But on Feb. 22, 1943, labor conscription was openly introduced by a decree giving Reich Commissioner Arthur Seyss-Inquart full powers over Dutch manpower as well as the means of production and distribution. The decree was issued with a warning that refusal to cooperate with the German war effort would be considered sabo-

tage, which was punishable by death.

Under the leadership of the underground, the Dutch people fought labor conscription with strikes and evasive tactics that greatly reduced the effectiveness of the decree. Nevertheless Nazi sources reported that the number of Hollanders at work in German war plants increased from 302,000 on May 1 to 400,000 on October 1. This increase of 98,000 excluded those dying in Germany, those returned to the Netherlands because of illness, and some 37,000 Netherlanders put to work in France. On September 7 all leaves for Dutch workers in the Reich were suspended indefinitely. To curb absenteeism and malingering among Dutchmen drafted for work in the Netherlands, the occupation authorities gave employers unlimited power to impose fines upon workers charged with these offenses.

Measures against Students. The German authorities' long struggle to control Netherlands institutions of higher learning took a new turn when, in connection with his labor conscription decree, Seyss-Inquart ruled that the universities and high schools must provide 8,000 students for German war factories. There was immediate resistance. With the connivance of the school authorities, thousands of students scattered to their homes and hundreds went into hiding.

The Reich Commissioner then decreed on March 16 that all students in college or equivalent courses must sign a written pledge to refrain from joining "any sect of conscience or honor" directed against the occupying authority. He promised that there would be no deportation for students signing the pledge. But at the same time he announced that the number of university students would be limited by examination and that those failing to pass would be assigned to "work con-tributing to the national welfare." University proctors were held personally responsible for the good conduct of prospective students and for the "de-livery to the proper authorities" of those failing in their examinations.

Warned by the Netherlands Government in London, 85 per cent of the students refused to sign the declaration of loyalty to the German authorities. Moreover many professors who had not been dismissed previously resigned their positions in protest against these measures. At the end of December it was reported that the freshman registration for the 1943-44 session of the universities was less than one-tenth that of the prewar figure (378 against 3,973 registered for the 1939-40 session). Meanwhile hundreds had been thrown into concentration camps and others executed

Deportation of Jews. By the end of June, the German authorities had executed the threat made in 1942 to deport all Jews from the Netherlands to eastern Europe, where a living death awaited them (see 1943 YEAR BOOK). The only Dutch Jews who escaped deportation were those married to non-Jews, those having Palestine immigration certificates or original South American visas, those ransomed by non-Jewish acquaintances, and some 15,000 who were estimated to be in hiding. Jewish husbands and wives of non-Jews were reportedly subjected to mass sterilization, according to a London report of November 20. In all 120,000 Jews were believed to have been shipped from Holland to Germany or eastern Europe for forced labor or for purposes of extermination.

Anti-Invasion Measures. Early in the year the Germans speeded up their preparations to resist an Allied landing in the Netherlands. Late in March the Netherlands Government in London reported that a state of emergency had been proclaimed in the Dutch coastal areas, that most of the population had been moved inland, and that whole villages, seaside resorts, and sections of the larger ports had been razed to make way for concrete fortifications and gun emplacements. A decree of August 12 closed the northeastern provinces to all travelers, ostensibly for the purpose of stamping out resistance. However the Dutch underground charged that some 10,000 Netherlanders from coastal defense areas and thousands of Germans bombed out of homes in the Reich were being settled in this region.

Another blow at the Dutch resistance movement was struck toward the end of April when Maj. Gen. Friedrich Christiansen, commander of the German occupation forces, ordered the imprisonment of all members of the Netherlands armed forces released on parole toward the end of 1940. Some of the paroled officers and cadets had been jailed in the spring of 1942 to break up secret military organizations founded to assist an Allied invasion. Now the German commander ordered the internment of all former war prisoners "in view of the growing numbers of outright violation of parole undertaking, if not open collaboration with the enemies of Germany."

Beginning with the sudden seizure of some 18,-500 former officers, noncommissioned officers, and soldiers on April 29, the Germans and the Dutch Nazi military and police formations continued the roundup for several months. Most of the Dutch war prisoners reportedly were deported to Germany for work in war factories. However the Netherlands Government in London announced on July 2 that "a fairly large number" of Dutch officers had been sentenced to death after a secret trial by a German military court. As a final warning to the thousands of paroled soldiers who went into hiding, the German commander set August 6 as the deadline for their surrender.

General Strike Crushed. Announcement of the decree for the re-internment of war prisoners provoked a general strike and the most serious manifestation of nationwide defiance that the occupa-tion authorities had encountered. The Germans moved promptly and ruthlessly to crush the incipient revolt. A state of emergency was proclaimed May I over the entire kingdom. The decree prohibited strikes, lockouts, the bearing of arms, assemblages of more than five persons, and the publishing or distribution of anti-German pamphlets—all under penalty of death. A dusk-to-dawn curfew was imposed. All males between 18 and 35 years of age were ordered to register. Mass arrests, the execution of several score prisoners, and the machine-gunning of strikers and demonstrators soon ended open opposition but sabotage and underground warfare continued on a major scale for many weeks.

In a decree issued September 15 Dr. Seyss-Inquart gave police courts summary powers to "administer justice to terrorists under police martial law," including capital punishment, until further notice. This decree was the signal for a new wave of executions. The Germans announced the killing of 31 more Netherlanders—mostly students during the next three weeks, and the grim toll mounted steadily until the end of the year.

Dutch Nazis Assassinated. Hitler's action assigning Mussert and his Dutch Nazi followers an official role in the occupationary administration in December, 1942, was followed in February, 1943, by a wave of assassinations of leading Dutch Nazis. Those attacked included D. J. Feitsma, Attorney General of Amsterdam, seriously wounded (February). Living Con Hondrilly A Southeast ruary 1); Lieut. Gen. Hendrik A. Seyffardt, commander of the Nazi "Netherlands Legion" and the only Dutch general to collaborate with the Germans, shot and killed February 5; Dr. H. Reydon, Secretary-General of the Ministry of Culture and Public Enlightenment, mortally wounded, and Mrs. Reydon, instantly killed, on February 9; Storm Troop leader H. Bannink, shot to death February 10; and C. van Ravenzwaai, Mussert's Secretary for Social Affairs, reported slain on February 14.

On February 16 Mussert announced the formation of a special armed guard to protect Dutch Nazi leaders. Meanwhile German and Dutch Nazi police and armed forces were rounding up hundreds of suspects. Nineteen members of one underground group, executed early in October, were stated in the Dutch Nazi press to have killed 10 Dutch Nazis and attacked eight others. These sources revealed that General Seyffardt and Dr. and Mrs. Reydon were assassinated by Dr. G. W. Kastein, a well-known psychiatrist of The Hague, who leaped to his death from a high window when taken to Gestapo headquarters for questioning.

Mussert further embittered Dutch patriots in

mid-March by approving a Seyss-Inquart decree

for the formation under German Elite Guard leadership of a semi-military "national guard," open to all Netherlanders between 17 and 50 years of age. Service in the "national guard" for three months entitled members to jobs on the active police force. Despite all protective measures and numerous executions, assassinations of prominent Dutch Nazis continued. The Dutch Nazi weekly Volk en Vaderland of October 2 published an official list of 50 Nazis and Nazi sympathizers slain or wounded between February 1 and October 1. Later victims included Dr. Folkert E. Posthuma, leader of the Nazi "agricultural front," the police president of Utrecht, and many other high police officials.

Mussert was quoted as saying that in all more than 1,000 of his followers had been slain by the anti-Nazi underground. Early in October he announced that all Dutch Nazis would be permitted to bear arms for self-protection, but Reich Commissioner Seyss-Inquart was reported to have restricted this right to specially selected members of a Nazi "self-defense" organization. At the same time Seyss-Inquart threatened to withdraw food supplies from the Netherlands if attacks on Dutch Nazis and on rationing offices did not cease.

Other Forms of Resistance. Other Dutch groups expressed their resistance to German rule in less violent forms. In January all Dutch churches sent joint letters of protest against the mounting tide of executions and deportations to both the German military commander and Reich Commissioner. Seyss-Inquart replied in a broadcast of January 31 that the executions would continue and might be expected to increase unless opposition ceased. In February the Protestant and Catholic churches sent another open letter to the Commissioner protesting against encroachments on freedom of wor-

ship and persecution of the Jews.

Another bluntly worded pastoral letter read in Catholic churches on May 16 attacked the conscription of Netherlanders for forced labor and declared the occupationary regime was seeking to undermine Christianity. On June 10 it was announced that the Reformed Church, Roman Catholic Church, and seven other Dutch religious groups had sent a united protest to Seyss-Inquart against the sterilization of Jews who had contracted mixed marriages. They denounced the practice as "the final consequence of an anti-Christian and destructive racial doctrine . . ." These protests were made in the face of arrests of more pastors and priests and threats of severe reprisals. On December 23 it was reported that the German authorities had closed all nine Christian Science churches in the Netherlands and confiscated their property.

Meanwhile Dutch judges, aroused by brutalities and "revolting conditions" in the concentration camps, were reported on May 29 to have threatened to cease issuing verdicts unless conditions improved. Early in June some 6,200 Netherlands physicians struck to avoid compulsory membership in a Nazi-controlled medical association, which advocated the sterilization of racially "objectionable" persons and the deportation of insane and sick persons. Their open refusal to apply "national socialist measures in the field of medicine" was followed by the arrest of several hundred physicians, but some of them were released and a truce was agreed to after several weeks during which medical service was brought to a virtual stand-

still.

Economic Deterioration. Meanwhile the deterioration of the economy of the Netherlands continued steadily as Allied bombing forced the Reich war industries to lean more and more heavily upon the resources and manpower of the occupied countries. There was a progressive restriction of Dutch industrial operations, a growing scarcity of all consumer supplies, an alarming weakening of the financial structure, and a general decline in health due to undernourishment. The lowered resistance of the Dutch people was reflected in a serious diphtheria epidemic which swept the country in January and February and in a marked increase in tuberculosis and other diseases that overcrowded all hospital facilities.

The national debt increased nearly threefold and the total of government short-term obligations more than fourfold in 3½ years of German occupation. On October 29, the British Ministry of Economic Warfare reported that the amount due the Netherlands through Germany's blocked-mark system and nonpayment for imports, was about 5,700,000,000 marks, or some 4,104,000,000 guilders, with the annual rate of increase estimated at 1,900,000,000 marks (about 1,368,000,000

guilders).

Government-in-Exile. While proceeding with plans and preparations for an early return to the Netherlands, Queen Wilhelmina and the Government-in-Exile in London continued to direct and encourage the resistance movement in Holland by frequent radio broadcasts. On April 24 the Queen expressed confident hope that the German oppressors and Dutch traitors would alike be brought to justice. On August 13 Premier Gerbrandy added Jacob Burger, an attorney and trade union official newly escaped from Holland, to his Government as Minister without Portfolio. Burger was entrusted with plans for postwar reconstruction in the Netherlands.

A broadcast to occupied Holland on September 21 by Premier Gerbrandy announced that the Queen had signed an act for the institution of a "special state of siege" in the Netherlands after its liberation, under which the military authority would "cleanse and revive the civil authority." The Queen and Premier subsequently gave assurances that the Dutch people would have the right to determine their future government and policies after the tranfer of power from the German authorities to

the Government-in-Exile.

In an important statement of the Government's foreign policy broadcast to occupied Holland on December 28, Foreign Minister E. N. van Kleffens stressed the desirability of a close understanding between the Netherlands, Belgium, and France on the one hand, and Britain and the United States on the other to offset a prospective violent resurrection of German power during the postwar years. He said such a policy was dependent upon the maintenance of Anglo-American armed power and continuing American interest in Europe. In the meantime, he indicated, the Netherlands and Belgian Governments-in-Exile had reached a definite agreement for postwar collaboration. The Belgian Netherlands currency stabilization agreement of September 23 was a positive step in this direction (see Belgium under History).

By an exchange of notes on June 14, the U.S. and Netherlands Governments supplemented the agreement of July 8, 1942, on the principles applying to mutual aid in the prosecution of the war. The new accord made specific provision for the supplying of U.S. armed forces in "territory of the Kingdom of the Netherlands." On November 10 the Dutch and British Governments announced their decision to prohibit the use of opium for

smoking and to abolish opium monopolies in their colonial territories freed from Japanese occupation.

A third daughter was born to Crown Princess Juliana and her husband, Prince Bernhard, in Ottawa, Canada, on January 19. In the autumn Princess Juliana paid an official visit to Surinam—the first time an heir to the throne had visited one of the overseas territories of the Kingdom.

See Naval Progress; Banks and Banking; World War; Australia, Belgium, Netherlands East Indies under *History*.

NETHERLANDS EAST INDIES. A group of large and small islands in the East Indies forming the main overseas territories of the Netherlands Kingdom, conquered and occupied by Japanese armed forces in 1942. Capital, Batavia, on the island of Java.

Area and Population. The area, population at the 1930 census, and population density of the various islands is shown in the accompanying table.

| Group of islands Java and Madoera                                 | Area,          | Popu-      | Density     |
|---|----------------|------------|-------------|
|   | sq. miles,     | lation,    | per sq.     |
|   | 1930           | 1930       | mile        |
|   | 51,032         | 41,718,364 | 817         |
|   | 164,148        | 7,677,826  | 47          |
| Riouw-Lingga  | 12,235         | 298,225    | 24          |
| Bangka  | 4,611          | 205,363    | 45          |
| Billiton  | 1,866          | 73,429     | <b>3</b> 9  |
| Borneo: West district South and east districts Island of Celebes: | 56,66 <b>4</b> | 802,447    | 14          |
|   | 151,621        | 1,366,214  | 9           |
| Celebes   | 38,786         | 3,093,251  | 80          |
|   | 34,200         | 1,138,655  | <b>3</b> 3  |
| Guinea  | 191,682        | 893,400    | 5           |
| Timor Archipelago   | 24,449         | 1,657,376  | 68          |
| Bali and Lombok   | 3,973          | 1,802,683  | <b>4</b> 54 |
| Total   | 735,268        | 60,727,233 | 83          |

The estimated population in 1940 was 70,476,000, including 68,832,000 natives. Java and Madoera had 48,416,000 inhabitants; the Outer Provinces, 22,060,000. There were about 250,000 persons classed as Europeans (many had some native blood), including 220,000 Dutch. Chinese numbered about 1,200,000; other alien Asiatics (mostly Hindus and Arabs), 115,000. Over 92 per cent of the population is rural. The 1930 census populations of the chief cities, all of which were in Java except as noted, were: Batavia, including Meester Cornelis, 533,015 (606,800 in 1940); Soerabaja (Surabaya), 341,675 (390,700 in 1940); Soerabaja (Surabaya), 341,675 (390,700 in 1940); Soerakarta, 127,796; Bandoeng, 166,815; Soerakarta, 165,484; Djokjakarta (Jogjakarta), 136,649; Palembang, in Sumatra, 109,069.

Education and Religion. According to the 1930 census, there were 4,296,579 literate persons, of whom 400,877 were able to write Dutch. In 1939 there were 17,291 village schools with 1,839,386 pupils, 3,481 other primary schools (public and private) with 450,684 pupils, 35 secondary schools with 7,795 pupils, and various vocational and special schools. Higher education was given in the Technical College, Bandoeng, and in colleges of law, medicine, agriculture, science, literature, and philosophy at Batavia. About 20 per cent of all pupils attended missionary schools.

About 90 per cent of the natives are nominally Mohammedans and there are about 2,500,000 Christians and 1,000,000 Hindus. However all three religions are superimposed upon the prevailing spirit and ancestor worship.

Production, etc. Agriculture and mining are the chief occupations, although manufacturing was expanding rapidly prior to the Japanese invasion. The islands normally produced 90 per cent of the

world's quinine; of pepper, 79 per cent; kapok, 70 per cent; rubber, 38 per cent; copra, 30 per cent; oil palm products, 20 per cent; tea, 17 per cent; coffee, 6 per cent; sugar, 5 per cent. The islands were likewise a leading source of petroleum and tin. Bauxite, manganese and coal were other mineral products. Before the Japanese invasion, over 6,000 factories and workshops were engaged in processing agricultural and mineral products for export. For the 1940 (latest available) statistics of production, foreign trade, finance, and transportation, see 1943 Year Book.

Government. Under Dutch rule, the islands were considered an integral part of the Kingdom of the Netherlands. The Government at Batavia handled only local affairs under the guidance of the mother country. There was a governor-general appointed by the Crown, assisted by an advisory Council of the Indies, a cabinet, and a Volksraad (legislative assembly) of appointed and elected members with limited legislative powers. The Netherlands Government appointed the five members of the Council of the Indies and two (the war and navy ministers) of the eight members of the Governor-General's cabinet.

After the German invasion of the Netherlands, the East Indies demanded and obtained a growing measure of autonomy. In February, 1942, the Netherlands Government promised that the islands would be granted a status similar to that of the Philippine Commonwealth after the war, with independent control of all of its affairs except foreign relations and defense. Upon the Japanese conquest, the Netherlands Government transferred to its Minister of Colonies all of the powers formerly exercised by Gov.-Gen. A. W. L. Tjarda van Starkenborgh Stachouwer (who was taken prisoner by the Japanese), with the exception of command of the armed forces and merchant marine. The Japanese established military rule over the islands. For developments during 1943, see below.

### HISTORY

Japanese Rule. The anti-Axis trend of the World War, particularly the successful progress of Allied offensives in the South and Southwest Pacific, caused a radical change in Japanese plans and policies in the Netherlands East Indies during 1943. Toward the end of 1942 the Japanese, feeling that their victory was secure, had ended the blackout and other air raid precautions and proceeded to put into effect a program of economic exploitation, with little or no consideration for the natives. But in the latter half of 1943 the Japanese restored and reorganized the air raid precautions system, began the construction of extensive defense installations, and made a strenuous effort to enlist the native population in the Japanese war effort. On May 25 the Japanese Domei Agency announced that Lieut. Gen. Kumakichi Harada had replaced Gen. Hitoshi Imamura as commander in chief of the Japanese forces in the Netherlands East Indies and head of the military administration.

The Netherlands News Agency reported from Melbourne, Australia, on August 4 that Japan was conscripting thousands of Javanese for a labor force to replace shipping lost through Allied air and sea operations. News correspondents who flew with Allied airmen on raids into Japanese-held territory reported that the Japanese were concentrating upon the production of numerous small wooden ships from materials available in the Netherlands East Indies. Japanese radio broadcasts announced that "self-sufficiency" had been substituted for

East Asian "co-prosperity" in plans for the economic development of the islands, due to the

growing shortage of shipping.

In mid-August it was reported that the Japanese had ordered all radio receivers in territory under their control adjusted so that only Japanese broadcasts could be heard. At the same time they announced a program of "autonomy" for the island of Java. During September 18 regional councils were established in the Javanese provinces, with 22,000 persons voting out of the 40,000,000 inhabitants of the island. The regional councils met early in October and selected 18 of their number to a Central Council of 43 members. The Japanese commander appointed 23 of the remaining members while two others were "recommended" by local sultans.

The Javanese Central Council met for the first time October 17. It was empowered to "advise and submit proposals connected with administrative affairs to the Japanese military authorities. Addressing the opening session, General Harada said that the war situation was becoming "most serious" and that the main purpose of the Central Advisory Council was "to acquire for the military administration the collaboration of the people" and "the smooth enforcement of military administrative measures." As in other Japanese dependencies, Nipponese officers dominated the deliberations of the council. With its assistance, the Japanese sought to enlist Indonesians in (1) a "defense" corps to relieve the Japanese army of policing duties, (2) large-scale mobilization of labor for war work, and (3) efforts to further self-sufficiency. In November Chairman Sukarno and four other native members of the Council were sent to Tokyo, where they were received in audience by the Emperor and participated with representatives of other Japanese-controlled regimes in propagandist activities (see Japan under *History*). However Japanese broadcasts to the populations of the Netherlands East Indies indicated that the effort to win their collaboration against the Allies had achieved only limited success.

Allied Bombings. Meanwhile the Allies, from newly developed bases in Australia and New Guinea, gradually extended the scope and power of their air attacks upon Japanese defense bases and shipping in the former Dutch islands. American Liberator bombers made the first Allied attack upon Soerabaja July 22. This was followed by longrange air blows at the big Japanese-occupied oil center of Balik Papan in Borneo in mid-August; at docks, stores, and fuel depots at Macassar in the Celebes; and other strategically important centers. During the last half of 1943 there were 245 such raids on Japanese bases in the Netherlands East Indies (38 in December). Meanwhile the establishment in October of a separate Allied East Asia Command based on India led the Japanese to pre-pare for an amphibious attack on Sumatra from

Dutch Preparations. While Dutch and Indonesian airmen trained and equipped in the United States took part in the rising Allied air attacks, Netherlands military and governmental officials laid plans in Australia to aid the forthcoming Allied invasion of their lost empire. A decree of the Netherlands Government-in-Exile of August 8 made all Indonesians outside the Netherlands, Surinam, and Curação subject to military conscription. Lieut. Gen. L. H. van Oyen, commander in chief of the newly reconstituted Netherlands Indies Army, arrived in Australia on October 29. His new command superseded the joint Netherlands Army-Navy

set-up under Rear Adm. Pieter Koenraad. Vice Adm. C. E. L. Helfrich remained in Australia as commander of all Netherlands armed forces in the

Far East.

The Governing Commission for the N.E.I., established in Australia after Japanese conquest of the islands in 1942 (see 1943 Year Book), opened a school in Melbourne for training staffs of Dutch and Indonesian civil servants to follow the Allied forces into each island and reestablish civil administration.

## NETHERLANDS GUIANA. See SURINAM.

NETHERLANDS WEST INDIES. The colonial possessions of the Netherlands in the West Indies, comprising (1) CURAÇÃO and (2) SURINAM, or Dutch Guiana. See separate article on each colony.

NEUTRALITY, NEUTRALS. See ARGENTINA, CHILE, EIRE, PORTUGAL, SPAIN, SWEDEN, SWITZERLAND, and Turkey, under History; PAN AMERICANISM.

NEVADA. A mountain State. Area: 110,540 sq. mi. Population: 110,247 (1940 census); 133,095 (1943

nonmilitary estimate).

Statistics. Statistical information pertaining to each of the 48 States and the District of Columbia has been assembled in comparative tables which appear in the following articles. Acriculture; Mineral Production; Roads and Streets; Schools; Social Security Board; Taxation; Universities; and Vital Statistics. The census of manufactures has been suspended for the time being; for the latest information, see 1941 YEAR Воок, р. 430.

Elections. See the article Elections in the United States; also, for incumbents, House of

REPRESENTATIVES and SENATE.

Legislation. See the separate article on STATE

LEGISLATION.

Officers. The Governor is E. P. Carville (Dem.), inaugurated in January, 1943, for his second four-year term; Lieutenant Governor, Vail Pittman; Secretary of State, Malcolm McEachin; Attorney General, Alan H. Bible.

See Magnesium; Tungsten. For upholding of Nevada divorce law, see Law under Decisions Con-

cerning the Federal System.

NEVIS. See LEEWARD ISLANDS.

NEW BRITAIN. The largest island in the Bismarck Archipelago in the Territory of New Guinea, mandated to Australia by the League of Nations. The island is 300 miles long and has an average width of 50 miles; area, 14,600 square miles. The native population of patrolled areas was 101,373 on June 30, 1940. Rabaul, the capital and chief port and settlement, had a non-native population of 4,674. Rabaul was seized by Japanese forces early in 1942 and converted into an important auxiliary naval and air base for operations against Australia and its approaches. There are many good harbors, the chief being Linden Haven, Powell Haven, Simpson Haven, Jacquinot Bay, and Arawe. See New Guinea, Territory of; World War.

NEW BRUNSWICK. A maritime province of eastern Canada. Area, 27,985 square miles, including 512 square miles of fresh water. Population (1941 census), 457,401 (234,097 male; 223,304 female), of these, by racial origin, British totaled 276,758, French 163,934, Netherland 4,539, etc. Religious membership (1941 census): Roman Catholic 220,454, Baptist 88,766, United Church 63,268, Anglican 55,155, Presbyterian 15,382, Pentecostal 5,052, etc. In 1942 there were 12,651 living births, 5,149 deaths, and 4,933 marriages. Education (1940–41): 102,888 students enrolled in schools and colleges. Chief cities: Fredericton (capital) 10,062 inhabitants in 1941, Saint John 51,741, Moncton 22,763, Edmunston 7,096, Campbellton 6,748.

Production. The gross value of agricultural output Production. The gross value or agricultural output for 1942 was \$49,876,000 (field crops accounted for \$28,497,000, farm animals \$9,228,000, milk \$7,245,000, poultry and eggs \$2,726,000, fruits and vegetables \$1,503,000, fur farming \$455,000). Chief field crops (1942): oats 6,895,000 bu., potatoes \$40,900 tons, turnips, etc. 157,850 tons, hay and clover 970,000 tons. Livestock (June 1, 1943): 920,800 cattle (including 113,400 milk cows), 107. 220,800 cattle (including 113,400 milk cows), 107,-000 sheep, 94,400 swine, 47,500 horses, 1,549,600 hens and chickens, 31,700 turkeys. Fur output (1941–42): 78,910 pelts valued at \$834,671. Fisheries catch (1942): \$7,088,302. The gross value of all lumber products in 1941 was \$11,236,582.

Mineral output in 1942 was valued at \$3,508,323 (coal, 427,982 tons, accounted for \$1,764,232). Manufacturing (1941): 791 plants, 19,600 employees, \$21,718,407 for salaries and wages, \$59,-234,107 for cost of materials, \$47,296,960 was the

net value of production.

Government. Finance (year ended Oct. 31, 1942): revenue \$11,800,480; expenditure \$10,641,229; total direct and indirect liabilities (less sinking funds) \$97,091,208. The executive authority is vested in a lieutenant governor who is advised by a ministry of the Legislative Assembly, the latter consisting of 48 members elected for a five-year term by the voters (29 Liberals and 19 Conservatives were elected at the provincial general election of Nov. 20, 1939). Ten members (appointed for life) in the Senate and 10 members in the House of Commons represent New Brunswick in the Dominion Parliament at Ottawa. Lieutenant Governor, W. G. Clark (appointed Mar. 5, 1940): Premier, J. B. McNair (Liberal; appointed Mar. 13, 1940).

NEW CALEDONIA. A French island possession in the southwestern Pacific, 850 miles east of Australia. It is 248 miles long and has an average width of 31 miles. Total area (including dependent islands), 7,336 square miles. Population in 1942, 56,000 (20,000 whites and half-castes and the rest Melanesians and Polynesians). Capital, Nouméa (pop. 12,000), which is 1,230 statute miles from Sydney, Australia, and 1,150 miles from Auckland, N.Z. The dependent islands: Isle of Pines (58 sq. mi., pop. 570), Wallis Archipelago (40 sq. mi., pop. 4,243), Futuna and Alofi, Loyalty Islands (800 sq. mi., pop. 11,000), Huon Islands, Bélep Archipelago, Chesterfield Islands, and Walpoole.

Production and Trade. The main agricultural production and Trade.

ucts are coffee, copra, cotton, manioc, maize, toncts are coffee, copra, cotton, manioc, maize, to-bacco, bananas, and pineapples. Mineral production included nickel (17,500 metric tons, metal content of ore, in 1940), crude chromite (55,790 metric tons, 1940), cobalt, iron, and manganese. Trade (1938): imports 158,571,000 francs; exports 146,453,000 francs (franc averaged \$0.0288 for 1938; \$0.0251, 1939).

Government. The colony is administered by a governor appointed by the French Committee of Na-

ernor appointed by the French Committee of National Liberation in Algiers, assisted by a privy council and an elected general council. Governor, Christian Laigret (appointed Sept. 14, 1943). New Caledonia adhered to the Fighting French National Committee in London Committee in London on Sept. 23, 1940. Early in 1942 U.S. naval and military forces landed in New Caledonia with the consent of the French authori-

ties and converted the island into an important base of operations for the campaigns of 1942 and 1943 in the Solomon Islands. See WORLD WAR.

NEWFOUNDLAND. An island lying between the Gulf of St. Lawrence and the Atlantic Ocean. Its de-pendency, Labrador, lies north of the Gulf of St. Lawrence, between the Province of Quebec and

the Atlantic. Newfoundland, with Labrador, forms a part of the British Empire. Capital, St. John's.

Area and Population. Area, exclusive of Labrador, 42,734 square miles. Population in 1943, 335,877 (based on registration under the Food Rationing Regulations), compared with 289,588 at the 1935 census. The inhabitants are mostly of English and Irish descent. Immigrants in 1941 numbered 26,-386; emigrants, 22,481. The increase in population since 1935 was largely due to the establishment in Newfoundland of Canadian and United States garrisons and military, naval, and air bases during World War II. The population of the St. John's district rose from 58,886 in 1935 to 81,934 in 1943 (the latter figure included members of armed forces quartered in private buildings in the city). Estimated populations of the chief towns in 1940: St. John's, 43,000; Corner Brook, 6,500; Grand Falls, 4,500; Bonavista, 4,200; Carbonear, 3,400; Twillingate, 3,400. Area of Labrador, 118,400 square miles; population (1935), 4,716; chief set-tlement, Battle Harbor.

Defense. As of June, 1941, Newfoundland had 2,000 enlisted men in the Royal Navy; a considerable number serving in the Royal Air Force or training in Canada under the Empire Air Training scheme; two regiments of heavy artillery in the British Army, serving mostly in Great Britain; and a small militia force in Newfoundland. Under the Anglo-American agreements of Sept. 2, 1940, and Mar. 27, 1941, the United States shared responsibility for the defense of the island and of the surrounding waters. During 1941–43 new U.S. bases were constructed and occupied on 99-year leases.

In 1940 Canadian military forces were sent to share in the defense of Newfoundland, particularly by guarding the important airfield at Gander, formerly called Hattie's Camp, (for landplanes) and the seaplane base near Botwood, from which

ransatlantic military and civil air services operated.

Education. Among adults, between 7 and 10 per
cent are illiterate. Schools (mainly denominational,
with public support) numbered 1,151 in 1943;
numils 66 439, there were more Anglians of the pupils, 66,439; there were more Anglican schools, and more Roman Catholic pupils, than of any other single denomination. A School Attendance Act, providing for free and compulsory education for children from 7 to 14 years of age, went into effect Sept. 1, 1942. This greatly increased the number of pupils. In 1935, 93,925 of the population were reported to be Roman Catholic; 92,709, Anglican; 76,134, of the United Church; 18,054, in the Salvation Army; 1,460, Presbyterian; and 7,306, of other denominations.

Production. Cod fishing is the chief occupation, engaging 35,018 out of some 55,000 whose occupations were reported for 1935. The codfish catch declined from 1,045,236 quintals (of 112 lb., "dried") in 1939 to 713,722 quintals valued at \$6,759,047 in 1942, due largely to war causes. The number of men engaged in the fisheries during 1942 was 25,645 (17,645 in codfisheries). The 1942 catch of fresh salmon was 2,967,495 lb. worth \$445,145; live lobsters, 1,860,663 lb. worth \$241,-886; cod liver oil (exports), 216,073 gal. worth \$593,677 (Newfoundland currency). The annual seal hunt yielded only 4,698 pelts in 1942 (about

42,000 in 1941).

With only 102,000 acres under cultivation, the total value of farm production in 1942 was \$4,600,-000. Livestock in 1941 included 25,000 cattle, 95,000 sheep, 15,000 goats, 15,000 horses, and 8,600 swine. The forests sustain two pulp and paper mills-at Corner Brook on the west coast and at Grand Falls near Botwood on the east coast. Newsprint output in 1942 was 281,263 tons; pulpwood and pit props, 281,263 cords valued at \$5,888,016. Mineral production for 1942 (calendar year) included: Iron ore, 1,192,870 tons, valued at \$3,089,701; lead concentrates, 37,375 tons, \$1,512,222; zinc concentrates, 94,114 tons, \$824,834; copper concentrates, 21,612 tons, \$786,485; fluorspar, 34,600 tons, \$4,84,876 690 tons, \$484,876.

Foreign Trade. For the nine months ended Mar. 31, 1943, imports were valued at \$45,111,380 and exports at \$39,399,640. Exports included: Local manufactures, especially newsprint and wood pulp, \$16,183,519; fishery products, \$12,655,834; mineral products, \$7,312,507; forest products, \$827,-189. Figures showing the destination of exports were withheld by the Newfoundland Government.

Finance. For the fiscal year ended June 30, 1942, Government receipts were \$23,294,300 (highest in Newfoundland's history); expenditures, \$16,083,-000. There was a record surplus of \$7,211,300. Estimates for 1942–43: Receipts, \$18,744,100; expenditures, \$17,722,000. Public debt on June 30, 1041, and \$2,412,772. 1941, was £19,980,012 and \$2,412,773. The official exchange rate of the Newfoundland dollar in 1942 was I Newfoundland dollar equals \$0.9091 in U.S. currency. Beginning in 1943 the fiscal year was changed so as to end on March 31 instead of June 30.

Transportation. In 1941 there were 705 miles of government-owned railway, the main line extending from St. John's across the center of the island to Port-aux-Basques on the southwestern extremity. Private lines extended 56 miles. Highways extended 6,440 miles in 1943 (only 85 miles paved). Because of inadequate land communications, the bulk of the island's transport and travel moves by boat. The Newfoundland Government operates a fleet of coastal steamers on regular schedules and maintains direct service between St. John's and North Sydney, Nova Scotia. Other steamer services operate between Port-aux-Basques and North Sydney, and (in summer) between Corner Brook on the west coast and Montreal. All internal transport services were placed under the supervision of a Transportation Control Board in 1942. On Jan. 1, 1940, 2,342 ships of 117,338 tons were registered in Newfoundland. Vessels entering and clearing Newfoundland ports during the fiscal year 1940–41 had a tonnage of 4,293,225.

Government. As a result of acute financial difficulties caused by the depression in the fishing in-dustry, Newfoundland temporarily abandoned its status as a self-governing dominion of the British Commonwealth in November, 1933, and became a British colony. The British Government assumed responsibility for Newfoundland's financial obligations and provided an annual grant-in-aid pending restoration of the island treasury's financial solvency. Effective Feb. 15, 1934, executive and legislative authority was vested in the Governor and a Commission of Six—three Newfoundlanders and three British—all appointed by the British Government. Each member of the Commission has charge of a Government department. Governor, Vice Adm. Sir Humphrey Thomas Walwyn, who assumed office Jan. 21, 1936, for a three-year term which was successively extended. On Oct. 25, 1942, his term was extended for one year beginning Jan. 1, 1943.

History. The question of the future status of Newfoundland was debated during 1943 in both the island and in the British Parliament. The commission form of government established in 1934 had become widely unpopular and the temporary restoration of Newfoundland's economic and financia. equilibrium as a result of war conditions stimulated an agitation for restoration of self government in some form.

In June a demand for the resumption of constitutional government in Newfoundland was raised in the British House of Commons. The Dominior Secretary, Clement Attlee, who had visited the is land in 1942 to study this question, replied that he had found a great division of opinion in Newfound land as to whether any change should be made and what kind of change it should be, but that few wanted to return to the pre-1934 institutions. Attlee held that it would be unfair to decide the future of the island while many of the inhabitants were away in the fighting services and other was activities. But he announced that to prepare Parliament for future action on the issue, he was sending a goodwill mission of three Members of Parliament to Newfoundland.

This mission, composed of Alan P. Herbert, Si Derrick Teunston, and Charles G. Ammon, visited the island during the summer and upon their return to London submitted individual and secre reports of their findings. In a debate on December 16 they reported that the future remained uncertain because there was no certain majority in Newfoundland for any specific type of government and no agreement in the British Parliament as to how far British financial support should be carried Some of the proposals advanced were: restoration of Dominion status, modification of the existing commission government to permit the election of half its members, union with Canada (as a separate province) or with the United States, and union with the United Kingdom with a status similar to that of Northern Ireland.

There was wide recognition of the prospect that the war-born economic prosperity in Newfound land would end with the conclusion of the conflict During 1943 the tapering off of construction or the new U.S. military and naval bases ended em ployment for many of the 20,000 Newfoundland ers engaged on these projects. However most o these released found new jobs in the neglected fish ery and forest industries and on construction in Canada and Greenland. The Wabana iron-ore mines closed down for some weeks in April and May due to shipping difficulties, a large stockpile and labor difficulties arising from attempts to re duce operations. They reopened in mid-May on a part-time basis.

Curtailment of essential imports and inflationar prices for staple commodities led to the institution of sugar and tea rationing early in the year, the fixing of price ceilings on tea and molasses, and the elimination of the special war tax on foodstuffs

NEW GEORGIA. See BRITISH SOLOMON ISLANDS WORLD WAR.

NEW GUINEA. An island in the East Indies, north o Australia. It comprises Netherlands New Guine (151,000 sq. mi.), North East New Guinea (69, 700 sq. mi.)—the mainland part of the Australia mandated Territory of New Guinea, and Papu (87,786 sq. mi. excluding islands)—a Territory of Australia—formerly called British New Guinea

lotal area, 308,486 square miles. Population, approximately 1,000,000. See Australia; Netherlands East Indies, New Guinea, Territory of; PAPUA. For military operations in 1943, see World

NEW GUINEA, Territory of. A territory administered by Australia under mandate conferred by the League of Nations from Dec. 17, 1920; temporarily occupied by Japanese armed forces during 1942 and 1943. It comprises North East New Guinea (also called the Mainland), 69,700 square miles; Bismarck Archipelago (consisting of New Britain 14,600 sq. mi., New Ireland 8,340 sq. mi., Lavongai 460 sq. mi., and Admiralty Islands 800 sq. mi.), 19,200 square miles; and part of the Solomon Islands (Bougainville 3,880 sq. mi., Buka and adjacent small islands 220 sq. mi.), 4,100 square miles. Total area, 93,000 square miles. Total enumerated natives in patrolled areas (June 30, 1940), 668,871, including 39,344 indentured laborers; in addition, there were 4,399 Europeans (3,345 British subjects), and 2,099 Asiatics (2,061 Chinese). The former capital, Rabaul (on New Britain), had 10,174 inhabitants in 1939. Chief towns of North East New Guinea: Aitape, Lae (capital of the Territory), Madang, Monumbo, Morobe, Salamaua, Vanimo, and Wewak.

Production and Trade. In 1939-40 the output of gold amounted to 278,922 fine ounces valued at £2,917,526. Platinum, osmiridium, copper, iron, sulphur, and brown coal have been found. The area under cultivation in 1939-40 (exclusive of native reserves) was 277,523 acres, of which 261,676 acres were devoted to coconuts, cocoa 5,827 acres, rubber 2,481 acres, and coffee 2,792 acres. Livestock (1939–40): 20,474 cattle, 9,327 goats, 6,160 pigs, 1,184 sheep, and 1,323 horses. Timber and fish are other products. Trade (1939–40): imports £1,268,097; exports £3,673,635. Shipping (1939-40): 50,833 tons of cargo entered and 74,862 tons cleared.

Government. Finance (1939-40): revenue £496,-689; expenditure £500,614; public debt £16,164 (the official exchange rate of the Australian & was \$3.228 in 1940, 1941, and 1942). The Territory (prior to the Japanese occupation) was under the control of an Australian administrator assisted by appointive executive and legislative councils. Administrator, Brig. Gen. Sir W. R. McNicoll (appointed Sept. 13, 1934). See Australia under History; WORLD WAR.

NEW HAMPSHIRE. A New England State. Area: 9,304 sq. mi. Population: 491,524 (1940 census); 454,-

167 (1943 nonmilitary estimate).

Statistics. Statistical information pertaining to each of the 48 States and the District of Columbia has been assembled in comparative tables which appear in the following articles. Agriculture; Mineral Production; Roads and Streets; Schools; Social Security Board; Taxation; Universities; and Vital Statistics. The census of manufactures has been suspended for the time being; for the latest information, see 1941 Year Воок, р. 430.

Elections. See the article Elections in the United States; also, for incumbents, House of Representatives and Senate.

Legislation. See the separate article on STATE

LEGISLATION.

Officers. The Governor is Robert O. Blood (Rep.), inaugurated in January, 1943, for his second two-year term; Secretary of State, Enoch D. Fuller; Attorney General, Stephen M. Wheeler. NEW HEBRIDES. A British-French condominium in the South Pacific, 250 miles northeast of New Caledonia. The main islands of the group are Ambrym, Aneityum, Aoba, Efate, Epi, Erromanga, Espiritu Santo, Gaua, Maewo, Malekula, Pentecost, and Vanua Lava. Area, 5,700 square miles. Population (1941), 43,130, including 40,000 natives, 2,213 Asiatics, and 917 Europeans (710 French and 207 British). Capital, Vila (1,200 inhabitants). The principal products are copra, cacao, coffee, and vanilla. Trade (1939): imports £118,618; exports £123,921 (copra £79,906, cacao £22,682, coffee £16,800). Finance (1940): revenue £22,775; expenditure £23,557. The Government is under the joint administration of British and French officials. The French owe allegiance to the French Committee of National Liberation in Algiers, represented by a High Commissioner who delegates his power to a Resident Commissioner. There is a British Resident Commissioner who is subject to the British High Commissioner for the Western Pacific. British Resident Commissioner, R. D. Blandy, French Resident Commissioner, R. Kuter. With the consent of the Anglo-French authorities, U.S. military and naval bases were established on Espiritu Santo Island in 1942 and employed in the ensuing campaigns against the Japanese in the Solomon Islands. See World War.

NEW IRELAND. See New Guinea; World War.

NEW JERSEY. A middle Atlantic State. Area: 7,836 sq. mi. Population: 4,160,165 (1940 census);

4,101,846 (1943 nonmilitary estimate).

Statistics. Statistical information pertaining to each of the 48 States and the District of Columbia has been assembled in comparative tables which appear in the following articles. Agriculture; Mineral Production; Roads and Streets; Schools; Social Security Board; Taxation; Universities; and Vital Statistics. The census of manufactures has been suspended for the time being; for the latest information, see 1941 YEAR Воок, р. 430.

Elections. See the article Elections in the UNITED STATES; also, for incumbents, House of Representatives and Senate.

Legislation. See the separate article on STATE LEGISLATION.

Officers. The Governor is Walter E. Edge (Rep.), inaugurated in January, 1944, for a three-year term; Secretary of State, Joseph A. Brophy; Attorney General, Walter D. Van Riper.

See Elections. For constitutional revision, see STATE LEGISLATION under State Government and

Employees.

NEW MEXICO. A mountain State. Area: 121,666 sq. mi. Population: 531,818 (1940 census); 490,081

(1943 nonmilitary estimate).

Statistics. Statistical information pertaining to each of the 48 States and the District of Columbia has been assembled in comparative tables which appear in the following articles. Agriculture; Mineral Production; Roads and Streets; Schools; Social Security Board; Taxation; Universities; and Vital Statistics. The census of manufactures has been suspended for the time being; for the latest information, see 1941 Year BOOK, p. 430.

Elections. See the article Elections in the

United States; also, for incumbents, House of

Representatives and Senate.

Legislation. See the separate article on STATE LEGISLATION.

Officers. The Governor is John J. Dempsey (Dem.), inaugurated in January, 1943, for a two-year term; Lieutenant Governor, J. B. Jones; Secretary of State, Cecelia T. Cleveland; Attorney General, Edward P. Chase.

NEWS COMMENT AND REPORTS. See Newspapers; Magazines; Radio Programs.

NEW SOUTH WALES. See Australia under Area and Population.

NEWSPAPERS. Newspapers in general enjoyed a prosperous year in 1943 but publishers lived in a great apprehension over the future supply of newsprint. Circulations, even though arbitrarily limited in many cities, rose to a new peak in the United States as a whole, and the movement toward higher subscription and single copy prices, already well under way in the year before, gained new momentum. Advertising volume increased and rates generally were higher. A considerable number of economies helped to offset the higher wage and salary rates paid to the staffs, and impartial and competent observers agreed that the newspaper industry was on a sound basis, but was approaching a hard test as reductions in the quotas of newsprint grew more severe.

The service of the newspapers in covering the news of the war remained the chief concern of the staffs. Correspondents at the front took greater and greater risks and the number of those killed increased steadily. Censorship was inclined to be somewhat less rigid and slow as the war progressed and as the public demanded information of operations. The domestic situation, political and economic, moved to the front as a topic hardly less

important than the war itself.

While British newspapers were struggling along on 17 per cent of the amount of newsprint used before the war (increased late in the year by 11 per cent to be used solely for copies distributed to the armed forces) newspapers in the United States began 1943 on a quota only 5 per cent less than the tonnage consumed in 1941 for net paid circulation. A second cut of 5 per cent followed, and in November the increasingly critical situation was reflected in regulations of the WPB enforcing, for the first quarter of 1944, a sliding scale of reductions ranging from none for newspapers using less than 100 tons a year to 24 per cent for those using over 1,000 tons. The amount of paper allowed in inventory also was reduced. It was certain that the consequences of this order would be severe indeed and newspapers ended the year adopting various measures to save paper in addition to those already in force.

Some daily journals had "frozen" their circulations, declining to accept any new subscription order except to replace a cancellation. Several New York newspapers cut their out-of-town circulations. The New York Times omitted hundreds of columns of advertisements monthly and limited classified advertisers to small space; this action was typical of what some publishers in other large cities were doing. In more than 25 of the metropolitan centers of the country, rationing of advertising was enforced in one form or another. Some publishers issued so-called "victory editions" on Mondays or Saturdays of 8 or 10 pages, and containing little or no advertising. "Split run" placing of advertising -the use of one announcement in half the run and another in the other half-was also tried, a device already employed in Britain. Comic sections were reduced in size and many typographical changes made to conserve space. Experiments with lighter-weight or 30-pound newsprint, and with

de-inked paper, were announced.

The diminishing supply of newsprint was attributed to two causes. One was the lack of labor to cut pulpwood. Canada, the chief source, had begun the year expecting to send to the United States 210,000 tons monthly, in addition to the 70,000 tons produced in this country and 12,500 in Newfoundland. It was found necessary later to reduce Canadian shipments to 182,000 tons. The demand for pulpwood for war and other uses also was a factor and the newsprint mills faced dwindling receipts of logs. Various campaigns to increase the cutting of pulpwood and the delivery of waste paper to cardboard mills were undertaken.

The second cause was the mistaken policy of granting newsprint on appeal in excess of the quotas established by the 1941 formula. Newspapers in some communities where populations were swollen by war industries asked for and received extra newsprint to meet circulation demands. Other newspapers in medium to large cities—chiefly those of mass circulation—received extra allotments, the legitimate need for which was not readily apparent. Extra tonnage granted on appeal was approximately 65,000 tons a quarter and this largely offset other savings. The consequence was the sharp reduction ordered for 1944 and a tightening of the grants on appeal. A second price increase of \$4, to \$58 a ton, for newsprint was made effective in the year.

Circulation of newspapers in the United States had risen to a new peak of 43,750,000 copies daily but was certain to decline as the more drastic newsprint cuts were put in operation. Almost one half of the newspapers were found to be charging five cents a copy for the daily issues, and carrier-delivered and subscription prices were almost universally increased. Circulation revenue reached a far more substantial percentage of the publishers'

gross revenue than ever before.

Advertising volume gained approximately 14 per cent over 1942 and 7 per cent over 1941 despite the arbitrary limitations necessarily imposed by many newspapers. The rate of gain slowed appreciably in the closing months as space restrictions grew tighter. A survey also showed that the gains had been in the larger cities and that the nonmetropolitan newspapers had generally reported a small loss of three to four per cent compared with 1942. Lack of consumer goods in stores had led to a decrease in retail advertising in smaller communities. Also, the newspapers in non-metropolitan cities had not shared equally in the extensive volume of institutional advertising placed by large industrial companies. The competition for labor in the more thickly populated areas had expanded greatly the "help wanted" advertising in the classified columns.

The total number of daily newspapers in the United States at the end of 1943 was 1,754, a loss of 34 in the year. In the previous twelvemonth 70 newspapers had ceased publication. The rate of loss had slowed appreciably but it was increasingly evident that fewer publishers were able, or thought it worth while, to continue the publication of unprofitable newspapers. The number of weekly newspapers dropped from a total of 10,682 in the previous year to 10,200, a loss of 382. The loss of pressmen, and the impossibility of replacing them, was responsible for many suspensions in this field.

Ā number of strikes interfered with the production of newspapers in various cities; the most serious affected the mailing and delivery of New York newspapers. A deliberate slowdown of the typo-

graphical union in Newark, N.J., was in protest against the amount of increase allowed by the WLB. In general the increased scales of the mechanical unions approached the limits of 15 per cent over January, 1941, allowed under the Little Steel formula. The newspaper industry was fortunate in having a special advisory panel set up by

the WLB to rule upon wage contracts.

The American Newspaper Guild reported at its annual convention that it had 22,202 active members, a gain of 3,945 in the year, and had contracts with 135 daily newspapers. A division of opinion on certain policies was seen in the protest by the New York Guild against the interference of the national organization in local affairs. One of the most important labor issues was debated in the hearing ordered by the WLB on the maintenance-of-membership clause in Guild contracts. A group of the nation's most important publishers argued against the WLB ordering this clause upheld, on the ground that such action was an infringement of

the freedom of the press.

In the suit against the Associated Press charging that this cooperative news-gathering agency, by reason of its bylaws governing membership, had conspired to restrain and monopolize interstate commerce in the distribution of news, the government won a victory in the Federal District court, which ruled that the AP had the right to pass upon those applying for membership but must change its rules to prevent a member in the same field (that is, in the same city as the applicant, and in the morning, evening, or Sunday field sought) from presenting a ban to election. If this bylaw was changed satisfactorily, the exclusive right to republication of spontaneous local news which the AP requires of its members would be legal. The Department of Justice filed a judgment on November 12 carrying out the decision of the court. Directors of the AP were expected to take the issue to the Supreme Court to get a final ruling on this momentous case. On several minor points—the sale of a photographic agency to the AP and an exclusive exchange arrangement with the Canadian news agency—the AP was upheld.

The AP had modified its bylaws as to admission

of members in 1942; an affirmative vote of the majority of regular members was required and in a city in which there were one or more existing memberships, an applicant would pay to such members a sum equal to 10 per cent of all assessments in the same field since October, 1900. In New York, a new member, morning and Sunday, would have been compelled to pay \$824,333 and an evening member \$575,003; in Washington, D.C. the corresponding for summary and head 2000. responding figures would be \$118,930 and \$88,293.

Evidence in the suit brought out the facts that the AP had its own staffs of 5,394 persons, 94 news bureaus in the United States, and offices in 250 cities. Its operating expenses in 1942 were \$11,-

305,577.

The suit had grown out of the refusal to admit The Chicago Sun, owned by Marshall Field, to AP membership. Mr. Field had charged that the AP was a violation of the anti-trust laws and that therefore his application was in substance "a threat of litigation"; and at the same time the anti-trust division of the Department of Justice had interrogated members concerning their attitude toward Mr. Field's efforts to become a member. Counsel for the AP declared that the case involved the fundamental freedom of the press. An interesting aspect of the case was the argument of the AP that rival newsgathering services gave adequate coverage. It was surmised by some that a final de-

cision against the AP opening membership widely might seriously harm the other services and might eventually lead to a greater degree of monopoly than was now charged against the AP.

Relations of the press with the government did not improve. For some years a number of publishers had been convinced that President Roosevelt had sought to belittle the value and influence of the press as a whole. Whatever the truth of this charge (it is probably more accurate to say that Mr. Roosevelt, not without reason, had been antagonistic to a certain class of newspapers), as discontent over domestic policies increased, the cor-respondents and the President grew apart. The President denounced one columnist as a "chronic liar"; he rebuked other correspondents for what he said were inexcusable inaccuracies. Two members of the cabinet, Mr. Hull and Mr. Ickes, also attacked members of the press or specific newspapers.

Many newspapers were inclined to be critical of the operations of the OWI as a part of a general dislike of administration policies. Elmer Davis was conceded by more impartial observers to have handled his task as well as anyone could under the hampering restrictions of the Army and Navy upon news. Differences of opinion between the OWI, which sought to give prompt and more adequate war information to the people, and the Army and Navy censors continued. There were also some heated exchanges between the official government news authorities of the United States and Great Britain over the priority of certain important news releases, notably those on the meeting of Mr. Roosevelt, Mr. Churchill, and Chiang Kai-shek in Cairo.

The OPA relied almost wholly on the newspapers to distribute to the public the complicated news of retail prices and ration-point changes. The task

was effectively carried out.

Newspapers continued to make extraordinary efforts to cover events of a war fought on every continent and in every sea. The list of dead and wounded grew as correspondents took great risks at the front. Editor & Publisher, the trade magazine, estimated that casualties in the press corps had been 20 per cent; that 60 members of the 350 covering the war had been killed, seriously wounded, or captured, and many others had been hospitalized. Several men were lost in 1943 in bombing raids over Germany, among them Robert Post of *The New York Times* and Lowell Bennett of the INS. John H. Thompson of the *Chicago* Tribune actually parachuted from a plane in Sicily with the troops behind the enemy lines and was wounded. The list of killed and wounded is too long for inclusion here, but the mounting toll was proof of the bravery of the men and women re-porting the news. Also there was no question that citizens in the United States were more thoroughly informed on the events of the war, thanks to the enterprise of the newspapers, than the citizens of any other country.

The Bankhead bill, providing that the Federal government spend \$30,000,000 in advertising space in newspapers to promote war-bond sales aroused considerable debate. Before the bill passed the Senate, the amount was reduced to less than \$15,-000,000 the bulk of which was to be spent in communities of less than 10,000 population. The measure was attacked as a subsidy to the press. Its supporters pointed out that the British government used paid advertising to further the sale of war bonds and that the smaller newspapers in this country had not received much of the advertising placed by private companies to encourage the pur-

chase of bonds. It was generally agreed that the bill was an ill-considered one and the weight of competent newspaper opinion was against it. The ANPA registered its opposition, but a number of associations composed of smaller newspapers supported it. One of the outstanding war services of the American newspapers was the tremendous support given to bond sales.

A tentative proposal by the House Ways and Means Committee framing the tax bill to double second-class postage rates was finally eliminated in committee. This increase would have affected

smaller newspapers most adversely.

Materials other than newsprint entering into the production of newspapers were in no worse supply than in 1942. The quota of zinc for engravings actually was increased from 50 per cent to 60 per cent of the quantity formerly used. Many publishers began the use of thinner gauge zinc. The chief trouble encountered was in motor transportation as trucks and tires wore out and could not be satisfactorily replaced.

A case which attracted wide attention was the action of the Federal government against fifteen New York department stores which had withheld advertising from *The New York Times* in protest against an increase in rates. The Times had no part in commencing this action, which the government charged was "conspiring to regulate the adment charged was "conspiring to regulate the advertising rates of The New York Times and other newspapers in the New York metropolitan area.

The stores pleaded nolo contendere and were fined \$5,000 apiece.

In foreign lands newspapers suffered even more severely than in the United States from shortages of materials and, except in Britain, were increasingly subject to government controls on policies. Germany, in March, suspended more than 100 of the nation's 750 daily newspapers to conserve manpower for war efforts. A city with less than 100,000 population was permitted to have not more than one daily newspaper. The Zeitung Am Mittag was discontinued and the morning editions of the Berliner Volks-Zeitung, the Deutsche Allgemeine-Zeitung, and the Berliner Morgenpost were merged. The last Catholic newspaper in the Reich, the

Kirchliche Bistums-Blaetter, suspended. In Argentina some pro-Axis newspapers continued to flourish as well as newspapers which sought to bring that country into collaboration with the Allied nations. A decree against a Yiddish newspaper led to a protest from the United States. See

ARGENTINA under History.

No major change took place in the British press. In four years only eight daily newspapers and one Sunday had ceased publication, a surprisingly small casualty list. Advertising revenues aggregating \$88,-935,000 for the year were down 50 per cent from prewar figures. Newsprint was \$128 a ton compared with \$40 in 1938. In Great Britain there were 93 afternoon newspapers, 47 morning, 17 Sunday, and 1,341 weeklies.

No important changes in ownership were reported in the year. Frank Gannett added the Binghamton, N.Y., Press to his chain. Linwood I. Noyes, of the Ironwood, Mich., Globe was elected president of the American Newspaper Publishers Association. See Censorship, Office of; French Lit-ERATURE; PAPER AND PULP; PULITZER PRIZES. Com-

NEW ZEALAND. A British Dominion in the South Pacific Ocean; principally two islands about 1,200 miles east of the southeastern coast of Australia. The Dominion has jurisdiction over Western Samoa (see Samoa), the Union Islands (including Tokelau), and some other islands of Oceania; also over the Ross Dependency, a part of the Antarctic Zone.

Capital, Wellington.

Area and Population. New Zealand proper has an area of 103,723 square miles (North Island, 44,-281; South Island, 58,093; Stewart Island, 670; Chatham Islands, 372; outlying islands, 307). The population on Mar. 31, 1942, was estimated at 1,634,338 (93,680 Maoris), as compared with 1,491,484 (82,326 Maoris) at the 1936 census. The Union Islands have an area of 4 square miles and a population of 1,297; the Ross Dependency, no reported definite area or resident population. Living births among the white population of New Zealand proper in 1941 numbered 35,100 (22.8 per 1,000); deaths, 15,146 (9.8 per 1,000); marriages, 13,313 (8.65 per 1,000). Excluding troop movements, there were 7,102 arrivals and 6,903 departures from New Zealand ports during the year ended Mar. 31, 1942. Estimated populations of the chief cities (including Maoris) as of Apr. 1, 1941, were: Auckland, 223,700; Wellington, 160,500; Christchurch, 135,500; Dunedin, 82,200; Invercargil, 26,400; Wanganui, 26,000; Palmerston North, 25,500; Hamilton, 20,900.

Education and Religion. Primary education is free and compulsory. As of Jan. 1, 1941, there were 2,204 public primary schools, with 203,951 pupils; 306 private primary schools, with 28,454 pupils; 146 native village schools, with 10,730 pupils; 234 secondary and technical schools of all kinds, with 36,590 students; and four colleges at Dune-din, Christchurch, Auckland, and Wellington, form-ing the University of New Zealand, with a total of 5,528 students in 1940. According to the 1936 census, 40.28 per cent of the population belonged to the Church of England, 24.66 per cent were Presbyterians, 13.09 per cent Roman Catholics, and 8.11 per cent Methodists.

Production. The economic system rests upon the production of agricultural and animal products for export, but manufacturing is rapidly expanding.

Livestock on Jan. 31, 1942, included 34,505,290 sheep and lambs, 4,447,160 cattle, 1,714,859 milch cows, 603,876 pigs, and 236,451 horses. Animal products exported during 1942 included: Butter, 2,344,029 cwt.; cheese, 2,689,232 cwt.; beef, 803,553 cwt.; mutton, 693,077 cwt.; lamb, 3,638,381 cwt.; pork, 270,415 cwt.; potted and canned meat, 326,142 cwt.; wool, 934,230 bales. Crop yields for the 1942–43 season were: Wheat, 9,821,718 bu.; oats, 3,023,658 bu.; barley, 1,057,678 bu.; tobacco, 2,721,539 lb. in 1941–42.

Coal output in 1942 was 1,174,725 tons, excluding 276,045 tons of lignite and 1,229,271 tons of brown coal. Production of other minerals (1942): Iron ore, 2,433 tons; asbestos, 42 tons; manganese ore, 321 tons; platinum, 21 oz.; tungsten ore, 67 tons; antimony, 17 tons in 1941. For the year ended Mar. 31, 1942, there were 6,367 manufacturing establishments employing 117,214 persons (82,042 males and 35,172 females). The value of their output was £155,566,195, of which £53,305,335 was added in the process of production.

305,335 was added in the process of production.

Overseas Trade. In the calendar year 1942 imports totaled £53,670,000 (£49,167,000 in 1941) and exports £80,875,000 (£67,479,000 in 1941). Values of the chief exports in 1942 were: Butter £15,777,864; wool, £12,613,062; frozen lamb, £10,965,186; cheese, £9,833,861. The principal imports were mineral and vegetable oils, cotton piece goods, machinery, tea, sugar, motor vehicles, etc. For the year ended Mar. 31, 1941, the United Kingdom supplied 46.2 per cent of the imports by value and took 84 per cent of the exports; Australia, 16.3 and 3.2 per cent, respectively; United States, 13.4 and 4.3 per cent. All figures are in New Zealand pounds.

Finance. For the fiscal year ended Mar. 31, 1943, actual Consolidated Fund (nonwar) revenues totaled £42,361,000 (£36,196,000 from taxation) and expenditures £38,206,000 (including £1,500,000 transferred to the War Expenses Account). In the War Expenses Account, revenues totaled £153,490,000 (taxes, £39,556,000; loans, £78,041,000; other sources, £35,893,000) and expenditures were £143,939,000, leaving a balance on hand Mar. 31, 1943, of £9,551,000. In the separate Social Security Fund, receipts totaled £19,037,000 (including the balance of £3,024,000 from the previous year) and expenditures £15,951,000. The gross public debt rose from £304,000,000 on Mar. 31, 1939, to £463,825,372 on Mar. 31, 1943. The New Zealand pound exchanged at an average of \$3.228 in 1942.

Transportation. In 1941 there were about 3,390

Transportation. In 1941 there were about 3,390 miles of state railways and 198 miles of privately owned lines. Highways extended 87,760 miles in 1940. Internal air lines, with nearly 2,000 miles of routes, carried 39,529 passengers, 159,129 lb. of mail, and 189,061 lb. of freight in the year ended June 30, 1942. Overseas air lines connected New Zealand with Australia and the United States. As of Jan. 1, 1941, the New Zealand merchant marine consisted of 496 vessels of 98,789 net tons.

Government. Executive power is vested in a Governor General, appointed by the Crown for five years on recommendation of the Dominion Government. Legislative power rests with the Governor General and a Parliament of two chambers—the Legislative Council with an indeterminate number of members (36 in 1943) appointed by the Governor General for seven years, and the House of Representatives of 80 members, elected by general male and female suffrage for three years. The Governor General delegates his executive powers to a Cabinet responsible to the House

of Representatives. Sir Cyril L. N. Newall, former Chief of Staff of the Royal Air Force, was sworn in as Governor General Feb. 22, 1941. The standing of the parties in the House of Representatives following the general election of Sept. 25, 1943, was as follows (with the previous standings in parentheses): Labor, 45 (51); National, 34 (25); Independents, 1 (2); Democratic Labor, 0 (2). The Labor party had been in control of the Government since Dec. 5, 1935. Prime Minister in 1943, Peter Fraser (appointed Apr. 30, 1940). For war declarations, see table under WORLD WAR. For the events of 1943, see below.

#### HISTORY

The tide of Japanese aggression that had threatened to overwhelm New Zealand in 1942 was definitely repelled in 1943, thanks in large part to powerful aid from the United States. Nevertheless the sturdy little island Commonwealth continued to pull its full weight in the United Nations war effort. Mobilization of both manpower and material resources for war reached their maximum capacity, relieving the strain on American shipping and armed forces in the South Pacific to an appreciable extent. The Labor Government, returned to power in a close general election, tightened New Zealand's relations with the United States and at the same time moved toward more intimate long-range collaboration with the sister Dominion of Australia. It also proceeded with its program of progressive socialization of New Zealand's economy, while striving to hold in check the inflationary and disruptive economic forces unleashed by the war.

Conscription Extended. Continuing the drafting of new classes for military and labor service, the Government on February 17 ordered girls between 18 and 20 to register for "nationally important work." The Government further extended its war powers early in May by requiring nonmobilized men of 21 to 41 years of age, classified as medically fit for armed service, to train for fixed periods every month. Lieut. Gen. Edward Puttick, commander of New Zealand's army, explained that new training cadres were being established to provide replacements for overseas forces.

In line with the growing role of air power in the Pacific war, the Government placed growing stress upon expansion of the air force. Reorganization of the air training system for youths was announced in August and for the first time the Dominion began drafting men for air force ground crews. New Zealand air squadrons took an increasing part in the offensives waged by Admiral Halsey's South Pacific Command and New Zealand troops also went into action in the Solomon Islands.

Meanwhile the one New Zealand division in Gen. Bernard Montgomery's British Eighth Army made an important contribution to the victory in Tunisia. Lieut. Gen. Sir Bernard G. Freyberg, New Zealand commander under Montgomery, returned to Wellington in June and presented a report to Parliament behind closed doors. Parliament then approved a resolution affirming faith in his leader-ship. New Zealand army casualties up to Mar. 31, 1943, were 20,878, including 3,471 dead and 7,745 prisoners.

Mobilization Reaches Peak. As the Japanese threat waned, the Government beginning in February began to shift a portion of the men in the armed services to work in war industries. It was announced in September that at the peak of military mobilization, there were 573,000 men and women

in the various defense units, or one-third of the total population. An important new war industry developed during the year was the production of minesweepers, barges, and other small craft for the U.S. Navy in the South Pacific. The growing inadequacy of housing facilities in Auckland and Wellington led the Government to begin construction of 1,200 houses in those areas. In mid-August the Ministry of Industries and Commerce announced a switchover of industry to meet civil shortages of textiles, clothing, and shoes. Another new industrial development was the opening of plants for the dehydration of meat and vegetables.

Economic Controls. The price stabilization plan put into operation in December, 1942 (see 1943 Year Book) was successful in holding prices of essential foodstuffs at prewar levels, according to a statement by the Minister of Supply on July 17. On August 5 the Government moved to stabilize prices of all house and farm properties by introducing a measure establishing land sales courts and committees for the control of sales and leases. Farm lands were to be held at prices equivalent to their production value. The attempt to fix prices at retail and not wholesale levels caused beef wholesale prices to soar to 50 per cent above retail prices in December.

Purchase of new coal mines by the State was revealed February 12. Plans for the further extension of State medicine were announced at the end of June; the program included the establishment of health clinics, of a home nursing service, and of a domestic aid service. The bill for the control of land prices was passed August 21 after a bitter Parliamentary struggle in which farmers and commercial groups joined in opposing the measure. They charged the Government with using the need for postwar land settlement of soldiers to cloak nationalization of the land.

On October 18 the War Cabinet approved a 10year program for the development of hydroelectric power at a cost of some \$100,000,000. Early in December it approved a rest period of five days with pay for all workers not entitled to paid an-nual vacations. This move was presented as a first step toward the redistribution of the national income and socialization of industry. The Employers Federation charged that the measure violated the Government's program for stabilizing living costs.

Political Events. State control of the economic system was at issue in the general election held September 25. The Labor Government was returned to power with a considerably reduced majority (see above under Government). Opposition gains resulted in part from the new program published by the Conservative National party on August 31. It called for expanded government housing and social security; determination of ceiling prices for farm products by farmers instead of by the Government; and producer control of marketing. The party also promised to end Government control of currency and radio broadcasting, to institute nonpolitical direction of transport, to promote protection and expansion of manufacturing, and to press for large-scale postwar development plans.

Final returns on the general election, published in December, indicated that only the soldier vote saved the Labor party's parliamentary majority, and that among soldier voters Labor won a majority of only 3,000. In fact, out of every 100 voters in New Zealand as a whole, 52 voted against the Government. This result led Opposition leaders to renew their demand for the establishment of a national union government containing representatives of all parties. However Prime Minister Fraser again spurned the proposal.

The Fraser Government lost one of its strongest members with the death on May 27 of former Prime Minister Joseph G. Coates, the Minister of Armed Forces and War Coordination. The Prime Minister on July 8 announced the impending appointment of Maj. C. F. Skinner as full-time Minister of Rehabilitation.

Relations with United States. Official and unofficial relations between the United States and New Zealand remained on an extremely friendly basis throughout 1943. Mrs. Franklin D. Roosevelt, visiting the islands in August at the invitation of the Dominion Government, received a cordial welcome. American and New Zealand armed forces got on well together in the Solomons and the Fiji area. Some uneasiness was manifested in New Zealand over the future implications of U.S. lendlease. The Opposition leader, Sidney G. Holland, declared on December 4 that lend-lease arrangements should be more clearly defined so that the Dominion might know whether or not it would have to repay the final balance. The Minister of Supply indicated in April that New Zealand would furnish reciprocal aid to the United States valued at some \$33,000,000 in 1943, but the balance was still in New Zealand's favor at the year's end.

Australian Collaboration. Shortly after the announcement of an Australian-New Zealand mutual aid agreement in the event of future attack (see Australia under *History*), Prime Minister Fraser on February 27 appointed Carl A. Berensen as the Dominion's first High Commissioner to Australia.

See CHEMISTRY under Foreign; LEND-LEASE PROGRAM; SOCIALISM; WORLD WAR.

NHA. See National Housing Agency.

NICARAGUA. The largest in area of the Central

American republics. Čapital, Managua.

Area and Population. Area, 57,143 square miles including 3,475 sq. mi. of lakes). Population on Jan. 1, 1942, 1,013,946. The people are mainly of Spanish, Indian, or mixed blood, but there is a considerable infusion of West Indian Negroes on the east coast. Chief cities (1942 estimate): Managua, 118,857; León, 47,871; Matagalpa, 46,128; Granada, 34,735; Masaya, 30,372; Chinandega, 18,000. Bluefalde, 10,000

000; Bluefields, 10,000.

Defense. On Jan. 1, 1941, there was a total of 4,118 men in the land and air forces (3,481 active; 637 trained reserves), including 44 in the active air force. The navy comprised a small number of coastal patrol boats. A military academy was estab-lished in 1940 with a United States army officer

as director. See History.

Education and Religion. About 60 per cent of all adults are illiterate. In 1940 there were 744 State elementary schools, 2 normal, 18 secondary, 5 professional, 408 mixed (urban and rural), and 233 other schools. In addition, there were 3 universities and a military school. Roman Catholicism is the principal religion but other faiths have religious freedom.

Production. Coffee-raising is the principal industry, but gold replaced coffee as the leading export beginning in 1939. Gold accounted for 61.4 per cent of all 1941 exports (8.4 per cent in 1932). Coffee exports in 1941 were 12,667,512 kilos; gold, 6,514 kilos. Bananas, cabinet wood, cotton, hides and skins, live cattle, rice and sesame are other exports. Beans, rice, com, and sugar are the main food crops, and sugar refining is the leading manufacturing industry. Cocoa beans, plantains, tobacco.

and yucca also are grown. There are numerous coffee-cleaning establishments.

Foreign Trade. Imports in 1942 were valued at \$6,772,000 (\$10,438,000 in 1941); exports, \$14,-327,000 (\$11,931,000 in 1941). The export surplus was \$7,555,000 in 1942 (\$1,493,000 in 1941). The United States supplied 87.6 per cent of the 1941 in the control imports (84 in 1940) and took 96 per cent of the exports (94.2 in 1940). Values of the chief 1941 exports: Gold, \$7,323,265; coffee, \$2,575,688; cabinet wood, \$390,885. Leading imports were machinery and apparatus, cotton manufactures, iron and steel manufactures, oils, chemicals, and food

Finance. Budget estimates for 1941-42 anticipated revenues of 33,941,000 cordobas and expenditures of 31,941,000. The public debt on Dec. 31, 1941, totaled 29,313,082 cordobas, including guaranteed internal and external consolidated bonds of 9,889,812 cordobas and a U.S. Export-Import Bank used credit equivalent to 11,879,270 cordobas. Official exchange rate of the paper cordoba: \$0.20; curb rate, \$0.1572 in 1940 and \$0.1686 in 1941. Note circulation increased from 12,048,335 cordobas on Dec. 31, 1939 to 23,132,833 cordobas on Dec. 31, 1942.

Transportation. Nicaragua in 1943 had about 240 miles of railway line, all Government-owned; over 1,600 miles of roads; and air services of the Pan American and TACA systems connecting Managua with the chief cities of the hemisphere and with the principal Nicaraguan towns. See History for 1943 highway developments. During 1941 a total of 1,732 passengers arrived in Nicaragua by Pan American planes and 1,733 departed, while TACA planes carried 6,949 passengers within the republic and 1,199 to points outside. Chief ports: Corinto and San Juan del Sur on the Pacific; Bluefields, Cabo Gracias, Puerto Cabezas, and San Juan del Norte on the Caribbean.

Government. The Constitution of Mar. 22, 1939, vested executive powers in a President elected for six years and legislative powers in a parliament of two chambers—a Senate of 15 elected members with all ex-Presidents serving ex officio, and a Chamber of Deputies of 42 elected members. The terms of Senators and Deputies is six years. President in 1943, Gen. Anastasio Somoza. He assumed office Jan. 1, 1937, for a four-year term, was reelected by a Constituent Assembly Mar. 23, 1939, and inaugurated for an eight-year term Mar. 30, 1939. For war declarations, see table under WORLD WAR. For developments during 1943, see below. History. The close collaboration between the

Nicaraguan and United States Governments was continued throughout 1943 with resultant benefits to both countries. In his annual message to Con-gress on April 15, President Somoza revealed that his Government had put at the temporary disposal of the United States a zone around the port of Corinto which was rapidly being converted into a military base for the defense of Nicaragua and all Central America. Lieut. Gen. George H. Brett, chief of the U.S. Caribbean Defense Command, visited Managua on August 17 to inaugurate new barracks for American forces stationed there. Nicaragua celebrated the Fourth of July as a national holiday, marked by a special session of Congress to honor the United States, and the Nicaraguan press later supported Washington in pressing Argentina to fulfill its obligations under inter-American defense agreements.

The economic accords concluded with the United States in 1942 (see 1943 YEAR BOOK) helped to bring Nicaragua a high degree of pros-

perity. The most important contributing cause was the flow of U.S. funds into the country in connection with work on highway projects. In May more than 10,000 men were employed on the Pan American Highway and the Atlantic Coast road. In addition, the export of crude rubber reached a new high and brought nearly \$1,000,000 into the republic during the year ended May 31, 1943. Crude rubber exports from wild trees were 485 tons in 1942 against 55 tons in 1941. The U.S.-Nicaraguan plantation rubber investigations accord of Jan. 11, 1941, was extended indefinitely by an exchange of notes in June, 1943. Reviewing the progress made by the Inter-American Cooperative Service for Public Health in Nicaragua, the President in his message of April 15 announced plans for the establishment of a new school for nurses with U.S. financial and technical aid. In May the respective legations of the United States

and Nicaragua were raised to embassy rank.

High budget receipts enabled the Government to increase the 1943–44 defense budget by 25 per cent over 1942–43. They also permitted payment by the Collector General of Customs on June 30 of \$500,000 on the frozen commercial debt of Nicaragua. President Somoza in the same month ordered the Collector General to redeem the entire frozen commercial debt notes issued in 1938 and the 5 per cent customs bonds issued in 1918. These obligations were due to mature in 1945 and 1953 respectively. On August 6 Congress authorized the expropriation of the funds, property, and real estate (except houses actually lived in) of nationals of Axis powers. Defense bonds issued to cover the value of the expropriated properties were to be held in trust until after the war.

The economic boom brought a marked increase in the cost of living. Food prices doubled and imported articles were scarce and high priced. The Price Control Commission fixed maximum rents in May and attempted to prevent further price rises by heavy fines on offending storekeepers, but with-

out conspicuous success.

There were few noteworthy political developments. On April 16 Gen. José Maria Moncada, former President, was elected President of the Senate and Aurelio Montenegro President of the Chamber of Deputies. A project for reform of the Constitution was submitted to the President by Congress early in June. Changes in a number of the higher military posts were announced by the President March 6, including the appointment of Col. Julio Somoza as chief of the Presidential guard. At the same time the President condemned alleged efforts by the Conservatives to arouse political disputes in preparation for the next Presidential election, which was not due until 1946.

The Chamber of Deputies on June 9 approved a bill revising the immigration law to place Chinese on the same basis as Europeans. See Archaeology; SPANISH-AMERICAN LITERATURES; WORLD WAR.

NICKEL. Although 1943 nickel production exceeded the all-time high of the previous year, this metal in December remained the only major member of the ferro-alloy group whose supplies were listed by the War Production Board as "insufficient for war plus essential industrial demands under existing administrative control."

Production in Canada's Sudbury, Ontario, district where most of the world's nickel is mined, was handicapped by the same acute labor shortage which plagued American mines, and in the latter part of the year tonnage dropped 10 per cent below its peak. The International Nickel Co. of

Canada, Ltd., which had expanded its production capacity by 50 million lb. annually over 1940, was unable to use these expanded facilities to the utmost. Canadian production was buttressed to a small extent by nickel from New Caledonia and Cuba, where a plant to treat low-grade ores came

into production.

Consumption of nickel by the United Nations in 1943 was estimated to be nearly double that used by those countries in the prewar peak year. Steel mills in the United States, England, and Canada took over 70 per cent of the new nickel made available to those countries. Replacement of steels containing high percentages of alloying elements by the low alloy National Emergency Steels in the United States for from 30 to 45 per cent of total alloy steel production in that country was a major factor in keeping demand from exceeding supply by too great a margin. The NE steels were estimated to have saved 24,000 tons of nickel, somewhat less than originally anticipated. For many uses there was considerable question as to whether consumers would return to high alloy steels after the war. Slightly more than one-half of the nickel being melted by steel mills at the end of the year was in the form of scrap, which was abundant, thus further cutting the need for primary nickel.

Early in 1944, it appeared that the nickel situation was easing. Raising of restrictions on other alloys which might be substituted for nickel, took the pressure off that metal and it was predicted that relaxation upon nickel for civilian requirements might come before long. A possible omen of such action was the War Production Board's action making chrome and nickel available for

truck engine valves.

Base prices, f.o.b. refinery, including duty, remained frozen at 35 cents per lb. for electrolytic cathode sheets, 99.95 per cent pure, 36 cents per lb. for ingot or shot produced from electrolytic cathodes, and 34 cents per lb. for "F" nickel shot or ingot for addition to cast iron.

CHARLES T. POST.

# NIGER. See FRENCH WEST AFRICA.

NIGERIA. A British possession in West Africa, comprising the colony (1,381 sq. mi., pop. 331,544) and the protectorate which includes British Cameroons (q.v.). Total area, 372,599 square miles. Total population (1941), 21,040,720. Chief towns: Lagos, the capital, 167,000 inhabitants in 1939; Ibadan, including farming suburbs, 318,320; Kano, 80,634; Abeokuta, 69,500; Ogbomosho, 64,680; Oyo, 63,170. Education (1939): 40,763 schools and 543,618 students.

Production and Trade. The chief agricultural products, with 1942 export figures in long tons, are palm oil (151,290), palm kernels (356,590), cotton lint (18,522), rubber (6,668), groundnuts (196,281), cocoa, tobacco, maize, ginger, sesamum, and rice. Minerals produced included gold, tin, silver, and coal. Deposits of manganese, galena, lignite, columbite, wolfram, and monazite have been found. Other products are gum arabic, mahogany, ghee, hides and skins (7,283 long tons exported in 1942). Livestock (1938): 2,936,000 cattle, 2,188,000 sheep, 5,630,000 goats, 476,000 asses, 173,000 horses, 168,000 swine, 2,000 camels. Trade (1942): imports were valued at £10,400,000; exports, £9,000,000 (palm kernels £2,557,123, groundnuts £1,706,424, palm oil £1,426,348, cotton lint £1,123,726, rubber £673,467, hides and skins £649,601).

Transportation. Railways (1940): 2,341 miles. Roads (1940): 21,277 miles. Nigeria is now linked with French North Africa by the 2,000 mile Trans-Saharan highway, and with the Anglo-Egyptian Sudan and Kenya. Lagos is an important base for the air communications of the British Empire, and is a link in Pan American Airways' ferry and transport services between the United States, the Belgian Congo, and the Middle East. Kano in northern Nigeria is an important trading center and a focal point for road, rail, and air transport.

Government. The budget estimates for 1942–43

Government. The budget estimates for 1942–43 anticipated a deficit of £7,850. Public debt (Mar. 31, 1940), £24,936,599. Nigeria, including the British Cameroons attached to the Protectorate for administrative purposes, is under the control of a governor, assisted by an executive council. There is a legislative council for the Colony and the Southern Provinces of the protectorate. The Governor enacts the laws affecting the Northern Provinces. Governor and Commander in Chief, Sir Arthur Richards (appointed during June, 1943).

NIGHTINGALE ISLAND. See St. Helena. NITROGEN. See Chemistry under Fertilizer. NLRB. See NATIONAL LABOR RELATIONS BOARD. NON-FEDERATED MALAY STATES. Same as Unfederated Malay States. See under British Malaya. NOREPOL. See RUBBER.

NORFOLK ISLAND. An Australian-owned island in the South Pacific, lying 930 miles northeast of Sydney and 630 miles northwest of Auckland, N.Z. Area, 8,528 acres. Population, 896 on June 30, 1940. Bananas, citrus and other fruits, beans, and fish are the principal products. The territory is governed by an administrator appointed by the Prime Minister of Australia. An advisory council of eight elected members was established in 1935.

NORTH AFRICAN CAMPAIGN. See MILITARY PROGRESS; UNITED STATES under Foreign Relations; WORLD WAR; ALGERIA, EGYPT, LIBYA, MOROCCO, and TUNISIA, under History.

NORTH AFRICAN ECONOMIC BOARD. See Algeria and Tunisia under History.

NORTH AMERICA. Excluding Mexico and Central America, but including Greenland, Newfoundland, and smaller adjacent islands, the continent has an area of about 7,589,532 square miles and a population estimated at 143,175,000 on Jan. 1, 1940. The combined area of Mexico, Central America, and the West Indian islands was about 1,073,080 square miles and the population about 40,870,000. See separate articles on the constituent countries and territories.

NORTH AMERICAN B-25 AND P-51. See AERONAUTICS under Types.

NORTH CAROLINA. A south Atlantic State. Area: 52,712 sq. mi. Population: 3,571,623 (1940 census): 3,404,194 (1943 nonmilitary estimate).

sus); 3,404,194 (1943 nonmilitary estimate).

Statistics. Statistical information pertaining to each of the 48 States and the District of Columbia has been assembled in comparative tables which appear in the following articles. Agriculture; Mineral Production; Roads and Streets; Schools; Social Security Board; Taxation; Universities; and Vital Statistics. The census of manufactures has been suspended for the time being; for the latest information, see 1941 Year Book, p. 430.

Elections. See the article Elections in the United States; also, for incumbents, House of Representatives and Senate.

Legislation. See the separate article on STATE

LEGISLATION.

Officers. The Governor is J. Melville Broughton (Dem.), inaugurated in January, 1941, for a four-year term; Lieutenant Governor, R. L. Harris; Secretary of State, Thad Eure; Attorney General, Harry McMullan. See Floods; Music under Orchestras.

NORTH DAKOTA. A west north Central State. Area: 70,665 sq. mi. Population: 641,935 (1940 census); 536,510 (1943 nonmilitary estimate).

Statistics. Statistical information pertaining to each of the 48 States and the District of Columbia has been assembled in comparative tables which appear in the following articles. Acriculture; Mineral Production; Roads and Streets; Schools; Social Security Board; Taxation; Universities; and Vital Statistics. The census of manufactures has been suspended for the time being; for the latest information, see 1941 YEAR Воок, р. 430.

Elections. See the article Elections in the United States; also, for incumbents, House of Representatives and Senate.

Legislation. See the separate article on STATE

Officers. The Governor is John Moses (Dem.), inaugurated in January, 1943, for his third two-year term; Lieutenant Governor, Henry Holt; Sec-retary of State, Thomas Hall; Attorney General, Alvin C. Strutz.

NORTH EAST NEW GUINEA. See NEW GUINEA, TER-RITORY OF

NORTHERN RHODESIA. See RHODESIA, NORTHERN. NORTHERN TERRITORY. See Australia under Area and Population.

NORTHWEST TERRITORIES. The northern areas of Canada, extending north from the provinces and the Yukon to the North Pole. It is divided, for administrative purposes, into the districts of Franklin (554,032 sq. mi.), Keewatin (228,160 sq. mi.), and Mackenzie (527,490 sq. mi.). Area, 1,309,682 square miles, including 51,465 square miles of fresh water. Population (1941 census), 12,028 (6,700 male, 5,328 female)

male; 5,328 female).

Production, etc. Mining, fur trapping, and reindeer herding are the principal occupations of the inhabit-ants. The original herd of 2,370 reindeer from Alaska, delivered in 1935, had increased to 10,000 by 1944. Mineral output (1942) was valued at \$5,223,079, of which gold (97,039 fine oz.) accounted for \$3,736,002. Petroleum, radium, uranium, and silver are produced. Lead, zinc, nickel, copper, coal, and sheelite (a tungsten ore) have been found. Furs (1941–42): 445,836 pelts valued at \$2,513,750. For the "Canol" project see Yukon under History. In the fiscal year, 1942–43, revenue and expenditure totaled \$225,335 and \$1,153,963, respectively.

Government. A territorial council, consisting of a commissioner, deputy commissioner, and 5 councilors appointed by the governor general in council, controls the administration of the territories. The seat of government is at Ottawa, Ontario. Commissioner, Charles Camsell. See Canada under Rela-

tions with United States.

NO-STRIKE AGREEMENT. See Labor Conditions; Na-TIONAL WAR LABOR BOARD.

NORWAY. A European kingdom occupying the western and northern part of the Scandinavian peninsula; occupied by German armed forces beginning Apr. 9, 1940. Norway held sovereignty over Svalbard (Spitsbergen and adjacent islands) in the Arctic Sea, 240 miles distant from the Norwegian coast (see SVALBARD); also Norway asserted sovereignty over Jan Mayen Island in the Arctic Sea, uninhabited, and certain uninhabited areas in the Antarctic region. Capital, Oslo.

Area and Population. Covering an area of 124,556 square miles (land area, 119,148 square miles), Norway proper had 2,952,000 inhabitants on Jan. 1, 1941, by official estimate; by latest census, 2,814,194 in 1980. Only 28 per cent of the population of 1980 wave closed as well as the population of 1980 wave closed. tion of 1930 were classed as urban, and females exceeded males by about 71,000. According to a Stockholm report, there were 250,000 German soldiers and more than 300,000 German civilians in Norway in August, 1942. The birth rate, per 1,000, was 16.3 for 1940 (15.9 for 1939); death rate, 10.7 (10.2). Populations of chief cities: Oslo, 275,000 in 1938; Bergen, 106,500 in 1938; Toologies, 1000 chief cities: Oslo, 275,000 458 in 1930; Stavanger, 46,780 in 1930.

Education and Religion. Primary education is compulsory and literacy is virtually universal. In the academic year 1937–38 there were 852,992 pupils in elementary schools and 33,792 in secondary schools. The University of Oslo had 4,118 students

The Evangelical Lutheran Church was politically established. All religions were tolerated (but not the Jesuit order). Apart from Evangelical Lutherans, persons reporting religious affiliation in 1930 numbered 91,459: among them, 12,207 Methodists, 7,788 Baptists, 3,325 Adventists, and 2,827 Roman Catholics. After the German occupation, unremitting attempts were made to reorganize schools and churches in accordance with Nazi principles. See

History below.

Production. In normal times 29 per cent of the workers followed agriculture or forestry, 27 industry, 10 commerce, 9 transportation, 7 fishing and whaling, 5 professions and public administration. Under German rule, all economic resources and productive facilities were coordinated as far as possible with the requirements of the Nazi war machine. Production of the chief crops in 1940, with 1939 figures in parentheses, was (in metric tons): Wheat, 70,700 (77,800); barley, 91,400 (103,500); rye, 5,700 (6,200); oats, 161,200 (200,800); potatoes, 1,250,000 in 1942. The fish catch for 1940 was reported at 1,070,000 metric tons (1,030,000 in 1939). The estimated livestock population in 1043 with prevent feed in parentheses. 1943, with prewar figures in parentheses, was: Milch cows, 800,000 (860,000); young cattle, 400,000 (550,000); swine, 200,000 (360,000); poultry, 1,000,000 (3,250,000). The value of ore production in 1939 was 56,500,000 kroner, with pyrites and iron ore accounting for 81 per cent of the total. Estimated mineral and metallurgical production in 1940 was (in metric tons): Iron ore, 1,500,000; pig iron, 175,000; tungsten, 20; nickel, 1,250; copper, 20,000; zinc, 5,000; lead, 820; aluminum, 15,000; molybdenum, 600. The merchant fleet's earnings in 1939 were estimated at about 800,000,000 kroner. Manufacturing is confined chiefly to the processing of wood, fish, minerals, and other Norwegian prod-

Foreign Trade. Imports in 1941 were reported at 888,000,000 kroner (944,800,000 in 1940); exports of Norwegian products at 446,000,000 kroner (611,-800,000 in 1940). After the German occupation, trade was entirely with Germany and Axis-controlled Europe except for trade with Sweden.

Finance. For the fiscal year ended June 30, 1941, estimates for the combined current and capital budgets balanced at 826,300,000 kroner as against 664,900,000 kroner in 1939–40. In addition to this budget, the Germans levied upon Norway the cost of the German military occupation and civil administration. This bill, estimated at from 1.9 to 2.4 billion kroner annually, was met mainly by the Bank of Norway, which advanced some 4 billion kroner between April, 1940, and August, 1942. In addition, other Norwegian banks had been compelled to accept nearly 800,000,000 kroner of German treasury notes in exchange for ready cash. The German occupationary authorities fixed the value of the reichsmark at 1.67 kroner, an overvaluation of 34 per cent above the previous effective rate (1.24 kroner equals 1 reichsmark).

The budget of the Norwegian Government in London for 1941–42 amounted to about £13,000,000, over half of which was for defense. Receipts came from the income of the Norwegian merchant

marine and other Norwegian assets.

Transportation. Prior to the German occupation, Norway had about 2,500 miles of railway lines in operation, practically all of which were stateowned. Another line, Grong to Mosjoen (122 miles), was opened after the occupation. Paved highways, totaling 25,699 miles in 1939, were extended by the Germans. An all-weather express highway from Oslo to Bergen was completed early in 1941, and other important roads including one from Trondheim northward to Narvik, were under construction. The Norwegian civil airways were linked with the German network following the military occupation.

Shipping. The Norwegian merchant fleet on Jan. 1, 1940, was the fourth largest in the world, comprising 4,391 steam, motor, and sailing vessels aggregating 4,846,000 gross tons. Eighty per cent of this tonnage, manned by 25,000 sailors, escaped when the Germans seized Norway; it was immediately requisitioned by the Norwegian Government and operated on behalf of the United Nations by the Norwegian Shipping and Trade Mission.

Government. Under the Constitution of 1814, as subsequently amended, executive power is vested in the King, acting through a Cabinet responsible to the Storting (parliament). The Storting consisted of 150 members elected for four years by universal suffrage. It divided itself into two sections of 38 and 114 members, called the Lagting and Odelsting, respectively. The composition of the Storting elected in October, 1936, was: Labor, 70; Conservatives, 36; Liberals, 23; Agrarians, 18; others, 3. The elections scheduled for 1940 were not held because of the German invasion of Norway on Apr. 9, 1940. King in 1943, Haakon VII, who was born in 1872 and was elected to the throne by the Storting Nov. 18, 1905. Premier, Johan Nygaardsvold (Labor party), heading a coalition government formed in June, 1940. For the dissolution of the Storting and the withdrawal of the Norwegian Government to London in 1940, see 1941 Year Book. For its war declarations, see table under World War.

The German administration of occupied Norway was headed by Josef Terboven, the Reich Commissioner in charge of civil affairs (appointed by Hitler Apr. 24, 1940), and Col. Gen. Nikolaus von Falkenhorst, the military commander. On Sept. 25, 1940, Herr Terboven appointed a State Council (Statsraad) of 13 Norwegian Nazis or sympathizers, and a legislature (Riksting) to take over the functions of the Storting. On the same day Terboven decreed the abolition of the monarchy

and Storting, the dismissal of the Nygaardsvold Government, and the dissolution of all political parties except Maj. Vidkun Quisling's pro-Nazi National Union (Nasjonal Samling), which in the 1936 elections had failed to win any seats in the Storting. Quisling was appointed chairman of the State Council and later (Feb. 1, 1942) was proclaimed Minister President, or Premier, of Norway. He remained subject to the orders of Reich Commissioner Terboven. With the assistance of Quisling and his Norwegian Nazi followers, Terboven undertook to Nazify all aspects of Norwegian life (see 1941, 1942, and 1943 Year Books, and History below for developments during 1943).

## HISTORY

As in the other occupied countries of Europe, events in Norway moved toward a climatic explosion during 1943. Forced increasingly upon the defensive in the World War, the Germans and their Norwegian Nazi collaborators intensified both their defensive preparations, their ruthless exploitation of Norwegian manpower and resources, and their efforts to root out all opposition. Norwegian patriots, encouraged by the prospect of early liberation, stiffened their resistance and prepared for the ultimate reckoning with their oppressors.

Dissension among Quislings. Following upon reports of dissensions among Quisling's followers, the Norwegian Fuehrer was reported late in February to be carrying out a systematic purge of unreliable elements within the Nazi party. Soon afterward it was announced that the Quislingists were organizing in special fighting groups to help the Germans combat an internal uprising. A number of Nazis not enrolled in the Quisling military formations appealed to local German commanders for arms to defend themselves against patriot attacks. A growing number of Quisling's followers were reported later in the year to be finding excuses to

resign.

On April 19 Quisling and Josef Terboven, Reich Commissioner for Norway, had an important conference with Hitler and Reich Minister Heinrich Himmler, head of the Gestapo and Elite Guard, at Hitler's headquarters. The conference was followed by more drastic repressive measures in Norway (see below) that spurred patriot resistance and aroused further dissension among the Norwegian Nazis. A number of Quisling's Cabinet Ministers were reported to have offered their resignations in September in protest against his decree of August 14 declaring a state of emergency. This decree, they declared, indicated that Hitler still considered Germany at war with Norway. A statement by Hitler broadcast on September 27 appeared designed to allay the unrest among Norwegian Nazis.

"It is the unchangeable will of the Fuehrer," the statement read, "that after the victorious conclusion of this fateful struggle, a nationalist and socialist Norway should arise in liberty and independence, surrendering on the higher plane of the European community only those functions that are essential for the security of Europe for all time..."

German Morale Slumps. Among the German occupationary forces and civilian officials of the Terboven administration there were likewise reports of falling morale, necessitating drastic disciplinary measures. Eighteen Germans, including several officers, reportedly were executed at Kristiansand in January for seeking to escape and "cooperating with the enemy." In May Swedish sources reported widespread refusals by German soldiers in Norway to serve on the Russian front. The growing number

of German officers and soldiers deserting and fleeing to Sweden led Col. Gen. Nikolaus von Falkenhorst, the German commander in chief in Norway, to issue an appeal to the sense of honor and duty of his troops in July. At the same time he attacked the Swedish Government for harboring the deserters.

Labor Draft Extended. These signs of weakness and fear within the German and Quisling ranks were accompanied by more desperate and drastic measures of repression. Another round-up of Norwegian patriots, including many members of the banned Communist and Labor parties, was followed by Premier Quisling's announcement on February 22 that men between the ages of 18 and 55 and women between 21 and 40 would be drafted for any sort of labor service the authorities might designate. The move was in line with the previous extension of manpower mobilization in Germany (a.v.)

The Quisling and German authorities began immediately to call up additional workers for construction gangs engaged in building defenses against a threatened Allied invasion. However the underground launched a campaign to sabotage the labor conscription program, which met with considerable success. According to a Nazi-controlled Oslo news agency report of June 12, only 25 per cent of the persons called up had reported for service. This was in spite of a decree of March 26 withholding food ration cards from men between 18 and 57 years of age who had not registered for

the "National Labor Service."

The Germans used the new labor law to get rid of "undesirable elements" in the population, particularly anti-Nazi clergymen, newspapermen, teachers, and other intellectuals. They also drafted considerable numbers of girls. The German radio reported May 23 that 4,000 Norwegian girls had been summoned for labor service during the previous four days, and that in all 66 women's labor corps were in operation. Meanwhile the age limit for girls subject to labor conscription had been re-

duced from 21 to 18 years of age.

Exploitation of Industries. Norway's industries and economic resources also came under an increased measure of German control. Early in March decrees were issued giving the Quisling administration's Department of Trade control over all industries, with authority to liquidate or concentrate them in accordance with the needs of Germany's war economy. They called for the compulsory organization of business men and industrialists in groups, each group being directed by a leader with dictatorial powers appointed by the Quisling regime. This system was resorted to when Terboven failed in his efforts to enlist the cooperation of the Federation of Norwegian Industry, which was then dissolved.

German sources later reported that the exploitation of Norwegian industry and economic resources by compulsory methods was meeting with increasing difficulties. Slowdowns by workers reduced production—by 35 per cent in one Fredrikstadt factory. In Trondheim 13 out of 24 contracting firms put to work on German orders were subsequently liquidated, their properties confiscated, and their proprietors deported to the Reich. But despite the active and passive resistance they encountered, the Germans looted Norway of at least nine billion crowns (about \$2,137,500,000) during the three years ending Apr. 9, 1943, according to estimates by Norwegian experts. This represented an annual rate equivalent to three-fourths of the kingdom's national income during the pre-occupation days.

Norwegian foodstuffs not only supported the occupation forces but also played an important part in the German war economy. Of Norway's exports of some 200,000 tons of fish in 1942, about 80 per cent went to Germany and its armed forces. Moreover by the summer of 1943, the damage done to the German-occupied port of Narvik by British forces in 1940 was reported completely repaired, and a dozen ships a week were leaving the port with Swedish iron ore for German war factories. Every phase of Norwegian economic life was under rigid German control.

Conflict with Churches. Premier Quisling's effort to force the Lutheran churches into active collaboration with his Nazi regime fizzled out during 1943 (see 1943 YEAR BOOK, p. 510, for background). It was reliably reported from Norway in mid-April that only 61 of the 869 pastors of the Evangelical Lutheran State Church had accepted the Quisling regime. Twenty-five of the 61 were described as accounted Nazic and the remainder as old men

avowed Nazis and the remainder as old men.

The anti-Quisling Provisional Church Council formed in 1942 extended its struggle into 1943 with a New Year's message denouncing Nazi principles that was read in over 1,000 churches. In April the Quisling Minister of Labor submitted the names of 75 pastors and 200 theological students who had "publicly declared their solidarity with the oppositional church movement" or rejected parishes offered them by Quisling church authorities. He requested their immediate conscription for labor service. A vigorous written protest against the labor conscription program was submitted to Premier Quisling by opposition church leaders on May 11. Quisling replied by sending the head of the Provisional Church Council, Dr. Ole C. Hallesby, and his chief assistant to the Grini concentration camp.

In June a Stockholm newspaper reported that the handful of pro-Quisling clergymen, upset by popular ostracism of them and their churches, had petitioned the Premier to introduce compulsory church attendance by Quisling party members

church attendance by Quisling party members.

Battle of the Schools. The Quisling regime, with Terboven's support, also intensified its efforts to Nazify the Norwegian educational system, but met the same stubborn resistance as in 1942 (see 1943 Year Book). In January the Quisling authorities announced that Norwegian parents opposing their children's attendance at meetings of the Nazicontrolled Norwegian Youth Service would be brought before the Quisling People's Court. In February a new catechism, edited by a leading member of Quisling's Church Department, was introduced into the schools. Designed to inculcate youth with Nazi principles, it instructed the children that "before all we owe obedience to our Fuehrer and his administration. To oppose our chief and the State is against the word of God and would be followed by punishment."

would be followed by punishment."

The Nazi struggle to crush resistance in the University of Oslo was renewed in September when a number of professors were arrested and 40 students sent to concentration camps for six months for refusing to sign a declaration of loyalty. A fire in the assembly hall on November 27 was followed on November 30 by the closing of the university in a sudden raid by German and Quisling police. The police were ordered to arrest all students except some 300 who were Nazi party members. They seized about 1,200 students and instructors, but another 1,500 were reported to have escaped and gone into hiding. Those arrested were confined in a nearby concentration camp. Beginning December 9 many were deported to Germany, de-

spite an official protest from Sweden (q.v.) and world-wide condemnation. The students were charged with "conducting propaganda and illegal activities against Germany and the Norwegian state." During December the Nazi regime was reported extending the round-up of intellectuals to include students and professors in all Norwegian universities.

General Repression. In addition to these systematic attacks upon the churches and schools, the German and Quisling authorities resorted to measures of increasing severity in their efforts to stamp out resistance among the people at large. Trade union leaders and members of the strong Norwegian Labor party and of the less influential Communist party experienced particularly harsh treatment. The execution of 17 persons for "Communist activity" was reported late in February. The victims included Ottar Lie, Secretary of the Norwegian Communist party, and several other prominent Communist leaders.

The deportation to Germany and Poland of Norway's 1,300 Jews was virtually completed during the first quarter of 1943. The able-bodied men were reportedly put to work in the mines around Katowice, Silesia, but the others were said to be starving. In mid-March sabotage of German communication lines and ships around Trondheim led to the confinement of 300 prominent Trondeim residents in concentration camps. To check ne number of Norwegians seeking refuge in weden and Great Britain, Reich Commissioner 'erboven on May 12 decreed the death penalty or anyone attempting to escape. Properties of hose seeking to escape were confiscated and any ne assisting them was likewise made subject to unishment.

An amnesty proclaimed by Premier Quisling on Iay 17 freed a number of Norwegian patriots imrisoned on minor charges. But the concentration amps remained full, and there was every evidence hat the prisoners were subjected to all the torture nd brutalities customary in German prison camps hroughout Europe. Executions of new batches of Vorwegians for sabotage, espionage, attempting to eave the country, etc., were reported from time o time.

Martial Law Imposed. The Germans were driven to nore extreme measures in mid-August. The over-hrow of Mussolini on July 25 had been followed y numerous resignations of high Norwegian poice officials, many of whom were then arrested y the Gestapo. Meanwhile a number of punishing aids by American Flying Fortresses on German ases in Norway had emphasized the danger of an Illied invasion, and Sweden had acted to curtail he transit traffic of German supplies and soldiers

Norway.

On August 11 the Germans executed Gunnar ullifsen, head of the civilian section of the Oslo olice, when he refused to detail members of his orce to arrest Norwegian women who had failed o report for labor duty in German war industries. The shooting of Police Chief Ailifsen was anounced to a meeting of all Oslo policemen on ugust 16 by Jonas Lie, Police Minister in the Puisling administration, who warned that the ame fate awaited all policemen disloyal to the Jerman occupationary regime. Gen. Wilhelm lediess, German chief of the Gestapo in Norway, hen insisted that all policemen sign a declaration if loyalty to the Germans on pain of death.

A decree issued by Premier Quisling on Aujust 14 inducted into the German armed forces ill members of the Norwegian police, of Quisling's

bodyguard, of the German-Norwegian Elite Guard units, and of the armed formations of the Quisling party. The entire population was made subject to the jurisdiction of special police courts, functioning behind closed doors and empowered to impose the death penalty in all cases of espionage, sabotage, or "cooperation with Germany's enemies." Police Minister Lie, a rival of Quisling, was placed in charge of the militarized Norwegian police and entrusted with the task of rooting out underground organizations and breaking up their preparations to assist an Allied invasion. Among the measures adopted to this end were two requiring all males to report for labor duty as soon as an invasion began, and providing for the immediate arrest of numerous prominent hostages who were slated for execution if the civilian population joined the invaders.

Army Officers Interned. On the eve of the police purge, the 1,500 Norwegian army officers paroled in May, 1940, after the German occupation were ordered interned in Germany on instructions from Hitler. Those officers actively collaborating with the Germans were exempted. About 500 others were believed to have escaped the German roundup, but about 1,000 officers were transported between August 15 and September 15 to a German internment camp at Schocken, Poland, according to Norwegian sources. The holding of these Norwegian hostages in Germany was believed a form of insurance against possible future Norwegian and Allied retaliation against Germans and Norwegian Nazis in Norway.

Resistance Continues. During the last half of 1943 the German terror in Norway reached a more severe stage than at any time since the occupation. The Swedish border was closed on October 27 in connection with a new nation-wide search for members of the Norwegian underground. Nevertheless sabotage continued on a major scale. The explosion of a big German ammunition dump at Tjoeme in Oslofjord on January 10 and the blowing up of four ships and a lighthouse in Oslo Harbor on April 28 were followed on December 19 by the detonation of a German ammunition ship being unloaded in the port of Oslo. In the latter explosion more than 100 persons, including 60 Norwegians, were reported killed and 500 houses damaged. Sabotage was suspected in most of these major disasters as well as in hundreds of less important fires, explosions, and derailments.

Despite German repression, the circulation of the Norwegian underground press continued to grow. The hand-to-hand circulation of mimeo-graphed and other illegal publications was believed to approximate the prewar circulation of Norway's

free newspapers.

Government-in-Exile. The Norwegian Governmentin-Exile in London and King Haakon meanwhile continued their efforts to spur passive resistance and underground preparations in Norway. In radio broadcasts to the homeland, Government leaders repeatedly warned the Norwegian people to avoid open violence and risings against the Germans until they received the signal from London. The training of Norwegian forces in Britain to take part in the restoration of Norway's liberty proceeded along with other preparations for the Government's return home.

A decree issued January 5 deprived the estimated 30,000 Norwegian Nazis and Axis collaborators of their citizenship and right to carry on trades, businesses, and professions after the war, in addition to such penalties as might be imposed for treason. A list of about 1,000 German and Nor-wegian "war criminals," headed by Major Vidkun Quisling, was made public by the Government-in-Exile on October 17. On November 6 the Government announced the appointment of Andreas Aulie as chief of Norway's police forces, with the specific task of rounding up war criminals and traitors

following the kingdom's liberation.

There remained a question as to the status of the Government-in-Exile after liberation. Escaping from Norway in March, Cato Hambro, son of the former President of the Norwegian Parliament, reported Norwegian sentiment as opposed to the continuance in power of the Government-in-Exile. "The feeling is that the government of the country belongs to those who stayed," he said, but added that King Haakon remained the symbol of unity and was most popular.

In July the Norwegian Minister of Shipping announced in London that about 2,400 Norwegian seamen and 40 per cent of the prewar Norwegian merchant fleet had been lost through enemy action while in the service of the Allies. In the first World War, Norway lost about 2,000 seamen and 49 per cent of her merchant marine although remaining

neutral throughout the conflict.

NOVA SCOTIA. An eastern maritime province of Canada. Area, 21,068 square miles, including 325 Canada. Area, 21,068 square miles, including 325 square miles of fresh water. Population (1941 census), 577,962 (296,044 male; 281,918 female), comprising, by racial origin, British 445,178, French 66,260, Netherland 23,834, German 15,038, etc. Religious membership (1941 census): Roman Catholic 188,944, United Church 124,301, Anglican 103,393, Baptist 89,272, Presbyterian 47,415, Lutheran 9,104, etc. In 1942 there were 15,254 living births, 6,350 deaths, and 6,871 marriages. Chief cities: Halifax (capital) 70,488 inhabitants in 1941, Sydney 28,305, Glace Bay 25,147, Dartmouth 10,847, Truro 10,272, New Waterford 9,302, New Glasgow 9,210, Amherst 8,620, Sydney Mines 8,198, Yarmouth 7,790. Education (1940–41): 146,926 students enrolled in schools and colleges. Production. The gross value of agricultural output

Production. The gross value of agricultural output in 1942 was \$42,003,000 (field crops accounted for \$15,846,000, farm animals \$9,714,000, milk tor \$15,846,000, farm animals \$9,714,000, milk \$7,697,000, fruits and vegetables \$4,983,000, poultry and eggs \$3,287,000). Chief field crops (1942): oats 2,622,000 bu., potatoes 124,800 tons, turnips, etc. 196,000 tons, hay and clover 663,000 tons. Livestock (June 1, 1943): 212,500 cattle (including 104,300 milk cows), 161,600 sheep, 65,500 swine, 35,700 horses, 1,601,000 hens and chickens, 12,220 turkeys. Furs (1941–42): 101,731 pelts valued at \$532,059. Fisheries catch (1942): \$15,-297,446. The gross value of all lumber products in 1941 was \$6,291,112. in 1941 was \$6,291,112.

Mineral output in 1942 was valued at \$31,652,-244 (coal, 7,189,201 tons, accounted for \$28,822,-786). Manufacturing (1941): 1,177 plants, 24,577 employees, \$27,527,339 for salaries and wages, \$76,779,821 for cost of materials, \$51,318,369 was the net value of production.

the net value of production.

Government. Finance (year ended Nov. 30, 1942): revenue \$17,103,001; expenditure \$14,380,-215; total direct and indirect liabilities (less sinking funds) \$93,536,064. The executive authority is vested in a lieutenant governor who is advised by a ministry of the House of Assembly, the latter

comprising 30 members elected for a five-year term by popular vote (28 Liberals, 4 Conservatives, and 3 Cooperative Commonwealth Federationists were elected at the provincial general election of Oct. 28, 1941). Ten members (appointed for life) in the Senate and 12 members in the House of Commons represent Nova Scotia in the Dominion Parliament at Ottawa. Lieutenant Governor, F. F. Mathers (app. May 31, 1940); Premier, A. S. MacMillan (Liberal; app. July 10, 1940). See Canada.

NURSING. See Civilian Defense, Office of; Pub-LIC HEALTH SERVICE; RED CROSS. For Division of Nurse Education, see Public Health Service.

NUTRITION. See FOOD AND DRUG ADMINISTRATION; LIVING COSTS AND STANDARDS; PSYCHOLOGY under Psychodietetics; Public Health Service; United NATIONS. For the Nutrition and Food Conservation Branch, see ACRICULTURE, U.S. DEPARTMENT OF.

NYASALAND. A British protectorate in southeast Africa. Area, 37,374 square miles. Population (Jan. 1, 1941), 1,686,045, including 1,682,456 natives, 1,851 Asiatics, and 1,738 Europeans. Chief towns: Zomba (capital), Blantyre, Limbe, Cholo, and Lilongwe. Education (1941): 4,018 native schools with 181,521 students enrolled and an average attendance of 126,909. There are four elementary schools for European children.

Production and Trade. Chief products (with 1942 export figures)—tobacco (18,700,000 lb.), tea (12,400,000 lb.), cotton (4,584,000 lb.), maize, rubber, ivory, coffee, rice, sisal, groundnuts, and tung oil. Livestock (1941): 208,164 cattle, 205,-208 goats, 44,387 swine, and 44,205 sheep. Trade 200 guals, 44,301 swine, and 44,200 sneep. Irade (1942): imports £898,550 (textiles, vehicles, wood manufactures, machinery, metal manufactures, and petroleum products were the chief items); exports £1,409,642 (tobacco £702,100, tea £567,527, cotton £66,855).

Communications. In 1941 there were 3,733 miles of roads. Good motor roads link with South Africa and the extension northward links Nyasaland with the Great North Road through Northern Rhodesia, Tznganyika, and Kenya. Several airfields and emergency landing grounds have been constructed and regular air services for passengers and mail are operated. There is a railway system (3 ft. 6 in. gauge) extending from Chipoka on Lake Nyasa to Beira, Portuguese East Africa. A marine transport service is operated on Lake Nyasa by the railway.

Government. Budget (1943): revenue £905,600 (£933,000 in 1942); expenditure £891,000 (£846,-500). Public debt (Dec. 31, 1941) £3,698,281. Nyasaland is administered under the British Colonial Office by a governor, assisted by an executive council (nominated) and a legislative council (nominated). Governor and Commander in Chief, Sir Edmund Richards (appointed June 5, 1942).

NYLON. See CHEMISTRY under Nylon; TEXTILES; WAR PRODUCTION BOARD under Salvage.

OATS. The oats crop of the United States in 1943 was estimated by the U.S. Department of Agriculture at 1,143,867,000 bu., about 15 per cent below the 1942 bumper crop of 1,349,547,000 bu., but 12 per cent above the 1932–41 average of 1,018,783,-000 bu. The harvested acreage of 38,449,000 acres was the largest since 1935 and compared with the 37,878,000 acres for 1942 and the 1932-41 average of 35,979,000 acres. Acre yields averaged 29.8 bu. in 1943 and 35.6 bu. in 1942. The seasonal average

price per bushel (preliminary) received by farmers was 71.0¢ and the estimated value of production was \$811,861,000 in 1943 compared to 48.7¢ and \$657,779,000 in 1942. The accompanying table lists the States leading in oats production in 1943.

CNTARIO. A Canadian province between Quebec and Manitoba. Area, 412,582 square miles, including 49,300 square miles of fresh water. Population (1941 census), 3,787,655 (1,921,201 male; 1,866,454 female), comprising, by racial origin, British 2,729,830, French 373,990, German 167,102, Netherland 73,001, Jewish 69,875, Italian 60,085, Polish 54,893, Ukrainian 48,158, etc. Religious membership (1941 census): United Church 1,073,425, Roman Catholic 882,369, Anglican 815,413, Presbyterian 433,708, Baptist 192,915, Lutheran 104,111, etc. In 1942 there were 78,080 living births, 39,085 deaths, and 45,468 marriages. Chief cities: Toronto (capital) 667,457 inhabitants in 1941, Hamilton 166,337, Ottawa 154,951, Windsor 105,311, London 78,264, Kitchener 35,657, Sudbury 32,203, Brantford 31,948, Fort William 30,585, St. Catherines 30,275, Kingston 30,126. Education 737,495 students enrolled in schools and colleges.

Production. The gross value of agricultural output for 1942 was \$558,658,000 (field crops accounted for \$209,014,000, farm animals \$139,208,000, milk \$102,716,000, poultry and eggs \$47,704,000, fruits and vegetables \$33,466,000, tobacco \$18,350,000). Chief field crops (1942): oats 84,538,000 bu., mixed grains 50,759,000 bu., corn for husking 13,622,000 bu., barley 12,179,000 bu., potatoes 358,050 tons, turnips, etc. 634,700 tons, hay and clover 5,962,000 tons, alfalfa 2,091,000 tons, fodder corn 3,135,000 tons, sugar beets 245,000 tons. Livestock (June 1, 1943): 2,693,700 cattle (including 1,169,700 milk cows), 1,885,600 swine, 737,500 sheep, 7522,200 horses, 25,403,100 hens and chickens, 668,300 turkeys. Fur output (1941–42): 1,024,195 pelts valued at \$3,965,003. The 1942 fisheries catch was worth \$4,103,345. Pulp and paper products in 1942 had a net value of \$50,340,500. In 1941 the gross value of lumber products was \$23,173,015. Mineral output in 1942 was valued at \$258,423,-

Mineral output in 1942 was valued at \$258,423,-267 (gold, 2,756,922 fine oz., accounted for \$106,-141,497, other metals \$124,366,057). Manufacturing (1941): 10,250 plants, 468,230 employees,

\$660,722,278 for salaries and wages, \$1,683,912,-216 for cost of materials, \$1,360,055,756 was the

net value of production.

Government. Finance (year ended Mar. 31, 1942): revenue \$111,496,170; expenditure \$96,-337,016; total direct and indirect liabilities (less sinking funds) \$847,887,493. The executive authority is vested in a lieutenant governor who is advised by a ministry of the Legislative Assembly. There is a single chamber in the Legislative Assembly comprising 90 members elected for a five-year term by popular vote. At the provincial gen-eral election held on Aug. 4, 1943, there were elected 39 Progressive Conservatives, 34 Coopera-tive Commonwealth Federationists (C.C.F.), 14 Liberals, and 3 others. Ontario is represented in the Dominion Parliament at Ottawa by 24 members (appointed for life) in the Senate and 82 elected members in the House of Commons. Lieutenant Governor, Albert Matthews (app. Nov. 30, 1937); Premier, Col. George Drew (Progressive Conservative).

OPA. See Price Administration, Office of. OPERA. See Music.

OPINION RESEARCH CENTER, National. An institution established in 1941 by the Field Foundation, Inc., of New York City, in association with the University of Denver, as the first non-profit, non-commercial organization in the United States devoted to

the measurement of public opinion.

During 1943 the Center continued its study of public opinion regarding postwar problems both in-ternational and domestic. Nationwide studies were made of popular attitudes toward a world union, the powers of such an organization, and the degree of responsibility United States membership might entail. Further research was made in the field of related economic problems—reparations, lend-lease, and trade barriers. Attitudes toward the problems of reconversion in the United States, including reemployment of war workers and veterans, and the issue of social security were surveyed. The findings were embodied in a series of published reports. A special report dealt with public opinion regard-

ing the part that the churches—organized religion should play in planning for peace. Two special studies were focussed on the interrelated problems of inflation: subsidies, wages and salaries, and prices. Attention was also given to certain educational problems, including public opinion regarding Federal aid to public education. Trends were accumulated on such topics as: attitudes toward Axis peoples, the American people and the war effort, gasoline rationing, and the United States'

postwar territorial policy. In September, 1943, the Center launched Opinion News, a fortnightly digest of outstanding polls and surveys. This publication summarizes the findings of the leading opinion polls and surveys, including the Gallup Polls, the Fortune Poll, and others. Early in the year the Center published a distorted map of the world, "Distribution of World Population," in which each country is drawn in proportion to its population instead of its land area. Population," in which each country is drawn in proportion to its population instead of its land area. In anticipation of the 1944 election, the Center also published a series of nine distorted maps based on the popular vote for president in 1940. See Elec-TIONS.

The National Opinion Research Center has also made several surveys for other non-profit organizations, including the United States Government; Carnegie Endowment for International Peace; Civic Research Institute (Kansas City); National Child Labor Committee: Social Science Foundation (Denver); United Service Organizations. The Director is Harry H. Field; Assistant Director and Statistician, William K. Salstrom.

PALAU ISLANDS. A group of islands (143° 10' E. and 6° 50' N.) in the western Carolines of the Japanese Pacific Islands (which see). The chief islands of the group are Palau proper, or Babeldoab (143 sq. mi.), Angaur (3 sq. mi.), and Korror (3 sq. mi.). Total area, 184 square miles. Civil population (1938), 12,798. Angaur supplies some 20 per cent of Japan's normal phosphate needs, the total deposits of the island being estimated at 2,400,000 tons. The laterite deposits contain a large amount of bauxite. There are many good anchorages for ships and a large harbor at Malakai.

PALESTINE. A former district of the Turkish province of Syria, conquered by British forces in 1917, and administered by Great Britain under a mandate of the League of Nations since Sept. 29, 1923. Capital, Jerusalem.

Area and Population. Area, 10,429 sq. mi. Estimated population on June 30, 1942, 1,605,816 (excluding British military forces); of this total, 987,985 were Moslems (mostly Arabs), 478,449 Jews, and 126,344 Christians (including some Arabs). In 1918 there were about 50,000 Jews and 650,000 Arab Moslems. The increase of the Jews from 7 to 30 per cent of the total population was due mainly to immigration, as the fecundity of the Arabs is greater. Of the 57,879 births in Palestine in 1941, 44,009 were Moslems and 9,714 Jews. There were 24,485 deaths (Moslems, 19,133; Jews, 3,710). Between Apr. 1, 1939, and Sept. 30, 1942, 38,000 Jewish immigrants entered Palestine, of whom 20,000 entered illegally. Estimated populations of the chief cities in 1941: Jerusalem, 141,100 (86,000 Jews); Tel-Aviv, 140,700 (all Jews); Haifa, 114,400 (57,000 Jews); Jaffa, 85,300; Gaza, 27,400; Nablus, 21,900; Hebron, 21,000; Petah Tiqva, 17,400; Lydda, 15,700.

Education. Education is not compulsory. In 1940–41 there were 1,491 schools of all types, with 7,483 teachers and 177,864 pupils. For Arab children, there were 403 government schools with 54,645 pupils and 191 private Moslem schools with 15,505 pupils. The Hebrew public school system consisted of 413 schools with 59,163 pupils, and there were 298 private Jewish schools with 23,892 pupils. Christian schools numbered 186 with 24,659 pupils. The Hebrew Technical Institute at Haifa in 1940–41 had 344 students and the Hebrew University on Mount Scopus, Jerusalem, 1,106 students.

Production. Agriculture supports over 50 per cent of the population, although manufactures have in recent years exceeded agricultural products in value. The chief crop is citrus fruit, which was hard hit by the war. Exports declined from 15,000,000 cases in the 1938—39 season to 170,000 in 1940-41. The 1942-43 crop was estimated at 4,500,000 cases, of which about 2,000,000 cases were consumed locally, 1,000,000 purchased for the Allied armies, and the remainder shipped to Syria, Lebanon, and Egypt. Yields of other crops were (metric tons): Wheat, 112,000 in 1942 (90,000 in 1941); barley, 122,000 in 1942 (68,000 in 1941); olives, 62,708 in 1942 worth \$11,469,000; olive oil, 9,455 in 1942-43; sesamum, 7,600 in 1940; tobacco, 1,000 in 1940; durrah and corn, 74,335 in 1941; potatoes, 20,736 in 1941; rice (grown for the first time), 400 in 1943. Livestock in 1943: 242,945 cattle, 244,062 sheep, 325,376 goats, 29,736 camels; 19,021 horses, 107,736 donkeys, 12,145 swine, 4,972 buffaloes.

Cement output in 1940 was 149,000 metric tons; potash, 63,527 in 1939; salt, 9,944 in 1940; gypsum, 4,403 in 1940; sulphur, 1,380 in 1940; refined bromine, 589 tons in 1939. The principal manufactures are clothing, textiles, leather, timber products, metals and machinery, printing and paper, food, chemicals, clive oil, soap, and wine. A large oil refinery completed at Haifa in 1940 received oil by pipeline from the Kirkuk fields in Iraq. In 1942 there were 1,299 factories with 30,000 workers producing essential supplies. Early in 1943 Jewish industrial enterprises had a total capital investment of £P14,000,000, of which some £P2,000,000 had been invested since the beginning of the war. Jewish industry comprised 76 textile factories, 52 metal works, 47 chemical plants, 30 diamond-cutting factories, 28 foodstuffs factories, etc.

Foreign Trade. Excluding military stores and fuel, imports in 1941 were valued at £P12,038,280 (£P11,035,454 in 1940); exports, excluding petroleum and Dead Sea chemicals, £P1,361,895

(£P2,114,584 in 1940). Chief 1941 exports: Wearing apparel, £P153,207; polished diamonds, £P143,693; chocolate, £P116,963; edible olive oil, £P90,568; hides and skins, £P70,912; soap, £P53,743. Of the 1941 imports, the United Kingdom supplied £P3,619,610; Egypt, £P1,575,237; United States, £P1,160,817. Of the exports, Egypt took £P579,329; Syria, £P148,647; United States, £P133,450; Turkey, £P120,828; United Kingdom £P80,668.

Finance. For the fiscal year ended Mar. 31, 1943, preliminary returns showed receipts of £P8,770,000 and expenditures of £P9,860,000. Final returns for 1941–42: Receipts, £P8,326,000; expenditures, £P7,464,000. The accumulated budget surplus declined from £P5,270,000 on Apr. 1, 1942, to £P4,180,000 on Apr. 1, 1943. Governmental receipts included grants-in-aid from the British Exchequer amounting to £P2,100,000 in 1941–42 and £P670,000 in 1942–43. Public debt, £P4,475,000 in January, 1942. The Palestine pound (£P) is equivalent to 1 pound sterling (\$4.03).

Transportation. The 328 miles of railway line and the highway network of over 2,500 miles with which Palestine entered World War II were later extended and improved for strategic purposes. The railway linking Cairo, Egypt, with Haifa, was extended 175 miles northward in 1942 to connect with the Syrian, Turkish, and Iraq networks at Beyrouth. Scores of asphalt military highways were built in Palestine and trunk highways were opened bringing Cairo within 10 hours drive of Jerusalem and linking Haifa with Baghdad. Lydda and other Palestinian cities are connected by air with Egypt, Iraq, and more distant points under Allied control.

Government. The territory is administered by a High Commissioner (Sir Harold Alfred MacMichael, assumed the office Mar. 1, 1938), who is appointed by the British Crown and assisted by appointed executive and advisory councils. The Jewish, Moslem, and Christian communities have autonomous control of their religious, cultural, and communal affairs. Official languages, English, Arabic, Hebrew. For 1943 developments, see below.

### HISTORY

Arch-Jewish Crisis. The struggle between Arabs and Jews for the control of Palestine mounted toward another crisis during 1943. Both sides intensified their underground preparations for armed violence, and observers warned that the Palestinian question would lead to riots and pogroms throughout the Middle East unless it was handled with fairness and firmness.

Two developments served to bring the irreconcilable Arab-Jewish claims to Palestine back into the foreground of discussion both in the Holy Land and among the United Nations. The rapidly changing fortunes of war forecast an early United Nations' victory, while the Nazis speeded up measures for the extermination of the Jews throughout most of Axis-controlled Europe. Both of these developments led Zionists the world over to intensify their efforts to nullify the official British policy, set forth in the 1939 White Paper (see 1939 Year Book, p. 591), which made permanent the minority status of the Jews in Palestine through restrictions on immigration and land sales. The Zionists demanded the lowering of immigration bars to provide a refuge for the persecuted Jews of Europe. At the same time they agitated for the establishment of a separate army of Palestinian and stateless Jews to fight under the Zionist banner with the United Nations forces. Both of these moves were designed to

strengthen the Zionist demand at the forthcoming peace conference for repudiation of the 1939 White Paper and the recognition of Jewish sovereignty

over Palestine.

Early in 1943 the Jewish Agency for Palestine submitted proposals to the British and other United Nations governments for the immediate admission of large numbers of European Jews to save them from extermination and to relieve the acute labor shortage in Palestine. Demonstrations in support of this program were held throughout Palestine on June 14. The Arab press strongly opposed the suggestion, contending that some other asylum must be found for European Jews. Arab leaders said they could not permit the Zionists to use the plight of European Jews as a lever for attaining their political aims in Palestine.

The British authorities held to the immigration quotas laid down in 1989, with minor exceptions. They permitted the entry in February of 1,228 Polish Jews, who had made a three-year odyssey from Poland through Russia, Iran, and Iraq. They arranged to receive 4,000 Jewish children and 500 adults from Bulgaria, and also promised to admit another 29,000 Jewish children with a smaller number of adults up to Mar. 31, 1944. The British Colonial Secretary on November 10 said that 43,-922 Jews had entered Palestine legally and illegally up to Sept. 30, 1943, as against the total of 75,000 who were to be admitted up to Mar. 31, 1944, under the five-year quota system set up in the 1939 White Paper. Attributing the failure to fill the quota to wartime transportation difficulties, he announced that the British Government had decided to extend the time limit for the entrance of the remaining 31,078. However the Colonial Secretary indicated that there would be no change in the basic policy of the White Paper, which made further Jewish immigration into Palestine subject to Arab consent.

The Zionist campaign against the 1939 White Paper spurred Arab leaders in Palestine to undertake the establishment of a representative political agency to take the place of the Arab Higher Committee, dissolved by the British administration in 1937 because of its connection with Arab terrorist activities. Arab leaders in neighboring countries sought to counteract Zionist activity by speeding negotiations for the establishment of an Arab federation to include Palestine, and in some cases by aligning the Arab states more closely with the United Nations war effort (see Arabia, Egypt, Iraq, and Syria and Lebanon, under History). In distant India the annual session of the All-India Moslem League on April 27 adopted a resolution condemning Zionist propaganda for a Jewish national state in Palestine as "a deliberate attempt to perpetuate a wrong on the Arab and Islamic world. . . ." Meanwhile Axis propaganda broadcasts to the Moslem peoples of the Middle East duralt on the fear that a United Nations victors. dwelt on the fear that a United Nations victory would mean Jewish domination of Palestine and subsequent aggressions upon neighboring Arab

Preparations for War. In a New Year's broadcast, High Commissioner MacMichael appealed to both Jews and Arabs to "face with cool, balanced wisdom the great responsibility that lies upon you for the maintenance of peace and goodwill in the Palestine of the future." Minority elements among both Jews and Arabs continued to strive for a peaceful compromise in the form of a bi-national Arab-Jewish state (see Dr. Judah L. Magnes, "Toward Peace in Palestine," Foreign Affairs, January, 1943, p. 239 f.). However the dominant forces on

both sides rejected compromise and speeded preparations for armed hostilities.

According to a correspondent of the New York Times, Arabs and Jews were both storing weapons in secret caches and organizing for offensive and defensive military operations. He stated that the Jewish Socialists and middle-class elements were preparing for self-defense only, but that the militant Revisionists were prepared to attack Arab areas in the event of trouble.

The correspondent reported that the Jewish Agency was recruiting Jewish volunteers for British and other United Nations armed forces for two reasons—to demonstrate active Jewish aid and to prepare Jews in the handling of weapons as a precaution against war with the Arabs. In January British authorities were obliged to enact a law to prevent terrorists and "hooligans" from using bombs, castor oil, and other means to persuade reluctant Jews to volunteer for military service.

The correspondent's report was substantiated in part on August 11 when a British military court in Jerusalem sentenced two British soldiers to 15-year prison terms for selling arms to an unnamed underground organization allegedly connected with the Jewish Agency for Palestine. The president of the court said that this "vast and dangerous organization with vast resources behind it" threatened "the

safety and defense of Palestine."

In their confession, the two convicted British soldiers named four Palestine Jews as members of a Jewish arms smuggling gang which had paid them sums up to \$3,600 to steal guns and ammunition from military dumps in Palestine and Egypt and prepare the way for delivery of the stolen weapons. Two of the four Jews involved—A. Tannenbaum, former inspector of Palestine police, and Isaac Levy—eluded arrest, but the other two were convicted by a British court-martial in Jerusalem on September 27 of the illegal possession of 300 Australian rifles and 105,000 American cartridges. The defendants were Abraham Rachlin, taxicab driver and former member of the Palestine police force, and Leib Sirkin, secretary of the Jewish seaman's union. They were sentenced to seven and ten years' imprisonment, respectively.

The trial of Rachlin and Sirkin aroused great interest and bitter controversy in Palestine because of prosecution assertions that the "vast, wealthy, unscrupulous gun-running organization" to which they belonged operated with the connivance if not the full knowledge and encouragement of the official Jewish Agency for Palestine. Sixty-three witnesses testified that the arms smugglers described themselves as working for the Jewish Agency. A Haifa official of the Agency was identified as one of those directly involved in the negotiations. These charges were flatly denied by David Ben Gurion, chairman of the executive committee of the Jewish Agency, and other spokesmen. Ben Gurion said the trial was "a crude frame-up designed to defame the Jewish war effort and bring Jewish soldiers into disrepute." He blamed "an anti-Semitic group in Palestine which is attempting to incite Anglo-American public opinion against Jews and prejudice the Jewish future in Palestine."

The British authorities continued their drive to break up the illegal accumulation of arms by both Arabs and Jews. The military tribunal that heard the Rachlin and Sirkin cases sentenced Eliahu Sacharoff, another well-known Jew, to seven years' imprisonment on October 7 for the illegal possession of two rounds of ammunition, one of which was similar to the American ammunition figuring in the Rachlin-Sirkin trial. On November 16 Pales-

tine police, aided by Indian troops and Polish military police, searched the Jewish village of Ramat Hakovesh for Jewish deserters from the Polish armed forces reported to have been harbored there and for illegal arms said to have been cached in the village for the training of an illegal Jewish military organization. Thirty-four of the villagers were arrested after the search.

On November 20 the Palestine authorities suspended nine daily Hebrew newspapers and a German-language daily at Tel-Aviv for one week for publishing uniform statements, officially described as "highly tendencious accounts of the search," without submitting them to the required censorship. The Jewish account of the search said there had been violence on both sides and that all male villagers had been forcibly rounded up inside a barbed-wire enclosure. These events were followed on November 20 by anti-British riots and various protest meetings in Tel-Aviv. Twenty-one Jewish residents and 11 British constables were injured in the rioting. The suspended newspapers were permitted to resume publication November 30 and the arrested villagers were released on bail two weeks

A Jerusalem military court on December 10 convicted seven Jewish villagers of Kibbutz Hulda of the illegal possession of 68 mortar bombs and 85 ballistite cartridges found there on October 3. Rejecting the court's offer of a lighter sentence if they revealed the source of these weapons, the defendants were sentenced to prison on December 17 for

terms ranging from two to six years.

British Block Jewish Army. Despite pressure from Zionist organizations in Britain and the United States, the British Government declined to authorize the creation of a separate Jewish army. However Jewish volunteers for service in the British armed forces considerably outnumbered Arab volunteers. A dispatch of Aug. 1, 1943, to the New York Times reported that there were about 22,000 Jewish men in the British armed forces, 7,000 in auxiliary police units, and 35,000 in civil defense work. Arab volunteers numbered about 6,000 in the armed forces, 4,000 in the auxiliary police, and 10,000 in civil defense. The volunteer mixed Arab-Jewish defense force created in December, 1940, to resist a threatened, Axis invasion was dissolved in December, 1943, on the ground that it served no further useful purpose.

Economic Developments. The presence in Palestine and nearby countries of large Allied military forces created an unprecedented demand for military supplies and foodstuffs, accompanied by an acute labor shortage and rising living costs. Many Arab and Jewish truck farmers made relatively enormous profits. Industrial plants producing essential supplies operated at full capacity and there was a

rapid growth of new industries,

The latter development was due in large part to assistance provided by the United Kingdom Commercial Corporation, acting as agent for the Mid-dle East Supply Center. The Corporation made ailable the shipping, raw materials, and equip-

ent for the development of Palestine as a major lied supply base. With the Corporation's techal and financial aid, plants were erected for the oduction of sulfurie, nitric, and hydrochloric ids in quantities sufficient to meet the needs of lestine, Syria, Cyprus, and Turkey. The need of ipping to import superphosphate fertilizer for the ne region was largely eliminated by a UKCC heme to manufacture the fertilizer from the raw osphates of Trans-Jordan and the surplus sulfuric acid and acid-tar products of the Haifa oil

refinery

The Palestine authorities met the danger of inflation and labor scarcity by more strict control of prices and the rationing of both manpower and foodstuffs. The subsidy for citrus growers was continued to tide them over the war crisis. In November citrus exports were resumed for the first time since 1940. New and heavier taxation was imposed to eliminate a budget deficit and offset the decrease in the British Exchequer's annual grant-in-aid to Palestine. At the same time more liberal labor legislation was enacted. In March Sir Douglas Harris was appointed to the newly created post of Reconstruction Commissioner to prepare for postwar economic developments. However the Zionist General Council in July voted to refuse its cooperation with government reconstruction schemes so long as the Administration proceeded on the basis of the 1939 White Paper.

A War Economic Advisory Council, composed of 4 Arabs, 4 Jews, and 2 Britons, was appointed November 3 to coordinate the activities of the 11 controllers in charge of the various fields of civilian war effort. In connection with the anti-inflation drive, provision was made in September for the establishment of low-cost restaurants and for revision of the food distribution system.

Effective Jan. 1, 1943, the General Federation of Jewish Labor established an old-age pension fund on the lines of the Beveridge plan. Through a special levy on all members, the federation proposed to pay a monthly pension of 2£ 10s. to members incapable of self-support, beginning Jan. 1, 1945.

See EGYPT, GREAT BRITAIN, IRAQ, under History; ARCHAEOLOGY; CHEMISTRY under Foreign;

Music; Refugees.

## PALLADIUM. See PLATINUM.

PALMYRA ISLAND. An atoll in the Central Pacific, belonging to the United States. Lying 1,109 air miles southwest of Honolulu and 1,513 miles northeast of Pago Pago in American Samoa, it is an important station on the Hawaii-Samoa air route. Land area, 1½ square miles. Population (1940 census), 32. With funds appropriated by Congress in 1939 and 1941, the U.S. Navy Department, which has jurisdiction over the island, converted it into a naval air station (commissioned Aug. 15, 1941).

PANAMA. A republic of Central America, bisected by the Panama Canal (which see). Capital, the city of Panama.

of Panama.

Area and Population. Area, 34,169 square miles. Population (1940 census), 631,637, including civil population of 566,677 and Indian population (living in tribes) of 64,960. Chief cities (1940 census): Panama, 111,893 (21,619 whites, 29,402 Negroes, 58,375 of mixed race, and 2,497 others); Colón, 44,393 (8,107 whites, 23,532 Negroes, 10,908 mixed, and 1,846 others); David, 9,222. On Jan. 1, 1941, there were 7,222 United States citizens in the republic. zens in the republic.

Defense. On July 7, 1942, an agreement was signed by the U.S. Secretary of State, Cordell Hull, and the Ambassador of Panama at Washington, providing for a U.S. army officer to serve as adviser to Panama's Foreign Minister in matters pertaining to defense. Air and anti-aircraft bases for the defense of the Canal Zone were granted to the United States in 1941. There were 2,150 officers and men in the National Police Force.

Education and Religion. The census of 1940 re-

vealed that 93 per cent of the individuals of 10 years of age and over had received at least a primary-school education. In 1940–41 there were 63,122 pupils in 621 public elementary schools, 4,021 pupils in 7 secondary schools, 1,028 pupils in the college for higher education, and 725 pupils in the National University of Panama; in addition there were various special, normal, and vocational schools. The Constitution of Jan. 2, 1941, recognizes the Roman Catholic Church as that of the majority of the people, but guarantees freedom of religion.

Production. As of July, 1942, approximately one-third of Panama City's working population and one-half of Colón's were employed by Canal Zone agencies. The remainder of the employed population of the republic was engaged mainly in commerce, the tourist trade, agriculture, cattle raising, lumbering, and pearl fishing. Bananas were the chief export crop until the war shipping crisis of 1942–43 caused abandonment of 12,000 acres of banana plantations. Banana exports declined from 6,400,000 stems in 1938 to 2,369,000 stems in 1942; cacao exports from 11,601,000 lb. in 1939 to 4,309,000 lb. in 1942. Yields of abaca and the food crops increased. The 1942 harvest included: Rice, 112,000,000 lb.; corn, 777,847 quintals; and record yields of beans and cassava. White sugar production (1942) was 4,078 short tons. There were 333,960 cattle and 138,000 hogs in June, 1942—twice as many as in 1938. Some rubber (17,773 kilos in 1941), gold, and coconuts are exported.

Foreign Trade. Imports in 1942 totaled 37,580,000 balboas (32,504,000 in 1941); exports, 2,229,000 balboas (4,283,000 in 1941). The United States in 1941 supplied 81.5 per cent of the total imports and took 97.1 per cent of the exports (excluding reexports). Bananas, cocoa beans, gold bullion, and coconuts were the chief 1941 exports. Gasoline, wood, cement, wheat flour, perfumes and cosmetics, and industrial machinery were the leading

imports.

Finance. Budget estimates for the two-year period 1941–42 balanced at \$30,127,977 (\$39,378,714 for 1943–44). Actual revenues for the calendar year 1942 were \$22,310,000 (\$17,621,460 in 1941); actual expenditures, \$21,347,000 (\$18,046,000 in 1941). The 1941 returns excluded \$4,000,000 received from the sale of bonds and \$3,972,356 paid for interest and amortization on loans. The internal debt was reportedly liquidated during 1942. External debt, 18,560,000 balboas on Dec. 31, 1942. The balboa, unit of currency, is equal to the U.S. dollar.

Transportation. The chief railway is the Panama Railroad in the Canal Zone, which connects Panama City and Colón. Highways extend over 870 miles. During World War II a network of important military highways was constructed by the United States in the Canal Zone and Panama. It included the final Panamanian section of the Pan American Highway, the Trans-Isthmian Highway, and the Chorrera-Rio Hato road. In 1942 the U.S. Government also undertook to construct a macadam highway from Piña on the Atlantic side of the Isthmus to the Canal Zone boundary at Rio Providencia, and to extend the Trans-Isthmian Highway from Madrinal to Panama City via Roque and Pueblo Nuevo (see 1943 Year Book). Air transport services are provided by Pan American Airways. As of Dec. 31, 1941, a total of 327 ships of 1,344,345 gross tons (mostly foreign-owned) were registered under the flag of Panama.

Government. The Constitution effective Jan. 2, 1941 (see Year Book for 1940, p. 575), extended

the terms of office of the President and members of the National Assembly from four to six years and increased the powers of the President. The President and the 32 members of the National Assembly are elected by direct popular vote. President Amulfo Arias was deposed on Oct. 9, 1941, during his unauthorized absence from Panama, and was succeeded by Ricardo Adolfo de la Guardia, Minister of Government and Justice (see 1942 Year Book for details). On Jan. 4, 1943, the National Assembly adopted a resolution continuing the de la Guardia administration in power for two more years. Panama declared a state of war with Japan on December 8 and with Germany and Italy on Dec. 12, 1941. For 1943 developments, see below.

## HISTORY

The administration of President Ricardo Adolfo de la Guardia received an additional two years' lease on power by a resolution adopted by the National Assembly on Jan. 5, 1943, by a vote of 28 to 4. This action followed preparations for continuance of the Government in office made during 1942 (see 1943 Year Book). During the debate in the National Assembly that preceded the vote, Foreign Minister Octavio Fábrega attacked former President Arnulfo Arias, who was in exile in Argentina, as "a second-class dictator" who had in 1940 "brought the German spy Karl Brunner here, so that he could inform Germany of all that was being done at this strategic spot." He said that President de la Guardia had demonstrated his attachment to hemispheric solidarity and his determination to keep Axis spies and saboteurs out of the republic.

In a speech accepting the honorary presidency of the anti-totalitarian International Democratic Action society, the President pledged himself to maintain "public liberty and individual rights... until the last second of my administration." A revolutionary plot against the Government was nipped in the bud August 28 with the arrest of Dr. José Pezet, former Minister of Education in the Arnulfo Arias administration, Pezet's nephew, and 13 police officials. Pezet, who claimed that he became the lawful President of Panama upon the ousting of President Arias by the 1941 coup, was charged with attempting to secure the support of the national police through bribes and promises of pro-

motions

The de la Guardia administration maintained close friendship and collaboration with the U.S. Government throughout the year. Vice President Henry A. Wallace was warmly welcomed when he visited Panama on his goodwill tour of Latin America on March 22-24. The two important agreements signed by the U.S. and Panamanian Governments on May 18, 1942 (see 1943 YEAR BOOK, p. 519) were ratified in May, 1943, and placed in effect. The U.S. Senate on April 26 approved by a vote of 37 to 19 the agreement under which the United States undertook to turn over to Panama water and sewage systems and real estate holdings in the cities of Cólon and Panama and to cancel a \$2,700,-000 debt representing Panama's share in the construction of the Chorrera-Rio Hato highway. This legislation was signed by President Roosevelt on May 3. On May 11 the National Assembly of Panama unanimously approved the complementary agreement governing the use of defense sites on Panama's territory by American forces defending the Canal.

The detail of a U.S. Army officer to serve as adviser to the Panamanian Minister of Foreign Affairs, agreed upon July 7, 1942, was extended for another year through an exchange of notes signed

July 6 and Aug. 5, 1943. Sixteen electric light plants owned by the Government of Panama were sold to the Panama Electric Company, a subsidiary of the Electric Bond and Share Company, for \$250,000 on September 15. It was announced on May 9 that dry excavation for the third set of locks for the Panama Canal was almost completed.

The new Inter-American University was opened September 27 in Panama, with the Government contributing \$4,000 monthly toward its organization and maintenance. It was understood that the Government's contribution was to provide five professorships and 20 scholarships for distribution among teachers and students of the entire hemisphere. Students of the Inter-American University, the National Institute, and the Girls Lyceum went on strike in November in protest against the discharge of a professor, who was accused by the Government of neglect of duty and political activ-

ities incompatible with his position.

Panama enjoyed boom conditions during 1943 as a result of heavy expenditures by contractors at work on the Panama Canal and by the numerous United States service men stationed in or passing through the Canal Zone. Meanwhile the lack of imports resulted in an accumulation of purchasing power out of all proportion to the republic's size and normal wealth. The agricultural development program launched in 1942 yielded favorable results, particularly in the increased production of rice and corn, the basic diet of the people. On April 8 the National Assembly approved a bill for the promotion of agricultural colonies; it authorized homesteaders to occupy Government land tax-free and to secure title to the land after working it for two years.

See Spanish-American Literatures; World

WAR (for Panama's war declarations).

PANAMA CANAL. See COORDINATOR OF INTER-AMERICAN AFFAIRS; PANAMA CANAL ZONE; ROADS AND STREETS.

PANAMA CANAL ZONE. This strip of land crosses the Isthmus of Panama and extends about five miles on each side of the canal between the cities of Colon on the Atlantic Ocean and Panama on the Pacific Ocean. By means of a treaty with the Republic of Panama in 1903 the United States leased the Canal Zone in perpetuity at an annual rental of \$250,000 (gold currency). In 1933 the United States went off the gold standard and since then the annuity has been fixed at \$430,000 payable in any currency. Area, 552.95 sq. mi., including 190.94 sq. mi. of water.

Population. The 1940 U.S. census reported 51,-Population. The 1940 U.S. census reported on-827 persons, both civilian and military, in the Canal Zone. Of this number less than one-half were whites from the States. The remainder were mostly Negroes who were born or had parents who were born in the English-speaking West In-dies. This accounts for the widespread use of English in the Canal Zone. Detailed 1943 statistics on population were not available because of censorship. But in 1940 the death rate was 6.43 per 1,000 and the birth rate 12.56 per 1,000. Sufferers from malaria among the civil population averaged 17 per 1,000. Illiteracy was low in the white civilian population, 2.3 per cent in 1930, but higher among the Negroes, 16.8 per cent in 1930. (The Federal census for 1940 did not record any illiteracy figures.) Public schools for both whites and Negroes are supported by Congressional appropriations. Opportunities are available for white children through the Junior College level and for Negroes through

the ninth grade. There is maintained, however, a Normal School for the purpose of training Negro

Panama Canal Finances. For the fiscal year ended June 30, 1943, total revenues of the Panama Canal were \$8,872,067, net appropriation expenses \$11,-268,564, and the net deficit \$2,396,497. The net capital investment in the Canal, after depreciation, as of June 30, 1943, was \$644,826,653, including \$128,991,063 interest on funds borrowed to construct the Canal up to the opening on July 12, 1920.

Economic Conditions. The Panama Canal Zone is a U.S. military reservation whose principal industry during peace times is the maintenance and op-eration of the Panama Canal. All other functions center around this major activity. The Federal Government owns all the land and dwellings, pub-lic buildings, schools, clubs, movies, the only dairy farm, and the one printing plant. Only employees of the United States may live in the Canal Zone and all employment is restricted to Government ventures. Food and clothing are sold to residents from Government-owned commissaries. Before the United States undertook to strengthen its defenses in 1940 there was considerable unemployment among the unskilled Negro workers. But with the advent of war this condition was removed. Recent data on shipping traffic, financial operations, and commerce were withheld for military reasons. See

YEAR BOOK for 1943, p. 521.

Government. A civil government was authorized by Congress by the Panama Canal Act of 1912 and general supervision delegated to the Secretary of War. Administration rests, normally, in the hands of a Governor (in 1943, Maj. Gen. Glen E. Edgerton) who is appointed by the President for a period of four years. But in wartime the control of the Canal and the government of the Zone are under the authority of the commanding general of the Panama Canal Department, U.S.A. Subject to such superior authority the scope of government in this area goes much beyond the functions of government in the States and other Territories. The Covernor is the superintendent of the Canal, and the president of the Panama Railroad. He has charge of relations with the Republic of Panama and supervises all the resources of the Zone. His duties can be compared to those of an executive in the efficient management of a vast business organization. The Executive Secretary, appointed by the governor, is responsible to him for the proper exercise of such governmental func-tions as fall within the scope of the police, fire, school, and civil affairs divisions. The administration of justice is carried on through the district court and two magistrate courts. A district attorney conducts all civil and criminal cases for the Federal Government and a United States marshal executes the processes of the district court. Judicial officers, with the exception of the magistrates, are appointed by the President.

PAN AMERICAN HIGHWAY. See ECUADOR, PARAGUAY and each of the Central American republics, under Transportation or History.

PAN AMERICANISM. Inter-American solidarity in resisting Axis aggression was further extended during 1943. Chile finally severed diplomatic and economic relations with Germany, Italy, and Japan on January 20, a full year after the Rio de Janeiro Conference of American Foreign Ministers recom-mended such action. Chile's action left Argentina as the only one of the 21 American republics maintaining relations with the Axis nations. Bolivia declared a state of war with the three principal Axis Powers on April 7 and Colombia declared war on Germany November 27. This raised to 14 the number of American republics at war with one or more of the Axis countries. See table under WORLD WAR for dates of war declarations and severances of re-

lations by each republic. The year also saw steady progress in the development of the program of military, political, and economic cooperation among the American republics agreed upon at the Rio de Janeiro Conference in January, 1942 (see 1943 YEAR BOOK, p. 522 f.). This program, based upon agreements and principles adopted at the Inter-American Conferences of 1933, 1936, and 1938 and the meetings of American Foreign Ministers at Panama in 1939 and Havana in 1940, called for joint action in combating Axis propaganda, espionage, economic penetration, and subversive activities. In return for such collaboration on the part of the other republics, the United States had pledged financial, technical, and economic aid in increasing the hemisphere's production of strategic materials, mobilizing shipping facilities for their transportation, and stimulating increased production and more equitable distribution of necessities among all the American peoples on a long-term basis. Finally, the program aimed at developing closer unity among the American governments in tackling postwar problems, particularly the problem of establishing a stable peace. See PAN AMERICAN Union for a summary of steps taken

to carry out this program during 1943. The major achievements of the Pan American movement during 1933-43, and the resultant concrete assistance to the United States war effort, were set forth by Secretary of State Hull on December 14 in replying to an attack upon the Roosevelt Administration's "good neighbor" policy made by Senator Hugh A. Butler, Nebraska Republican.

Mr. Hull's statement follows in part:

Beginning 10 years ago at Montevideo we of the Americas have built a cooperative relationship to increase our trade and raise our standard of life and to serve as a bulwark in the defense of our independence and freedom. At Buenos Aires we established the procedure of consultation before the menace of overseas aggression. At Lima we proclaimed the solidarity of the Americas and our determination jointly to face common dangers to our security. After war broke out in Europe in 1939 we had two special meetings, one at Panama and another at Habana, where we concerted measures of mutual assistance. We agreed to consider an attack against one as an attack against all.

Habana, where we concerted measures of mutual assistance. We agreed to consider an attack against one as an attack against all.

On December 7 attack came and with it the sternest test of inter-American solidarity. The other American republics realized that the Axis attack against the United States was only part of a plan to conquer the entire world. Now, 13 are in a state of war with the Axis, and 6 others have broken diplomatic relations with the Axis, argentina alone has failed to act.

We in the United States are proud of our membership in the inter-American system through which the 20 American republics have so decisively met the challenge of our times. At the blackest moment of the war, during the meeting of Foreign Ministers at Rio de Janeiro, our sister republics raised their banners alongside ours. They opened their ports to our ships. They welcomed and quartered our troops on their soil. They devoted their mines, their forests, and their fields to the intensive production of strategic war materials. They rounded up Axis spies and saboteurs, and they shut off trade of benefit to the Axis. They cooperated in the defense of the Panama Canal and in the suppression of the submarine menace. All this and much more they did as their contribution to victory.

The plain truth is that without this cooperation the course of the war in highly essential strategic areas might have been different. For example, consider the situation in the Near East. When Rommel was hammering at the gates of Egypt it was planes and light-tank ammunition ferried by northeastern Brazil that helped turn the tide. The value to our cause of the use of these Brazilian Army and Navy cannot be overstated.

Oversegs Expeditions Planned. In addition to the direct military aid cited by Secretary Hull, two of the Latin American republics-Brazil and Mexico -had virtually completed preparations by the end of 1943 for sending military expeditions overseas to join in the armed conflict. Brazilian divisions were scheduled to see action in Europe during 1944, while the Mexican Government announced plans to send military contingents to fight the Japanese in the Pacific.

The Inter-American Joint Defense Board, set up in 1942, continued its work of planning and co-ordinating measures for the defense of the continent (see Bulletin of the Pan American Union, July, 1943, p. 402, for a report on the Board's activities during its first year of operation). Mean-while naval and air bases for joint use by the cooperating American republics in waging war against the Axis were completed in Brazil, Ecua-dor, and most of the other countries of the hemisphere. These bases were financed with U.S. lendlease funds and defense appropriations by the United States and the Latin American governments directly concerned. All of the Latin American republics except Argentina received U.S. lend-lease aid in expanding, equipping and modernizing their armed forces.

Political Defense. Probably the most actively useful of all the hemisphere war agencies established by the Rio de Janeiro Conference was the Emergency Advisory Committee for Political Defense, with its headquarters at Montevideo (see under PAN AMER-ICAN UNION). Under the chairmanship of Dr. Alberto Guani, Vice President of Uruguay, this committee spent the first year of its labors (up to Apr. 15, 1943) preparing a detailed program of legislation designed to combat Axis political warfare, which it recommended for adoption by the individual American republics. With the substantial completion of this phase of its activities, the Committee early in 1943 followed up by sending groups of its members on tours of the American republics for direct consultation with responsible officials with regard to the application of political defense measures. In many cases, these visits led to the further tightening and extension of existing controls.

The major problem facing the Committee was the continuance of Axis political warfare throughout the continent from bases and with facilities left in the hands of Axis agents as a result of the Argentine Government's neutrality policy (see Ar-CENTINA under History). A memorandum drawn up by the U.S. Government and made public by the Committee on January 22 disclosed the existence in Argentina of a vast spy ring operating throughout South America under the direction and orders of the German Embassy in Buenos Aires. This memorandum was said to contain much of the information on Axis activities confidentially submitted to the Argentine Foreign Office by the U.S. Ambassador on Nov. 3, 4, and 10, 1942 (see 1943 YEAR BOOK, p. 43). The document was made public over the objections of the Argentine member of the committee and with the Chilean member not voting. It had a marked influence upon the development of anti-Axis opinion not only in Argentina

but also in the other countries of the hemisphere. Reporting on the Committee's activities before the Inter-American Joint Defense Board in Washington on January 25, Dr. Guani denounced radio propaganda broadcast from Berlin, Rome, and Tokyo as "one of the most powerful political weapons of our enemies." He recommended that "an efficient and energetic campaign should be carried out to counteract it"—a proposal subsequently acted upon by the U.S. Office of War Information. In a recommendation adopted May 25, the Committee discouraged further repatriations of Axis nationals from the Western Hemisphere and stricter interment and detention measures as a means of preventing additions to the manpower at the disposal

of the Axis nations.

The first annual report of the Committee issued in Montevideo July 31 declared that the repression of illicit activities by Axis agents was impossible so long as one American country maintained diplomatic relations with Germany, Italy, and Japan. The report warned that Allied victories had not eliminated the danger of Axis political aggression. It declared that a desperate enemy might still use political methods as an extremely effective weapon to weaken the war effort of the American countries. Substantiation of this danger came on November 12 when Dr. Guani reported an increase in subversive activities in South America. This increase coincided with the pro-Fascist trend of the Argentine military dictatorship established in June.

This disturbing development appeared likely to be duplicated in Bolivia, after pro-Axis and antidemocratic elements gained power through the military coup of December 20. On December 24 the Committee urged the American governments which had declared war or broken relations with the Axis powers "not to proceed to the recognition of a new government instituted by force, before consulting among themselves for the purpose of determining whether this government complies with the inter-American undertakings for the defense of the continent, nor before carrying out an exchange of information as to the circumstances which have determined the establishment of said government." In line with this proposal, none of the American governments recognized the new government in Bolivia, except Argentina.

For a detailed study of the Emergency Advisory Committee for Political Defense, see Karl Loewenstein, "Pan Americanism in Action," Current His-

tory, November, 1943, p. 229 f.

Economic Collaboration. Economic mobilization of Latin American resources to feed United States war industries and reciprocal economic aid from Washington to cushion the shock of war upon the economies of the other republics was carried on mainly through bilateral agreements (see each republic, under *History*, for details). The United States—in some instances with British collaboration—purchased virtually all the surplus strategic materials that the mines, farms, and forests of Latin America could produce. To increase the output of rubber, abaca, quinine, vegetable oil, insecticides, and other scarce commodities formerly imported from the Far East, Washington advanced funds, supplies, and technical assistance to Brazil and other tropical American republics. It assisted in the construction of roads, airports, and other public works needed to expand production of these commodities. It likewise cooperated in extensive campaigns against tropical diseases obstructing the progress of this emergency program.

Most of these projects had both a short-term and a long-term significance. The U.S.-Brazilian program for opening up the Amazon basin aimed at the immediate expansion of rubber production and also at the permanent economic development of that vast region. From the point of view of the increased amount of rubber collected in the Amazon area during 1943, the results were discouraging. Other significant economic development schemes were in progress in Haiti, Bolivia, and Ecuador.

U.S. governmental agencies also continued to

make large purchases of nonstrategic materials and to extend other financial assistance in order to support Latin American economies. Up to September, 1943, the U.S. Commodity Credit Corporation had bought some 10,600,000 bags of Brazilian coffee, most of which could not be moved for lack of shipping. War agencies in Washington contracted to buy cotton from Nicaragua, Haiti, and Peru; assisted Brazil, Mexico, Ecuador, and Colombia to stabilize their currencies; and advanced credits for roadbuilding in the Central American republics for strategic purposes and to relieve unemployment caused by the closing of banana and other markets in the United States.

The United States was also aiding in the development of Latin American manufacturing industries. In part, this aid was intended to relieve the strain upon Allied shipping—in the summer of 1943 only 16 per cent of the U.S. dry cargo tonnage was available to maintain the essential civilian economy of the United States and the other American republics. But it was also designed to lay industrial foundations for a long-range improvement in Latin American standards of living and thus to assure an expanding market for United States exports. As part of this program, there were in the United States at the end of 1943 over 200 recipients of industrial and trade scholarships from the other republics. They were studying North American production methods and acquiring other business and technical skills for future utilization in their own countries.

Additional bilateral economic accords were concluded during the year between various Latin American countries. Brazil granted Bolivia a free port in Santos. Argentina made the same concession to Paraguay at Buenos Aires and took preliminary steps toward customs unions with Chile and Paraguay. The Inter-American Financial and Econemic Advisory Committee, established in Washington on Nov. 15, 1939, played an important role in weaving this new fabric of inter-American cooperation. It made studies and formulated recommendations for defensive and offensive economic warfare against the Axis powers and for the further development of inter-American production and

See also Ernest S. Hediger, "Agricultural Cooperation in the Americas," Foreign Policy Reports, Sept. 15, 1943; Percy W. Bidwell, "Good Neighbors in the War, and After," Foreign Affairs, April, 1943, p. 524 f.; Office of the Coordinator of Inter-American Affairs, Americas United (1943); "Inter-American Health Plan," Foreign Commerce Weekly, May 29, 1943, p. 8 f.; report of Secretary of State Hull on activities of the Inter-American Financial and Economic Advisory Committee, Department of State Bulletin, Mar. 27, 1943, p. 260 f.

The Labor Problem. Because of its great need for Latin American strategic materials and the heavy financial investment made to obtain them, the U.S. Government was disturbed by the disquieting signs of unrest that developed among Latin American industrial workers. The killing of a number of striking miners by troops at the Catavi tin mines in Bolivia in December, 1942, threatened to interrupt the supply of tin to United States war industries. The State Department accordingly accepted an invitation from the Bolivian Government to send a mission composed of labor experts to Bolivia to study labor conditions and make recommendations for their improvement (see Bolivia under History). In various other ways Washington sought to prevent a deterioration of living standards in Latin America that would affect production of strategic

materials and play into the hands of Axis agitators. An improvement in the condition of the workers was declared an objective of the long-range development programs under way in Latin American

republics with U.S. assistance.

The need for such action was demonstrated by the plans announced by the Federation of Latin American Workers for an Inter-American Economic Conference in 1944 in Mexico City to study proposals for raising living standards, spurring technical progress, mechanizing agriculture, opening up new fields of production, etc. The Federation, organized in 1938 by Lombardo Toledano, head of the radical Federation of Mexican Workers (CTM), claimed to represent 4,650,000 workers in 14 Latin American countries. When the CTAL Council met in Havana, Cuba, in July, 1943, to lay plans for the 1944 conference, the Cuban Socialist delegates withdrew on the ground that the Council was under overwhelming Communist domination.

Interchanges of Visits. In addition to the specific economic, political, and military activities described above, various other developments of the year tended to strengthen the ties binding the American republics together. Interchanges of visits by high governmental leaders continued. The Presidents of Bolivia, Paraguay, and Venezuela and the Vice President of Uruguay visited Washington and stopped at other American capitals en route. President Roosevelt conferred with President Vargas of Brazil at Natal in January and with President Avila Camacho of Mexico at Monterrey in April. From March 16 to April 24 Vice President Henry Wallace made an official tour of seven Latin American countries—Costa Rica, Panama, Chile, Bolivia, Peru, Ecuador, and Bolivia-where he was received with enthusiasm, particularly by the pro-democratic elements of the middle and lower

Other visits were exchanged by a number of Latin American presidents and Foreign Ministers. Because of her non-cooperation in hemisphere defense, Argentina was excluded from the United Nations Food Conference at Hot Springs, Va., and omitted from Secretary Wallace's good-will tour. But the Argentine leaders sought to counter this coldness by actively wooing Chile, Bolivia, and

In addition to these exchanges of visits by government officials, there was a growing interchange of professors, students, professional men, and leaders of business, industry, and labor. Meanwhile the incessant round of specialized inter-American conferences continued. The second national and Pan American Press Congress was held in Havana in June. The Inter-American Bar Association met in Rio de Janeiro in August, and the Inter-American Demographic Congress in Mexico City in October (also see Pan American Union). The legations exchanged between the United States on one hand and Costa Rica, the Dominican Republic, El Salvador, Guatemala, Haiti, Honduras, and Nicaragua on the other were elevated to embassies under an agreement announced March 23.

Pan Americanism in Balance. By the end of 1943 it was clear that the Pan American movement had made a substantial contribution to the security and prosperity of the nations of the hemisphere and to Allied successes against the Axis. It was also recognized that the "good neighbor" policy of the United States was an important contributing factor to the success of Pan Americanism. At the invitation of the Cuban Senate, the diplomatic representatives of all 20 Latin American countries in Washington presented to President Roosevelt on June 30,

through the governing board of the Pan American Union, a resolution commending the "good neighpolicy.

On the other hand, there were attacks upon the Pan American movement and the "good neighbor" policy from three sources-Axis propagandists, Latin Americans who were either pro-Axis or who feared Pan Americanism as a screen for United States imperialism, and opponents of the Roosevelt Administration in the United States who sought to make political capital from criticisms of its activities in Latin America (see United States under

Foreign Relations).

Some of the Latin American governments that had severed relations with the Axis powers were slow in adopting and enforcing the measures against the Axis recommended by inter-American conferences and agencies. There was also some criticism in Latin America of the failure of the United States to supply the shipping and the materials necessary to provide that region's vital import needs. But the fear that the war would bring economic catastrophe to Latin America was largely removed by heavy United States purchases (see TRADE, FOREIGN).

The general manager of the airport construction division of Pan American Airways revealed on April 10 that scores of airports were nearing completion, linking the United States with the bulge of Brazil via both the Caribbean islands and Central and South America. Spaced at 500-mile intervals in the jungle, these airports were designed to serve as emergency landing fields and refueling stops for the stream of U.S. bombers, military transports, and commercial airliners flying to the fighting fronts and military and commercial centers in

other parts of the world.

Axis propagandists spread allegations that the United States was seeking permanent footbolds in Latin America by retaining control of airports and military-naval bases it had helped to build there for emergency war purposes. In a sweeping denial of this charge issued March 6, Acting Secretary of State Summer Welles gave assurances that the United States had no intention of holding these bases in the Western Hemisphere permanently. Yet suspicion of the ultimate purposes of the United States remained in many parts of Latin America, particularly in Argentina and among the uneducated masses in Mexico. There was a fairly widespread fear that the "good neighbor" policy would not outlast the Roosevelt Administration.

Another trend disturbing to many Latin Americans was the tendency in some North American circles to support a Pan American regional bloc under United States leadership as a substitute for a world organization to maintain peace and advance general prosperity. However Under Secretary of State Welles, Nelson Rockefeller, Coordinator of Inter-American Affairs at Washington, and other spokesmen set forth the Administration view that the Pan American movement was not a substitute for world cooperation but pointed the way toward an over-all organization.

PAN AMERICAN UNION. The Pan American Union is an official international organization founded in 1890 as the International Bureau of American Republics and maintained by the 21 republics of the Western Hemisphere for the development among them of good understanding, friendly intercourse, commerce, and peace. It is controlled by a Governing Board, composed of the Secretary of State of the United States and the diplomatic representa-tives in Washington of the other republics, and is administered by a Director General and an Assistant Director chosen by the Board. The Union publishes a monthly Bulletin in three editions, English, Spanish, and Portuguese, as well as numerous special reports on the countries which are members of the Union. The Pan American Union acts as the permanent organ of the International Conferences of American States which meet at intervals of five years. The last or Eighth of these Conferences was held at Lima, Peru, Dec. 9-27, 1938. On recommendation of the Colombian Government, the Governing Board on Jan. 6, 1943, indefinitely post-poned the Ninth International Conference, which was scheduled to open in Bogotá the following

During 1943 the Pan American Union and the special agencies which it had created for the purpose, continued to give preferential attention to the problems confronting the American republics as a consequence of the war. The Inter-American Defense Board, established at Washington and composed of military, naval and aviation representatives of the 21 republics, continued their consideration of problems relating to the defense of the Continent. The Emergency Advisory Committee for Political Defense, organized in Montevideo to meet the problems of subversive activities in the American republics, prepared a series of basic recommendations and in 1943 made visits to several countries for the purpose of working out plans with national officials for putting these recommendations into effect. National committees on political defense have been set up in most of the countries of the Western Hemisphere.

The Inter-American Financial and Economic Advisory Committee, which was organized at the Pan American Union in 1939 immediately following the outbreak of the war, gave major consideration to implementing the economic resolutions adopted at the Meeting of Ministers of Foreign Affairs held at Rio de Janeiro in 1942. The coffee marketing agreement, whereby the United States market was divided among the 14 coffee exporting countries of Latin America on the basis of their proportionate share of total production, was extended for another year to October, 1944.

Postwar problems also began to receive consideration. The preliminary recommendation on postwar organization formulated by the Inter-American Juridical Committee of Rio de Janeiro was transmitted for observation and comment to the Governments of the American Republics, several of which appointed national committees on postwar plans. The Executive Committee on Postwar Problems of the Governing Board of the Pan American Union prepared a report setting forth the basic principles of the inter-American system and undertook a study of recent trends in inter-American economic cooperation. The Inter-American Financial and Economic Advisory Committee appointed a special subcommittee to formulate plans for the Inter-American Technical Economic Conference which was to consider present and postwar economic problems confronting the republics of the American Continent.

At the meeting of the Governing Board of the Pan American Union held on Nov. 3, 1943, the Secretary of State of the United States was relected Chairman of the Board for the ensuing year. Julian R. Cáceres, Ambassador of Honduras, was at the same time elected Vice Chairman to succeed Luis Fernando Guachalla, Ambassador of Bolivia. Headquarters of the Union are at the Pan American Building, Washington, D.C.; L. S. Rowe, Director General; Pedro de Alba, Assistant Director.

PANELING BOARDS. See FEDERAL BUREAU OF INVESTIGATION.

PANTELLERIA. An Italian island (32 sq. mi.; pop., 9,000) in the Mediterranean 45 miles from the coast of Tunisia and 62 miles from the Sicilian coast. Strategically situated to dominate the shipping route between the eastern and western Mediterranean, it was fortified by Italy during the crisis of 1935–37 in Anglo-Italian relations. The island has two small ports and was said to be equipped for use as an auxiliary air and submarine base (see map, Year Book for 1938, p. 360). On June 11, 1943, the Italians surrendered the island to Allied armed forces following heavy air and naval bombardment. Governor, Brig. Gen. Auby C. Strickland (appointed June, 1943). See World War.

PAPER AND PULP. A pulp shortage of serious proportions developed in 1943 after the industry had been forced to make up a growing deficit between new production and requirements from inventories since the second half of 1942. Growing manpower shortages in the woods were directly responsible for the tightening in supplies since the flow of pulp wood to mills declined sharply both in the United States and in Canada. In an attempt to fight the growing crisis at its source, lumber, pulp, and paper controls were coordinated in the War Production Board, first through the appointment of a coordinator in the person of Harold Boeschenstein. and later in the organization of a special Forest Products Bureau within the War Production Board. Thus far, relief has been slow in forthcoming, however as a result paper consumption in 1944 will have to be curtailed much more sharply than heretofore.

This is due primarily to an important war-induced shift from paper production to paperboard output. While normally total paper production is substantially larger than paperboard output, this picture was reversed in 1943. Production schedules for the first quarter of 1944 allow for a ratio of 53 per cent paperboard and 47 per cent paper, compared with 45 per cent paperboard and 55 per cent paper in the fourth quarter of 1942. This trend indicates the increasing use of paper production for direct and indirect war purposes.

An extensive study of the United States and Canadian pulp and paper situation was made in 1943 by the Combined Pulp and Paper Committee, the so-called Adams Committee, which worked under the auspices of the Combined Production and Resources Board as well as the Combined Raw Materials Board. This Committee after several months of study submitted a preliminary report in October, 1943, containing the conclusion that a large deficit of wood pulp in 1944 could be avoided only by immediate steps to increase the supplies of manpower in the woods. In terms of pulpwood, the shortage for 1944 was estimated at 6,500,000 cords of wood by this committee.

Pulp and paper prices increased approximately 6 per cent during 1943. The Bureau of Labor In-

dex for this commodity group stood at 100.1 of its 1926 average in January, 1943, and registered

105.8 for November.

Pulpwood. The pulpwood supply for the paper and paperboard industry reached a critical level in 1943. Despite the fact that over-all receipts showed some improvement toward the end of the year, receipts for the full year, 1943, including imports from Canada, according to the Forest Products Bureau, were 12 per cent below the like period of 1942, or 14,814,000 cords as compared with 16,712,000 cords in 1942. Consumption of pulpwood also was cut approximately 10 per cent under the 1942 level, but still exceeded new supplies by a substantial margin, so that pulpwood inventories at United States mills declined to a low point of 2,807,000 cords at the end of November, 1943, as compared with 3,616,000 cords a year earlier. The lowest point for the year was reached in June when pulpwood inventories at mills dipped to 2,300,000 cords.

One of the actions responsible for the moderate increase in new supplies toward the end of the year was the Victory Pulpwood Campaign under American Newspaper Association sponsorship which was conducted under the motto of "Cut a Cord For Every Boy In The Service," which was concluded December 11. The campaign for increasing the output of pulpwood, however, will be continued in 1944 by the War Activities Committee of the Pulpwood Consuming Industries with the expected cooperation of 1,400 weekly and small daily newspapers in the pulpwood producing areas.

The combined pulpwood supply (United States and Canada) in 1943, i.e. new supplies plus inventories, was estimated at 23,619,000 cords by the Adams Committee. Canada also conducted a pulpwood production publicity campaign last year. Late in the year arrangements were completed for the employment of 500 Italian prisoners of war in Northern New York. Further possibilities of use of prisoners of war in pulpwood operations are in

prospect.

The 1944 domestic pulpwood goal has been set at 14,000,000 cords. Requirements have been stepped up further for packaging materials, especially weatherproof paper and kraft board for packaging and shipping munitions, foods, medical, and other supplies to foreign battle fronts and for containers for agricultural as well as other civilian supplies.

Wood Pulp. Domestic wood pulp production in 1943 dropped to 9,075,000 short tons as compared with 10,228,000 tons in 1942, when an all-time peak was established. The 1943 production by

grades was as follows:

|                                    | 1943        | 1942       |
|------------------------------------|-------------|------------|
| Bleached Sulfite                   | 1.575,000 4 | 1,718,000  |
| Unbleached Sulfite                 | 885,000     | 1,212,000  |
| Bleached Sulfate                   | 750,000     | 812,000    |
| Unbleached Sulfate                 | 3,515,000   | 3,914,000  |
| Soda                               | 415,000     | 453,000    |
| Semi-chemical and chemical screen- |             |            |
| ings                               | 255,000     | 226,000    |
| Mechanical and mech. screenings    | 1,680,000   | 1,893,000  |
| Total, All Grades                  | 9,075,000   | 10,228,000 |

a Including 300,000 tons dissolving pulp for rayon manufacture.

Imports of wood pulp from Canada in 1943 totaled 1,270,000 tons compared with 1,200,000 tons in 1942. Exports in 1943 reached 270,000 tons, as compared with 214,807 tons in 1942.

Total consumption of wood pulp in 1943 was 10,525,000 tons or 450,000 tons in excess of new production. Consumption in 1942 had amounted to 11,047,906.

s, as in ag was an new te

For the first quarter of 1944 the Forest Production Bureau has authorized the use of 865,000 tons of pulp per month. This will support an average minimum monthly production of paper and paperboard of 1,398,837 tons. Paper mills had proposed an average monthly production of paper and paperboard of 1,534,000 tons for the first quarter of 1944 which would have required about 977,000 tons of wood pulp monthly.

Waste Paper. Waste paper inventories also showed a marked shrinkage in 1943. At the end of November, 1943, they stood at 493,000 short tons as compared with 861,000 a year earlier. Low receipts of waste paper showed a gradual improvement since September. The results of the new large-scale salvage campaign had not made themselves felt by the end of the year. For the 11 months period of January through November, 1943, receipts of waste paper at United States paper and paperboard mills totaled 5,535,763 short tons. Comparable figures for 1942 are not available. The demand for waste paper is so keen that the Office of Price Administration (q.v.) developed a special program to eradicate black market operations in the waste paper industry through an amendment to MPR-30 designed to tighten the regulation governing waste paper sales. (See War Production Board under Salvage.)

Paper and Paperboard. Paper and paperboard products in 1943, according to figures compiled by the American Paper and Pulp Association, reached a total of 17,036,144 tons as compared with 16,888,646 in 1942 and 17,762,365 in 1941. Paperboard production increased to 8,591,177 as compared with 7,773,968 in 1942.

pared with 7,773,968 in 1942.

Paper production by major categories showed

the following trend in 1943:

|   | (In thousands of tons) |              |                       |
|---|------------------------|--------------|-----------------------|

Note: AP&P figures may disagree slightly with WPB data due to some changes in reporting procedure.

Wrapping Paper. Production of wrapping paper in 1943 failed to equal the 1942 total by a substantial margin. The War Production Board announced that kraft wrapping paper in the coarse paper field in the third quarter of 1943 was reduced to a point approximately 40 per cent below the 1942 average and is taking a further reduction for the first quarter of 1944. Because of the acute shortage in paper making supplies, especially kraft pulp, an amendment to Conservation Order M-241-a was issued

on Dec. 18, 1943, which restricts the use of wrapping paper, including wrapping tissue in the manufacture of converted paper products during 1944 to approximately 65 per cent of the 1942 base period production.

Newsprint. Consumption of newsprint was cut several times during the year, the latest amendment bringing the total cut up to 25 per cent from the 1941 base period. The reduction is on a graduated scale, however, under which small publications fare considerably better than the large ones. The latest amendment to Limitation Order L-240 as amended on Dec. 24, 1943, became effective on Jan. 1, 1944. Newspaper publishers' quarterly consumption quotas will be calculated upon a base representing the tonnage used in printing their net paid circulation in the corresponding quarter of 1941, plus a 3 per cent allowance for production waste. This base will be adjusted for each newspaper to compensate for circulation increase in 1942 over 1941. Newspaper publishers who use less than 25 tons of print paper per quarter will continue to be exempt from reduction. Other publishers will be subject to a reduction of 4 per cent of their base tonnage over 25 tons but not over 125 tons; 8 per cent of the amount over 125 tons but not over 250 tons; 12 per cent of the amount over 250 tons but not over 500 tons; 20 per cent of the amount over 500 tons but not over 1,000 tons; and 24 per cent of the amount over 1,000 tons. WPB stated there was no possibility that these restrictions would be relaxed.

A special United States-Canadian joint committee of technical experts has been appointed to study the complex problems of both the pressroom and the paper mill. It was pointed out that all practical methods of conserving fibers must be carried out; and it was then indicated that the following four methods will be tried out, despite a probable increase in the cost of the newsprint: Reducing basis weight without increasing sulfite pulp content; adding mineral filler as a replacement of wood fiber; reducing sulfite pulp content by slow-ing down machines, if necessary, replacing sulfite pulp by ground wood; and replacing some of the

new fiber with waste paper.

Representative Boren, Chairman of the House Newsprint Investigating Committee introduced a bill on Dec. 16, 1943, to exempt from tariff duty imported newsprint having a basis weight of 25 to 35 pounds per ream. The present tariff law exempts paper of 32–35 pounds.

Recently, experimental runs have been made by newspapers using paper containing different proportions of de-inked stock and other paper made with that waste that had not been de-inked. While there was some difference in brightness, it is reported that the various papers used seemed to be

satisfactory from a newspaper-printing standpoint.

Paperboard. The demand for paperboard for packaging civilian and military supplies continued to grow throughout the year. Therefore production is to be held at approximately the same level as the third quarter of 1943 under current plans of the Forest Products Bureau of the War Production Board. This would mean an average monthly pro-

duction of 732,568 tons.

To assure sufficient board to fill Government orders, the War Production Board on Nov. 13, 1943, issued Directive 1 to Conservation Order M-241, requiring each manufacturer of paperboard to reserve 35 per cent of each month's production subject to WPB instructions as to its use. This revision from 10 per cent to 35 per cent became effective on Dec. 1, 1943, and remained unchanged in the

amendment made to M-241 as of Dec. 30, 1943. The War Production Board recently informed a joint meeting of three industry advisory commit-tees that Government orders for boxboard, folding, and set-up boxes must be filled first and less essential demands met afterward. While solid fiber and corrugated shipping containers are essential for sending military supplies overseas, set up and folding boxes as inner containers are equally essential. It was stated that about 50 per cent of our food and over 14 per cent of military material require packing in folding or set-up boxes.

See Newspapers; Magazines; Photography. H. E. LUEDICKE.

PAPUA. A territory (formerly called British New Guinea) of Australia, comprising the southeastern part of the island of New Guinea (87,786 sq. mi.) and the Woodlark, Louisiade, Trobriand, and D'Entrecasteaux groups of islands (2,754 sq. mi.). Total area, 90,540 square miles; population (estimated) on June 30, 1940, 1,822 whites and 337,000 natives. Capital, Port Moresby, which had about 800 white residents in 1941.

Production, Trade, etc. Rubber, gold, copra, and desiccated coconut are the chief export products. On Jan. 1, 1941, about 63,609 acres were under cultivation. Sugarcane, breadfruit, sago, dyewoods, spices, ginger, nutmegs, and bananas are other products. Trade (year to June 30, 1941): imports £539,152; exports £492,775. There were no railways and only about 23 miles of roads in 1941. Port Moresby had air and steamship connections with Australia. Ocean-going shipping entering and clearing the ports in 1940–41 totaled 489,469 tons.

Government. Budget estimates (1940-41): revenue, £189,518; expenditure, £189,297; subsidy from Australian Government, £42,500. The civil government was headed by an Administrator, appointed by the Australian Government and assisted by appointive executive and legislative councils. It gave way to a military regime in 1942. See AUSTRALIA; WORLD WAR.

PARACON. See RUBBER.

PARAGUAY. An inland republic of South America. Capital, Asunción.

Area and Population. Area, about 169,266 square miles (61,647 sq. mi. east of the Paraguay River, and about 107,619 sq. mi. west of the river confirmed to Paraguay by the arbitral award of Oct. 10, 1938, which ended the Bolivian-Paraguayan dispute over the Chaco Boreal). The estimated population in 1941 was 1,040,420 (including some 8,000 Indians and 41,165 Paraguayans, Mennonites, and others in the Chaco). With the exception of the grall white plies also of the small white ruling class, the people are of mixed Spanish and Guarani Indian blood. Spanish and Guarani are the spoken languages; Spanish the language of government, commerce, and education. Chief cities: Asunción, the capital, chief port, and commercial center of Paraguay, had 119,608 inhabitants on Jan. 1, 1942; Villarrica, about 40,000; Concepción, 14,793; Encarnación, 14,425.

Education and Religion. In 1941 there were 1,600 public and private elementary schools with a combined enrollment of approximately 100,000. Elementary-school attendance is compulsory until the student completes the fourth grade or reaches 14 years of age. In public and private secondary schools 3,531 students were enrolled during 1941. The National University has facilities for the study of law, engineering, medicine, dentistry, pharmacy,

and surveying. Roman Catholicism is the established religion of the country, but freedom of worship is guaranteed other faiths.

Defense. Paraguay on Jan. 1, 1941, had a total of 98,450 men in the armed (land and air) forces, of whom 10,450 were in the active army (including 4,000 police), and 88,000 (estimated) in the trained reserves. The navy consisted of 2 armored river gunboats and 2 small converted merchant

vessels armed with modern guns.

Production. Agriculture, lumbering, and stock raising are the main occupations. Yields of the main products, in metric tons except as noted, were: Quebracho extract, 49,079 in 1942; sugar, 11,350 short tons in 1942; rice, 7,404 in 1942; petitgrain oil, 151.4 in 1942 (exports only); canned meat, 15,394 in 1941; groundnuts, 18,821 long tons in 1941; yerba maté, 8,866 in 1941; tobacco, 9,279 in 1941; cotton, 27,350 bales in 1941. Fruits, mandioca bears, and super potatoes are groun for mandioca beans, and sweet potatoes are grown for home consumption. Livestock in 1940 included 3,507,000 cattle, 205,501 horses, 195,264 sheep, 38-777 swine, 6,040 donkeys, and 5,210 mules. Textiles, shoes, leather goods, soap, furniture, matches, and cigarettes are the principal manufactures.

Foreign Trade. Merchandise imports in 1942 totaled 17,160,000 gold pesos (12,180,000 in 1941); totaled 17,100,000 gold pesos (12,150,000 in 1941); exports, 16,536,000 gold pesos (15,156,000 in 1941). Leading 1941 exports (in gold pesos): Preserved meat, 3,389,616; quebracho extract, 2,906,895; cattle hides, 1,907,428; cotton fiber, 1,582,705; woods, 942,515; oil of petitgrain, 749,036; yerba maté, 708,324. Latin America supplied 59 yerba maté, 1941 imports. United States, 1986. per cent of the 1941 imports; United States, 19.6; Japan, 10.7; United Kingdom, 8.5. Of the 1941 exports of known destination, the United States took 19 per cent, Latin America 18.6, and United

Kingdom 18.1. Finance. Actual government revenues in 1941 were 664,042 gold pesos and 1,088,079,630 paper pesos (1,030,631 gold and 920,877,834 paper pesos in 1940). The budget estimates for 1941 were extended for the year 1942. They were: Receipts, 583,400 gold and 1,302,218,084 paper pesos; expenditures, 1,259,984 gold and 1,193,964,644 paper pesos. On Oct. 31, 1940, the foreign debt totaled

12,908,816 gold pesos; internal debt, 10,208,830 gold and 1,528,040,717 paper pesos.

The decree of Feb. 10, 1941, fixed the value of the Paraguayan gold peso at 175 paper pesos instead of the former rate of 159.09 paper pesos. On the same date the paper peso was pegged at 77 (instead of 70) to the Argentine paper peso, or 333 to the U.S. dollar. The peso was replaced by the guarani as the national currency by a decree issued Oct. 5, 1943. The guarani, equivalent to 100 of the former paper pesos, is divided into 100 centimos, making I centimo equal to the former paper peso.

Transportation. In 1942 Paraguay had about 713 miles of railways, with connections to Buenos Aires; over 3,800 miles of highways and roads; air lines connecting Asunción with Buenos Aires, Santos, and Rio de Janeiro; and steamship services to all ports on the Plata river system. Situated 950 miles from the sea, Asunción is accessible to river vessels of 12 foot draft at all times of the year. The Marshal Estigarribia Highway between Asunuse contracted with a U.S. engineering firm for the construction of another \$2,000,000 arterial highway running from Asunción through the south-way running from Asunción through the south-way running from for the construction of the ropublic western section of the republic.

Government. A state of siege, or modified martial

law, was in effect almost continuously from the outbreak of the Chaco War in 1932 through 1942. The Constitution of 1870 was suspended following the successful military revolt of Feb. 17, 1936. A Congress of 20 Senators and 40 Deputies (all Liberals) was elected Sept. 25, 1938, and on Apr. 30, 1939, Marshal José Félix Estigarribia (Liberal) was elected President, with the opposition National Republican (Colorado) party boycotting the polls in both instances. Congress resigned collectively Feb. 17, 1940, and the next day President Estigarribia assumed dictatorial powers. He appointed a committee of university professors to draft a new Constitution, which was promulgated Aug. 15, 1940, after ratification in a plebiscite (See Year Book for 1940, p. 582 for its provisions). President Estigarribia was killed in an airplane accident Sept. 7, 1940, and the Cabinet designated Gen. Higinio Morinigo, Minister of War, as Provisional President. On Nov. 30, 1940, he proclaimed the establishment of an absolute dictatorship. He dissolved the Liberal Party on Apr. 25, 1942, and on September 30 announced that he would continue in office for the 1943-48 term. For 1943 developments, see below.

#### HISTORY

Morinigo Re-elected. With himself as the only candidate and with all opposition rigidly suppressed, President Morinigo was re-elected for the 1943-48 term in balloting which took place every Saturday and Sunday from Jan. 16 to Feb. 14, 1943. During 1942 arrangements had been completed for the extension of the Morinigo dictatorship without opposition (see 1943 YEAR BOOK, p. 528). Violent interruption of this procedure was threatened on January 29 when Col. Rafael Franco, exiled former President-dictator, started to return to Paraguay from Uruguay "to take part in the election." At the request of the Morinigo Government, he was detained in Buenos Aires until the voting was completed.

Official returns indicated that Morinigo received 85 per cent of the votes cast, the other 15 per cent being discarded as invalid. However Colonel Franco declared that few persons bothered to vote in an election offering no choice of candidates. Asunción authorities announced that the voters also authorized the President to revise the constitution; he was empowered to appoint a commission to draft a new constitution which would then be sub-

mitted to a plebiscite.

Morinigo's inauguration took place on August 15. The only changes in his new Cabinet were the appointment of new men to the Agriculture and Education portfolios and the creation of the new Ministry of Industry and Commerce. This latter post was given on November 8 to Juan Felix Morales, who had recently returned to Paraguay after spending two years in the United States studying finance.

Foreign Relations. With a poverty-stricken population unable to support the state and with the government financially unable to develop the national economy, Paraguay was primarily dependent on foreign assistance for any advance toward a higher standard of living. The inter-American develop-ment program worked out by Pan American agencies and the competition for Paraguay's favor between her powerful neighbors, Argentina and Brazil, had produced economic advantages in previous years. So also had financial and technical assistance extended by the United States (see preceding YEAR BOOKS).

During 1943 further progress was made along this line. On May 4 President Morinigo arrived in Rio de Janeiro to repay the visit President Vargas made to Asunción in 1941. The same day the Brazilian President followed the example of Argentina (see 1943 YEAR BOOK) and cancelled both principal and interest on the unpaid £40,000,000 war indemnity that Paraguay incurred under the treaty of Jan. 9, 1872. The two Presidents also discussed a project for extending the São Paulo railway to Concepción, Paraguay. Finally, a new trade and navigation treaty was signed. Later in the year it was announced that Brazil was aiding Paraguay in

a food-expansion program.

Not to be outdone, Argentina on November 17 signed an unconditional and unlimited most-favored-nation commercial treaty with Paraguay embodying reciprocal tariff concessions and providing for an eventual customs union. Ratifications of this treaty were exchanged December 15 during an official visit by President Morinigo to Buenos Aires. At the same time numerous other agreements were signed aiming at closer Argentine-Paraguayan commercial and cultural relations. Paraguay was given free port facilities in Buenos Aires, where Paraguayan imports and exports could be stored or reloaded without payment of Argentine tariff duties. Other accords provided for the improvement of postal facilities between the two countries, for the appointment of a mixed committee to study a customs union, for the extension to Asunción of an airline to be opened between Buenos Aires and Iguazu, and for the elimination from Argentine and Paraguayan school textbooks of anything that might "foster aversion for any American country. Moreover the Argentine Government issued a decree authorizing the National Roads Administra-tion to rush the completion of the Argentine section of the Pan American Highway, which was to connect Asunción with Buenos Aires.

Morinigo rounded out his contacts with neighboring Presidents by paying a state visit to President Peñaranda in La Paz, Bolivia, in July. On November 14 the two Presidents, their Foreign Ministers, and Chiefs of Staff met again on the recently delimited Bolivian-Paraguayan frontier in the Chaco. They erected a cross to the Chaco war dead of both sides at Camatindi and then proceeded to Villa Montes, Bolivia, where several commercial conventions were signed. One of these authorized construction of a pipeline to carry Bolivian oil across the Paraguayan Chaco to the Paraguay

U.S.-Paraguayan Relations. Accompanied by several Cabinet Ministers and army officers, Morinigo also joined the list of Latin American Presidents visiting Washington. Arriving there as the guest of President Roosevelt on June 9, he addressed both houses of Congress the next day, reaffirming Paraguay's solidarity with the United Nations. After visiting New York City and war industries in Detroit and Buffalo, he returned home by the west coast with stopovers for state visits to Mexico City, Lima, La Paz, and other capitals along the route. Spurred by the growing difficulty of supplying Paraguay's import needs from Argentina, President Morinigo while in Washington agreed to the opening of negotiations for the conclusion of a reciprocal trade pact between the two countries. Other results of his visit were seen in the conclusion on October 27 and December 10, respectively, of agreements for sending a U.S. military aviation mission and a military mission to Paraguay, each to serve for four years.

PATENT OFFICE, U.S. Cooperation of the Patent Office with the War and Navy Departments, the War Production Board, the Petroleum Co-ordinator, the Office of Scientific Research and Development, and other agencies of the Government in evaluating and safeguarding inventions of military character continued during the twelve months ended Nov. 30, 1943. By authority of an act (Public No. 700) passed by the Seventy-Sixth Congress all applications for the patenting of inventions and discoveries likely to prove useful for the war were preserved in secrecy. In the period from Dec. 1, 1942, to Nov. 30, 1943, there were issued 3,673 secrecy orders. In all, 7,122 applications have been subjected to such restrictions since the passage of Public No. 700. Between July 1, 1940, and Nov. 30, 1943, more than 250,000 applications were evaluated and a large number of inventions of military importance were disclosed to the Army and the Navy.

Of great significance to the Patent Office and to inventors and industry were the recommendations of the National Patent Planning Commission, This Commission, established by the President on Dec. 12, 1941, while recognizing and advocating preservation of the fundamental principles and the economic and social advantages of the system, proposed betterments in the conditions and processes concerned with the grant and adjudication of patents. One of its major recommendations is that

for a single court of patent appeals.

In the fiscal year ended June 30, 1943, receipts of the Office were \$3,563,616 and expenditures \$4,610,780. In the period from Dec. 1, 1942, to Nov. 30, 1943, applications for mechanical patents, accompanied by fees, were 43,866. There were received 952 applications exempt from fees. Applications for reissue patents were 197 and for design patents 2,933. In the same interval patents granted for mechanical inventions, compositions, etc., were

31,987, for designs 2,292, and for plants, 52.

PERU. A republic on the Pacific coast of South

America. Capital, Lima. Area and Population. Area, 482,258 square miles, subject to change when delimitation of the Ecuadorean-Peruvian boundary is completed in accordance with the agreement of Jan. 29, 1942 (see 1948 Year Book, p. 202 f.). The census of June 9, 1940, showed 7,023,111 inhabitants (6,207,967 actually enumerated and 815,144 added to cover the estimated number uncounted and possible omissions). Of those actually counted, 3,067,868 were men and 3,140,099 women. There were 3,283,360 whites and mestizos, 2,847,196 Indians, 41,945 Asiatics, 29,054 Negroes, 6,412 unclassified, and 815,044 others. The 1943 population was estimated at 7,395,687. Populations of the chief towns (1940) census for the first two; 1940 estimates for the

rest): Lima, 522,826; Callao, 69,601; Arequipa, 46,000 in 1936; Cusco, 44,080; Trujillo, 33,435; Chiclayo, 31,609; Iquitos, 29,778; Piura, 28,603.

Defense. Military service is computer, but the

number of conscripts is limited. As of Jan. 1, 1941, the active army was estimated at 14,551; trained army reserves, 470,895; active air force, 1,935 with 100 planes; police and gendarmerie, 8,000. The navy comprised 2 obsolete cruisers, 4 torpedo boats, 4 submarines, 7 river gunboats, and 3 auxiliary craft. The armed forces were instructed by U.S. naval, aviation, and military missions.

Education and Religion. Approximately one-half of the population is illiterate. Elementary education is free and compulsory for students between the ages of 7 and 14. The organic law of Apr. 1, 1941, provided for sweeping reform of the educational system in the direction of vocational and practical instruction. In July, 1942, there were 6,037 primary schools and 22 rural schools, with a total of 11,052 teachers—an increase of 1,400 schools and 2,343 teachers since 1940. There were also 180 secondary and vocational schools, and 5 universities. The Roman Catholic religion is protected by the state and only Roman Catholic religious instruction is permitted in state and private schools.

Production. Agriculture supports about 80 per cent of the population, but mineral products accounted for 50.6 per cent of all 1941 exports against 40.2 per cent for agricultural products. Yields of the chief crops were (in metric tons): Cotton, 151,800 in 1942; sugar, 500,000 in 1942; wheat, 107,500 in 1941; hulled rice, 101,364 in 1941. As a result of the war, the cotton acreage was reduced 30 per cent by 1942. Abandoned cotton lands were used for dairy production and particularly for flax which increased its acreage to about 15,000 hectares (hectare equals 2.47 acres) and produced a 1942 crop valued at about \$5,000,-000. Corn, potatoes, beans, barley, and quinoa are grown for local consumption. Coffee (q.v.) and fruit cultivation is important. War demands caused greatly expanded production of forest products, especially rubber, balata, cinchona bark, vegetable ivory, and lumber. The first livestock census ever taken in Peru (1942) showed 2,300,000 cattle, 13,-750,000 sheep, and 490,000 horses. Wool production in 1942 was 11,336 metric tons.

Petroleum production in 1942 was 1,812,000 metric tons (1,584,000 in 1941); bituminous coal, 120,000 metric tons. Gold exports in 1942 were 8,161,219 grams; silver, 487,885 kilograms; copper, 35,139 metric tons; lead, 43,409 metric tons; zinc, 26,421 metric tons; antimony, 1,454 metric tons; bismuth, 346 metric tons; tungsten trioxide, 222 metric tons; molybdenum sulphide, 324 metric tons; vanadium pentoxide, 1,804 metric tons. The chief manufactures include petroleum products, cotton textiles, knit goods, hats, food products, beverages, leather, shoes, matches, etc. Construction of a steel mill with a capacity of 100,000 tons annually was arranged for with U.S. aid in 1942

annually was arranged for with U.S. and in 1942 (see 1948 YEAR BOOK, p. 532).

Foreign Trade. Imports in 1942, including bullion and specie, totaled 333,360,000 soles (357,821,403 in 1941); exports, 507,480,000 soles (494,095,283 in 1941). Values of the chief 1941 exports: Cotton, 1925,26000 soles, particular and its products m 1941). Values of the chief 1941 exports: Cotton, 125,266,000 soles; petroleum and its products, 112,176,000 soles; copper bars (containing large amounts of gold and silver), 64,565,000 soles; sugar and its products, 60,246,000 soles; wools, 20,574,000 soles. The United States took 43.5 per cent of the 1941 exports (42.8 in 1940); Japan, 16.7 (7.8); Chile, 11.6 (10.1); Argentina, 5.4 (5.0). Of the 1941 imports the United States supports supports the United States supports the United States supports su (5.0). Of the 1941 imports, the United States supplied 62.5 per cent (53.1 in 1940); Argentina, 7.7 (7.8); Great Britain, 5.1 (9.2); Chile, 4.5 (1.9). Finance. The accompanying table shows estimated

Finance. The accompanying table shows estimated and actual ordinary receipts and expenditures and the total public debt for the years 1932–42. It excludes extrabudgetary receipts and expenditures, and those arising under special laws or from credit operations.

Of which 170.3 million was collected in the period January—December and 9.6 million in the liquidation period, January—March, 1940, according to final figures. Excluding 28,000,000 soles of revenues and expenditures under special laws, brought into the budget for the first time in 1940. Preliminary figures through December, 1941, including income of 10,700,000 soles collected during liquidation period early in 1942. As of June 30, 1941. Excluding estimated receipts under special laws, amounting to 75,000,000 soles.

The average exchange rate of the Peruvian sol remained at \$0.1538 in 1941, 1942, and 1943.

Transportation. During 1941–42 a total of 907 miles of new roads were completed, bringing the length of passable highways to over 16,000 miles. The Central Highway from Lima across the Andes to Pucallpa on navigable waters of the Ucayali River was completed in September, 1943, opening up vast undeveloped regions in Eastern Peru. There are about 2,760 miles of railway lines. New lines to the Yauricocha copper district and to the new port of Matarani were under construction in 1943. Air lines operating in Peru carried 28,538 passengers, 609,807 kilograms of freight, 67,486 kilograms of mail, and 16,303 kilograms of parcel post in 1941. In 1940 9,635 vessels of 11,159,846 tons entered Peru's ports.

Government. The Constitution of Apr. 9, 1933, as amended by the plebiscite of June 18, 1939, vested executive power in a President elected for six years and ineligible for reelection. Legislative authority was vested in a Senate of 48 and a Chamber of Deputies of 140 members, all elected for six years. The suffrage in national elections is restricted to literate males of 21 years and over. President in 1943, Dr. Manuel Prado y Ugarteche, who was elected Oct. 22, 1939, and inaugurated December 8. Most of the Government candidates for the Senate and Chamber of Deputies were successful in the 1939 elections as the strongest opposition group, the so-called Apra party, was forbidden to present candidates (see 1939 Year Book, p. 609).

## HISTORY

Political Developments. The internal political situation in Peru remained relatively quiet during 1943, but with a Presidential election scheduled for May, 1945, interest in potential candidates quickened toward the end of the year. President Prado was ineligible to succeed himself, but there was talk of amending the constitution to permit an extension of his term as an emergency war measure.

of his term as an emergency war measure.

The outlawed A.P.R.A., or American Popular Revolutionary Alliance, led by Victor Raúl Haya de la Torre carried on an underground agitation for recognition of its right to participate in the

1945 elections. Moreover a small liberal bloc in Congress late in 1943 demanded repeal of the legislation curbing free political discussion, which had been introduced by President Luis Sanchez Cerro in 1932 and by President Oscar Benavides in 1939. The Lima press, restive under prolonged censorship, came out in support of this demand. However the regular session of Congress adjourned on November 25 without taking remedial action.

Religious Controversy. A closely related controversy meanwhile had arisen over the growing interference by some members of the Roman Catholic clergy and government officials with the religious activities of Protestant missionaries and laymen. The 1939 decree authorizing government control of the press had been used by the Catholic "Eucharistic Crusade" movement to justify the breaking up of Protestant meetings. In the spring of 1943, 27 Peruvian Protestants submitted to President Prado a written complaint on behalf of the 80,000 Protestants in the country. They charged the Archbishop of Lima with "open incitement to the persecution of Protestantism" in a pastoral letter dated Mar. 17, 1942, and declared that "some elements in the police force lend their aid to this plan of persecution by prohibiting the religious activities of Protestantism, imprisoning the Evangelist preachers, even maltreating them."

Numerous Spanish priests of pro-Franco sym-

Numerous Spanish priests of pro-Franco sympathies were said to have played a leading part in fanning hostility and intolerance toward Protestants and even toward North American Roman Catholic missionary-priests in Peru. The Seventh Day Adventists complained that they were encountering serious obstruction of their work for the first time since they entered the Peruvian field 30 years before. Their school in Lima, open for 20 years, was closed by a government decree on the ground that the co-educational system followed

was "immoral

The demand for observance of the constitutional guarantees of freedom of religion was brought before Congress in October through petitions introduced in both houses by five Senators and 10 Deputies. They requested more energetic action by the Minister of Interior and Police to prevent subordinate authorities from "continuing to commit abuses against the Evangelists." They also asked that all other needed steps be taken to insure the free exercise of religion, and that the Minister of Foreign Relations and Religion end the alleged practice of Peruvian Consuls in the United States of withholding visas from Protestant missionaries desirous of going to Peru. In response to this petition, the Minister of Interior and Police advised the Senate that orders had been given to the police and Civil Guard throughout the republic to give the Protestant minority the required protection.

Prado's Tour. In September President Prado made a 16-day tour of the newly opened trans-Andean districts of the republic. On September 7 he officially inaugurated the Tingo María-Pucallpa section of the trans-Andean automobile highway linking Lima with the navigable rivers of the Amazon Basin. He was accorded an elaborate reception upon his return to the capital on September 18. Two newly created Cabinet posts—the Ministries of Aviation and Agriculture—were filled by Presidential appointment on January 3.

National Library Burned. A scandal arose in connection with the fire that destroyed the National Library in Lima on May 10. An invaluable collection of 100,000 rare volumes and 40,000 irreplaceable manuscripts dating in some cases from the

Spanish conquest was almost entirely consumed. Damage was estimated at \$750,000. A Congressional committee appointed to investigate the fire reported on September 30 that it was a case of deliberate arson. At the same time it was brought out that many valuable documents from the library had turned up in the United States and Argentina; presumably they had been stolen and sold at high prices. Moreover efforts to catalogue the contents of the library had met with strong opposition from some of its officials. These circumstances led some leading Peruvians to charge that the former director of the library had set fire to the building to prevent disclosure of alleged thefts.

Economic Conditions. In his annual message to Congress on July 28, President Prado reported that the serious threat to the nation's financial stability arising from the loss of normal export markets through war developments had been overcome by the reciprocal trade treaty of May 7, 1942, and the other economic accords concluded with the U.S. Government during 1942 (see 1943 Yean Book). The strong financial position of the republic was reflected in the 1943 budget of some 400,000,000 soles, which represented an increase of 70,000,000 soles over 1942. This increase, provided for by heavier taxes on business profits and incomes, was expended for additional public works and larger appropriations for national defense,

health, and education.

The failure of the 1941–42 rice crop and the scarcity of other foodstuffs led to a serious food shortage in Lima early in 1943 and a rapid rise in the cost of living. The Government took steps to remedy this situation in April. A new Minister of Agriculture was appointed in the person of Godofredo Labarthe. The entire rice and bean crops were placed under Government control and retail prices fixed for both staples. On recommendation of a special commission, cotton acreage was reduced 20 per cent by Government decree and it was made compulsory to plant 40 per cent of the farmlands in the Department of Lima with subsistence crops. Various other measures were adopted to increase food production.

While the food shortage in Lima was alleviated during May, speculation and inflation in staple commodities continued. This led the Government on August 27 to place maximum ceiling prices on all imported and domestic commodities sold in Peru. The Price Control Office was authorized to fix price ceilings at the level prevailing during the month of April; to limit profits of merchants or industrialists; and to regulate the price of imported articles when cleared through the customs.

The opening in Peru on July 23 of the first rubber tire factory on the west coast of South America was an important contribution to the restoration of normal economic conditions. Lack of tires had laid up a large proportion of the motor trucks upon which Peru's domestic commerce was largely dependent. Operating with Peruvian wild rubber, the factory had a production capacity of 36,500 tires annually as compared with the normal Peruvian consumption of 52,000 tires.

Proceeding with its plans for the industrialization of Peru, the Government early in the year signed a \$15,000,000 contract with a New York and London engineering firm for the construction of the steel mill and related works for the production of coal and iron ore decided upon in 1942 (see 1943 Year Book, p. 532). Construction was expected to be completed in two or three years. The Cabinet in June also approved a project for the creation of the Peruvian Santa Corporation, a

government holding company designed to further the industrialization of the Santa Valley. It contracted for additional port facilities at Chimbote in connection with the steel mill project.

United States Relations. The industrialization program was initiated with part of the \$25,000,000 credit advanced by the Export-Import Bank of Washington in 1942. There was an expansion of Washington in 1942. There was an expansion of U.S.-Peruvian economic collaboration in other directions. Through the Defense Plant Corporation, the U.S. Government was spending \$4,000,000 to expand vanadium production in Peru. Under an agreement signed by the U.S. Defense Supplies Corporation and the Peruvian Government Feb. 18, 1943, the former agency undertook to finance construction of airport facilities, to supply airplanes, and to improve communication facilities in order to make possible the expansion of rubber production in the jungles of eastern Peru. This supplemented the rubber purchase agreement of 1942.

The opening of a Lima factory for the production of quinine tablets early in 1943 was one of the tangible results of the agreement of October, 1942, for the exclusive purchase of Peruvian quinine by the U.S. Government. The task of increasing the output of rubber, quinine, and other strategic materials in eastern Peru was pushed forward under the auspices of the Peruvian-Amazon Corporation, established in June, 1942, with both U.S. and Peruvian capital for the joint exploitation of that region. The Director General of Public Health reported in March that 15 hospitals were under construction in remote centers of the rubber-growing region in order to make it habitable for more rubber workers.

The Institute of Inter-American Affairs, another U.S. Government corporation, early in 1943 undertook to provide part of the funds and technical aid for a health and sanitation program in the Chimbote region on the west coast, where Peru's major industrial development was being planned. It was announced April 3 that the Peruvian Government had authorized the use of the docks at Callao by U.S. warships and transports. In mid-April Vice President Wallace made a three-day official visit to Peru. He was welcomed to Lima on April 12 by 200,000 people in what was described as the most spectacular demonstration ever accorded a foreign statesman.

Anti-Axis Measures. In his July 28 message to Congress President Prado stressed that Peruvian foreign policy was consistently directed toward fulfillment of the anti-Axis Rio de Janeiro accords; aid to the United Nations in prosecuting the war; the strengthening of inter-American solidarity; and cooperation in planning for the postwar world. After failing to secure the release of Peruvian diplomats interned in France, the Government broke off relations with the Vichy Government on January 26. On February 8 it adhered to the United Nations Declaration. The Finance Ministry announced May 26 that it had ordered the expropriation of all commercial organizations, real estate and other properties belonging to German and Japanese nationals whose assets were frozen under the Rio de Janeiro accords.

The Japanese-owned rubber factory in Lima was destroyed by fire March 17—the day it was to have been transferred to the state-controlled Banco Industrial. Notwithstanding this, Japanese aliens were given until January, 1944, to liquidate their business interests. Many of them arranged to transfer their properties to Japanese citizens of Peru. Meanwhile evidence that citizenship papers had been fraudulently issued to a number of wealthy

Japanese aliens led to the arrest of 15 governmental officials.

Accords with Chile. A five-day official visit to Peru by the Foreign Minister of Chile early in November strengthened the cordial relations between the two governments. The visit also resulted in the signing of a commercial agreement, details of which were to be worked out by a mixed commission, and a decision to connect the national air services of the two republics.

PETROLEUM. The production and use of petroleum in the United States are discussed, from the scientific and industrial angle, in the article on CHEM-ISTRY under Petroleum and, from the governmental angle, in Petroleum Administration for War. For a general picture, see UNITED STATES under Production. See also Aqueducts (for pipelines); ELECTRICAL INDUSTRIES; MINES, BUREAU OF; MO-TOR VEHICLES; PRICE ADMINISTRATION, OFFICE OF (for rationing); RAILWAYS and SHIPPING (for transportation); RUBBER; STATE LEGISLATION under Taxation; also, Arabia, Iran, Mexico, Paraguay, and Venezuela under History and producing countries under Production.

PETROLEUM ADMINISTRATION FOR WAR (PAW). This Agency was created by an Executive Order issued by President Roosevelt on Dec. 2, 1942. It supplanted the Office of Petroleum Coordinator for War, which was established on May 28, 1941, immediately following the declaration that a national emergency existed, by a letter addressed to Secretary of the Interior Harold L. Ickes by the President. Secretary Ickes was appointed Petroleum Administrator for War, and he designated Ralph K. Davies as Deputy Petroleum Administrator. See 1943 YEAR BOOK for the authority and duties of the Administrator.

As of Jan. 1, 1944, the Petroleum Administration had approximately 849 employees in its Washington office, and approximately 542 more in its branch offices located in the cities of New York, Chicago, Houston, Denver, and Los Angeles. To assure full and continuing consultation with leaders of the petroleum industry, both executive and technical, and to provide a mechanism for effectuating approved plans of action, the Petroleum Administration has developed a comprehensive industry organization. This includes a Petroleum Industry War Council, which considers problems of national scope. The Council, headed by W. R. Boyd, Jr., is composed of 72 oil industry members from all parts of the country, representing both large and small producers of crude oil and natural gas, refiners, pipeline operators, and marketers, and also including representatives of trade associations, and cooperatives. In addition, in each of the five districts into which the country has been divided district committees have been established to deal

with sectional problems.

During 1943 the Petroleum Administration achieved two outstanding goals: (1) the virtual solution of the inland transportation problem caused by the withdrawal of ocean-going tankers for military service, and, (2) the achievement of more than four times the 100-octane aviation gasoline productive capacity that existed when the war began. By the end of 1944, the capacity is sched-uled to be ten times what it was in January, 1942.

Through the mobilization of tank cars, pipelines, barges, and trucks into one vast overland oiltransportation system—a cooperative undertaking of the oil and transportation companies, ODT (q.v.), and PAW—deliveries of oil to the Eastern Seaboard were increased from a negligible volume in 1941 to approximately 1,325,000 barrels a day, or a volume considerably in excess of the prewar tanker deliveries from domestic sources.

The movement of oil by pipelines was the biggest factor in solving the problem. In the early part of 1941, such movements into the Eastern States amounted to approximately 42,000 barrels a day. Today a network of through trunk lines carry crude oil and refined products from the producing areas of the Southwest and Midwest to the large consuming areas of the Eastern Seaboard at the rate of more than 500,000 barrels a day. This has been due largely to the capacity of the famed "Big Inch" extending 1,253 miles from Longview, Texas, to Phoenixville, Pa. This 24-inch pipeline was started in 1942 and completed in July, 1943, at a cost of \$95,000,000,000 lit was farned by the government. \$95,000,000. It was financed by the government. Its rated capacity is 300,000 barrels of crude oil daily, but there have been days when it has done better than this. Two 20-inch lines, aggregating 111 miles, extend the "Big Inch" to New York and Philadelphia.

Additional relief of the transportation situation will be afforded by another segment of the pipeline system known as the "Little Big Inch." Started in the Spring of 1943 at an estimated cost of \$75,000,000 to the government, this 20-inch line will extend from the Houston-Beaumont area on the Gulf Coast to Linden, N.J. It will be in operation early in 1944. Its rated capacity will be 235,000 barrels of

gasoline a day.

The year 1943 began to show the results of a vast program directed by the Petroleum Administration for the expansion of refining facilities to manufacture 100-octane aviation gasoline—the super combat fuel—involving an expenditure of more than \$900,000,000. Of this amount more than 75 per cent was the private investment of the petroleum industry, the balance being supplied by the government. Since Dec. 7, 1941, the Petroleum Administration and the oil industry have initiated 72 major 100-octane construction projects. Of these, 34 have been completed, and the remaining 38 will be finished shortly after the beginning of 1944. At the instance of the PAW, 200 minor projects were undertaken for changing or expanding existing fa-cilities in order to increase 100-octane production. In 1944 an aditional 22 domestic plants will be constructed.

In collaboration with the other agencies concerned the PAW carried out a program for conserving oil supplies and restricting unessential uses

of petroleum products in areas of shortage.

The PAW played an important part in the petroleum industry's production activities. Some three and one-half trillion cubic feet of natural gas and an estimated 1,503,595,000 barrels of oil were produced during 1943. The PAW recommended production rates for the various oil producing States, promoted conservation practices designed to increase the ultimate oil recovery, encouraged exploration for new fields, and administered a program for the most efficient use of materials in drilling and other production operations.

To meet the special military demands the PAW continued to supervise the manufacture of petroleum components for synthetic rubber (see Rub-BER), and directed operations of the refining industry, generally, so as to assure the production of adequate supplies of fuel and heating oils, lubricants, and other products required for military use,

for essential industry, and for the heating of homes. The PAW serves as a Claimant Agency under the War Production Board's Controlled Materials Plan. Requests for materials used in the oil industry were handled by the PAW, and in all branches of the industry means of conserving critical materials were introduced. The elimination of unnecessary well drilling, the substitution of secondhand for new material or the use of less critical for more critical material, as well as improvement in designs and in methods of operation, all contributed to substantial savings in materials during the year.

The PAW collaborated with the appropriate Federal departments and agencies in the determination of plans and policies with respect to foreign petroleum activities. In conformity with such policies, the PAW directed the physical operations of foreign petroleum facilities of the American speptroleum industry, and arranged for petroleum supplies for foreign shipment. See United States under

Production.

PHILANTHROPY. A trend toward combining the fundraising campaigns of various related philanthropic enterprises has been apparent for some years, in the grouping of community charity drives, and in the combined organization of such relief and war agencies as United China Relief and the United Service Organizations. This trend was further accentuated at the beginning of 1943 by the formation of the National War Fund (q.v.) through which 17 war-related agencies undertook a joint nationwide campaign.

War relief overseas and welfare work among the armed forces in the United States continued to dominate charitable activity in 1943, as in 1942. This was a reflection not only of patriotic urge and of the universal appeal of war sufferers, but of domestic factors as well: the soaring national income has greatly reduced the numbers of needy individuals, and the expanding Federal-State programs in the field of welfare (see Social Security Board) have to an extent obviated some of the more pressing needs in this field so that private

funds may go elsewhere.

The statistics of the John Price Jones Corpora-tion on gifts and bequests in the seven largest cities of the United States, showed a total of \$120,846,-785 contributed in those cities in 1943, as compared with \$78,269,358 in 1942. Contributions for war and relief accounted for more than 87 per cent, \$36,521,930 going to American war organizations, \$71,976, 602 to Community War Chests, and \$10,-157,072 to foreign relief agencies, from these seven cities. The report of the war relief agencies registered with the War Relief Control Board (q.v. for statistics) showed that funds collected in 1943 more than doubled the sum for the previous year. See articles under Societies for individual reports. For

individual gifts, see the subject, as ART, LIBRARY PROGRESS, UNIVERSITIES, ETC.

Foundation Activities. The following paragraphs contain reports on the activities of the wealthier and more publicly active foundations and trusts in

the United States.

Automotive Safety Foundation is supported by annual contributions from more than 200 companies in the motor vehicle and parts manufacturing, rubber, petroleum, financing, and cement industries.

Organized in 1937 to carry on a broad, integrated highway safety program, the Foundation made grants in 1942 to 14 qualified national organizations for specific activities in the fields of safety, transportation, conservation, and postwar highway planning. Chairman: Paul G. Hoffman. President: Pyke Johnson. Vice Presidents: Norman Damon and G. Donald Kennedy. Headquarters: the Tower Building, Washington, D.C.

Bamberger Foundation. See ADVANCED STUDY, IN-

STITUTE FOR.

Bok Foundation, The Mary Louise Curtis, has as its principal activity the support of the Curtis Institute of Music in Philadelphia. Grants have also been made to the Settlement Music School, Philadelphia, and the Research Studio, Maitland, Fla., the latter being a kind of "laboratory" for painting. Financed by gifts of \$12,500,000 from Mrs. Mary Louise Curtis Bok, the Foundation was created in 1931 for the support of music, fine arts, science, invention, or general education. Address: 1726 Locust Street, Philadelphia, Pa.

Buhl Foundation, established in 1928 by Henry

Buhl, Jr., reported that its capital assets were \$13,-011,660 in 1943 and that expenditures for the year totaled \$523,340. The Foundation's programs center in the Pittsburgh area, where it has sought to provide more adequate factual bases for social work and regional economic effort, to promote research in public health and the natural sciences, and to develop the community's resources in higher education. Another objective is the advancement of housing standards for American cities, as exemplified in large-scale planned communities administered on a long-term investment basis. In demonstration of this last-named objective, the Foundation operates Chatham Village in Pitts-burgh, built in 1932 at a cost of \$1,700,000. The Buhl Planetarium and Institute of Popular Science was built at a cost of \$1,100,000 in 1939 as a gift to the people of Western Pennsylvania. Director: Charles F. Lewis, Offices: the Farmers Bank Building, Pittsburgh, Pa.

Carnegie Endowments. See separate article.

Children's Fund of Michigan reported expenditures of \$735,773.67 during the fiscal year ending Apr. 30, 1941; capital assets on that date were \$7,693,-279.09. The Fund was established by James Couzens with a gift of \$10,000,000 in 1929 to promote the health, welfare, happiness, and development of children in Michigan, primarily, and elsewhere in the world. Chief officer: Wm. J. Norton, 660 Frederick Street, Detroit, Mich.

Commonwealth Fund. See separate article

Cranbrook Foundation of Bloomfield Hills, Mich., was established in 1927 for the purpose of adding to and strengthening educational and cultural fa-cilities within the State of Michigan. It is developing a cultural center at Bloomfield Hills includoping a cultural center at Bloomneau mais including three schools, an Academy of Art, an Institute of Science, and a church. Expenditures for the year ended June 30, 1943, were \$112,015; capital assets on that date, \$5,443,953. Chairman of the Board of Trustees: George G. Booth.

Duke Endowment. See 1942 YEAR BOOK, p. 508.

Falk Foundation, The Maurice and Laura, makes

grants to economic research organizations for definitive studies of specific economic problems basic to the development of American industry, trade, and finance. Grants voted in 1943 totaled \$152,-166 and included \$75,000 to The Brookings Institution, Washington, D.C., for sequential studies to research investigations previously made under the Foundation's appropriations, and out-of-program grants to such wartime organizations as the

United War Fund and the American Red Cross. Payments in 1943 on grants voted in 1943 and earlier years totaled \$177,166. Capital assets had a market value of \$4,168,746 on Dec. 8, 1943. The Foundation was established by Maurice Falk in 1929 with the provision that principal as well as income be used within 35 years for advancement of the general public welfare. Executive Director: J. Steele Gow. Chairman of the Board of Managers: Leon Falk, Jr. Offices: Farmers Bank Building, Pittsburgh, Pa.

Field Foundation, Marshall. See Opinion Research

General Education Board. See article on GENERAL EDUCATION BOARD.

Guggenheim Memorial Foundation, The John Simon, was created in 1925 by Simon Guggenheim and his wife as a memorial to a son who died at the age of 18. The original endowment was \$3,000,000 enlarged to \$7,000,000 by 1939, and further increased upon the death of Simon Guggenheim in 1941. In fulfilling its purpose to "promote the advancement and diffusion of knowledge and the appreciation of beauty" the Foundation awards Fellowships, normally \$2,500 a year, to citizens of the United States, Canada, and certain Latin American countries. Since its establishment the Foundation has granted 1,302 Fellowships with stipends totaling \$2,689,335. In the year 1943 the Foundation granted 78 Fellowships with stipends totaling \$167,000.

Hayden Foundation, Charles, founded in 1937 with an endowment of \$50,000,000, assists needy boys and young men, especially through aid to recreational centers. Offices: 25 Broad Street, New York

Heckscher Foundation for Children, The, an organizazation founded by August Heckscher (1848–1941) to promote the welfare of children. The Foundation was incorporated Mar. 15, 1921, and occupies its own building at 1 East 104th St., New York City. It maintains benevolent, educational, recreational, and welfare activities. The several departments include a kindergarten, day nursery, toyery, arts and crafts, sewing, boys' and girls' game rooms, billiard room, boys' workshop, library, gymnasium and swimming pool, print shop, thrift shop, and facilities for tap dancing and piano lessons. The Foundation also includes the Heckscher

Theater which has a seating capacity of 667.

James Foundation of New York, Inc., was incorporated Aug. 23, 1941, under the Membership Corporation Law of the State of New York, pursuant to the provisions of the will of the late Arthur Curtiss James who died on June 4, 1941. The Foundation will receive, upon the conclusion of the executorial administration of the estate of Arthur Curtiss James, the residuary estate, the amount of which is not yet determined. The income of the funds, will be distributed through organized religious, educational, and other charitable corporations. The officers are William W. Carman, President, and Talbot T. Lewis, Secretary and Treasurer. Trustees: William W. Carman, Robert E. Coulson, William Son Pell, Talbot T. Lewis, and Wm. B. Warner. Offices: 40 Wall Street, New York City.

Juilliard Musical Foundation was incorporated in New York State in 1920, in accordance with the will of Augustus D. Juilliard, to aid worthy students of music, promote the instruction of the general public in the musical arts, and to encourage a deeper interest in music in the United States. Invested trust funds had a book value of about \$12,000,000 in 1942, only the income is distributed.

Secretary: M. Steilen, 31 Nassau Street, New York

City, 5.

Kellogg Foundation, established by W. K. Kellogg in 1930 to advance the well-being of children without regard to race, creed, or geographical boundary, expended \$1,770,335 during the year ending Aug. \$1, 1943. Total capital assets on that date were \$43,934,332. The Foundation has undertaken and is administering the Michigan Community Health Project, a health program involving seven counties in southwestern Michigan. The present program includes also national and international health promotion activities and the granting of fellowships. President and General Director: Emory W. Morris. Headquarters: Battle Creek, Mich. See Dentistray.

Macy Foundation, established in 1930 by Mrs. Kate Macy Ladd in honor of her father, Josiah Macy, Jr., reported total expenditures for the year ending Dec. 31, 1943, at \$326,250; total grants paid \$262,158. Drafts are not permitted upon the endowment, which has a ledger value of \$6,600,-214. Emphasis is placed on special problems in medicine which require for their solution studies and efforts in correlated fields as well, such as biology and the social sciences. In the present emergency the Foundation is giving special attention to health problems within its program which make a contribution to the war effort wherever possible in collaboration with the armed forces. As a special wartime service the Foundation is distributing to medical officers of the armed forces of the United States, and of the United Nations as well insofar as possible, reprints of selected current medical literature. President: Dr. Willard C. Rappleye. Medical Director and Executive Secretary: Dr. Frank Fremont-Smith. Headquarters: 565 Park Avenue, New York 21, N.Y.

Markle Foundation, John and Mary R., established in 1927 by John Markle, limits its major activities to grants to institutions in support of special projects in medical research. Appropriations made in 1942 amounted to \$543,791, while grants paid and operating expenditures were \$563,850. There were in progress during the year 169 separate projects receiving aid. The year-end market value of the principal account was \$15,821,046. President: Thomas W. Lamont; Vice President and Treasurer, Archie S. Woods; Secretary, Florence E. Quick; Assistant Secretary and Assistant Treasurer, Irene R. Power. Offices: 14 Wall Street, New York

5, N.Y.

Mellon Trust. See ART under Gifts.

Milbank Memorial Fund, established in 1905, reported assets of \$9,095,029 at the end of 1942. Appropriations for grants and projects in that year totaled \$353,854. The Fund assists agencies and institutions in the field of public health and medicine, education, social welfare, and research. Emphasis is given to activities which are preventive rather than palliative, and to the improvement of administrative procedures in public health. In 1942, 22 organizations received funds, including Community Service Society of New York, \$20,000, Judson Health Center, \$25,000, Neighborhood Health Development, Inc., \$8,000, and Princeton University (for study of population problems) \$11,625. President: Albert G. Milbank. Executive Director: Frank G. Boudreau; M.D. Offices: 40 Wall Street, New York City.

Permanent Charity Fund was established in 1915 by the Boston Safe Deposit and Trust Company to furnish a medium through which money may be left in trust to charity. The principal of the Fund is invested and the income distributed to existing organizations, usually of Boston and vicinity. Payments to charities during the fiscal year ended June 30, 1943, totaled \$241,098 and capital assets on that date were \$5,690,565. President: Charles E. Mason. Secretary: Charles M. Rogerson. Offices: 100 Franklin Street, Boston, Mass.

Pilgrim Trust. See ART under Art Education.

Reynolds Foundation, Inc., established in 1936 for charitable and civic purposes within the State of North Carolina by the brother and sisters of Zachary Smith Reynolds, deceased, has since its inception used its income primarily for a campaign to control venereal disease in the State. Annual grants have been made as follows to the State Health Department for this purpose. The contribution for 1943 was \$200,000. The book value of the principal of the Trust, as of Oct. 1, 1943, was \$10,112,117, which represented its approximate value. Trustees: Richard J. Reynolds, President, W. N. Reynolds, Mary Reynolds Babcock, Nancy Reynolds Bagley, W. R. Hubner. Secretary: Stratton Coyner, Winston-Salem, N.C.

Rockefeller Foundation. See separate article.

Rosenwald Fund, The Julius, during the 25 years since its establishment in 1917 by Julius Rosenwald, has expended approximately \$18,000,000, being all of its income from year to year and about seven-eighths of its principal fund. The Trustees are required to expend all funds within 25 years of the death of the founder, that is, before Jan. 6, 1957. At the close of the fiscal year June 30, 1943, the assets of the Fund had a value of approximately \$3,000,000. The chief program of the Fund during its early years was aid in the building of rural public schools for Negroes. The main programs in 1943 were: (1) improving the content and quality of rural education in both white and Negro schools in the south; (2) fellowships for Negroes and for white southerners; and (3) efforts to improve race relations, especially the relations between white and colored citizens throughout the United States. During the year

1942-43 the Fund expended \$475,000 upon these and related programs.

Russell Sage Foundation, created in 1907 through a gift of \$10,000,000 by Mrs. Russell Sage, as a memorial to her husband; \$5,000,000 additional was left to the Foundation in Mrs. Sage's will. Its principal purpose is to study and analyze the causes of adverse social and living conditions in the United States, and to make available to citizens, organized groups, and others, such informa-tion, advice, and proved methods as will assist them to relieve, remedy, improve, or prevent similar untoward conditions affecting the welfare of their communities. Among the types of activities which in recent years have been carried on by its own Departments, or through its grants to agencies with similar purposes are: adult education, city and regional planning, family welfare, training for social work, study and coordination of community social work programs, child welfare, vocational service and placement, leisure-time activities, legal aid, social welfare publications, improvement of race relations, research in the social sciences, methods of relief, improvement of conditions affecting small loans, control of consumer credit, work relations in industry, increasing the public understanding of social work, social statistics, and the relation of the arts to social work. Printed reports of its principal studies are issued by the Foundation, and to assure their greater distribution to interested persons are made available at cost. Among its recent publications are The WPA and Federal Relief Policy, by Howard; A Study

in Public Relations, by Levy; Salaries and Qualifications of Child Welfare Workers in 1941, by Hurlin; a series of occasional papers on Administration of Relief Abroad, edited by Howard, including a bibliography on Foreign Relief and Rehabilitation, compiled by Holt; a Library bibliography on War and Social Problems, compiled by Baer; and the Social Work Year Book 1943, edited by Kurtz. The offices of the Foundation are at 130 East 22 Street, New York 10, N.Y. Shelby M. Harrison is General Director.

Sloan Foundation, The Alfred P., incorporated in 1936, aids accredited schools and colleges in developing new "patterns" in economic education. On Dec. 31, 1943, its capital assets were valued at \$5,849,589. Up to the same date, the Foundation had made grants amounting to \$2,031,564. At present the Foundation is enabling colleges and universities to promote popular economic education through radio, recordings, motion pictures, books and pamphlets, fellowships, and class instruction. Among such projects aided by the Foundation are: the University of Chicago Round Table of the Air, a weekly radio discussion of economic phases of national and international questions; the New York University Film Library, which distributes sound motion pictures and recordings on economic subjects; and the Public Affairs pamphlets, containing popular digests of current economic researches, issued continuously by the Public Affairs Committee of New York.

In addition to aiding these three forms of education for the thinking citizen, the Foundation in 1943 lent its support to a continuing Institute on Postwar Reconstruction at New York University. Here economists and national leaders in business, politics, labor, and agriculture discuss with a diversified audience plans for achieving widespread employment and a higher standard of living in America after the war.

To coordinate these varied educational efforts and to help schools and discussion groups make intelligent use of motion pictures, broadcasts, recordings, and pamphlets, these four institutions in 1943 set up a joint office in New York City with Foundation aid. Called "New Tools for Learning," the joint organization issues lists of available films, recordings, and pamphlets on various topics and offers a consultation service.

In the field of applied economics, the Foundation aids the State universities of Kentucky, Florida, and Vermont in carrying on experiments designed to help low-income groups. The experiments aim to discover whether solely through instructing school children in simple, inexpensive ways of improving diet, housing, and clothing, the community level of living can be raised. To enable teacher-training institutions throughout the country to study these experimental centers at first-hand, special grants were made to the American Association of Teachers Colleges for traveling fellowships.

To help the harassed tax payer find out how the city fathers are spending his money the Foundation maintained through 1943 ten fellowships at the University of Denver to train college graduates as expert appraisers of city, county, and town finances. The 18-month course equipped the fellowship holders to qualify as advisers to citizen groups. The Foundation also made a grant to the Brookings Institution. Director: Harold S. Sloan. Offices: 30

Rockefeller Plaza, New York City.

Spelman Fund of New York was incorporated in 1928 with a principal fund of \$10,000,000. The Trustees of the Fund have power to use the principal as well as income to carry out its purposes.

During 1943, the Fund continued its program directed at the improvement of methods and techniques in the field of public administration. Support was extended to public and quasi-public agencies engaged in disseminating information regarding advances in administrative practice, in developing new types of organization and operating methods, and in actually installing administrative improvements in governmental agencies. The Chairman of the Board of Trustees is Charles E. Merriam. The offices of the Fund are located at 49 West 49 Street, New York City.

Twentieth Century Fund is an institute for research in economic questions. The Fund is privately endowed and its entire income, administered as a public trust by a Board of Trustees, is devoted to its own research and related activities. For each major investigation the Fund appoints a special research staff and an impartial committee of qualified persons who use the factual report of the staff as a basis for recommendations on public policy. In order to make its findings available to as wide a public as possible, the Fund issues its surveys in book form and supplements these with news releases, pamphlets, bulletins, study outlines, magazine articles, and other materials, and produces occasional series of radio programs. Active contact work is maintained with organizations and educational institutions. The Fund is now concentrating on problems of postwar reconstruction. Current activities include a series of exploratory reports by Stuart Chase; a compilation of governmental and private agencies engaged in postwar planning; preparation of a discussion manual on wartime facts and postwar problems; and a large-scale research project by the Fund itself. Other recent major surveys concern collective bargaining, housing, the distribution system, taxation, and government's relation to the electric power industry. See Postwar Planning.

Warm Springs Foundation, a membership corporation, conducts a modern and scientifically equipped institution at Warm Springs, Ga., with a capacity of 100 beds, for the study and treatment of the after-effects of poliomyelitis (infantile paralysis). The Foundation is the only institution devoting its energies entirely to the after-effects of infantile paralysis. It seeks to improve and perfect methods of treatment and make the knowledge gained thereby available to the medical profession and the public. President: Franklin D. Roosevelt. Chairman of the Executive Committee: Basil O'Connor. Address: 120 Broadway, New York City.

PHILIPPINES. A group of islands in the Western Pacific Ocean, ceded to the United States by Spain on Apr. 11, 1899, and conquered by Japanese armed forces in 1942. The Tydings-McDuffie Act of Mar. 24, 1934, made the Philippines an autonomous commonwealth, designed to become fully independent in 1946. Capital, Manila.

Area and Population. The combined area is 114,-

Area and Population. The combined area is 114,400 square miles. This comprises 7,083 islands, of which only 466 cover as much as one square mile apiece. Two islands, Luzon (40,814 sq. miles) and Mindanao (36,906 sq. miles) account for more than two-thirds of the whole area. Others, with their respective areas in square miles, are Samar, 5,124; Negroes, 4,903; Palawan, 4,500; Panay, 4,448; Mindoro, 3,794; Leyte, 2,799; Cebu, 1,695; Bohol, 1,534; Masbate, 1,255.

The population was estimated at 16,771,900 on Jan. 1, 1941; at the census of 1918, 10,304,310. The city of Manila had (1939) 623,362 inhabitants. Persons from the United States, other than members of its armed forces and their families,

numbered 4,144 in 1939. There were 117,461 Chinese. Japanese numbered 29,262, of whom 17,888 were in and about Davao, on Mindanao Island. The Commonwealth in 1937 enacted legislation making Tagalog, the most prevalent native tongue, one of the official languages effective in 1946. About one in eight of the population was estimated to have some knowledge of the English language; about one in 16, of Spanish. The Roman Catholic Church holds the greater number of the people of religious affiliation. An independent Filipino Church (Christian) has many worshipers. Mohammedans number not far from half a million. Protestants are estimated at 250,000.

Education. The literacy rate was 48.8 per cent at the 1939 census (20.2 per cent in 1903). All schools began teaching Tagalog, in addition to English, in June, 1940. In April, 1942, the Japanese invaders ordered that instruction be in Japanese and Tagalog instead of English and Tagalog. In March, 1940, the public school system included 12,057 schools, 43,763 teachers and administrators, and 1,940,729 pupils, the largest enrollment in the islands' history. There were in addition 439 private schools, colleges, and universities, with 149,491 students. More than one-third of the 1941 budget was allotted for the support of public education.

Production. Agriculture is the main support of the population, but mining and manufacturing were expanding rapidly at the time of the Japanese occupation. Yields of the chief crops in 1940–41 were (in metric tons): Rice, 2,090,200; cane sugar, 937,000; tobacco, 34,400; corn, 409,500 in 1939–40; copra (net exports), 570,500 in 1940; Manila hemp, 193,000 in 1939–40. Estimated value of all crops in 1939–40 was 381,067,000 pesos (rice, 159,741,000; sugar, 97,524,000; coconuts, 52,439,000; Manila hemp, 15,053,000; corn, 18,986,000). Livestcok in 1939 included 2,607,836 water buffaloes, 1,721,600 cattle, 504,967 horses and mules, and 3,558,274 swine.

Gold production in 1940 was estimated at 1,095,-939 fine oz.; silver, 1,395,731 fine oz. Output of other minerals in 1940 was (in long tons): Copper ore, 20,413,236; iron ore, 1,215,718; lead, 1,422,-471; chromite, 189,919; manganese ore, 57,256. The value of gold, silver, and platinum produced in 1940 was 78,375,384 pesos (preliminary), of which gold accounted for 76,499,481 pesos. Base metal output was valued at 12,994,222 pesos. Leading factory products are refined sugar, lumber, soap, refined coconut oil, shoes, textiles, and

tobacco products.

Overseas Trade. The overseas trade of the Philippines for the calendar years 1939 and 1940 and the average for the five years 1934–38 are shown in the table on page 480 in pesos (1 peso equaled 50 cents. U.S. money).

50 cents, U.S. money).

United States statistics for the nine months ended with September, 1941 (the latest figures available) showed U.S. merchandise exports and reexports to the Philippines of \$81,489,808 and merchandise imports from the Philippines of \$72,925,140 (exclusive of \$32,202,823 in gold and \$716,473 in silver).

The value of the chief 1940 exports was (in 1,000 pesos): Sugar and its products, 94,794 (raw sugar, 86,170); gold, 75,800; abaca (manila hemp), 25,396; coconut oil, 19,724; copra, 18,803; tobacco and its manufactures, 10,291; embroideries, 9,162. Imports in 1940 were divided by main groups as follows (in 1,000 pesos): Metals and their manufactures, 71,845; nonmetallic minerals and chemicals and manufactures thereof, 56,

718; textiles and manufactures, 52,834; foodstuffs, 42,609; unclassified, 45,682.

<sup>a</sup> Includes reexports. <sup>b</sup> Includes gold and silver to Japan: 1939, approximately **P**440,000; 1940, approximately **P**800,000. Source: Reports of the Insular Collector of Customs.

Finance. Actual total budgetary returns for the fiscal year ended June 30, 1940, were: Receipts, 158,029,870 pesos; expenditures, 183,616,273 pesos. Actual general fund receipts for the six months ended Dec. 31, 1940, totaled 41,379,521 pesos; disbursements, 37,981,594 pesos. General fund estimates for the year ended June 30, 1942, years, Beceipts, 82,310,000 pesos, disbursements were: Receipts, 82,310,000 pesos; disbursements, 112,675,480. The net outstanding bonded debt on Dec. 31, 1940, was 72,746,559 pesos.

Practically all of the funds of the Common-wealth Government were saved from the Japanese invaders. Most of the Treasury certificates (paper money) was taken to Corregidor and burned before its capture. The gold reserve was taken out of besieged Corregidor by an American submarine and sent to the United States, where most of the Government's securities and other funds were on deposit either in the U.S. Treasury or in depositary banks at the outbreak of war with Japan. According to a statement issued by the Auditor-General of the Philippines on Apr. 3, 1943, the Government-in-Exile was meeting all of its expenses and obligations by using only part of the interest on the funds on deposit in the United States.

Transportation. The island of Luzon in 1941 had about 700 miles of railway, the greater part of all the rails in the Philippines. Lines on the islands of Panay and Cebu aggregated 133 miles. Producers of sugar and of lumber had an aggregate of thousands of miles of private rails. Highways extended 13,746 miles. A total of 1,060 ships (234 of American registry) aggregating 3,736,984 tons sailed from Philippine ports in 1940.

Government. Under the Tydings-McDuffie Act of 1934, a Philippine constitutional convention drew up a constitution which was approved by popular vote and went into effect Nov. 15, 1935. It vested wide executive powers in a President elected by popular suffrage for six years and legislative authority in a single-chambered National Assembly of 96 members elected for three years. Constitu-

tional amendments adopted in 1940 reduced the Presidential term to four years; revoked the for-mer clause barring reelection of a President (two successive terms only were permitted); established a bicameral Congress, with Senators elected at large, in place of the National Assembly; and established an independent electoral commission to supervise elections. Pending the full independence of the Philippines in 1946, the U.S. Government retained control over the Commonwealth's defense and foreign relations. Constitutional changes and legislation affecting currency, coinage, foreign trade, and immigration required the approval of the U.S. President. A High Commissioner represented the U.S. Government at Manila.

President in 1943, Manuel Luis Quezon, who assumed office Nov. 15, 1935, and was reelected for a four-year term on Nov. 11, 1941. Escaping from the Philippines with his War Cabinet early in 1942, President Quezon established the Government-in-Exile in Washington on May 14. At the end of January, 1942, the Japanese were reported to have established a puppet Filipino government in Ma-nila, headed by Jorge Vargas. Vargas, who was secretary to President Quezon and a member of the Commonwealth Cabinet, had been left behind in Manila to head a governing commission during the Japanese occupation.

## HISTORY

Fall of the Philippines. Although the Japanese began their invasion of the Philippines on Dec. 8, 1941, it was more than a year before the islands were completely under control. Gen. Douglas Mac-Arthur, under orders from President Roosevelt, left Corregidor on Mar. 11, 1942, and arrived in Australia on March 17. Lieut. Gen. Jonathan M. Wainwright, left in command, held out until May 7. Remnants of American and Filipino troops operating in Mindanao and northern Luzon, continued active guerrilla opposition well into 1943. Premier Tojo visited the Philippines late in the spring of 1943, and returning to Japan, announced that the Japanese Army was still carrying on "military operations" and working for the establishment of "peace and order." The Tokyo radio announced in June that Luzon had been "completely pacified," but late in July it admitted activity against American snipers in the Luzon jungles and bitter fight-ing between American and the occupying forces in Mindanao. President Quezon, head of the Philippine Government-in-Exile in Washington, broadcast in November a plea to his people to keep up their guerrilla warfare against the invading Japa-

Under Japanese Rule. The puppet government, set up in 1942, with Jorge Vargas as "Chief of State" was replaced in the fall of 1943. A new Filipino Constitution was ratified during September. There is no conscription clause. It contains a Bill of Rights resembling that of the United States, but has a reservation that these rights may be nullified if peace and order are threatened. On September 25, the Tokyo radio announced that José P. Laurel, Interior Commissioner of the puppet Philippines Government, had been named as "Presidentelect of the future Republic of the Philippines" at the first session of the "National Assembly." Benigno Aquino, head of the *Kalibapi*, the new totalitarian political party designed by the Japanese, was made speaker of the "National Assembly." Three months earlier, Commissioner Laurel had narrowly escaped assassination while playing on a Manila golf course.

Japan had been promising the Filipinos "inde-

pendence" since early in 1943. In the fall she announced that this "independence" would be withheld until the guerrilla bands surrendered. However, on October 14, the Philippines became an "independent" nation within the Japanese "coprosperity sphere." Tagalog became an official language of the State, replacing English. The new State flag had a sun in the center, surrounded by three stars representing the two main islands and three stars representing the two main islands and the Vizayan group, which contains all the remaining islands. The president-elect, José Laurel, after returning from conferences in Tokyo with Japanese officials, met with the Philippine "National Assembly" and requested authority to decree administrative and budgetary laws. The new Philippine "Republic" was recognized immediately by Berlin, Thailand, Manchukuo, and the puppet government in Nanking. ernment in Nanking.
On October 15, President Quezon broadcast to

the Philippines that Japan's purpose in granting independence was to use the islands in its prosecution of the war against the United States. On October 22, President Roosevelt declared that the United States would not recognize nor sympathize with the puppet government. This statement was in line with the Pacific policy determined two months before at the Quebec Conference by Prime Minister Winston Churchill and President Roose-

velt.

Military administration of the islands during 1943 was marked by several changes. Lieut, Gen. Masaharu Homma was relieved of his command there in August, 1942. Apparently he was not re-placed until May, 1943, when Lieut. Gen. Shi-zuichi Tanaka became Japanese commander-inchief in the Philippines. However, in less than a month he was transferred and replaced by Lieut. Gen. Shigenori Kuroda. These military administrations were marked by the transfer of some American and Filipino soldiers taken prisoners after the fall of Bataan and Corregidor to Formosa, Japan, and Manchuria, where, it was reported many were doing forced labor. Most of the higher-ranking officers were taken to Japan. Other American prisoners were taken to camps at Cabanatuan, Davao, and Mindanao. Civilians were interned at Santo Tomas University near Manila. In June, 1942, the Japanese ousted the Red Cross from all prison camps and made per-capita allotments, which were increased to fifty cents in September, 1943. The hospitals at Santo Tomas were operated by internee doctors and U.S. Army nurses from Bataan and Corregidor.

Japanese rule during 1943 also saw sporadic outbreaks of anti-Japanese sentiment. A wave of assassinations and attempts on the lives of Filipinos and Chinese known to be collaborating with the conquerors was followed by executions on the part

of the Japanese.

Japan's early plans were for economic self-suffi-ciency in the Philippines. One of the first steps in 1943 was the imposition of a sales tax ranging from 20 to 35 per cent on the people of the Japanese-occupied Philippines. A "five-year plan" was in-augurated to increase food production for their military machine. It was claimed by the Japanese that one-third of all the cultivated land in the Islands was now planted in essential food crops: rice, potatoes, beans, corn, and other staples. Cotton lands had been increased and plans were made to plant these lands between seasons to rice, corn, soybeans, and sweet potatoes. Wheat was even tried in the face of adverse climatic conditions. The island of Mindanao harvested a record coffee crop, and the making of domestic grape wine was

encouraged. The sugar industry was to be reorganized according to a plan of "rationalization." Of the 70 refineries less than half were to remain in business. The others were to be utilized for producing alcohol and butanol or for other purposes.

Accounts by interned American reporters returned home on the Gripsholm painted the reverse of the Japanese picture of self-sufficiency. They reported the Japanese Army living off the country, the natives unable to obtain fish, the price of rice and other staples increased as much as 500 times, and a serious sugar shortage, due probably to the Japanese depletion of sugar reserves for making glycerine and alcohol. One of the returned correspondents told of Japanese efforts to persuade the Filipinos into their way of thinking. Japanese-language schools had been opened throughout the Philippines, and many young Filipinos from the best families were being sent to Japan for indoctrination to prepare them for future leadership.

American Proposals. Counter measures to offset Japanese gains and promises in the Islands were taken by the United States in 1943. On August 12 President Roosevelt broadcast a message to the Filipinos on the 45th anniversary of the American occupation of the Philippines. He assured them that they would be represented at the peace conference after Japan's defeat. He referred to the Philippines as a signatory of the declaration by the United Nations, and mentioned President Quezon's and Vice-President Osmena's attendance at meetings of the Pacific War Council, where the war in the Pacific is planned. He also promised that the "entire resources in men and materials of the United States" will be used to free the Commonwealth, and assured them assistance in repairing the Islands after the war.

Again on October 6, the President asked Congress to give him authority to proclaim the independence of the Philippines as soon as possible, instead of in 1946 as the independence law provided. Such legislation was introduced in the Senate by Senator Tydings, and an identical bill was introduced in the House by Representative Bell. The bill provided full independence "as soon as feas-ible"—that is, as soon as the Japanese were exible"—that is, as soon as the Japanese were expelled. The bill had the approval of the Philippine Government-in-Exile, President Roosevelt, and Cordell Hull, Secretary of State. Under the Philippine Constitution, established in 1935, President Quezon would have been retired on Nov. 15, 1948, to be replaced by Vice-President Osmena. Special legislation passed by the U.S. Congress continued both Quezon and Osmena in their offices for the duration of the war. In September, 1942, the functions of the office of the High Commissioner to the Philippines were transferred by executive order to the Secretary of the Interior. The High Commissioner's duties include attention to problems con-cerning Americans interned in the Philippines.

Secretary Hull's statement on the occasion of the eighth anniversary of the establishment of the Philippine Commonwealth reaffirms the pledge of

American support to the Filipinos:

As the Filipino people recall what the Japanese enemy has done and is doing to the natives of Formosa, of Korea, of China, of Thailand and of Burma, and of all the areas overrun and invaded by the Japanese, it will be apparent to them, and to all of us, that Japan will never voluntarily withdraw from the Philippines, but rather will put forth its utmost effort to remain there for the purpose of exploiting those areas and those people in the sole interest of the Japanese Government.

They will not remain. They will be driven out.

During the last half of 1943 the fortunes of war turned against the Axis powers. Plans were started for the postwar era, and United States officials were taking steps to repair the ravages of war. The Secretary of the Interior reported on December 25 that the economic and financial rehabilitation of the Philippines was being planned. Such preparation was needed, he said, to repair government property, the damaged banks and credit houses, and the schools and health services. President Quezon also assured his people that General MacArthur would soon be able to start reconquest of the Philippines and that both of them would return to Manila together. See WORLD WAR.

PHILOSOPHY. Although the American Philosophical Association did not meet in 1943, the standard philosophical journals appeared, in spite of the war, and a number of noteworthy books were published.

The most important book of the year was The Philosophy of Bertrand Russell, the fifth volume of The Library of Living Philosophers, edited by Paul A. Schilpp. It contains 21 essays on various aspects of Russell's thought, Russell's "Reply to Criticism," his autobiographical sketch, "My Mental Development," and a complete bibliography of

his writings.

Hans Reichenbach opens the volume with a clear, popular account of Russell's contributions to logic, most of which are to be found in *Principia* Mathematica (1910). He explains how the propositional function coordinated class and relation, the latter becoming a variant of the former, describes material implication, the much disputed definitions of cardinal numbers, the simple and ramified theories of types and other important innovations. He shows that much of this work stands today, and that where improvements have been made in the past thirty years, they have often been inspired by Russell himself. The boldest and most far-reaching thesis of Principia Mathematica was that mathematics is a branch of logic, that positive integers can be defined purely in terms of logical notions, and that there is a perfect correspondence between the logically derived results and those of ordinary mathematics. Reichenbach not only describes and defends Russell's contributions, he also asks several probing questions. Why insist upon a two-fold classification of propositions? Is not a three-fold division often more useful? "To speak of 'Truth in itself' and Falsehood in itself,' existing as Platonic ideas ...." has no relation to actual procedures of knowledge." He proposes, with Brouwer, to abandon the principle of excluded middle, but does not favor the division of propositions into true, false, and indeterminate, for he prefers to replace the true by the "verifiable."

Morris Weitz's "Analysis and Unity of Russell's Philosophy" is systematic, and well documented. Russell takes only a few exceptions. He offers the valuable explanation that in his recent Inquiry into Meaning and Truth, he does not reject the dualism of universals and particulars, but only places qualities among universals. His aim is to get rid of "substance." James Feibleman's paper is also concerned with the question of universals, and undertakes to defend the early realistic Russell of The Problems of Philosophy against the nominalistic Russell of the second edition of The Principles of Mathematics. Russell replies that the use of the word "similar" is important and unavoidable, and may imply realism. Cognate with the question of universals, is the theory of "descriptions." Although this theory was presented with much logical pre-

cision, G. E. Moore in his paper succeeds in pointing out a number of ambiguities in its formulation. Whereas Moore is concerned with a particular linguistic theory, Max Black undertakes to criticize Russell's whole theory of language. He argues that the theory of types implies "that the impossibility of substituting two words for one another in even a single context [is] to be regarded as a sufficient cause for their segregation into mutually exclusive types . . . So stringent does the requirement prove that it becomes difficult, if not impossible, to state the theory itself without contradiction." The result, he believes, is a kind of paralysis of philosophical thought.

Albert Einstein, commenting on Russell's theory of knowledge, regrets that the influence of Hume has led to a pervasive fear of metaphysics, as illustrated by the common replacement of objects by "bundles of qualities." He urges that this bad conscience be exorcized and the need for metaphysics recognized. Other writers also believe Russell's attempt to escape from metaphysics is impossible or unwise. John Laird argues that the use of the word "I" seems to imply a substantial self and mental acts, neither of which can be reduced to sense-data. Walter T. Stace objects to Russell's project (in The Analysis of Mind) of constructing the world out of verifiables only. John Elof Boodin, on the other hand, complains of too much false metaphysics, and denounces Russell's positivism, atomism, and "solipsism." Common sense, he claims, is a more reliable guide than the "fairy land speculations" of Leibniz and Russell. These and many other objections result from Russell's persistent use of the principle of "Occam's razor," which counsels us to substitute, "whenever possible, constructions out of known entities for inferences to unknown entities." This point is discussed

by Ernest Nagel and others.

The last seven papers are concerned with Russell's ethical religious, political, economic, and historical theories. Russell's view that a judgment of value is merely an expression of desire (so that when I say "Democracy is good" this means only "Would that all men desired democracy") is challenged by Justus Buchler. He argues that this subjectivism is apparently inconsistent with the facts of moral life, such as conflict and persuasion, and with Russell's own warm approval or disapproval of other people's attitudes and actions. In reply Russell insists upon his right to express his ethical passions, even though what he says is neither true nor false of anything save his own private feelings. Edgar Sheffield Brightman also complains of Russell's subjectivism, and contends that it blinds him to the "empirical evidence and possibilities of positive aspects of religion." Russell, he says, in-sists on the alternative: either perfect demonstration of religion or rejection. He maintains, however, that Russell is truly religious, and believes in God, since he evinces a need for something beyond the human. To this Russell replies that the felt need for the divine does not prove its existence. Critics of Russell's social and political philosophy did not receive the cogent answers they might have expected owing to the fact that Russell, as he says, regards most questions in this field as lying outside the scope of philosophy. Thus to specific criticisms he replies, in effect, that much of his work in these fields is not instructional, but largely a personal reaction to the unhappy state of the world.

The philosophy of Edmund Husserl is almost

The philosophy of Edmund Husserl is almost as influential today as that of Russell, although in different circles. Marvin Farber's volume The Foundation of Phenomenology, Edmund Husserl and the Quest for a Rigorous Science of Philosophy, which traces the development of phenomenology and expounds and evaluates its main contributions, will do much to augment the interest in this philosophy. The book contains a thorough analysis of Husserl's Philosophie der Arithmetik (1891), and an account of his evolution beyond the psychologism of this book to the logical realism of the Logische Untersuchungen (1900-1). The change of mind was due in part to the criticism of the mathematician Frege, who also influenced Russell's development. Farber shows Husserl's relation to other great contemporaries and predecessors: Leibniz, the British Empiricists, Natorp, Schuppe, Schröder, and many others, sifting reviews and polemics buried in books and periodicals seldom consulted today. The major portion of the book is devoted to a condensed translation of the three volumes of the Logische Untersuchungen, Husserl's most important work. The classic proportions of this work unfold. The Prolegomena (vol. 1), with its stirring attack on psychologism was much acclaimed and disputed, while the six subsequent investigations, which elaborated a whole new science of "intentionality" were little regarded at the time. Years later these painstaking investigations of a priori relations embedded in the tissue of immediate experience, were widely recognized at something like their true worth. By this time Husserl had gone beyond the plane of the Investigations. These phenomenological Investigations themselves required phenomenological investigation. In his later works Husserl developed phenomenology into the science of transcendental subjectivity, which he regarded as the science of sciences, or as the only science, since it gave final vindication to all the others. Farber rejects this subjectivism and idealism, and rightly recognizes the Logische Untersuchungen as the greatest achievement, and foundation, of phenomenology. He sums up his understanding of phenomenology as follows: "(1) understanding of phenomenology as follows: "(1) It is the first method of knowledge because it begins with 'the things themselves,' which are the final court of appeal for all knowledge . . . (2) It views everything as an exemplification of essential structures . . . (3) It deals not only with 'real' essences, but also with 'possible' essences. (4) Direct insight engineers in the control of the co insight, evidence in the sense of self-giveness of the objectivity is the ultimate test of it." Farber goes to great lengths to exclude metaphysics and to interpret even Husserl's later writings, not idealistically, but methodologically.

The best known Catholic philosopher today is Jacques Maritain. He is distinguished not only by his advocacy of Thomism, but by the clarity of his thought, his hatred of fascism and his warm espousal of the cause of the people. Another reason for his popularity is that he has taken great pains, particularly in his best book, The Degrees of Knowledge, to present Thomism in relation to contemporary schools of thought. He criticizes, for example, both Russell's and Husserl's views, the latter much less severely. Indeed Husserl's philosophy, e.g. his doctrine of "intuition," has exerted considerable in-

fluence on Catholic thinkers.

The Maritain Volume of the Thomist, just issued, is a tribute to the philosopher on the occasion of his sixtieth anniversary. Twenty essays, remarkably diverse and of uneven merit, make up the book. Yves R. Simon, who writes on Maritain's philosophy of the sciences, argues that if empiricistic science includes in the definition of a chemical substance such as silver, its boiling point, melting point, etc., it is involved in circularity. The solution is to recognize, with Maritain, that

"Whereas the being of things is successfully penetrated by the dianoetical intellection used in philosophy of nature, it is only circumscribed by the perinoetical intellection of empiriological science. ... With Maritain, the science of phenomena was given for the first time a justification which owed nothing to the idealistic interpretation of the mind's activity." (p. 95) Other essays deal with the Thomist concept of culture, with providence, justice and friendship, peace and diverse historical matters. Emmanuel Chapman writes an enthusiastic appraisal of Thomist philosophy, while Mortimer J. Adler attempts to remedy a defect in the Thomistic argument for God's existence. The most impressive article is "The Theory of Oligarchy: Edmund Burke" by President Robert M. Hutchins. Hutchins argues convincingly that the contradictions in Burke's thought can be explained by his determination "to protect the aristocracy from attack from any quarter. If it came from the King, he would use the people against him; if it came from the people, he would retort on them with the glories and virtues of the established order. . . "When the attack came from the King and the North ministry, Burke favored the people and upheld the American Revolution, when the threat came from the other side, Burke embraced reaction condemned the French Revolution and led the fight against

democracy and freedom.

The philosophers discussed above also figure in a new volume Twentieth Century Philosophy, edited by D. D. Runes. Many other schools, and departments, of philosophy are also represented. Herbert Feigl's comprehensive survey of "logical empiricism" is especially interesting, because this international movement makes a great effort to hold together, in bonds of methodological cooper-ation, many distinguished philosophers and scientists who seem to have little in common, and to preserve the continuity of the movement in spite of surprising shifts and changes of theory. The basis of unity is the famous dictum of Peirce: A difference that is a difference must make a difference. Or, as Feigl puts it: "If and only if assertion and denial of a sentence imply a difference capable of observational (experiential, operational, or experimental) test, does the sentence have factual meaning." This principle enables logical empirists to unite with operationalists who follow Bridgman and pragmatists who follow Dewey, and to make overtures to scientists and philosophers who appear to employ this principle. It also enables them to reject all metaphysics as meaningless or purely emotive, and to relegate such time honored issues as the mind-body problem and the problem of free-will to the status of pseudo-problems. Feigl is willing to admit that when drastically reformulated, metaphysics might mean something, and he concedes that some of his associates have gone too far. The meaningfulness of a sentence does not require, he says, that the means are at hand to confirm it, but merely that it is con-ceivably confirmable. The value of logical empiricism is to be measured, of course, by its accomplishments. Feigl points with pride to the work of the mathematician, Kurt Gödel, who arithmeticized syntax, and discovered that "within the framework of the concepts of any given postulate system, providing the system includes only arithmetic without limitation to the finite, it is possible to formulate problems which cannot be solved with the frame-work." Carnap has also made unquestioned contributions to the techniques of language and deduction, but the more distinctively philosophical contributions of the logical empiricists enjoy no priv-

ileged place. They are just as frequently, and as destructively, criticized as are the theories of other philosophers. Examples are furnished by the present volume. Thus Everett W. Hall, in his article, "Metaphysics," argues that the logical empiricist opposition to metaphysics is itself a kind of metaphysics, and that it is hardly possible to reject all metaphysics, but only special varieties. On the other hand, V. F. Lenzen's "Philosophy of Science," shows how much one of the best writers in this fall has been interpreted by legislating the series of the period o field has been influenced by logical empiricism. His excellent article ends with a reference to the logical empiricist view that the realism-idealism issue is a psuedo-problem. He notes as important that whereas Helmholtz admitted the possibility of interpreting the facts in terms of subjective idealism, he also "held that the realist (dualist) interpretation is the simplest one." Lenzen, however, concludes: "Whether or not one concedes significance to the issue between realism and idealism the cautious philosopher of science can limit himself to the concept of nature as a scheme for the correlation of experiences."

Another movement of philosophy which takes seriously many of the problems which the logical empiricists regard as verbal confusions, is dialectical materialism. John Somerville, in the same volume, points out that dialectical materialism does not dismiss problems which have been called meta-physical but only objects to the frequent emphasis on changelessness, and on eternal forms as causal agents. Somerville shows that while dialectical materialism looks to the future, it also has its roots in the past. It has learned much from the classic materialists, the Utopian thinkers, Hegel and even from such classic philosophers as Aristotle. Prejudice and ignorance have prevented a better understanding of this philosophy in America, and the author believes that this situation should be rem-

edied in the future. The continuity of Marxist philosophy with great intellectual traditions of the past is stressed by Howard Selsam, in his Socialism and Ethics, but he exhibits the radical divergence of this philoso-phy from other schools of thought, past and pres-ent. What distinguishes Marxist ethics from other systems is, above all, its insistence upon the unity of theory and practice. A great deal of Selsam's book is taken up with historical, economic, and political questions, and with trade unionism and class and social viewpoints which seldom figure in ethical works. In utter contrast to the spirit of Selsam's book is a brief volume, The Value Doctrine of Karl Marx, by Prof. Albert G. A. Balz. In a genial, almost whimsical, manner Balz attempts to deepen the meaning of the labor theory of value with the help of Aristotle's metaphysics and the "science of angels."

Marxist books on philosophy inevitably relate theory, however abstract or remote, to immediate social issues. Other schools of thought do so less frequently. An example is furnished by Helmut Kuhn's Freedom Forgotten and Remembered, which attemps to show that the German surrender to National Socialism resulted from a forgetfulness of freedom, and from the passions of despair, hate, and resentment. The cure recommended is recollection of freedom, i.e. remembrance of man's real nature, which "implies freedom." Since human nature implies freedom, democracy is an absolute value. On the other hand, Edward W. Strong in "Civilization in Historical Perspective," Civilization (University of California Publications in Philosophy, 23), inclines to relativism. He grants that there is a nonhistorical, Platonic escape from

valuational relativity. There is also another way. It is "to assert, after the precedent of Hegel, that there is a World-Historical Spirit" which expresses itself "in parochial and local moments," that "our valuations though apparently relativistic are, in the reality of the Spirit, expressions of its unity." Strong, however, is attracted to Spenglerian relativism. It is not paradoxical, he states, to hold that valuational relativity promises more for ef-forts to realize the aims of civilization "than a conviction of absolute justification when claimed by any class or nation of men." The quest for absolute justification of value judgments appears in several of the essays in this timely and interesting volume.

Preoccupation with absolutism vs. relativism, organization vs. freedom, leaders vs. followers, is a marked feature of the now expanding literature of the philosophy of history. Questions of method in historiography and the problem of the proper distinction between procedures in history and in the physical sciences, are also prominent. Thus The Interpretation of History by Barzun, Holborn, Heaton, Malone, and La Piana, is concerned with the demarcation of history from the other sciences, the part played by imagination, insight, hypothesis, and the economic factor. James Burnham in his Machiavellians upholds views of Machiavelli, and of such modern writers as Pareto, Mosca, and Michels. He contends that only an élite can rule scientifically and efficiently and that the masses are incompetent. Democracy, if it has not already done so, will soon disappear. Sidney Hook in *The Hero* in History is also concerned with the causal efficacy of leaders. He contends that the decisions of the leader can determine the course of history at a juncture of two objectively possible alternatives, and that the role of heroes has been underestimated by Marxist philosophy.

Interest in the philosophy of history is also illustrated by the publication of a translation of Jacob Burckhardt's Force and Freedom. Reflections on History and by Jacques Barzun's Romanticism and the Modern Ego, which argues that "romanticism" is characteristic of expanding, creative periods of history, whereas classicism marks conservative pe-

riods.

At least three noteworthy books on the philosophy of education appeared: Jacques Maritain, Education at the Crossroads; Robert M. Hutchins, Education for Freedom, and Mark Van Doren, Liberal Education.

In esthetics we have Henry W. Wells' The American Way of Poetry and Bertram Morris' The Aesthetic Process. Following both Whitehead and Dewey, Morris emphasizes the process-character of experience. For example, he holds that the esthetic experience cannot be completely expressed by categorical propositions. "The puerile statement Dante loves Beatrice' can be nothing but caricature, . . Esthetic experience can be expressed only by the "metaphorical judgment" which, though neither true nor false, points to further esthetic realization of the original intention. To show esthetic experience as a dynamic process, the author also develops the Kantian notion of purposefulness as an essential aspect of the art object.

In addition to books listed in the text, the following may be noted: John Elof Boodin, Religion of Tomorrow; Ernest Campbell Mossner, The Forgotten Hume: Le bon David; Rudolf Carnap, Formalization of Logic; Kenneth J. W. Craik, The Nature of Explanation; Lewis Edwin Hahn, A Contextualist Theory of Perception; Clark L. Hull, Principles of Behavior; Robert W. Leeper, Lewin's Topological and Vector Psychology; Alexander D. Lindsay, Religion, Science, and Society in the Modern World; James Marshall, The Freedom to be Free; Cale Young Rice, A New Approach to Philosophy; Ben-Ami Scharfstein, Roots of Bergson's Philosophy; Francis Schoemaker, Aesthetic Experience and the Humanities.

Also: Jacob Klatzkin, In Praise of Wisdom; Jacques Maritain, Art and Poetry; An Inquiry into the Sociology of Knowledge; Ananda K. Coomaras-wamy, Hinduism and Buddhism; Merle Curti, The Growth of American Thought.

PHOTOGRAPHY. The mighty task of training millions of men and women in the grim business of global war and of recording the progress of that terrible conflict was aided greatly by photography. One out of every ten adults in the United States, according to the Office of War Information, was expected to be in training by the end of the year and nine out of ten of those in training were being instructed partially by photography. Almost every service man or woman had one or more photographs of their dear ones and these humble snapshots were regarded as treasured possessions. At home, civilian use of photography was restricted greatly by the curtailment and rationing of chemicals and materials. Manufacturers of photographic goods struggled with the problems of war production, including nonphotographic items such as fire-control instruments, metal pontoons, and height finders, in addition to their regular line of work. Much new knowledge was being acquired from this war experience, and it was predicted that this knowledge would be used effectively to bring out new materials and equipment when the world was again at peace.

Photography in the Armed Forces. Approximately 300 new films were completed during the course of the year by the U.S. Army Signal Corps, bringing the total to over 700 films. The majority of these were black and white, but a few of them were in color. All films were distributed through the libraries located in the nine different Service Command areas. Many hundreds of film strips were also in daily use. These strips each had about fifty separate pictures and titles, covering subjects that usually could be taught better with the still picture than with a motion picture. One of the most useful applications of the film slide was in connection with a course on recognition of aircraft and warships by the Renshaw system. A "flash projector" was used to project the image on the screen for a controlled time, say for several seconds. The viewing time was shortened every day during the eight-week period for the course and at its conclusion, the student was expected to identify 168 planes and ships in 1/5th second each.

Motion pictures of enemy planes in combat were used in several ways to train gunners of the Army and Navy Air Forces. Although no cartridges were fired by the guns used, the weapons were connected by optical and electrical means to indicator boards to show the instructor when the gunner was "on target" as he fired at the projected picture of the

planes. Recoil action and gunfire sounds occurred when the trigger was pressed. (Pop. Science, 143:

65, Sept., 1943).

Two new types of motion picture material were added to the lists of visual aids being distributed by the U.S. Army Pictorial Service. These were the Informational Films and the Film Bulletins. The former were intended to provide "historical" and general background information on the war," and the latter were "designed to inform military personnel of current activities and developments. . . . (J. Soc. Mot. Pict. Eng. 41: 255, Sept., 1943).

Training film activities of the U.S. Army were discussed in ten papers at a symposium of the Society of Motion Picture Engineers in New York in May. Subjects treated included psychological factors, production problems, animation, sound recording, distribution, and utilization. All papers were published in the September, 1943, number of the Society's Journal.

Throughout the country at various army posts, training films and entertainment films were shown under the auspices of the U.S. Army Motion Picture Service. Welpley reported that by the end of the year, 1,000 post theaters were expected to be in operation requiring the services of 5,000 enlisted men to operate them. The seating capacity of these theaters was about 750,000, providing over 150 million admissions yearly. (J. Soc. Mot. Pict. Eng.

40: 4, Jan., 1943)

Operational and tactical information was obtained in the actual combat areas or "theaters of war" by small groups of photographers called combat camera units. (Commercial Phot. 18: 402, Sept., 1943). The size of these groups varied from two to ten or more men, each of whom had been trained in the use of weapons as well as photographic equipment. They had to be in the thickest part of the action and sometimes were even ahead of the troops in their outfit. For example, it was reported by Lieutenant Colonel MacDonald, who directed the photography of the great documentary film, Desert Victory, that 17 men out of their starting force of 32 photography had of the barries force of 32 photography had of the barries of 32 photography had of the 32 photography had of the barries of 32 photography had of 32 photography had of 32 photography had of 32 photograph ing force of 32 photographers had either been killed, wounded, or captured during the 80-day advance of the British 8th Army from El Alamein to Tripoli. (Amer. Cinemat. 24: 167, May, 1943). Problems facing combat camera units in the U.S. Army Air Force were discussed by Jestor (J. Soc. Mot. Pict. Eng. 41: 136, Aug., 1943). The fine work of the Soviet camera units has been well known since Russia entered the war (Amer. Cinemat. 24: 168, May, 1943).

Radiophoto service was started by the U.S. Army during the year from the European and South Pacific war theaters of operations. True copies of photo reconnaissance records, maps, orders, and other important data could be flashed for study without delay. (Army Ordnance Bull. No. 34, Aug.

15, 1943, p. 4).
The important task of assembling photographs of enemy harbors, airfields, beaches, highways, railroads, and other strategic locations was carried out by the Office of Strategic Services, a civilian agency operating under the joint chiefs of staff of the U.S.

Army and Navy

Hundreds of thousands of U.S. Army Air Force personnel received the benefit of specialized instruction with the aid of the training film program which was started in 1937. According to Colonel Carr, it was "General Arnold's wish that the training film program be integrated with the instruc-tional courses being given within the Air Forces." The Training Aids Division was organized to serve as the central agency to coordinate this development. Production units for training films were maintained at Culver City, Calif., and at Wright Field, Dayton, Ohio. Films made by various aircraft manufacturers were also utilized by the Army Air Force for training. (J. Soc. Mot. Pict. Eng. 41: 329, Oct., 1943).

In the ten months previous to June, 1943, the Director of the U.S. Geological Survey (q.v.) reported that approximately 1,500,000 square miles of the earth's surface had been photographed by the U.S. Army Air Force and charted. The pictures were taken by using the Tri-Metrogon system, which consisted of a group of three cameras, one vertical camera, and two oblique cameras in each installation. About 8,000 square miles could be photographed daily. The actual mapping job was done by a staff of 250 technical personnel at the Geological Survey. Planimetric detail was transferred from the photographs to the map sheet by means of a camera lucida type of device known as a "Sketchmaster." Such reconnaissance maps pro-vided invaluable data for movement of troops and planning of battles. (Commercial Phot. 18: 395, Sept., 1943).

Research in aerial photography for the U.S. Army Air Force was done largely at the Aerial Photographic Laboratory at Wright Field near Dayton, Ohio. An illustrated article in U.S. Camera magazine for October and November described many of the new techniques (as many as could be told) that had been developed in recent years. With the new telephoto lenses, of focal length as much as 60-inches, signs can be read clearly on building roofs shown on pictures taken from an airplane flying 7½ miles above the earth; on low altitude pictures the "A" sticker on an automobile windshield could be distinguished on the photograph made while the plane flew better than 400 miles per hour just over the tree-tops. Entire coast lines of a country could be shown on one long roll of paper with the aid of the new strip camera (see under New Apparatus below). As the war progressed, the results of this intensive research program became more and more significant. The aerial photograph had proved its usefulness on every important mission of the war.

Stereo air photographs, taken by R.A.F. reconnaissance photographers, showing bomb damage in Germany and Holland were reproduced in an English magazine (Miniature Camera 7: 417, Sept., 1943).

The U.S. Navy established its Training Film Branch of the Bureau of Aeronautics in July, 1941, and all requests for films and film strips were handled through this agency. Problems in the production of training films for the Navy were discussed by Goldner (J. Soc. Mot. Pict. Eng. 41: 146, Aug., 1943). Like the Army films, these training aids were intended to supplement other types of instructional material and actual field experience. Approximately 2,400 units of these training aids had been finished by the close of the year, representing about 1,800 slide-films and 600 motion pictures.

Many hundreds of photographers were graduated from the U.S. Navy Photographic School at Pensacola, Fla., during the year. A rating of first class seaman or higher was necessary to gain entrance to this school, or if the applicant was an expert civilian photographer, enlistment in the "V-8" classification was required. Basic training in theory and practice of making pictures was followed by specialized instruction in sensitometry control, motion pictures, and aerial photography. The student learned to use many types of cameras, to do special processing, corrective printing, and map laying (*Pop. Photography 12*: 22, Jan., 1943). A modern well-equipped photo-laboratory was completed for and occupied by the U.S. Navy at the Naval Air Station, Anacostia, D.C. This was known as the Naval Photographic Science Laboration tory. According to a press release of the Navy Department, the building was to be staffed initially by about 700 Naval personnel, made up almost entirely of specialists. About 85 of these received advanced training in the handling of specialized processing equipment at the Eastman Kodak Company, Rochester, N.Y. The primary functions of the laboratory were to supervise the training and assignment of skilled photographers and technicians to fleet and shore activities, to check and test aerial and motion picture cameras and all other Naval photographic equipment, and to make new technical developments and improvements in equipment, operation, and training. (Phot. Trade News 7: 7, Feb., 1943).

Mortimer published another of his authoritative reviews of the role of photography in the war. (Phot. J. 83: 98, April, 1943).

Color Photograhy. Amateur and professional photographers continued to make the majority of their color pictures on Kodachrome, although the war naturally put certain restrictions on the supply of this film. Thousands of color prints were made daily from Kodachrome transparencies either as Minicolor (from 35-mm Kodachrome) or as Kotavachrome (from sheet Kodachrome). For the roll film user, Kodacolor film and prints were growing in popularity. The older processes of carbro and washoff relief remained in favor for many commercial illustrative photographers.

Color motion pictures by an improved Agfacolor process were reported by a Swiss publication to have been shown at Dresden in October, 1942. A faster film emulsion and better projection with the aid of a "honeycomb" condenser were claimed. The film was the Ufa production, The Golden City.

(Camera, Luzern 21: 191, Feb., 1943).

The armed forces used Kodachrome extensively for training and combat purposes. One of the best color documentary films of the year was the War Department picture, Report from the Aleutians, produced by the Signal Corps and released to the public through the War Activities Committee. The Technicolor release print was made from the edited Kodachrome original, which was taken on the ground and in the air.

More Technicolor feature pictures were made than in any previous year, the Film Daily reporting in September that 21 pictures had been released and 24 others were in preparation. For one picture, This Is The Army, it was said that 450 Technicolor prints were made. Another remarkable color picture was the Disney production of Major de Sever-sky's book, Victory Through Air Power, released by United Artists Corporation.

Information about a new color film, Kodacolor Aero, was released by the Army and Navy in May (Life 14: 59, May 10, 1943). With this film it was stated that exposures of the order of 1/150th second at f/8 could be made. Trouble with atmospheric haze at high altitudes could be counteracted with special filters. The article also said that this color film "can be processed and developed anywhere, even in tent darkrooms on the battlefront." Several color illustrations were published with the article to show the detail and range of color contrast revealed with the use of this aero film.

Technical details of the Ansco Color Film process were published in October; the product was announced in July, 1942. This film was stated to be of the three-layer type, requiring development to produce first a black-and-white negative image in each of the three emulsion layers. It was then bleached to remove the negative silver images, given a second exposure, and developed in a paraphenylenediamine type developer giving reaction products which combine with colorless substances in the three layers to produce dye images in the three subtractive colors, cyan in the lowest layer next to the base, then magenta, and finally a yellow image on top. The processing could be done by the user. A color paper for making color prints from three-color separation negatives was said to be available; the processing requirements were stated to be similar to those recommended for the color film. Distribution of all of these new color materials was restricted to the armed forces until after the war.

Motion Picture Photography. Travis discussed the allocation problems facing the motion picture industry in view of the demands of the war. Much greater conservation of materials, especially films and equipment, was necessary after the War Production Board issued Order L-233 on Dec. 16, 1942. A very high standard of product was maintained and in addition every motion picture studio devoted a portion of its production time to the making of pictures to aid the war effort. Many of the new developments are in the restricted category and will probably not be discussed until after the war. Two technical conferences were held by the Society of Motion Picture Engineers, at New York in May and at Hollywood in October. The major portion of the reports at these sessions were given by members of the armed forces. A complete issue of the magazine Business Screen (Vol. 5, No. 1, 1943) was devoted to articles dealing with the film programs and equipment of the U.S. Department of Agriculture

Causes of lack of sharpness of a projected motion picture were studied by Carver, Talbot, and Loomis and the results reported in a paper on the effect of high intensity arcs upon 35-mm film projection. High-speed motion pictures were used to analyze the movement of the film in the projector gate. (J. Soc. Mot. Pict. Eng. 41: 69, July, 1943; also ibid p. 88). See Motion Pictures.

Physical Measurements. An important accomplishment after nearly three years of trial and criticism was the final approval of the "American Standard Method for Determining Photographic Speed and Speed Number." (J. Opt. Soc. Amer. 33: 479, Aug. 1943). In the Thirteenth Hurter and Driffield Memorial Lecture before the Royal Photographic Society, Rawlings summarized the more important steps that have been taken to standardize the measurement of density and exposure. (Phot. J. 83: 49, February, 1943). Selwyn reported on investigations of graininess and granularity. He showed that it is possible to estimate print graininess from measurements on the negative material. He suggested a formula for specifying the graininess of a negative material and checked this proposal by direct experimental tests on prints. (Phot. J. 83: 227, June, 1943).

Manufacture of Sensitized Materials. As a result of the very great increase in the orders for photographic materials from the armed forces and the restrictions placed on the manufacture of film and film base by the government (WPB Limitation Order L-233) the quantity of film for civilian use was drastically reduced. The war provided a good excuse, however, for the manufacturer to take inventory of the demand for all items and to eliminate many that were being used only to a slight extent. Methods of manufacture were adjusted to permit the machines in these factories to operate at maximum capacity. No new films or plates were permitted except for special needs of the government.

Improved materials were made available for use in the phototemplate process for speeding up the design and manufacture of airplanes, ships, and vehicles for use in mechanized warfare. Some of these products were applied directly to metal surfaces and others were coated on paper for subsequent transfer to other surfaces. Batley and Coppin discussed these developments particularly as they applied to techniques and equipment used in Great Britain (Aircraft Production, 5: 107, March, 1943; ibid 190, April, 1943; also Phot. J. 83: 132, April,

Several types of recording and reflex copying papers for industrial photography were introduced. Large quantities of paper having a waterproof base were being made for the Navy and the Air Force. This product has the very useful property that it changes only slightly in size during processing and can be washed and dried rapidly. The older type double-weight Aero Mapping Paper was replaced by two new types of waterproof single-weight paper known as Aero Contact and Aero Enlarging. An interesting discussion of the many intricate problems facing the photographic manufacturer was given by the President of the Royal Photographic Society, Donald McMaster, who also dwelt upon the extensive research program that was being conducted by various laboratories in this industry. (Phot. J. 83: 164, May, 1943.)

Photographic Apparatus. Many improvements were

known to have been made in ground cameras and aero cameras for the armed forces but details of these were not released except in limited instances. Besides those cameras used for direct records of scenes and action, there were many types of specialized equipment in use, such as the Zenith Camera, which enable the exact latitude and longitude of aerial photographs to be determined. This device consists of (1) a camera which was used at night to photograph the sky around the zenith; (2) another camera for photographing three navigation watches, and (3) an automatic timing equipment for keeping the two cameras synchronized. Accuracy was believed obtainable within 40 or 50 feet, an outstanding achievement in view of the earth's circumference of 131,000,000 feet.

One of the most unique camera developments of the year was the shutterless, continuous strip camera of the U.S. Army Air Forces. This camera produced a continuous picture by drawing the film across a narrow slit at a speed synchronized with the speed at which the image passed in front of the lens. The operation of this camera was automatic by remote control, permitting a pursuit ship pilot to use it, to record on a single film strip (either in black and white or on the new color film) several hundred miles of coast line or a strategic railroad or canal. Prints were made rapidly by contact on the Sonne strip printer. (Life 14: 59, May 10, 1943; also Business Week 733: 60, Sept. 18, 1943).

New photo-trailer laboratories for processing aero film and paper rapidly on automatic machines were designed and constructed for the U.S. Army Air Forces by the Eastman Kodak Company. Each processing unit consisted of two trailers, one for developing the negative and the other for making the prints. Besides special equipment for rapid processing of film and paper, the temperature and humidity of the air in these mobile darkrooms was controlled with auxiliary machinery. The only external requirements were a supply of tap water and gasoline. (*Phot. Trade News* 7: 8, March, 1948).

A new portable darkroom outfit permitted devel-

opment, enlarging, and copying to be done anywhere in the field by Army, Navy, and Marine photographers. All necessary materials including a miniature 35-mm film camera, chemicals and a daylight developing outfit, enlarger, etc., were packed very compactly in a box less than two cubic feet in size. With an auto battery as a current supply and a truck or tent for a darkroom, or even working in the open at night, excellent photographs could be produced.

A new precision miniature camera using 35-mm film had the novel features of reflex viewing and a coupled range finder. It was equipped with an f/2.8 lens of 5 cm. focal length and a focal plane shutter with speeds to 1/1000th second. This device, known as the Alpa Reflex, was made by the firm of Pignon, Ballaignes, Switzerland (Miniature Camera 7: 407,

Sept., 1943).

Methods for analysis of motion were discussed by Phillips and Davies (Proc. Royal Inst. Great Britain 32: 384, 1942). Various applications of high speed photography and motion pictures were dealt with by Eyles (Phot. J. 83: 261, July, 1943). These papers pointed out the great usefulness of such special equipment for analyzing defects in rapidly moving machinery. Smith gave details of a new model of a high speed camera, called the Fastax, with which pictures could be exposed at 8,000 per second on 8-mm film or 4,000 per second on 16-mm film. A continuously rotating prism or optical compensator was used to form successive images on the moving film (Bell Lab. Record 22: 1, Sept., 1943). The new Eastman High Speed Camera, Type III, permitted photographs to be taken at from 500 to 3,000 exposures per second on 16-mm film. Another camera operating on a different principle was used to study the movement of liquid sprays such as automobile carburetor jets. The exposure was oneten-millionth of a second by means of a high-intensity spark gap (Phot. Trade News 7: 19, March, 1948). The Hercules Experiment Station employed a rotating drum and mirror camera set in an explosion-proof shelter to photograph detonation waves of explosions moving as fast as 25,000 feet per second (Sci. Amer. 169: 124, Sept., 1943).

Many millions of letters, drawings, and other documents were being copied on 16-mm film for rapid transmission by air across the oceans of the world. This plan was called the "Airgraph" as used by the British and "V-mail" as employed by the

U.S. Government.

A useful compilation of data on various types of microfilm reading machines was assembled by Litchfield and Bennett (Special Libraries 34: 15, Jan., 1943, et seq.). Tate of the National Archives designed a very compact reader which could be shipped by air to distant parts of the world, especially the interior of China where such equipment was urgently needed (Library J. 68: 414, May 15, 1943). A selected group of magazines were being microfilmed by the Library of Congress for transmission to China and other remote points where

such literature was practically unavailable.

The Photographic Process. Evans and coworkers published further data on the chemistry of developers and development. Subjects discussed included a polarographic method of analyzing for copper and sulfide in a developer and factors affecting the accumulation of iodide in used photographic developers. (J. Soc. Mot. Pict. Eng. 40: 88 and 97, Feb.,

1943).

The nonadditive properties of elon-hydroquin-one developers were discussed by James, who showed that this effect agrees with theoretical considerations. (J. Phot. Soc. Amer. 9: 62, Feb., 1943).

James also discussed the role of sulfite in developers with regard to the induction period. (Amer. Phot. 37: 12, May, 1943; ibid 24, Sept., 1943). Still another interesting paper by this author dealt in simple exposition with the study of development, particularly the reaction between the silver ion and the developing agent, and the reaction of pure silver halide with the developing agent. Amer. Phot. 37: 18, Nov., 1943; ibid 14, Dec., 1943).

The important subject of developer agitation and its effect on density, uniformity, and rate of development was studied by Ives and Jensen who analyzed various methods of agitation in relation to the problems of machine design. (J. Soc. Mot. Pict.

Eng. 40: 107, Feb., 1943).

A long article containing much factual data on the methods of removal of hypo and silver salts from photographic materials to insure maximum permanency was published by Crabtree, Eaton, and Meuhler. (J. Soc. Mot. Pict. Eng. 41: 9, July, 1943). (See also 1944 Amer. Ann. Phot. 58: 45, 1943.) The same authors presented data on the use of silver nitrate for the quantitative determination of hypo in prints. (J. Franklin Institute 235: 351, April, 1943). Useful information on the washing of films and prints in sea water was given by Faton and Crabtree, who showed that given by Eaton and Crabtree, who showed that removal of hypo is accelerated greatly as compared with fresh water. A final short wash in fresh water is recommended. (J. Soc. Mot. Pict. Eng. 40: 380, June, 1943).

Practical formulas for rapid fixing baths containing ammonium thiosulfate were published by Alnutt. It was shown that the speed of fixation of ammonium thiosulfate is greater than sodium thiosulfate or mixtures of ammonium chloride and sodium thiosulfate (I. Soc. Mot. Pict. Eng. 41: 300, Oct., 1943). Elvegard determined the effect on the time of fixing x-ray film by the addition of different nitrogen-containing organic and inorganic substances. Ethylene diamine, propylene diamine, and hydrazine gave the greatest increase in fixing rate. (Phot. Ind. 40: 249, Sept. 29, 1942).

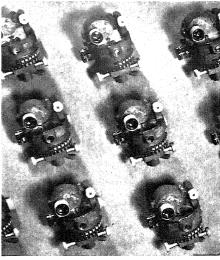

Bibliography. A technical photographic society was formed in Great Britain under the name "The Association for Scientific Photography." It was announced that proceedings of their meetings would be published as soon as conditions permit. As a result of the government restrictions on the use of paper stocks, very few photographic books were published. The more noteworthy were the were published. The more noteworthy were the following: Jacobson, C. I., Home-Made Papers, Films and Plates (Focal Press, London); Strasser, A., Victorian Photography (Focal Press, London); Wyble, E., Sell Your Photographs (American Photographic Publishing Co., Boston); Abel, Charles, Who's Who in American Portrait Photography (Cleveland); Greenwood, H. W., Document Photography (Focal Press, London); Smith. ment Photography (Focal Press, London); Smith, H. T. U., Aerial Photographs and Their Applica-tions (D. Appleton-Century); Heavey, W. F., Map and Aerial Photo Reading Simplified (Military Service Publ. Co., Harrisburg); Eardley, A. J., Aerial Photographs: Their Use and Interpretation (Harper); Falk, N., How to Make Animated Cartoons (Foundation Books, New York); Cricks, P. H., The Complete Projectionist (Kinematograph Publications, London, 3rd ed.); Cox, Arthur, Photographic Optics (Focal Press, London).

Plastic part of the Army's two-part helmet, to which an outer steel shell is added for front-line combat (Westinghouse Photo).

PHYSICAL FITNESS, Committee and Council on. See Federal Security Agency.

PHYSICS. The absorption of physicists in war research continues at a very high level and promises to continue so for the duration. During 1943 some of the fruitfulness of secret war research was made known, as in the announcement of the existence of radar and its general principles.

Emergency educational programs of the Army and Navy were inaugurated during the year for exceptional young men who were placed in special courses in various colleges. Physics was heav-

ily accented in this special training.

Radar. [Editor's Note: Shortly after the publication of the previous edition of the YEAR BOOK, the restrictions on publication of information about radar were relaxed, and the author of this article prepared an account of its development for publication here. Since that time restrictions have been reimposed and the U.S. War Department requested that the material be deleted. In view of the interest on the subject the War Department was asked to review its earlier decision. The review was courteously granted, but the request for omission was repeated. The delay accounts for the gap which unfortunately appears on this page. At such time as security permits the material will be printed in full.]

Hundred Million Volt X-Rays. The production of 100,000,000 electron volt X-rays through use of the new giant induction accelerator of the General Electric Company promised to usher in a new era of X-ray utilization. In one stupendous step from about 2,000,000 volts to fifty times that potential, X-rays of a new sort with extraordinary penetration were made available, first for experimental work and then for industrial and possibly medical use.

The scientists operating the new machine noted that it may be easier to protect people against the 100,000,000 volt X-rays. This is possible because whereas the lower voltage X-rays are spread out fan-like, the super X-rays are produced in very narrow beams. What the world's most powerful X-rays can do is still to be determined.

The induction accelerator, or betatron, as it is also called, operates on a principle different from the customary X-ray tube now in wide industrial and medical use. Developed by Dr. D. W. Kerst of the University of Illinois, the induction accelerator was first built in a 2,300,000 volt version and then as a 20,000,000 volt machine which was turned over to Dr. Kerst and the University of Illinois for research use. Meanwhile construction of the 100,000,000 volt machine was hurried along as fast as more urgent war work would allow because of the expectation that the X-rays it makes pos-

sible might prove practically useful in inspection of large metal castings. Previous steps leading to the 100,000,000 volt X-rays were described in the

YEAR BOOKS for 1940, 1941, and 1942. In principle the new X-ray machine gives electrons, particles of electricity, a continuous push so that a potential of a few thousand volts is built up to one hundred million volt energy, which is allowed to smash into a target to produce the super-powerful X-rays. In the conventional Coolidge X-ray tube the electrons from a hot filament are given the impulse of a high voltage current separately generated.

About 50 conventional X-ray tubes of a million volt energy are in industrial use today. The only other device creating such energies in particles is the cyclotron which has been placed under construction at Berkeley, Calif. This machine uses a different principle and instead of accelerating electrons to give X-rays applies high speeds to the hearts of atoms, such as the protons of hydrogen and the deuterons of heavy hydrogen or deu-

terium. See Electrical Industries.

Electrical Fire Director for Artillery. A new electrical fire director for artillery was demonstrated publically by the Ordnance Division of the U.S. Army

and the Bell Telephone Laboratories.

Cannoneers rapidly load and fire anti-aircraft guns, but no gunners peer through sights at the aerial targets. Training of the guns, as well as proper adjustment of fuze setters for the shells, is taken care of yards away by a single mechanism operated by a few men, who keep telescopic sights fixed on the target and adjust a few dials. The firing data, automatically calculated inside the machine, are also automatically expressed in terms of elec-trical currents which are fed through cables to motors controlling the movements of the guns. Superficially, the new fire control instrument

looks much like the mechanical devices already in use for this purpose. Inside, however, it is to-tally different. Previous fire control instruments use trains of cams and gears to translate move-ments of telescopic sights and dial adjustments into terms of predicted position of the target at the time of shell burst. The new instrument eliminates the mechanical train and uses instead an electrical hook-up, which is even more accurate and much more sensitive, since it can include variable factors not taken into the calculations of

existing machines

Elimination of the metallic cams, gears, and shafts of the mechanical train automatically does with one source of error: temperature changes cause expansion and contraction of metal parts, but have practically no effect on the new electrical mechanism. Another improvement that has been introduced is a smoothing effect, that automatically ignores sudden, jerky movements sometimes necessary in making quick changes of adjustment. By the time the final integration made by the instrument, suitably stepped up to the power necessary, begins to swing the heavy guns, the changes have become even and steady, corresponding more closely to the actual motion of the target in the air.

The fire control instrument demonstrated was of the mobile type, suitable for accompanying anti-aircraft guns traveling with an army. system is equally well adapted for use in fixed positions on land and on shipboard. See MILITARY

Procress.

Electron Microanalyzer. Chemical elements composing such extremely minute sub-microscopic objects as the tail or head of a germ or a virus, particles no larger than 1/100,000th of an inch in diameter, are identified in a few minutes by a new instrument, the electron microanalyzer, developed by Dr. James Hillier of RCA Laboratories. Used in conjunction with the electron microscope, the new instrument will allow the determination of the composition as well as the size, shape, and internal structure of the particles which a few years ago were quite beyond the most powerful means of exploration in the microscopic world.

In the electron microanalyzer a very small area of the specimen is irradiated with an electron probe, a stream of these particles of electricity brought into a beam by a two-stage magnetic lens system. The electrons transmitted by the irradiated area of the specimen are focused by a third magnetic lens so that the electron probe is reformed. The amount of energy lost by the electrons is measured through a photographic exposure, and the position of markings in the electron velocity distribution indicates the processor. distribution indicates the presence of a chemical element in the specimen.

Before the extra information being revealed by the electron microscope can be applied to prob-lems of the physical, chemical, and biological sciences, it must be translated into a form that is of significance to the individual problems being in-

vestigated.

Phosphorescence Microscope. A new kind of microscope, that promises to open up new fields for exploration in biology and mineralogy, was devised by Dr. E. Newton Harvey and Dr. Aurin M. Chase of Princeton University. It was called the phosphorescence microscope because it makes use of the short-lived phosphorescent glow given off by many substances just after they have been exposed to the action of ultraviolet radiation.

That many things shine in the dark with peculiarly-colored visible light when invisible ultraviolet rays strike them is a well-known phenome-non. This light is called fluorescence; and it has been much used in research during recent years. Special fluorescence microscopes have been devised to aid in this work. When the ultraviolet irradiation stops, fluorescence stops with it. However, it has frequently been noticed that some of the irradiated substances keep on glowing briefly after the ultraviolet lamp has been turned off. This glow, in many cases lasting for only a fraction of a second, has been termed phosphorescence. Among the substances showing this property are human teeth, wool, coral, dried potato, and several other materials of both animal and plant origin.

Because of the short duration of this phosphorescence, ordinary microscopic observation has not been possible. Drs. Harvey and Chase, how-ever, thought of the expedient of getting a large number of intermittent flashes, so close together that they appear to merge into one continuous illumination, like the rapidly succeeding "frames" of a motion picture. Several different means for achieving this end have been devised. In some, the ultraviolet ray source is an intermittent spark, with a rotating shutter shielding the object-lens of the microscope while it is "on" and opening it for the passage of the phosphorescent flash when the spark is "off." Simpler, however, is a continuous control of the spark is a continuous control of the spark is "off." tinuous source of ultraviolet with a double rotating shutter having staggered openings that alternately admit the ultraviolet rays and open the path for the phosphorescent light to the lens.

Colored Ultraviolet Microscopic Image. A new field of microscopic research was opened by a microscope which converts an invisible ultraviolet image

into a visible picture in full colors. The microscope was devised by three Russian scientists, E. M. Brumberg, S. Gershgorin, and P. Radchenko of the State Optical Institute of Leningrad.

The colored image has the same advantage that the use of colors has on a map in making the various parts stand out in stronger contrast. It permits also the use of ultraviolet stains to make visible details that would otherwise be invisible, just as the biologist now uses visible stains with the ordinary microscope for the same purpose. This is of great importance not only in biology but also in micro-chemistry.

The colors of the image correspond to and are an index to the different wavelengths of the ultraviolet light used to illuminate the object. The image is thus shifted in wavelength from the ultra-

violet to the visible.

Ultraviolet light has long been used in highpower microscopes because its short wavelength permits smaller details to be revealed than would be revealed by the longer waves of visible light. But the image, being invisible, had to be photographed or caught on a fluorescent screen, and gave, of course, the ordinary black and white photograph or a one-color image.

To obtain a colored picture, a sort of ultraviolet version of three-color photography was devised. The object was photographed with three different wavelengths of ultraviolet light, and the three negatives were then reproduced with the aid of red, green, and blue light. The combination

of course gives all the other colors.

To obtain a directly visible image without the use of photography the images given by the three ultraviolet wavelengths were thrown on a screen covered with three fluorescent substances which respond to the three ultraviolet radiations with red, green, and blue light respectively. In a later form a white fluorescing screen was used and the colors were given by an arrangement of rotating disks and light filters.

All this would have been quite easy to accomplish but for one thing. No microscope objective existed that could take care of the large range of ultraviolet wavelengths required. Existing ultraviolet microscopes use monochromatic or one-wavelength light, for the reason that it is impossible to make a satisfactory achromatic lens for ultraviolet light. An uncorrected lens used with visible light produces rainbow-colored fringes around the image, as can be seen when you form an image of the sun with a magnifying glass. With ultraviolet light of many wavelengths similar fringes are formed, giving a blurred image which is quite useless. To overcome this difficulty and put the method into successful practice, a brand new microscope objective had to be devised and this was done. It is an ingenious combination of tiny concave and convex mirrors, for the mirror has no chromatic aberration. For this reason, too, the mirror has largely supplanted the lens in our great modern telescopes.

"Quantum" of Energy. The smallest "quantum" of energy, the amount that would be emitted by a single atom making one vibration per second, if that were possible, has been somewhat enlarged by new measurements made with the help of X-rays. The measurements were carried out by the physicist, Prof. Per Ohlin of the University of

Uppsala, Sweden.

Previous measurements by this method gave results 0.3 per cent to 0.4 per cent smaller than those calculated from the atomic theory and other experimental data. The discrepancy was

due to the difficulty of determining just where the X-ray spectrum ends on the short wave side, which is the principal observation required by this method. This is as difficult as, or more difficult than, determining precisely where the edge of a rainbow is, especially on the blue side. A more precise way of determining this limit re-moved the difficulty and gave results in satisfactory agreement with those calculated from the atomic theory.

The quantity determined by this method is not directly the smallest quantum, Planck's radiation constant as it is more familiarly known to the physicist, but its ratio to the smallest electric charge, h/e. Professor Ohlin's final result for the ratio is 1.3787 divided by 10 <sup>17</sup> (1 followed by 17 zeros) which is the same, within the limits of experimental error, as that derived from the atomic theory. Since the smallest charge, e, is known, h

is readily found.

To find the precise point where the X-ray spectrum fades to nothing, the method had been to use a narrow band of the spectrum near the end and measure its increasing intensity as the voltage was raised. A curve of these intensities was then plotted, and the curve was extrapolated downward, continued by the eye, to the level of zero intensity. This should have given the voltage at which that particular band of X-ray frequencies began to be emitted, but it did not quite.

Professor Ohlin, by using a much narrower band and changing the voltage by very small steps (2 volts), which was made possible by the use of a more powerful and efficient X-ray apparatus, found an irregularity at the lower end of the curve quite undisclosed by the previous coarser measurements. This accounted for the failure to get a result in agreement with that derived from the atomic theory, which result is thus confirmed and may be taken to be correct together with the theory and measurements on which it is based.

Bibliography. Among the new books on physics issued in 1943 were: R. A. Bagnold, Physics of Blown Sand & Desert Dunes (Morrow); O. H. Blackwood, General Physics (Wiley); E. E. PIPELINES. See AQUEDUCTS; ELECTRICAL INDUSTRIES; PETROLEUM ADMINISTRATION FOR WAR.

PITCAIRN ISLAND. An island in the South Pacific, approximately midway between South Facilic, and Australia. Area, 2 square miles. Population (June 30, 1941), 193. The island was originally could in 1700 h, 193. settled in 1790 by mutineers from H.M.S. Bounty and native men and women from Tahiti. In 1902 the islands of Ducie, Henderson, and Oeno were annexed by Great Britain and are now included in the district of Pitcairn. The agricultural products are yams, taro, maize, sweet potatoes, bananas, pumpkins, oranges, melons, pineapples, arrowroot, sugar, and coffee. The Government is administered by an annually elected council of 5 members headed by a chief magistrate subject to the control of the British High Commissioner for the Western Pacific. Chief Magistrate, F. M. Christian.

PLACEMENT, Bureau of. See WAR MANPOWER COM-

PLAGUE CONTROL. See PUBLIC HEALTH SERVICE;

also MEDICINE PLANNING AND STATISTICS, Bureau of. See WAR PRO-DUCTION BOARD.

PLANT INDUSTRY, SOILS, AND AGRICULTURAL ENGI-NEERING, Bureau of. An agency of the U.S. Department of Agriculture, created as the Bureau of Plant Industry in 1902. It absorbed in February, 1943, the engineering research of the Bureau of Agricultural Chemistry and Engineering. Activities include investigations of plant production and improvement of soils and the engineering problems concerned with crop production and handling of soils.

PLANTS, PLANT DISEASES. See agricultural topics; In-SECT PESTS.

PLASTICS. Statistics are of course withheld, but it is safe to assume that 1943 was a year of record production in the United States. The problem of securing sufficient raw materials even to meet vital military needs continued paramount. There were shortages of phenols, cresols, cresylic acid, and furfural, for the tar-acid resins; of benzene for polystyrene; of nitric acid for nitrocellulose; and of phenol and cresol for plasticizers.

Two new methyl methacrylate plants were opened during the year for more, and still more, transparent plane enclosures: one for Röhm and Haas Plexiglas at Knoxville, Tenn., and the other for duPont Lucite in Massachusetts. (See 1943

YEAR BOOK, p. 552.) New Plastics. In vast array new plastics came upon the scene in 1943, under the urge for substitutions for strategic materials. They will be summarized alphabetically.

Amercote #33 is a liquid thermoplastic coating which may be cold-applied to storage tanks to protect foods from contamination by corrosion, and to protect machinery in chemical plants. Resisto-Flex Corp. has prepared a series called Compar, chemically compounded polyvinyl alcohol resin, up to twenty times more wear-resistant than natural rubber, and notably solvent-proof for handling aviation fuels. Snow-white casein plastics can at last be achieved, by removing the vitamin, riboflavin; heretofore only the colored variety

was economically feasible.

Ethyl cellulose is being made into a new coating for insulating wires or airplanes exposed to sub-zero stratosphere temperatures; it withstands temperatures as high as 80° C. A thermosetting lignin plastic from corn stalks, wheat straw, and other form weath her have developed by the content of the form weath her have developed by the content of the other farm waste has been developed by the Department of Agriculture. A heat-resistant Lucite molding powder, which withstands the temperature of boiling water, was announced by duPont as a war development; known as H-M-119, the plastic will fit a variety of military needs in airport and railroad signal-light lenses, reflectors, and other lenses exposed to temperatures in which ordinary plastics soften. A substitute mica, Prolectron, has been produced by General Aniline and Film Corporation.

A number of companies are making a plastic for propeller-shaft bearings replacing rubber, bronze, and Babbitt bearing materials in submarine chasers and other light vessels. Micarta, as it is called, wears longer and causes less friction than other bearing materials which it will probably permanently replace; also, it is unaffected by seawater, so that naval vessels may stay in action longer without dry-docking for bearing repairs. Soybean proteins are binding laminated kraft paper into plastic sheets for aircraft industries, to augment the limited supply of phenolic resin formerly employed. Water-proofed laminated board is achieved by placing single sheets of water-proof phenolic resin on the top and bottom of the stack of soy-bean sheets before pressing. The Army has pur-chased from Ecuador nearly 3,000,000 "vegetable ivory" buttons made from tagua nuts.

Thermo-Cast, a new thermoplastic ethyl cellu-lose, can be melted and cast into accurate shapes, without the use of pressure, forming the blocks, dies, and jigs upon which the metal parts of airplanes are fabricated. Tygon, a flexible plastic which can be shaped in regular rubber molds, is claimed to be unusually inert to the action of soaps, oils, and water, and hence is suitable for fashioning into fountain syringes, bath mats, ice bags, etc. The tannin compounds in redwood pulp can be converted by a process developed at the Institute of Paper Chemistry, into both thermo-setting and thermoplastic products, for objects such as automobile steering wheels and molded bottle-closures. The Easton Regional Research Laboratory has prepared a starch-acetate adhesive and lacquer by treating potato starch with acetic and sulfuric acids; or by pre-swelling the starch grains in formic acid and then treating with acetic acid.

New Processes. "Flexible pressure" has been intro-New Processes. "Prexide pressure has been intro-duced for forming curved shapes, such as plane fuselages and boat holds of pressure-cooked ply-wood. In molding these forms, an inflated bag may exert pressure, pushing the plywood into the contours of the mold; in this position the adhesive is "pressure cooked" so that the plywood retains its shape permanently. The rubber molding bag can be used some fifty times. Meharg of the Bakelite Corporation described heatronic molding, the use of diathermic waves to harden thermosetting objects. The advantage of this treatment, only lately applied to nonconductors, is a uniform heating not achieved by the old method of applying

heat from a hot die.

New Uses. The H. & H. Selmar Company are producing transparent phonograph records from a plastic surface on a glass base. Four hundred pounds of weight is saved in a single 50-ton flying boat by the use of a new type of flooring made up of laminated sheets of phenolic plastic, reinforced with strips of aluminum alloy. DuPont has produced lithographic printing plates from polyvinyl alcohol resin for printing colored army maps in mobile field presses. The discovery came through the use of the plastic as a coating on zinc to improve the printing quality of the metal, where it became apparent that the actual printing was from the plastic and not the metal. The printed image is formed from a light-sensitive coating of ammonium bichromate, the same as with a metal plate. Methyl methacrylate resins find outlet not alone in bomber noses but as insulators in electroplating baths, contact lenses worn next to the eyeball for correcting defective vision, insulators in high frequency radio equipment, unbreakable waterproof watch crystals, ear stoppers to eliminate the hazards of loud noises, deepsea divers' helmets, and so forth. A New Orleans oculist has developed an artificial "Lucite" eye which moves in unison with its good mate. The electrical and mechanical properties of cellulose acetate "Plastacele" are put to advantage in a new air induction coil. Cellulose nitrate "Pyralin" is fashioned into hammer heads for sheet metal work in aircraft factories. For the molded bodies of military heliocopters, duPont developed Adhesive #4624, a thermoplastic and thermosetting glue which is not affected by scorching tropical sun.

bonded woods, see Machine Building.

HUBERT N. ALYEA.

PLATINUM. Platinum and its by-metals—iridium, ruthenium, rhodium, osmium, and palladium—which normally are of importance primarily to jewelry manufacturers have become important war metals. Platinum stands at the head of the War Production Board list of all metals essential to the

war in order of scarcity.

Platinum's great military importance is derived from its use by the electronics industry, which has extremely large requirements for contact points for radio and radar, and from added needs for catalysts and spinarets for synthetic fibers. The use of platinum in jewelry is forbidden by the WPB. Supplies have been shrinking, while production, which normally comes from Canada, Alaska, and Colombia placers, in that order, and from the Transvaal hard rock mines, has not kept pace. Russia is popularly supposed to produce 100,000 oz. per year from placers in the Urals, but wartime data on this production is not available.

Osmium and iridium occur as a natural alloy (osmiridium) and are separated at the refinery by a complex chemical operation. South Africa normally is the principal source, with some from Alaska and Colombia, and the principal peace time use is jewelry. Iridium now is under complete allocation through WPB order M-49, and consumption is limited to contact points, it is understood. Un-

der WPB order M-802, osmium may only be used for implements of war. Placing of iridium under allocation had the effect of pushing consumers into a more complete substitution of ruthenium for contact points, materially easing the iridium scarcity, but iridium is still available for a substantial portion of total magneto contact requirements. Use of ruthenium in jewelry manufacture, still permitted, is controlled in effect through the WPB order limiting the use of palladium in jewelry manufacture. This results from the fact that palladium normally is alloyed with ruthenium by the jewelry producers.

The rhodium supply position eased materially during 1943, and it is hoped by the War Production Board that some platinum may be saved by using a higher percentage of rhodium in the gauzes used in nitric acid manufacture. Use of rhodium in jewelry is forbidden. Palladium is in easy supply for war uses, and it is hoped to substitute it for platinum in the manufacture of

contacts.

POLAND. A central European republic, established Nov. 9, 1918. It was invaded by Germany Sept. 1, 1939, partitioned between Germany and the Union of Soviet Socialist Republics by the treaty of Sept. 28, 1939, and completely occupied by German forces after the outbreak of the Russo-German War on June 22, 1941. For a description of Poland prior to its partition, see 1939 Year Book, p. 625 f.

The Partition. At the outbreak of the war with Germany, Poland had an area of 150,470 square miles and a population of 35,500,000, according to official Polish statistics. By the German-Russian treaty of Sept. 28, 1939, Germany occupied the western sector of some 72,667 square miles with about 23,000,000 inhabitants, predominantly Polish, and Russia the eastern sector of 77,700 square miles with approximately 12,500,000 inhabitants, mostly Ukrainians and White Russians. See map in

1939 Year Book, p. 626.

German-Annexed Territory. By the decree of Oct. 8, 1939, Germany annexed as an integral part of the Reich about 35,512 square miles of territory in Western Poland with a population estimated in December, 1939, at 10,043,000. More than 9,000,000 of the inhabitants were Poles and about 600,000 Germans. The Poles were subjected to a ruthless Germanizing process. By May, 1941, it was estimated that between 1,500,000 and 2,000,000 Poles had been deported from the annexed territory eastward to the so-called Government General of Poland, while another 1,000,000 had been conscripted for labor service in Germany proper. Meanwhile German-speaking populations were transferred to the annexed territory from the Government General and from all of Eastern Europe—the Baltic States, Soviet-controlled Poland, the U.S.S.R. proper, Rumania, and Bulgaria—to occupy the lands and other properties taken from Poles. By March, 1941, some 490,000 repatriated Germans had been settled there. There was also an influx of Germans from Germany proper.

The Government General. Of the remaining German-occupied territory, an area of 225 square miles with some 45,000 inhabitants was transferred to

Slovakia on Oct. 21, 1939. The rest—an estimated 36,930 square miles with a population estimated at 12,912,000 in June, 1940—was organized as a separate German-controlled territory known as the Government General of Poland, with its capital at Cracow.

The Government General was constituted Oct. 25, 1939, under Hitler's decree of October 12 appointing Dr. Hans Frank, Reich Commissioner of Justice, as Governor General. While administered and controlled by the Germans, it was not a part of Germany. It remained outside the German customs area, although organized as an economic ad-

junct of the Reich.

The population of the Government General was subsequently increased by the wholesale deportation of Poles from German-annexed territory, and by the Nazi policy of using it as a "dumping ground" for Jews and other rebellious elements in Germany and the German-controlled regions of

Europe.

Following the German attack upon Russia beginning June 22, 1941, all of Soviet-occupied Poland passed under German control. The Government General was then expanded to include the Polish Ukraine. This increased its area to an estimated 77,444 square miles and the population to about 19,807,000. There remained 34,000 square miles of Soviet-occupied Polish territory with a 1939 population of about 4,800,000. This region was lumped with the Baltic States and Germanoccupied parts of Russia proper to form the Ostland Province, under German military occupation.

Government-in-Exile. The German invasion beginning Sept. 1, 1939, and the Russian invasion beginning Sept. 17, 1939, forced the Polish Government to leave Poland on September 18. The Government-in-Exile established a temporary capital in Paris on Sept. 30, 1939. That same day President Moscicki resigned and appointed Wladyslaw Raczkiewicz as his successor. The latter named Gen. Wladyslaw Sikorski as Premier of a non-party Cabinet. On Nov. 22, 1939, the Government moved to a site near Angers, France. That same month the Polish Parliament was dissolved by Presidential decree. On Dec. 19, 1939, another decree authorized the appointment of a National Council of 24 members to serve in an advisory capacity to the Government. The National Council convened in Paris Jan. 23, 1940 (see YEAR BOOK for 1940, p. 603, for membership). On the eve of the French capitulation to Germany, the Polish Government and State Council moved to London (June 20, 1940). The National Council was dissolved Sept. 3, 1941, and a new one composed of 32 members was appointed Feb. 3, 1942. It comprised five representatives of each of the four main Polish political parties, two Jewish representatives, and 10 representing other sections of public opin-

Premier Sikorski signed military conventions with Great Britain on Aug. 5, 1940, and with Canada on Apr. 5, 1941, providing for the raising and training of Polish armed forces on British and Canadian territory. In April, 1941, the U.S. Lend-Lease Act was extended to include the Polish Government-in-Exile. After the German attack upon Russia, the Polish Government-in-Exile terminated its state of war with the Soviet Union and concluded agreements with Moscow on July 30, Aug. 14, and Dec. 4, 1941, for the resumption of diplomatic relations, the annulment of the German-Soviet treaties partitioning Poland, the raising of a Polish army in Russia, and for friendship and mutual assistance (see 1942 Year Book).

Members of the Cabinet at the beginning of 1943 were: Premier and Commander-in-Chief of the Polish Armed Forces, General Sikorski; Vice Premier and Minister of Interior, S. Mikolajczyk; rremier and Minister of Interior, S. Mikolajczyk; Acting Minister of Foreign Affairs, Count E. Raczynski; Information, Prof. S. Stronski; Labor and Social Welfare, Jan Stanczyk; Finance, H. Strasburger; Education, Gen. J. Haller; Justice, W. Komarnicki; Industry, Trade, and Shipping, Jan Kwapinski; War, Lieut. Gen. Marian Kukiel; Preparatory Work for Peace Conference, Marian Seyda; Minister of State, K. Popiel; Ambassador to the U.S.S.R. S. Kot. For developments in 1942 the U.S.S.R., S. Kot. For developments in 1943, see below.

#### HISTORY

Polish-Russian Quarrel. Polish-Russian relations worsened steadily throughout 1943 over the issue of the Polish-Russian boundary, which had already become acute during 1942 (see 1943 Year Book, p. 555). Russia broke off diplomatic relations with the Polish Government-in-Exile on April 26. Thereafter Moscow followed a policy aiming at the replacement of the existing Polish Government by a pro-Soviet Polish regime, which would recognize Russian possession of the Polish territory annexed under the German-Russian treaty of Sept. 28, 1939. (This territory, inhabited mainly by Ukrainians and White Russians, had been in Russian possession from the end of the 18th century until 1919.) In view of the anti-Communist sentiments of the Polish people, the Anglo-Polish alliance, and the recognition of the Polish Govern-ment-in-Exile by the United States and the other United Nations, the Russo-Polish split posed a serious threat to wartime unity and postwar collaboration among the Allied powers.

The seriousness of Polish difficulties with Moscow were indicated by developments early in 1943. On February 21 Premier Sikorski, who had incurred the enmity of Polish reactionaries by his efforts to reach an amicable settlement with Premier Stalin, disclosed that his Government had protested to Moscow against "foreign elements intervening in the internal affairs of the Polish state." He said the Russians had been dropping parachutists in Central and Eastern Poland to organize Communist cells and direct political war-fare; that there had been "spontaneous incidents" between Polish underground factions supporting Moscow and the Polish Government-in-Exile respectively; and that "the secret Russian radio in Poland—the Kosciuszko station—is always appealing to Poles for a general uprising and demanding that I issue orders to that effect." General Sikorski said he could not give such an order as it would risk "drowning my nation in a sea of blood."

It was announced February 23 that Premier Sikorski had postponed a scheduled trip to Moscow pending the outcome of "very delicate" negotia-tions with the Russians. These negotiations involved the status of an estimated 1,300,000 persons removed from Eastern Poland to Siberia and other parts of the Soviet Union following the Russian occupation and annexation of that region. The Poles insisted that the evacuées were Polish citizens and offered to provide funds for their relief, while the Russians claimed that they had acquired Russian citizenship.

These negotiations soon broke down. The Polish Government on February 25 published a resolution affirming Poland's right to the frontier existing Sept. 1, 1939, when the German invasion of Poland began, Tass, the official Soviet news agency, replied on March 2 in a Moscow broadcast accus-

ing the Polish Government of "imperialistic tendencies" in denying "the right of the Ukrainian and White Russian peoples to unite with their blood brothers" in Russia. On March 8 a pro-Soviet group of Poles in Moscow commenced publication of a weekly newspaper, Wolna Polska (Free Poland), which vigorously denounced the Polish Government in London and Polish nationalist and anti-Communist emigrés in Britain and the United States. It called for a "free, independent, and democratic Poland" without national or racial discrimination which would maintain "relations of good-neighborliness" with the Soviet Union and give up the Polish claim to the territory annexed by Russia.

Severance of Relations. These recriminations, plainly forecasting a parting of the ways between Moscow and the Polish Government, intensified the controversy over General Sikorski's Russian policy that had torn Polish governmental circles during 1941 and 1942. The Minister of Information, Professor Stronski, resigned on March 17, and it was reported that the anti-Russian faction was attempting to supplant Sikorski with Gen. Kazimierz Sosnkowski, a vigorous critic of the Sikorski-Stalin agreements of 1941 and 1942.

While still expressing a desire for a rapprochement with Russia, Premier Sikorski on March 30 called on the great powers to stand by their pledges to their smaller associates. He warned that if Poland's "rights" were not respected, "every Pole, irrespective of religious or political creed, will be united to the last man to resist any claims which aim at the sovereignty of our country." On April 17 the Polish National Council in London formally rejected the reasons given by the Soviet Government for the execution of the two Polish-Jewish labor leaders, Henryk Ehrlich and Victor Alter, in 1942 (see 1943 Year Boox, p. 555).

At this point German propaganda intervened with a successful move to widen the breach between the Poles and the Russians. In mid-April the Germans announced the discovery of the bodies of 10,000 Polish officers who, they declared, had been slaughtered by the Russians near Smolensk prior to the occupation of that region by German armed forces. These officers were missing from among the Polish war prisoners taken by Russian forces in 1939. Accordingly the Polish Cabinet in London on April 18 instructed its representative in Switzerland to request the International Red Cross in Geneva to send a delegation to investigate the alleged massacre. This request was immediately denounced in Moscow as direct assistance to the Germans in fabricating a lie. Soviet spokesmen declared the Germans to be guilty of the massacre.

Despite British and American efforts to avert it, the severance of relations followed on April 26. The Soviet note declared the Polish Government had launched a hostile campaign against the Soviet Union "for the purpose of wrestling from it territorial concessions at the expense of interests of the Soviet Ukraine, Soviet White Russia, and Soviet Lithuania." The Polish Government replied that it still desired a friendly understanding with Russia "on the basis of integrity and full sover-eignty of the Polish Republic." It appealed "in the name of solidarity of the United Nations and ele-mentary humanity" for the release of thousands of Poles whom it said were still held in the Soviet Union. According to a statement of the Polish Minister of Social Welfare on May 3, between 800,000 and 900,000 Poles were being held in Russia against their own and their Government's will."

Stalin's Statement. The next significant develop-

ment came on May 5 when Premier Stalin, replying to questions addressed to him in writing by Ralph Parker, The New York Times correspondent in Moscow, stated that the Soviet Government desired "to see a strong and independent Poland after the defeat of Hitler's Germany." He added that postwar relations between the two countries should be based "upon the fundament of solid good neighborly relations and mutual respect or, should the Polish people so desire, upon the fundament of an alliance providing for mutual assistance against the Germans as the chief enemies of the Soviet Union and Poland."

Vishinsky's Charges. Hope that Stalin's letter might pave the way for a rapprochement between Moscow and the Polish Government was dashed on May 6. On that date Andrey V. Vishinsky, Soviet Vice Commissar of Foreign Affairs, issued to British and American correspondents in Moscow a lengthy statement listing numerous serious charges against the Polish Government and the armed forces under its command (for text, see New York Times, May 8, 1943). He charged Gen. Wladislas Anders, commander of the Polish forces organized in Russia under the Polish-Soviet military pact of 1941, with violating the agreement by refusing to send his troops to fight on the Russo-German front.

The statement said that in December, 1941, the Soviet Government agreed to regard persons of Polish nationality (blood), residing in the Russianannexed territories of Eastern Poland, as Polish subjects. However, Vishinsky declared, the Poles assumed "a negative attitude" toward this offer, insisting that all residents of the annexed districts were Polish citizens. Consequently the Soviet Government on Jan. 16, 1943, withdrew the offer. Vishinsky also accused the Polish Government of using the funds and facilities placed at its disposal by the Soviet Government for the relief of refugees from German-occupied Poland to establish a network of spies and hostile propagandists on Soviet soil.

To this statement, the Polish Foreign Minister replied that the Polish troops in Russia had never received adequate or sufficient arms to permit them to fight; that the Soviet Government had suspended further recruiting of Poles in the spring of 1942; and that by reducing food rations for the Polish forces to enough for only 44,000 men, they had forced the evacuation of 30,000 Polish soldiers to the Middle East. He dismissed the Russian charges of espionage on behalf of Germany and "one of the Allied states" as fantastic and unfounded.

Pro-Soviet Poles Organized. Following Vishinsky's blast at the Polish Government-in-Exile, Soviet authorities took a series of steps that seemed designed to pave the way for the establishment of a pro-Soviet Polish regime in Moscow as a rival to the existing regime in London. On May 9 it was announced that the Russian Government had approved formation of a Polish division to join the Red Army in the fight against Germany. This di-vision, named after the Polish hero Kosciusko, went into action late in August. On November 12, 243 officers and men of the division were decorated for bravery in action by the Supreme Presidium of the Soviet Union. The division was commanded by Col. Zigmund Berling, former Chief of Staff of a Polish division under General Anders.

Meanwhile on May 12 a newly formed Union of Polish Patriots in the U.S.S.R. was organized in Moscow, with Wolna Polska as its official organ. The Union held its first assembly in Moscow in June. Meanwhile the Soviet Government had given it responsibility for the welfare and education of

all Poles in Russia. In a message to the leaders of the Union made public June 16, Stalin declared that the Soviet Union would do all in its power "to strengthen Polish-Soviet friendship and by every means possible aid the creation of a strong

and independent Poland.

Death of Sikorski. British diplomacy strove unceasingly, with American support, to smooth the way for a restoration of Russo-Polish relations. But Moscow was unyielding and General Sikorski clung to the conditions for a resumption of relations set forth in his speech of May 4-release of families of Polish soldiers and of orphaned Polish children in the Soviet Union as soon as possible; release of Polish men fit to bear arms; and continuation of Polish relief work among Polish evacuées in Russia. The Polish Foreign Minister, Count Raczynski, announced on May 25 that the Polish Government would continue its efforts to organize a central European federation, to which Moscow had expressed strong opposition.

Dissension and unrest among the Polish armed forces of General Anders in the Middle East led Premier Sikorski to make a tour of Polish camps in that area in June and July. Polish officers were reported fearful lest British and American pressure force the Sikorski Government to yield to Soviet demands. There were reports of anti-Semitism and pro-Fascist tendencies among some of the officers and of resentment and discontent among the troops.

The Premier took steps to allay apprehension regarding his Russian policy and to eliminate other sources of dissension. En route to London from a six-weeks' trip, his plane crashed on July 4 soon after taking off from Gibraltar. Of the 16 persons on board only the Czech pilot survived. Killed along with General Sikorski were his daughter, his Chief of Staff, Gen. Taduesz A. Klimecki, other leading Polish staff officers, and Col. Victor A. Cazalet and Brig. John P. Whiteley, both members of the British Parliament. The Premier's body was taken to England amid widespread regret at his death throughout the United Nations and buried at Newark, Nottinghamshire. Paying tribute to the departed leader in the House of Commons July 6, Prime Minister Churchill said the British Government was resolved to see that his work "shall not have been done in vain."

New Government Formed. The removal of Sikor-

ski's strong and respected leadership provoked open dissension between rightist and leftist elements within the Polish Government over the appointment of a new Premier and military commanderin-chief. Government leaders agreed upon the appointment to the Premiership of the Deputy Premier under Sikorski, Stanislaw Mikolajczyk, son of a farm worker and leader of the powerful Polish Peasant party. Gen. Marjan Kukiel was continued in office as Minister of Defense. However President Raczkiewicz's insistence upon the appointment of General Sosnkowski as Deputy Premier and commander in chief of the armed forces precipitated a crisis.

Sosnkowski was a close associate and Minister of War under Marshal Josef Pilsudski, unofficial dictator of Poland until his death in 1935. His rightist affiliations made him unacceptable to the more democratic elements supporting the Government. However an agreement was finally reached on July 10 under which Sosnkowski was given command of the armed forces but the Vice Premiership went to the Socialist leader, Jan Kwap-inski, along with the Ministry of Commerce.

Other members of the new Government announced July 14 were: Foreign Affairs, Tadeusz

Romer, who was Polish Ambassador to Moscow when relations were severed in April; Home Affairs, Wladyslaw Banaczyk (Peasant party); Justice, Prof. Waclaw Komarnicki (Nationalist); Information, Stanislaw Kot (nonparty); Finance, Ludwig Grosfeld (Jewish Socialist); Labor, Jan. Stanczyk; Middle East, Hendryk Strassburger; Ministers of State, Marjan Seyda (Nationalist) in charge of preparations for the peace conference and Karol Popiel (Labor party) in charge of planning future administration; Education, Father Zygmunt Kaczynski.

In all, the new Government contained three members of the Peasant party, three Socialists, two Christian Democrats, two Nationalists, and three members without party affiliation. Members with liberal party affiliations predominated. Moreover Premier Mikolajczyk declared that his "government of national unity" was sincerely democratic and of national unity" was sincerely democratic and would be guided by the declaration of policy made by Premier Sikorski before the National Council on Feb. 25, 1942 (see 1943 YEAR BOOK). In an interview on July 16 the new Premier indicated that his Government would also adhere to the same policy as its predecessor with regard to Russian territorial claims and general relations with the Soviet Union. It was reported to have made several attempts to renew diplomatic relations with Russia on that basis, but with no success up to the end of 1943.

German Rule in Poland. Meanwhile the German authorities in occupied Poland intensified and extended their systematic program of exploitation, enslavement, deportation, and extermination, described in preceding Year Books. In January Premier Sikorski reported that Governor General Hans Frank of the Polish Government General had instituted another wholesale roundup of Poles in an effort to crush the underground resistance move-ment and speed the process of national disinte-

Gruesome reports of mass arrests and wholesale executions by the Gestapo and the German military forces reached London via underground routes from time to time. The Government-in-Exile announced on June 23 that 500 more Polish men and women had been shot and at least 2,000 others arrested in the preceding weeks. The Polish Minister of Home Affairs on July 26 estimated that 3,200,000 persons, including 1,800,000 Jews, had been slain by the Germans in one way or another up to May 1.

Reports of further atrocities led the U.S. and British Governments on August 29 to warn Germany once more that the "instigators and actual perpetrators" of crimes against civilians in occupied countries would be punished and their actions taken into account in the final settlement with Germany. The statement issued in Washington follows

in part:

Trustworthy information has reached the United States regarding the crimes committed by the German invaders against the population of Poland. Since the autumn of 1942 a belt of territory extending from the Province of Bialystok southward along the line of the River Bug has been systematically emptied of its inhabitants. In July, 1943, these measures were extended to practically the whole of the Province of Lublin, where hundreds of thousands of persons have been deported from their homes or exterminated.

These measures are being carried out with the utmost

These measures are being carried out with the utmost brutality. Many of the victims are killed on the spot. The rest are segregated. Men from 14 to 50 are taken away to work for Germany.

Some children are killed on the spot, others are separated from their parents and either sent to Germany to be heaven'th the a Germany or sold to Germany to be

brought up as Germans or sold to German settlers or dispatched with the women and old men to concentration

As before, these warnings had no effect whatever, except possibly to spur the Germans on to greater violence. From Polish and from official German sources came announcements of the wiping out of whole villages and of mass executions of thousands of Poles and Jews. The Jews, in particular, were singled out for systematic extermination. According to seemingly well authenticated reports, the 500,000 Jews in the Warsaw ghetto were virtually all slain after a heroic resistance against intermittent attacks by heavily armed German forces during the first half of 1943. The same fate was meted out to the inhabitants of ghettos in a number of other cities and towns. In some cases lethal gases were allegedly used for mass executions.

The Germans also stepped up their campaign to suppress the religious activities of the Polish Roman Catholic clergy. The organ of the Swiss Roman Catholic National Union stated on March 20 that of some 14,000 priests formerly officiating in Poland, more than 2,500 had been deported while the fate of 5,000 others could not be ascertained. Polish sources reported the continued slaughter of priests and that many others were confined in

concentration camps.

Polish Resistance. Despite the growing ferocity of German repressive measures, the Polish underground maintained its organization intact and fought back with the weapons of assassination, sabotage, and terror. According to the Governmentin-Exile, which organized and maintained close touch with the underground movement, Gestapo members and German government officials guilty of notorious cruelties were selected for assassination. The fatal shooting of Gen. Wilhelm Krueger, chief of the Gestapo in Poland, was reported by official Polish circles in London May 9, but this claim was denied by the Germans. On May 16 the Moscow radio announced the assassination of Kurt Hoffman, director of the Warsaw Labor Exchange. Many minor German officials and some Polish traitors and collaborators were said to have met the same fate.

AMERICANISM.

POLITICAL ECONOMY. Subjects in the field of applied economics are treated in this volume under the following heads: Banks and Banking; Business Review; Consumers' Cooperation; Financial Review; Labor Conditions; Socialism; Social Security Board. See also the article on Agriculture and the various crops, industries, minerals, public utilities, etc. For books on the subject, see articles on literature.

POLLS. See Opinion Research Center, National. POLL TAX. See State Legislation under War and Postwar Legislation; also Negroes; United States.

POLO. All tournament competition was canceled

and only a little informal polo was played in 1943. With the majority of players in some branch of the services or kept busy by the wartime "speed-up" courses at our polo-playing schools, even the colorful intercollegiate tourneys, so successful the previous year, went by the boards. So, for the duration, the indoor intercollegiate championship trophy will remain at Yale and the outdoor prize will stay at Princeton.

THOMAS V. HANEY.

PONAPE. The main island (158° 10′ E. and 6° 45′ N.) in the eastern Carolines of the Japanese Pacific Islands (q.v.). Total area, 145 square miles. Civil population (1938), about 11,468. There is a lagoon around the island formed by an outer reef. Jokai, a fortified islet, 876 feet high, in the lagoon provides the chief harbor landing. A naval establishment and large commercial docks have been constructed on the island which was reported to be a primary Japanese naval base. There is an agricultural experiment station. The chief exports are sugar, phosphates, bauxite, alcohol, copra, and dried fish.

PORTS AND HARBORS. These two terms are complementary and to some extent interchangeable, but in general "port" has the broader application to both land works and water areas, while "harbor" is generally limited to the water areas of a port. Comparatively little new work or extension has been carried out in the United States during 1943. Most of the ports had facilities adequate even for the heavy export business incident to the war and its lend-lease factor. Such additions and improvements as were necessary for commercial, military, and naval activities were made quietly and quickly and without much publicity.

River and harbor improvements by the War Department (with jurisdiction over all navigable waters) were restricted to works of direct importance to the war efforts. Improvements and maintenance were carried out on 323 projects, of which six were completed. Typical works included harbor dredging at New York, Portland (Maine), and other ports; rock removal on the Delaware River channel from Philadelphia to the sea, and breakwaters at Los Angeles and Long Beach, California. Besides new works and maintenance of existing channels, improvements were effected on ports and waterways on the Atlantic, Gulf, and Pacific coasts, on the Great Lakes, and on a number of rivers. A notable work on the Great Lakes was the construction of the new MacArthur lock on the St. Mary's River at Sault Ste. Marie.

At one coastal port, new facilities provided on account of heavy lend-lease export traffic, included a wharf or quay 2,500 ft. long and 80 ft. wide, built of creosoted piles and timbers, with 40 ft. of water alongside and the deck 12 ft. above water level. This deck has a solid plank base carrying a 6-in. concrete roadway and trucking space 50 ft. wide, and bituminous paving along a double-track railway served by two classification yards having

some ten miles of track. The entire construction was completed in five months (a month ahead of schedule) by forces working two 10-hour shifts

per day.

A new ore shipping dock at the head of Lake Michigan, at Escanaba, Mich., was built by the Chicago & Northwestern Railway (the cost de-frayed by the U.S. Government). It is of timber construction, with a capacity of 96,000 tons of iron ore. Its purpose is to provide an alternative route for ore from the mines in the Lake Superior district in case of accident to the canal and locks at the "Soo," connecting lakes Superior and Michigan.

A vast program of dry-dock construction for ship repair work has been carried out by the Navy Department, 183 such docks having been built since 1940 at a cost of \$511,000,000. They include mobile types of floating dry-docks which can be towed or self-propelled at speeds sufficient to follow the fleet, and which vary in size from those for small craft to those capable of servicing the largest warships and troopships. There are also dry-docks composed of small pontoons that can be transported on

ships and assembled at destination.

In fixed dry docks, or graving docks, new concrete designs have been developed. An outstanding feature of this dry-dock program is speed of con-struction by the Navy forces. For example, two huge dry-docks at the Navy Yard in New York were completed in 20 months, as compared with 8 years for an older dock only half the size. The new dry-dock at Pearl Harbor was also completed in 20 months (just before the Japanese attack on Dec. 7 1941), while the first and smaller dock at that yard required 6 years.

In Mexico, the government plans port improvements costing \$3,150,000 at Puerto Mexico and Salina Cruz, the Gulf and Pacific terminals of the railway crossing the Isthmus of Tehuantepec. Improvements will be made also at Topolobampo on

the Gulf of California.

Good progress has been made at Cape Town, Union of South Africa, on the new harbor works and the great dry-dock, 1,220 ft. long and 135 ft. wide, with 40 ft. of water on the gate sills. Plans are now being made for laying out the extensive area of new foreshore or made land formed by filling the space between the old shore line and the new docks. At Durban, South Africa, some \$4,000,000 are to be spent on harbor works, railway terminals, extension of the deep water areas, and additional facilities on Salisbury Island, in the bay. At Mombasa, East Africa, new ship berths, cargo handling machinery, and coaling facilities are to be provided. In Iran (Persia), American engineers and contractors and the U.S. Army have cooperated in building port facilities on the Persian Gulf for the use of American ships bringing war materials and supplies which are forwarded to Russia over roads also built by United States forces.

A new breakwater at Leixoes, Portugal, 3,300 ft. long, has its first 1,300 ft. formed by a concrete block pier, beyond which it consists of a heavy rock fill capped with 90-ton cubical concrete blocks  $12 \times 11 \times 11$  ft. These blocks were transported on a special barge having rolling platforms on the decks. At the site, the platforms were hauled forward by cables so as to dump the blocks over the bow of the barge. Postwar plans at Greenock, Scotland, include new dry-docks, commercial docks and piers, and revision of the railway terminal system. Similar plans for joint improvement of the opposite ports of Liverpool and Birkenhead, on the Mersey, England, provide for new roads and railway facilities, and the installation of machinery for the more rapid and economical handling of freight. See COAST GUARD; TAXATION; WATERWAYS.

E. E. RUSSELL TRATMAN.

PORTUGAL. A republic of southwestern Europe.

Capital, Lisbon.

Area and Population. The area is 35,490 square miles (continental, 34,254; Azores, 922; and Madeira, 314). The population at the census of Dec. 12, 1940, was 7,702,182 (continental, 7,223,421; Azores, 246,000; Madeira, 232,761), as against an estimated total of 7,760,965 on June 30, 1941. Live birth rate in 1942, 24.0 per 1,000 inhabitants (23.8 in 1941); death rate, 16.2 (17.4 in 1941). Emigrants in 1941 numbered 6,269, of whom 5,886 went to Brazil. Populations of the chief cities (1940 census): Lisbon, 686,416; Oporto, 267,122; Setubal, 51,037; Funchal (Madeira Is.), 34,487; Coimbra, 30,166; Braga, 29,658; Evora, 24,267. See Azores, Madeira.

Colonial Empire. Portugal's colonial possessions comprise approximately 808,363 square miles of territory, with a population estimated at 9,405,000 in 1938. See separate articles on Angola, Cape Verde Islands, Macao, Mozambique, Portuguese Guinea, and Timor (occupied by Japan in 1949). The article scale is a second of the second of th 1942). The remaining colonial possessions are Portuguese India (capital, Nova Goa), with 601,000 inhabitants on an area of 1,538 square miles; and the islands of São Thomé and Principe (capital, São Thomé) off West Africa, with an area of 386 square miles and 59,000 inhabitants.

Defense. Military service is compulsory for men from 20 to 48 years of age. As of Jan. 1, 1941, the standing army totaled 30,868 and the air force 868. There were 155,000 trained reserves but little equipment for them. The navy consisted of 7 sloops, 6 destroyers, 7 gunboats, 3 submarines, and a dozen auxiliary vessels. The naval personnel on Jan. 1, 1941, included 719 officers and 5,860 other

ranks.

Education and Religion. Education is nominally compulsory. The census of 1930 indicated that 67.8 per cent of the population were illiterate. Efforts to spread elementary instruction were thereafter intensified. In 1939–40 there were 545,867 elementary pupils receiving instruction from 13,416 teachers, 17,471 pupils and 1,022 teachers in 42 secondary schools, and three standard universities and one technical university with a total of 6,925 students. There is freedom of worship, but the Roman Catholic faith prevails. A Concordat signed by the Government and the Vatican May 7, 1940, granted the Church specific privileges (see 1941 Year Book, p. 619).

Production. Agriculture is the leading occupation, followed by forestry, fishing, mining, and manufacturing. The 1933 constitution provided for Portugal's economic reorganization along corporative lines. In 1941 over 70 per cent of all exports were subject to state (corporative) control. Estimated yields of the principal crops in 1943, with 1942 figures in parentheses, were: Wheat, 330,000 metric tons (495,000); corn, 500,000,000 liters (450,000,000); oats, 200,000,000 liters (215,000,000); rye, 10,000,000 liters (175,000,000); barley, 80,000,000 liters (95,000,000); rice, 75,000 metric tons (88,700); olive oil, 80,000,000 liters (38,000,000); almonds, 8,000 metric tons in 1942. Wine production was 5,186,645 hectoliters in 1940; wool, 5,004 metric tons in 1941; meat, 66,600 metric tons in 1940. Livestock in 1940 (including the islands): 973,226 cattle, 3,948,320 sheep, 85,040 horses, 122,832 mules, 245,448 asses, 1,252,975 swine, and 1,243,890 goats. The fishing industry in 1941

employed 36,837 men and boys, with 13,630 boats of 66,680 tons; in 1940, the sardine catch was 98,-211 metric tons. Mineral production was (metric tons): Coal, 444,000 in 1942; cupriferous pyrites, 393,879 in 1940; copper, 173 in 1940; tungsten ore (tungsten trioxide content), 2,880 in 1942 (3,228 in 1941); kaolin, 2,701 in 1941; sulphur, 192,288 in 1940. The chief manufactures are textiles, shoes, cement, lime, glass, fertilizers, porcelain tiles, etc.

Foreign Trade. Merchandise imports in 1942 totaled approximately 2,449,200,000 escudos (2,468,400,000 in 1941); exports, 3,859,200,000 (2,972,400,000). Portugal's transit trade increased from 151,200,000 escudos in 1939 to 1,839,700,000 escudos in 1941. For the chief items of import and export in 1941, see 1943 Year Book. Portugal's direct trade is mainly with Great Britain, the United States, Germany, and the Portuguese colonies.

Finance. Budget estimates for the calendar year 1943 placed ordinary receipts at 2,302,425,124 escudos (2,132,944,824 in 1942) and the total of ordinary and extraordinary expenditures at 3,469,-354,164 escudos (2,850,395,133 in 1942). Defense expenditures authorized for 1943 were 1,407,241,-770 escudos, or 40.5 per cent of the total appropriations. Excluding bonds held by the Government and Government balances with banks, the public debt was 6,614,000,000 escudos on Jan. 1, 1942 (7,145,100,000 on Jan. 1, 1940). Average free market exchange rate of the escudo: \$0.03711 in 1940 and \$0.04 for the first half of 1941.

Transportation. There are 2,224 miles of railway lines, which in 1941 carried 25,470,324 passengers and 4,464,049 tons of freight. Highways and roads extended 15,215 miles in 1941. Eleven rivers are navigable for varying distances. As a result of its neutrality in World War II and strategic position, Portugal became one of Europe's most important shipping and air traffic centers. From the new £ 700,000 airport completed 18 miles from Lisbon in December, 1942, air lines radiated to North and South America, Africa, Great Britain, and the chief cities of continental Europe. The Portuguese merchant marine in 1941 comprised 790 vessels of 232,625 tons. An additional 54,000 tons of shipping was acquired in 1943 (German vessels interned in ports of Angola and Mozambique). A total of 5,976 ships of 7,646,070 tons entered Portuguese ports in 1941

Government. Under the Constitution adopted Mar. 19, 1933, Portugal is governed as a corporative, one-party state. Voting is restricted to adult males who are able to read and write or who pay direct taxes to the state or administrative corporations, and to adult females having a special, secondary school, or university diploma. The Government party (Party of National Union), which is pledged to support the corporative state, was headed in 1943 by Dr. Antonio de Oliveira Salazar, Portugal's unofficial dictator. He was Premier, Minister of War, and Minister of Foreign Affairs of the nonpartisan military-civilian Cabinet formed after the 1926 military coup and reorganized in 1936 and 1940. The Constitution provides for a President elected for seven years by the voters, a National Assembly of 90 members similarly elected for four years, and a Corporative Chamber of 79 appointed representatives of the various branches of social and economic activity. The President appoints the Premier, who in turn names his Cabinet, which is not responsible to either the National Assembly or Corporative Chamber. For developments in 1943, see below.

#### HISTORY

Pro-Allied Trend. The trend toward a more openly pro-Allied nonbelligerency that took place in Portugal during 1942 (see 1943 Year Book) was accelerated in 1943. Speaking early in May on the 15th anniversary of the day he assumed charge of Portugal's finances, Premier Salazar said that the country's neutrality "was not unconditional, naturally, in view of the higher interests of the country and the English alliance, which, even in these dark and difficult times, we loyally affirm." Military censorship of all written and telephone communications to foreign countries was instituted July 15.

The tension that developed between Portugal and Japan in 1942 following Japanese occupation of Portuguese Timor was further aggravated in August when the Japanese flagrantly violated the neutrality of the Portuguese colony of Macao (q.v.). Early in September Chinese reports stated that Japan was demanding the installation of Japanese "advisers" in Macao under threat of military occupation.

Meanwhile the economic situation in Portugal had been deteriorating through the long-continued curtailment of overseas trade. Food riots and demonstrations were reported in some parts of the country. Toward the end of July industrial strikes by thousands of workers tied up shipyards, railways, and electrical power plants. The government was forced to threaten conscription of strikers for heavy labor duty in the Cape Verde Islands and to offer "iron rations" as an inducement to workers to return to their jobs. To overawe the strikers, 10,000 troops of the Lisbon garrison paraded through the streets of the capital on August 1, displaying new equipment.

Britain Gets Azores Bases. The foregoing circumstances, coupled with the steadily growing prospects of Allied victory over the Axis powers, led

Courtesy of The New York Times

British naval and air bases in the Azores, acquired on Oct. 12, 1943, facilitated Allied anti-submarine operations in the eastern Atlantic.

the British Government to approach the Portuguese Premier with an offer of increased shipments of arms, food, and other essential civilian supplies in return for the wartime use of bases in the Azores. As indicated by the accompanying map, the Azores were ideally located to round out the network of Anglo-American bases established in the North Atlantic for the protection of convoys against German submarine depredations. The islands guarded the southern sea route between American and British ports and stood athwart the direct routes from the United States to the Mediterranean and from the Venezuelan oil fields to the British Isles. Their use would permit the U.S. Army and Navy air transport commands to operate direct services from American east coast ports to French North Africa instead of taking the roundabout route by way of the bulge of Brazil.

Premier Salazar proved receptive to this proposal. After careful preparations to minimize the danger of Axis reprisals against the Portuguese mainland, the conclusion of the agreement was announced simultaneously in London and Lisbon on October 12. According to the announcement made by Prime Minister Churchill before the House of Commons October 12, the agreement concerned "first, the conditions governing the use of the (Azores) facilities by His Majesty's Government in the United Kingdom and, secondly, British assistance in furnishing essential material and supplies for the Portuguese armed forces and for the maintenance of Portugal's national economy."

the maintenance of Portugal's national economy."

"The agreement concerning the use of facilities in the Azores," he continued, "is of a temporary nature only and in no way prejudices the maintenance of Portuguese sovereignty over Portuguese territory. All British forces will be withdrawn from

the Azores at the end of hostilities."

Portugal Neutral on Mainland. Churchill emphasized that the new Anglo-Portuguese agreement was an application of the 600-year-old alliance first concluded between the two countries in 1873. "Nothing in this agreement," he said, "affects the continued desire of the Portuguese Government, with which His Majesty's Government have declared themselves in sympathy, to continue their policy of neutrality on the European mainland and thus to maintain a zone of peace in the Iberian Peninsula." Premier Salazar likewise announced his Government's determination to remain neutral

on the European mainland.

Both the German and Japanese Governments lodged formal protests against the violation of neutrality involved in the grant of the Azores bases to the British. But neither carried its anger and chagrin to the point of breaking relations with Portugal. The reasons for this were that the Axis powers had nothing to gain from such action. Germany was buying tungsten and other vitally needed strategic materials from Portugal, which would be cut off in case the Germans sought to retaliate against the Portuguese. The Germans, like the British, needed a neutral base in the Iberian peninsula for espionage and other contacts with territories under hostile or neutral control. Finally, the Germans could not successfully attack Portugal without crossing neutral Spain and such a move threatened to throw both Spain and Portugal into the war on the side of the Allies. In addition, large Allied forces in Britain and North Africa were in a position to go to Portugal's assistance.

The Portuguese Government took major precautions against a German attack before announcing the Azores deal. The Portuguese armed forces, supplied with much new British equipment, began military maneuvers on the largest scale since World War I on October 11. The civil defense organizations in Lisbon and other cities were placed on the alert October 10, and the Portuguese Government issued a number of cryptic statements indicating that it was prepared to abandon neutrality "if dignity and the national interest require it." When the crisis was passed, the Portuguese War Ministry on November 2 ordered demobilization of the reserve units called into service for the October "maneuvers."

Application of Azores Pact. British naval and air forces landed in the Azores—which already had strong Portuguese garrisons—immediately after the conclusion of the Anglo-Portuguese agreement. They carried out extensive but unspecified engineering works, including the construction of a number of air fields and improvement of harbor facilities, to facilitate anti-submarine patrols. Within two weeks after British patrol planes began operating from Azores bases, a Coastal Command Flying Fortress reported the first sinking of a German submarine. United States forces also made use of the base facilities in the Azores.

It was announced in Lisbon October 16 that the British Government had delivered two corvettes to the Portuguese Navy, the first of a number of warships promised under the Azores agreement. Equipment for the ground and air forces was also forthcoming. Lisbon sources announced December 30 that Portugal had received 43,000 tons of wheat from the United States, Canada, and Argentina during the preceding month and that the British had made available a number of ships to assist in transporting it. The improvement in the food situation was followed on December 25 by a Government order freeing the several hundred political prisoners remaining in Portuguese jails. However it was stated that a number of prisoners charged with "social crimes" were still confined.

Other Developments. On November 26 Premier Salazar told the National Assembly that lengthy negotiations with the Japanese for the restoration of Portuguese sovereignty over Timor had made no progress and that the Government felt a solution was "absolutely necessary." An important commercial agreement was concluded by the Spanish and Portuguese Governments on February 22, replacing the agreement of May 21, 1941. It provided for the exchange by each party of goods and services valued at 235,000,000 escudos during 1943.

See Australia, Great Britain, and Spain under *History*; Ports and Harbors.

## PORTUGUESE EAST AFRICA. See MOZAMBIQUE.

PORTUGUESE GUINEA. A colony of Portugal situated on the west coast of Africa between French Guinea and Senegal. Area, 13,944 square miles. Population (1940 census), 351,089. Chief ports: Bolama, Bissau (capital), Cacheu, and Bubaque. The principal commercial products are rice, palm oil and kernels, groundnuts, and hides. Trade (1941): imports 49,261,000 escudos; exports 64,997,000 escudos (escudo averaged \$0.0400, 1941). Shipping (1941): 59 vessels aggregating 66,855 tons (net) cleared the ports. Roads (1941): 1,864 miles. Budget (1942): 35,544,848 escudos. A governor heads the administration of the colony.

PORTUGUESE INDIA. The possessions of Portugal in India, comprising Goa, Damán, and Diu. Total area, 1,537 square miles. Population (1940 estimate), 600,000. Capital, Panjim (Nova Goa). Chief products: manganese (3,300 metric tons, 1940), copra, spices, caju-nuts, fish, and salt. The trade is principally transit. Trade (1940): imports 104,933,000 escudos; exports 1,646,000 (escudo averaged \$0.0371 in 1940). There are some 51 miles

of railway and 730 miles of roads. Budget (1942): 46,487,822 escudos. Public debt, Jan. 1, 1942, 15,-989,551 escudos. Governor General, Col. José R. P. Cabral.

PORTUGUESE TIMOR. See TIMOR, PORTUGUESE. PORTUGUESE WEST AFRICA. Same as ANGOLA (q.v.).

POST OFFICE, U.S. The year 1943 was one of rapidly expanding mail volume, continued strain on postal personnel and facilities to meet the demands of wartime, and reorganization in the interest of postal efficiency and better business practices.

For the first time in twenty-four years, postal revenues exceeded expenditures; there was a surplus of \$1,334,551 for the fiscal year ended June 30, 1943. Revenues for the fiscal year increased to \$966,227,288, by far the largest total in history and \$106,409,797 larger than in the preceding year. Accrued expenditures were \$964,892,737. Total financial transactions, including such items as postal savings, war bond sales, money orders, revenues, and expenditures, rose to about four-teen billion dollars. Sales of war savings stamps and war bonds by the post offices for the year exceeded two billion dollars. Volume of mail rose some 10 per cent to more than 33,000,000,000 pieces, swelled by correspondence of the armed forces and of those who left their homes to take work in war industries. The service handled the gigantic task of distributing the third ration book, delivering about 120,000,000 copies, one for every civilian man, woman, and child in the United States.

The number of postal employees, including regularly working substitutes, workers under contract, and temporaries, was approximately 335,000, about the same as a year earlier. Included, however, were thousands of temporary wartime employees hired to take the places of those who left for the Army and Navy; returning members of the armed forces will find their jobs waiting for them. By the end of the calendar year 1943, about 32,000 postal workers had gone into the fighting forces. The number of post offices declined further to 42,680 at the end of the fiscal year, compared to 43,406 a year earlier. There were also 5,965 branch post offices and contract stations.

The Bureaus of the First Assistant Postmaster General, in charge of post office operations and personnel, and the Third Assistant, in charge of postal finance, were thoroughly reorganized for more effective supervision of the vastly expanded mail and financial work. A detailed study of postal cost ascertainment and accounting, by specially employed accounting experts, was near completion at the end of 1943. The study will provide a sounder basis than ever before for controlling costs and determining the proper rates to be charged for each class of mail and special services. See MAGAZINES.

POSTWAR ECONOMIC POLICY AND PLANNING, Committee on. See POSTWAR PLANNING.

POSTWAR PLANNING. The decisive military successes won by the United Nations during 1943, the collapse of U-boat attacks on shipping in the Atlantic, the destruction of German cities by bombing from the air, and the advances in the Southwestern Pacific, greatly intensified interest in postwar planning, both in the United States and among the other United Nations. At the same time, such planning tended to become more realistic as the difficulties and problems of the postwar transi-

tion came more clearly into view. The tendency to regard the postwar period as a bright-hued Utopia, in which political, economic, and social problems would resolve themselves automatically and mankind would attain unprecedentedly high living standards as a matter of course, gave way to efforts to study and surmount specific difficulties standing in the way of a return to normal conditions at the end of the war.

In the political domain, the progress of planning was marked by conferences held among the United Nations' leaders, culminating with the Moscow conference of foreign ministers in November and the meetings of Prime Minister Churchill, Generalissimo Chiang Kai-shek, Premier Josef Stalin, and President Franklin D. Roosevelt at Cairo and Teheran near the end of the year. (See United Nations.) Passage in Congress of a resolution favoring a postwar organization to maintain peace offered the hope that postwar political plans would not be undermined this time, as they were after the first World War, by refusal of the U.S. Senate to approve a peace treaty that would involve American participation

in an international political organism.

Far greater activity was manifest in the field of economic postwar planning. Both Government and private agencies, and individual business enterprises, formulated plans for the solution of postwar problems.

Government Planning. The most ambitious postwar plan formally submitted to Congress by any Government agency was that of the National Resources Planning Board, which was received by the legislature on Mar. 10, 1943. Part I of this report on a Postwar Plan and Program made specific proposals for military and economic demobilization after the war. For the longer run, the Board proposed that higher living standards be sought through curbing monopolies, the establishment of "mixed corporations" in which Government and private enterprises would cooperate where the Government already has large investments, and Government assistance to small business in solving its production, marketing, and financial problems. Detailed plans for urban development, land and forest use, development of water power resources, and modernization of transportation with Government assistance were presented, as well as for placing public works on a planned basis through the preparation of six-year capital budgets by Federal, State, and local governmental agencies.

A second report of the National Resources Planning Board on Security, Work, and Relief Policies covered expansion of social insurance and public assistance to the unemployed, health insurance, housing, and educational developments.

The proposals of the National Resources Planning Board were criticized as favoring unduly the expansion of Government activities at the expense of private industry. Congress, reflecting such criticisms, did not appropriate funds to continue the Board, and it ceased operation July 1, 1943. The Senate on Mar. 12, 1943, passed a resolution introduced by Senator George of Georgia to set up a Special Committee on Postwar Economic Policy and Planning, to assure Congress a leading part in the formulation of postwar economic policies. The Special Committee launched a series of studies of postwar problems, to be carried out by the Brookings Institution.

A number of Government departments and agencies prepared plans covering specific questions in their special fields. The armed forces

tackled the question of demobilization. President Roosevelt presented a series of proposals for cash allowances and retraining of men released from the military forces, which were part of the overall demobilization plan. The War Production Board prepared plans for reconversion of industry.

and demonization plan. The war Production The U.S. Department of Commerce issued special studies on "Markets After the War" and "Foreign Trade After the War." The first predicted an unprecedented demand for automobiles, refrigerators, and other durable consumer goods, based on the huge accumulations of cash and war savings bonds in the hands of the people. The second pointed out that a high level of business activity within this country would stimulate our imports, so that foreigners would have, inclusive of sums received for services rendered Americans and foreign investments by this country, some \$10,000,000,000 of dollar exchange in a typical year, of which \$7,000,000,000 would be available for purchases of goods here. This would represent a larger export trade for the United States than was ever attained in the past in time of peace. Other Government agencies preparing specific plans were the Bureau of Labor Statistics, the War Manpower Commission, the Interstate Commerce Commission, the Maritime Commission, the Civil Aeronautics Authority, the Social Security Board, and the National Housing Agency. (See those articles; see also Postwar Plans of the United Nations by Lewis L. Lorwin.)

Near the end of the year, the absence of coordination in postwar economic planning within the Government, and the conflicting ambitions of several agencies to direct the difficult transition process, became apparent. The armed forces, the War Production Board and the Office of War Mobilization were in open conflict, in fact, over the direction of economic demobilization. To head off hasty and ill-considered legislation by Congress, Director of War Mobilization James F. Byrnes appointed Bernard M. Baruch as his special adviser on postwar problems. Mr. Baruch was expected to formulate a comprehensive plan to coordinate direction of the postwar transition, which would form a basis for enacting legislation, and to hasten decisions on contract termination policy, severance pay for war plant workers, disposal of surplus plants and inventories, and lifting of government controls. Shortly after the turn of the year, Mr. Baruch issued a Uniform Termination Article for war contracts, to assure contractors reimbursement for costs and a profit up to 6 per cent on cancelled contracts.

Private Planning. The Twentieth Century Fund in its second report on Postwar Planning in the United States, listed 137 agencies and groups, most of them private, as engaged in postwar planning in 1943. The most ambitious of the private efforts was that of the Committee for Economic Development, which had been set up with the cooperation of the Department of Commerce, but was financed entirely by private industry. This Committee undertook a comprehensive research program with a budget of \$5,000,000, its chief objective being to assure a high level of employment after the war. Apart from general economic studies, the Committee sought to organize business concerns in each community to plan for additional jobs, setting up a Field Development

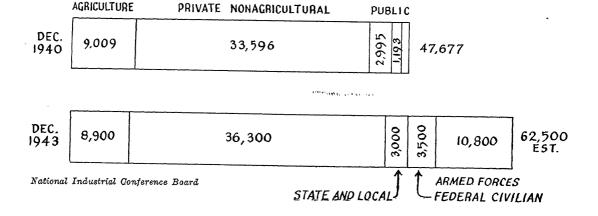

Committee for the purpose.

The National Association of Manufacturers through its Postwar Problems Committee urged greater reliance upon the recuperative powers of the national economy, once freed from restraints upon private enterprise. Stimulation of new investment through an overhauling of the tax system, through stabilized industrial relations and through the removal of Government restrictions on prices and production were urged. The National Association of Manufacturers also advanced a plan of its own to facilitate demobilization of the armed forces through cash allowances for persons honorably discharged. The Chamber of Commerce of the United States and individual trade associations also sought actively to stimulate realistic planning by individual concerns.

Postwar planning by business corporations was concerned mainly with the termination of war contracts, reconversion of plants, reemployment of returning members of the armed forces, designing products for postwar markets, planning distribution of goods in the postwar period, and the preparation of budgets for financing the postwar transition. Corporations like the General Electric Company were inclined to emphasize the development of new and improved products, while others like the General Motors Corporation were more concerned with plans for hastening reconversion of plants to a peacetime basis and the restoration of prewar efficiency standards in their organizations.

Foreign Postwar Planning. The planning for the postwar period was actively prosecuted both by Government and private agencies in Great Britain during 1943. A number of these plans dealt with the reconstruction of cities destroyed by bombing and with social security. The Beveridge Plan for social insurance was taken up formally in the

## THE POSTWAR EMPLOYMENT PROBLEM IN THE UNITED STATES

House of Commons in February, 1943, and the debate over it for a time threatened the life of the coalition Government. However, the issue was settled amicably by endorsement of the principles of the Plan by Prime Minister Churchill, without specific commitment as to when and how the proposals would actually be put into effect. Similarly, the Churchill Government refused to adopt proposals to set up a central planning authority, although in a speech before the House of Commons on Mar. 21, 1943, Mr. Churchill outlined a Four-Year Plan for Great Britain, embracing in principle an extension of social insurance, expansion of British agriculture to make the country more selfsufficient as regards food supplies, and fuller planning by the Government in partnership with private enterprise. The Prime Minister stated that the field of State ownership, especially in monopolistic industries, was expanding and that the modern State must "increasingly concern itself with the well-being of the nation."

Private planning in Great Britain was concerned largely with foreign trade, shipping, and aviation development. Because of her far-flung empire, Britain is especially interested in adequate transportation facilities. Strong support was expressed for the development of a number of competing international air transport lines, some owned by steamship lines, to take the place of the Government monopoly of Imperial Airways, Ltd. before the war.

The other United Nations, particularly the governments-in-exile of Western European countries, conducted intensive postwar economic planning of their own, both individually and through joint committees of finance ministers and other officials. These nations sought to formulate their reconstruction needs, as a basis for appeals for aid from the United States as soon as their countries are free from German occupation. The United Nations Relief and Rehabilitation Administration was set up to provide a vehicle for joint international action to furnish relief to areas freed from the Axis yoke. Emphasis was placed on relief in the plans of this agency with very limited provisions for reconstruction.

It was generally recognized that China would offer a particularly promising field for economic development after the war, when the Japanese invader will have been defeated. Plans for Chinese economic development after the war contemplate Government ownership of armament and other heavy industries and transportation facilities, with consumer goods industries left in private hands. See Australia, China, Great Britain, Palestine, Union of Soviet Socialist Republics under History

International Planning. Progress was made during the year in laying plans for international agencies to foster postwar economic reconstruction. Most attention was paid to published proposals for international currency stabilization, formulated for Great Britain by Lord Keynes and for the United States by Harry D. White, monetary adviser to the United States Treasury. The British Keynes plan contemplates an International Clearing Union to enable individual countries to build up favorable or unfavorable balances of international payments without the necessity for gold shipments, up to specified limits. The settlement of accounts in the Clearing Union is to be made in terms of "Bancor." The American White plan provides for the organization of a formal International Monetary Stabilization Fund in which various countries would have participations, settlement of accounts to be made in terms of "Unitas." This fund is to

begin with at least \$5 billion of gold and foreign exchange resources. Under both plans, and especially the White plan, gold would retain a considerable role, since both "Bancor" and "Unitas" would bear a specific ratio to gold. The "Unitas" would have a fixed value of \$10 in gold, but under the revised White plan issued in July, this gold content could be changed by vote of 85 per cent of the Board of Directors. Because the Keynes plan was considered more favorable to debtor countries and the White plan to the creditor countries, they were the subject of considerable controversy on both sides of the Atlantic. Conferences held late in the fall between Lord Keynes and Mr. White failed to yield an agreement, but an international conference of representatives of 44 nations on these plans was projected for 1944.

plans was projected for 1944.

The United States Treasury also published a plan for a United Nations Bank for Reconstruction and Development, to make long-term loans to nations and industries where private capital is not available for the purpose, and to help finance international commodity stabilization schemes. This institution was to have a capital of \$10,000,000,000, a third to be provided by the United States.

Both the monetary stabilization and the international capital bank plans were widely criticized in financial and industrial circles as being far too ambitious and experimental in character. Spokesmen for American banking urged instead an Anglo-American agreement to stabilize the dollar-pound relationship in the postwar period, as an indispensable first step towards the restoration of sound monetary conditions generally. Such an agreement, which it was felt could be reached readily, would provide a nucleus around which other currencies could be stabilized throughout the world. Bankers were also inclined to emphasize the need for each country creating conditions within itself, through proper economic and budgetary policies, to place its currency and credit on a strong basis, rather than to rely mainly upon help from abroad before putting internal affairs in order.

Postwar plans are discussed specifically in a number of topics in this volume, including the following: Aeronautics under Postwar Air Policy; Aericulture under Postwar Food Needs; Construction Industry and the various engineering topics; Education; Fire Protection; Insurance; Library Progress; Pan Americanism; Prisons; Roads and Streets; State Legislation under War and Postwar; Psychology under Social; Shipping; Social Security Board; Rubber; United States. See articles on organizations, as League of Nations; Pan American Union; Opinion Research Center; Philanthropy under Foundation Activities; Societies.

Jules I. Bogen.

POTASH. See CHEMICAL INDUSTRIES; CHEMISTRY under Chlorine and Fertilizers.

POTATOES. The 1943 potato crop in the United States was estimated by the U.S. Department of Agriculture at 464,656,000 bu., a record yield, harvested from 3,322,000 acres averaging 139.9 bu. The comparable figures for 1942 were 370,-489,000 bu., 2,705,500 acres and 136.9 bu. The average annual yield for the 1932–41 period was 363,332,000 bu., 3,131,200 acres and 116.9 bu. The 18 surplus late potato States produced 28,1430,000 bu.; the 12 other late potato States made 35,430,000. The seven intermediate potato States totaled 34,774,000 bu., and the 12 early potato

States produced 66,339,000 bu. The seasonal average price per bu. (preliminary) received by farmers in late potato States \$135.3, in intermediate States \$140.9, in early potato States \$152.0, or a national average of 137.5¢ and an estimated production value of \$639,124,000 (1943), compared to 116.4¢ and \$431,245,000 (1942). The accompanying table lists the leading nation States for panying table lists the leading potato States for 1943.

|                 |              | Acres     | Production |
|-----------------|--------------|-----------|------------|
| State           | Value        | Harvested | (bushels)  |
| Maine           | \$81,568,000 | 207,000   | 73,485,000 |
| New York        | 47,485,000   | 209,000   | 29,678,000 |
| Idaho           | 43,035,000   | 189,000   | 43,470,000 |
| California      | 41,895,000   | 41,000    | 11,480,000 |
| Michigan        | 35,784,000   | 213,000   | 22,365,000 |
| Pennsylvania    | 33,394,000   | 176,000   | 18,656,000 |
| Minnesota       | 27,107,000   | 243,000   | 23,571,000 |
| North Dakota    | 24,973,000   | 170,000   | 22,100,000 |
| Colorado        | 24,316,000   | 87,000    | 18,705,000 |
| Wisconsin       | 22,915,000   | 186,000   | 16,368,000 |
| Washington      | 20,460,000   | 60,000    | 13,200,000 |
| New Jersey      | 16,689,000   | 71,000    | 11,431,000 |
| North Carolina  | 16,576,000   | 109,000   | 12,099,000 |
| Ohio            | 16,502,000   | 90,000    | 8,550,000  |
| Nebraska        | 15,233,000   | 93,000    | 12,090,000 |
| Oregon          | 15,192,000   | 53,000    | 10,335,000 |
| <u>Virginia</u> | 13,432,000   | 78,000    | 9,594,000  |
| Texas           | 10,384,000   | 75,000    | 6,450,000  |
| Iowa            | 8,119,000    | 54,000    | 5,238,000  |
| Alabama         | 7,896,000    | 56,000    | 5,264,000  |
| Indiana         | 7,790,000    | 41,000    | 4,100,000  |
| Florida         | 7,295,000    | 30,600    | 3,703,000  |
| Kentucky        | 6,903,000    | 53,000    | 4,663,000  |
| Arkansas        | 6,386,000    | 59,000    | 4,661,000  |
| Tennessee       | 6,263,000    | 60,000    | 4,380,000  |
| Massachusetts   | 5,974,000    | 25,000    | 3,375,000  |
| Connecticut     | 5,742,000    | 22,000    | 3,190,000  |
| Louisiana       | 5,578,000    | 59,000    | 3,599,000  |
| South Carolina  | 5,428,000    | 31,000    | 3,193,000  |
| West Virginia   | 5,134,000    | 37,000    | 2,775,000  |

**PRESBYTERIANS.** A religious connection adhering to a system of church government by presbyters or elders and having some 60,000,000 members throughout the world. In the United States there are ten Presbyterian bodies, the largest of which follow. Also see Religious Organizations.

Presbyterian Church in the United States of America. This is the largest body of the Presbyterian communion, being represented by churches in every State of the Union and having official mission stations in Alaska, Cuba, Puerto Rico, and 16 foreign lands. In 1943 its churches in the United States and abroad were organized into 40 synods and 271 presbyteries. Statistics for the year ended Mar. 31, 1943, showed a total communicant membership in full standing of 2,051,869, the largest number in the history of the Church. The known adherents

number approximately 3,000,000 additional. The Sunday school enrollment totaled 1,294,818. The number of churches was 8,628 and of ministers 9,434. Contributions during the year amounted to \$47,451,008, of which \$39,356,249 was for current expenses and \$8,094,759 for benevolences. From living givers the Board of National Missions received \$2,556,132; the Board of Foreign Missions, \$2,240,850; the Board of Christian Education, \$615,599; and the Board of Pensions, \$171,931. In addition the Church raised \$1,102,000 for war emergency causes. The Church maintains 53 col-leges and 10 theological seminaries. It publishes three national official periodicals, Monday Morning,

Everyone, and Women and Missions.

The 155th annual General Assembly was held at Detroit, Mich., May 27 to June 1, 1943. The Rev. Dr. Henry Sloane Coffin, president of Union Theological Seminary, New York, was elected Moderator. The Assembly recommended for "thorough study and appropriate action" the six "Pillars of Peace" prepared by the Commission to Study the Bases for a Just and Durable Peace and appropriate Bases for a Just and Durable Peace, and approved a report prepared after a year of study by the Church's own Special Committee on a Righteous Peace and containing nineteen basic principles. The General Assembly also celebrated during 1943 the Tercentenary of the 1643 convening of the Westminster Assembly of Divines in Westminster Abbey, London; established a new National Committee on Evangelism; adopted a thoroughgoing re-vision of the Church's system of education of its ministry, involving still higher standards than the already high standards of the past; and issued a lengthy pronouncement in the social realm, including labor and management, rural life, gambling, child welfare, anti-Semitism, and other problems. The Church has its headquarters in the Witherspoon Building, Philadelphia, Pa., in charge of the Rev. Dr. William Barrow Pugh, Stated Clerk.

Presbyterian Church in the United States (South). This division of the Presbyterian denomination covers the territory commonly known as the Southern States. It was composed in 1943 of 17 synods (in most cases, corresponding to State lines) and 88 presbyteries, with 3,502 organized churches, 2,542 ministers, and 553,797 members. During the year 16,705 were received on profession of faith, and 24,072 by certificate. There were 9,973 adult baptisms and 7,973 infant baptisms. The Ruling Elders numbered 18,292, and deacons 21,226. Contributions for current expenses during the year amounted to \$4,317,344; for pastors' salaries \$3,355,611; for building expense \$2,321,334; and for benevolences \$4,178,159; a grand total of \$14,-172,448. The total per capita gift was \$25.59, of which \$7.54 was for benevolences and \$18.05 for current expenses current expenses.

Foreign Mission Work has been carried on in six countries: Africa, Brazil, China, Japan, Korea, and Mexico, among 36,000,000 people; 337 American Missionaries have constituted the working force. Work in the Orient has been disrupted by the war. Occupied China contains practically all of the territory in which mission stations are located. Because of the enmity of Japan to Christian work the presence of American missionaries in China, Japan, and Korea resulted in embarrassment and persecution for the native Christians. Hence the missionary force in these three countries was withdrawn. Of a total of more than 200 missionaries only 24 remain and these are interned in China, Japan, the Philippine and Hawaiian Islands.

In the homeland the Church maintains four theological seminaries, one training school for lay workers (white), two training schools for colored, thirteen colleges, eight junior colleges, two preparatory schools, three mission schools, four mountain schools, two Mexican mission schools, and sixteen orphans' homes and schools. The official organ of the Church is the *Presbyterian Survey*, published

The 83rd General Assembly of the Church convened in Montreat, N.C., May 27, 1943, with 340 Commissioners present. Rev. Donald W. Richardson, D.D., Professor of Christian Missions, Union Theological Seminary, Richmond, Va., was elected

Moderator.

The number of ministers who entered the Chaplaincy of the Armed Forces is in excess of the quota of this Church. On May 11, 1943, there were 168, of whom 114 were in the Army and 54 in the Navy. The Defense Service Council assists churches adjacent to army camps by providing funds to supplement normal work. Additional facilities and personnel are needed for the sudden and abnormal demands made upon the churches by the presence of so many service men, and a special fund of \$100,000 was authorized to meet these needs. Another problem results from the wartime shifting of population; to assist the churches in meeting this challenge a special appeal was authorized for the raising of \$250,000.

The 1944 meeting of the General Assembly will convene in Montreat, N.C., on May 25. Rev. E. C. Scott, D.D., is Stated Clerk and Treasurer, with office at 1120 Liberty Bank Building, Dallas 1, Texas.

United Presbyterian Church of North America. A member of the family of Presbyterian Churches, of Secession and Covenanter origin, formed by the Union in Pittsburgh, Pa., May 26, 1858, of the Associate and Associate Reformed Churches. The General Assembly of the Church convened in Westminster College, New Wilmington, Pa., May 26, 1943. The membership of the church is 191,-369 in America and 66,298 in Egypt and India. The contributions in America averaged \$25.86 for the year. The Moderator of the General Assembly is Rev. W. Bruce Wilson, D.D., of Pittsburgh, Pa.

Cumberland Presbyterian Church. One of the Presbyterian bodies whose chief strength is in the Southern States. The 1948 statistical report shows: churches, 1,069 reporting; ministers, 765; total membership, 78,018, a net gain of 6,198 members over the previous year, with 199 churches making no report. A general assembly which meets an-nually is the supreme judiciary, the 1944 meeting to be held in place not yet selected, June 15-20, 1944. Rev. A. A. Collins, Lubbock, Tex., was Moderator of the general assembly in 1943 and the Rev. D. W. Fooks, of Nashville, Tenn., was stated clerk, treasurer, and general secretary.

PRESIDENTIAL CANDIDATES. See United States under Politics.

PRICE ADMINISTRATION, Office of (OPA). The Office of Price Administration was active during 1943 in three interrelated fields: price control, rent control, and rationing. OPA's most important action in the retail price field was the establishment of dollarsand-cents ceiling prices on most food sold at retail on a community, zone, and national basis. Under the regulations, it was necessary for each retailer to post in his store a list of top legal prices supplied by OPA. This had two important advantages: first, it was no longer necessary for each retailer to laboriously compute his own prices and, second, the housewife could now see the top legal prices which local stores could charge for specific

items, quantities, and also brands of food products. By the end of 1943, OPA had established three kinds of ceiling prices: (1) *Dollars-and-cents ceil*ing prices; specific prices which were applied nationally or in certain zones or community areas. Maximum prices for meat, soap, and women's rayon hose were fixed on this basis. The "community food prices" are specific dollars-and-cents prices for essential foods applying only within a given community. (2) Fixed mark-up ceiling prices; used, for example, in setting prices on shoes. This method controls the amount wholesalers and retailers may add to the original cost of the goods to them. (3) The General Maximum Price Regulation of April 28, 1942, permits ceiling prices to be based on those charged during March, 1942. This technique has been principally used to cover clothing and household furnishings.

It was soon found impractical to apply dollarsand-cents prices arbitrarily to all types of stores. Price differentials have always existed between different classes of retailers; thus the effect of setting a single price high enough to cover the expenses of small, independent stores would have been inflationary in regard to large chain stores with lower operating costs. On the other hand, a price allowing only for the low costs of the large retailer would have been ruinous to the small in-

dependent.

In setting maximum prices on retail foods, therefore, OPA divided all retail stores into four groups: OPA 1—independents with less than \$50,000 gross income per year; OPA 2—independents grossing between \$50,000 and \$250,000; OPA 3-chain stores with gross incomes less than \$250,000 (if there are less than 4 stores in the chain with combined earnings of less than \$500,000, each store is placed in OPA 1); OPA 4—all stores with gross incomes of more than \$250,000.

At the same time OPA established communitywide food price programs, volunteer price panels were set up in all War Price and Rationing Boards. By informing merchants regarding the details of price regulations and by checking upon violations of the price ceilings, these price panels provided greater participation of the community in obtain-

ing compliance with price rules.

Under authority delegated by the Emergency Price Control Act, OPA had begun to regulate residential rents in 1942. In so doing, OPA divided the country into defense rental areas." In each area, rents are frozen at the level prevailing on a specific date, usually Mar. 1, 1942. By Dec. 31, 1943, OPA had established 241 rental area offices for the 342 defense rental areas.

By Dec. 31, 1943, the following items had been rationed: tires, automobiles (new), typewriters, sugar, gasoline, bicycles, rubber footwear, fuel oil, coffee (removed from rationing July 29, 1943), heating stoves (in eastern states), shoes, processed foods, meats and fats, pressure cookers (removed from rationing, December 29), and refrigerators.

The following paragraphs present in greater detail the conditions with which OPA has worked

and the scope of its activities.

The purpose of OPA is to keep down dwelling rents and the prices of war materials and consumers' goods and to ration scarce consumer goods. During its first year and a half (down through 1942) OPA launched programs of broad scope embodying the price control of almost all things Americans wear, use, and eat and the rationing of such important scarce commodities as gasoline, fuel oil, and shoes. In 1943 the programs were significantly extended and at the same time modified in many important respects. Serious gaps in the price control structure were bridged by ceilings on animal feeds, fresh fruits and vegetables, used commodities, and on various primary products, most important of which were live hogs. Rationing assumed an increasingly significant place in American life with the inclusion under the program of meats, processed foods, and dairy products. Administrative policy in 1943 stressed the need for greater participation in the program by the general public. The local War Price and Rationing Boards, comprised chiefly of volunteers, were given greatly widened responsibilities in both the rationing and price programs. Price panels were established in local boards throughout the country to promote compliance with the regula-tions among retailers and consumers in the community and to provide a channel for the consideration and settlement of consumer complaints. Closer relations with industry were brought about through the fuller development of industry advisory committees, set up to iron out special problems and to further the exchange of viewpoints between the agency and the business world. There was considerable restaffing of the agency's Price Department in order to comply with the so-called "business experience" amendment to the National War Agencies Appropriations Act for 1944 requiring that all key policy positions in the OPA be held by men who "in the judgment of the Administrator ... shall be qualified by experience in business, industry or commerce." A Labor Office and an Industry Council had been established in the agency prior to 1943. An Agricultural Relations Advisor was appointed during the year to promote better understanding between the OPA and the country's 12,000,000 farmers. A consumer Advisory Committee was also appointed to study the effects of OPA policies on the consumer and to advise with operating people on how policies and regulations might be made more effective.

By the end of 1943 nearly the whole price structure of the Nation had been brought under control through the General Maximum Price Regulation and over 500 individual maximum price regulations. Maximum prices, determined either by a "freeze date" or by calculations using formulas based on costs, had been established for most of the materials going into armament production as well as essential semi-fabricated and fabricated industrial products. Ceilings had been established on residential rents in defense rental areas in which 80,000,000 people lived. OPA estimated that price control from its inception through the end of 1943 had saved the Nation \$65 billion in the cost of war production and construction. Price control by the end of 1943 had saved consumers nearly \$22 billion on cost-of-living items. Americans would have had additional outlays of these dimensions if prices in World War II had been permitted to follow the upward spiral of World War I. OPA's rent control program during 1943 prevented increases in residential rents in critical areas estimated at a billion dollars.

Despite the general success of the program, some serious signs of inflation became apparent early in the year. Major threats were runaway prices in uncontrolled products, the difficulty of enforcing numerous individual ceilings, and a growing black market. These dangers were met and for the most part overcome. The President issued a "Hold-the-Line" order in April directing the Price Administrator to place ceilings on all cost-of-living commodities, to prevent any further increases so far as possible and to reduce excessively high prices.

Following this order a four-point program was entered upon by the OPA: (1) to extend price control across the board, to include a number of formerly exempt commodities such as fish and fresh fruits and vegetables; (2) to reduce prices which had got out of hand, including prices of meats, butter, and fresh fruits and vegetables; (3) to extend the use of specific dollars-and-cents ceilings to include retail foods; and (4) to provide more vigorous enforcement of the program.

Under the third of these points, the community price program was launched during the late spring and summer. This was designed to remedy a serious defect of the General Maximum Price Regulation and the "formula type" regulations under which many commodities had been taken out of the general regulation. This defect, which made compliance at retail very difficult, was the lack of a clear and stated price which seller and buyer alike could know to be the legal price. Under the GMPR, ceiling prices were those of a base date and varied from retailer to retailer. Under the formula type regulations, standard calculations were applied to individual cost data, and the resulting calculated price varied from one retailer to another. Under the community price program, the established formulas were applied to costs typical of each class of retail food outlet to arrive at specific prices. These prices, calculated separately for each community, were required to be posted in the retail stores where all parties could readily consult them. At the close of the year prices had been set under this program on between 300 and 700 food and grocery items in nearly 300 communities including about 100 million people.

Under the new program, ceiling prices for the most important items in the consumer food budget were set on a community basis. Specific dollars-and-cents prices were set for four classes of retail outlets, classified according to volume of business

and type of service.

The extension of the dollars-and-cents ceilings was paralleled during the first part of the year by the increasing use of quality standards in price regulations. The passage of the Taft amendment to the Commodity Credit Corporation Act on July 16, however, prohibited the OPA from requiring grade labeling in any case and from requiring standards except where "absolutely essential to an effective system of fixing prices." Grade labeling requirements were thereupon removed from 20 regulations, and other regulations were revised to assure complete conformity with the Congressional mandate. The Director of the Office of Economic Stabilization, however, ordered continued the Federal grading and marking of carcasses and wholesale cuts of beef, veal, lamb, and mutton, which had been recommended and approved by the meat industry.

By the time the "Hold-the-Line" program had been put into effect, prices on a number of commodities had risen so steeply that emergency measures had to be taken. Roll-backs of some prices were accomplished by reducing inflated margins of distributors and producers. In other cases, however, prices could not be reduced without also reducing margins or farm returns below reasonable levels. In such cases subsidies were authorized by the Director of the Office of Economic Stabilization in order that the reduction of retail prices would still permit a fair return to producers and distributors. The reductions were financed by the Commodity Credit Corporation and other agencies having funds available for the purpose. Subsidies intro-

duced during the year kept down the retail prices of a very significant group of cost-of-living staples, including meats, butter, cheese, and milk, apples, bread and flour, peanut butter, and certain canned vegetables. The net result of the program as a whole was apparent in the fact that, despite rising inflationary pressures, the cost of living, as reported by the Bureau of Labor Statistics, rose only 3½ per cent during 1943, as compared with 9 per cent in 1942 and 10 per cent in 1941. (See Living Costs.) Whether or not subsidies would be continued in the control of food prices was still to be decided by Congress at the end of the year.

Rationing was not only extended during 1943 but was also modified in a number of important respects. Early in 1943, the first "point rationing" coupon book, War Ration Book Two, was issued. Under the point system, coupons designated for certain foods are valid for a certain number of "points," and the amount of goods that can be purchased is determined by the point values as signed to each item. These point values are changed from time to time according to the supply situation. War Ration Book Three was distributed during the summer of 1943 and War Ration Book Four in October. A plan for supplementing ration stamps with plastic tokens was scheduled to go into effect early in 1944.

Food was, in general, rationed according to the principle of equal division of available supply among all consumers. Equal treatment was also accorded in the shoe program and the basic gasoline ration. Other things such as fuel oil, automobiles, extra gasoline, etc. were rationed differentially according to need. Moreover, the local boards were, during the summer of 1943, given authority to allot additional quantities of ration points for food to people living or working in isolated areas where they could not otherwise get a

nutritionally adequate diet.

An important development in the rationing program during 1943 was the growth of the ration banking plan worked out in cooperation with the American Bankers' Association. About 84 per cent of the nation's commercial banks participated in the program, under which retailers, wholesalers, primary suppliers, bulk consumers, and institutional and industrial users were enabled to deposit their ration currency in cooperating banks and to make and receive ration payments in the form of checks. It was estimated that approximately 50 million deposits would be made annually and about 637 million items would be handled by the banks each year of rationing. The ration banking program re-lieved local boards throughout the country of a tremendous burden of counting, auditing, and exchanging stamps and coupons for certificates of larger denomination. The producers and distributors of rationed goods likewise benefited from the time and cost-saving features instituted by ration banking.

History. The Office of Price Administration was created Apr. II, 1941, by executive order of the President, and was first known as the Office of Price Administration and Civilian Supply. It took over the price stabilization and consumer protection work started by the Advisory Commission to the Council of National Defense, the initial organization set up to direct the nation's armament program (see Year Books for 1941, 1942, and 1943). The executive order directed the price agency to take "all lawful steps necessary or appropriate in order to prevent price spiraling, rising costs of living, profiteering, and inflation resulting from market conditions caused by the diversion of

large segments of the nation's resources to the defense program, by interruption to normal sources of supply, or by other influences growing out of the emergency."

The Price Stabilization Division of the National Defense Advisory Commission issued the first maximum price schedule, Feb. 17, 1941, covering second-hand machine tools, prices of which were threatening to skyrocket under war demand. Price schedules for aluminum scrap and secondary aluminum ingot, zinc scrap and secondary zinc scrap, iron and steel scrap, and other important war materials followed. The creation of the Office of Price Administration and Civilian Supply (which became the Office of Price Administration in the Office for Emergency Management, August, 1941) greatly strengthened the authority to issue and enforce maximum price schedules. The Office, by delegation of executive authority, possessed all the powers that had been available to the Price Fixing Committee of the War Industries Board in 1917-18. There was, however, one defect in the Office's power—there were no direct penalties for violations of price schedules. This was corrected on Jan. 30, 1942, when the President signed the Emergency Price Control Act of 1942. The Act, for the first time, gave the Office of Price Administration undisputed statutory power, defining its duties to control prices and rents and providing it with specific means to punish violators. Leon Henderson, who had directed price control operations from the start became the first OPA Administrator. Provided with statutory power, and authority to enforce its orders, all existing "price schedules," of which there were close to 100, became "regulations" within the meaning of the Act.

On Apr. 28, OPA issued its General Maximum Price Regulation, which set the highest prices charged in the month of March, 1942, as the ceiling prices for virtually everything the American family wears or uses, and for around 60 per cent of all foods. On May 11, 1942, the new ceilings became effective at the manufacturers' and wholesalers' levels, and one week later, on May 18, 1942, at the retail level, carrying price control into every store and shop throughout the nation. Rent regulations established ceiling rentals in areas where inflationary rises were appearing. The general practice was to establish as a ceiling for an area the actual rent charged as of the date when the beginning of an inflationary advance was noted.

The basic weakness in price control after the General Maximum Price Regulation had gone into effect was that it provided ceilings for only 60 per cent of foods, due to limitations of the Emergency Price Control Act of 1942. As a result, the cost of living continued to advance, due to rises in the prices of uncontrolled foods. Between May and September, 1942, foods controlled by GMPR advanced only three-tenths of 1 per cent. In the same period uncontrolled foods advanced 10 per cent, and the increase was translated into a 1.6 per cent increase in the cost of living. To halt this uptrend, Congress amended the Emergency Price Control Act of 1942 to extend its coverage. The Stabilization Act, amending the earlier statute, was approved by the President Oct. 2, 1942, and with this new enabling legislation, price control was extended to provide retail ceilings for 90 per cent of all foods. Toward the end of 1942, OPA issued increasing number of dollars-and-cents maximum prices to replace the "freeze date" prices of the General Maximum Price Regulation or the "formula" maximums which had to be calculated by the seller on the basis of costs.

The trend toward dollars-and-cents ceiling prices was continued in 1943. Compliance with these ceilings was made more effective through the Community Price Program, under which uniform retail prices for most standard groceries are published at

regular intervals.

Leon Henderson, who had been OPA Administrator for nearly 2 years, resigned on Jan. 26, 1943 and was succeeded by Prentiss Brown. On April 8 the President issued the "Hold-the-Line" order under which the four-point program of the office was announced by the Administrator on April 30 and put into effect during the summer and fall of 1943. On November 8, Mr. Brown resigned and Chester Bowles, who had been General Manager since July, became the third OPA Administrator. The first few months of his administration were characterized by emphasis on cooperation with industry and consumer groups and by increasing decentralization of the program.

The delegation of authority to OPA to ration items made scarce by the war was first made experimentally on Dec. 27, 1941, when hostilities in the Pacific choked off rubber imports from the Far East, and it became clear that automobile tires would have to be equitably distributed to essential users. This rationing authority was generalized and made permanent by Directive No. 1 of the War Production Board, issued Jan. 27, 1942.

Under the general rationing arrangement, WPB determines the quantity of scarce commodities that are to be made available for civilian consumption except in the case of foods. Directives to ration foods are issued to OPA by the War Food Administration. If the supply of a commodity for civilian use is so limited that it cannot be fairly distributed through the usual trade channels, and if the item is considered essential to civilian welfare, OPA is directed by WPB or WFA to ration it.

Tires, automobiles, and typewriters were among the first commodities upon which the impact of war was felt. They were rationed by certificate, as were bicycles. But by the end of 1942, the use of coupon books in rationing was well established. War Ration Book One, put in use in May, 1942, first provided coupons for sugar, then also for coffee. A separate coupon book was issued for rationed gasoline and coupon sheets for rationed

fuel oil.

Point rationing was started early in 1943 with War Ration Book Two for meats and processed foods. War Ration Book Three and Four consisted of point coupons for meats and other commodities. Book Three was distributed by mail June 15-July 15 and Book Four through individual registration

in October.

By the end of 1943, plans had been completed for rationing coal, should it become necessary. Dates upon which rationing of various products began: 1942—new tires and tubes, January 5; recapped and recapping tires, February 19; new automobiles, March 2; typewriters, March 13; automobiles, March 2; typewriters, March 13; sugar, April 28; gasoline in 17 Eastern States, May 15; nation-wide mileage rationing, Dec. 1, 1942; bicycles, July 9; rubber footwear, September 29; fuel oil, October 1; coffee, November 29 (released July 1, 1943); coal and oil heating stoves for private dwellings in 30 states, December 18 (nation-wide Aug. 24, 1943). 1943—shoes, February 7; processed foods, March 1; meats, fish, fats, oils, cheese, March 29; canned milk and soft cheeses, June 30; solid fuels in Pacific Northwest, September 20: iellies and preserves. October 31 September 20; jellies and preserves, October 31.

Rationing programs are administered directly by approximately 5,500 local War Price and Ra-

tioning Boards which serve as ultimate contact points between the OPA and consumers on matters pertaining to rationing and between OPA and retailers on matters concerning price control.

In general the Boards operate through panels, each established to consider separate phases of the price and rationing programs. The boards, constituting "committees of neighbors," issue ration books directly to the public, determine what extra rations are needed for special cases, assign allotments of gasoline and fuel oil to users, issue purchase certificates for new automobiles, new and recapped or recapping tires and other certificaterationed items, and perform other rationing administrative functions. The Price Panels, which by the end of 1943 were functioning in most local boards, have the important job of securing maximum compliance with price regulations at the retail level. They help to distribute regulations and explanatory price control material to retailers. They collect price information and check retailers prices upon receipt of consumers' complaints of violation. Local Board members serve without pay. They are selected by State or Local Defense Councils, and their names recommended to OPA for approval.

Organization. The organizational set up of OPA at the beginning of 1944 was as follows: Administrator, appointed by the President; two chief aides, one for national office and one for field operations. Eight units, responsible to the Administrator, act in an advisory capacity: General Counsel, legal advisor, drafts opinions and represents the Agency before the Emergency Court of Appeals: Economic Advisor, chief general policy aide and director of research; Office of Accounting Services, supervises all accounting investigations; Labor Office, clearance point in the Agency for all issues of labor policy; Industry Council presents the industry point of view; Racial Relations Office deals with Negro participation in OPA program; and Credit Policy Office handles problems of consumer credit control. There are six Deputy Administrators distributions of the control of the con rectly responsible to the Administrator of OPA: Deputy Administrator in charge of Price; Deputy Administrator in charge of Rationing; Deputy Administrator in charge of Rationing; Deputy Administrator ministrator in charge of Rent; Deputy Administrator in charge of Information; Deputy Administrator in charge of Administrative Management, and Deputy Administrator in charge of Enforcement.

The Price Department is responsible for issuing maximum price regulations to control commodity and service prices throughout the country. It is made up of an Executive Office, an Export-Import Price Control Office, a Legal Division, a Standards Division and six Price Divisions. Each division in turn is made up of smaller units called branches, headed by a price executive or chief. The branches handle administration of pricing for specific groups of kindred items. The Price Divisions and branches are as follows: Food Price Division (Branches: cereals, feeds and agricultural, grocery products, meats, fats and oils, fruits and vegetables, poultry, eggs and dairy products, food distribution, and administrative services); Consumer Goods Price Division (Branches: Administrative, Economic Analysis, Consumer Durable Goods, Manufactured Articles, and Primary Products). Fuel Price Division (Branches: Petroleum, Solid Fuels); Industrial Materials Price Division (Branches: Iron and Steel, Nonferrous Metals, Building Materials and Lumber, Metal Mining Analysis); Industrial Manufacturing Price Division (Branches: Chemicals and Drugs, Consumers Durable Goods, Machinery, Paper and Paper Products, and Rubber). The branches in turn are subdivided into sections.

which handle homogeneous groups of items. Sometimes sections are still further subdivided into units.

The Rationing Department is made up of four Divisions: the Automotive Supply Rationing Division, the Food Rationing Division, the Fuel Ra-tioning Division, and the Miscellaneous Products Rationing Division. Each is headed by a Director. The organizational structure of the Rationing Department closely parallels that of the Price Department, with Divisions divided into Branches and Sections.

The Rent Department is organized into an Executive Office, a Program and Analysis Office, an Operations Division, and a Legal Division. Rent control is administered through offices in each of

the 370 defense rental areas.

The Enforcement Department was formerly a division of the legal department, which was disestablished during the summer of 1943. The Price, Rent, and Rationing Divisions of the former Legal Department were transferred to the Price, Rent and Rationing Departments. Legal functions were transferred to the office of the General Counsel. The Enforcement Department is organized primarily on a commodity basis. It consists of an Executive Office, Office of the Chief Investigator and five divisions: Litigation Division (Branches: Appellate, Briefing, and General Litigation): Food Enforcement Division (Branches: Meat and Dairy, Groceries, Agricultural Commodities); Apparel and Industrial Materials Enforcement Division (Branches: Apparel, Textiles and Materials, Industrial Materials, Industrial Manufacturing); Fuel and Consumer Enforcement Division (Branches: Automotive Supplies, Heating Fuel, Consumer Durable Goods); Rent and Services Enforcement Division (Branches: Rent and Service).

The Information and Administrative Management Departments perform operative functions

within OPA.

There are nine Regional Offices, as follows: Region No. 1, Boston, Mass.; Region No. 2, New York, N.Y.; Region No. 3, Cleveland, O.; Region No. 4, Atlanta, Ga.; Region No. 5, Dallas, Tex.; Region No. 6, Chicago, Ill.; Region No. 7, Denver, Colo.; Region No. 8, San Francisco, Cal.; Region No. 9, Washington, D.C. (for Territories and Possessions). In addition, OPA has 93 District Offices which serve as primary points of supervision over the Local War Price and Rationing Boards and the defense rental areas offices.

Administration of the Office of Price Administration in 1943 was characterized by a tendency toward decentralization and increasingly great local control. Headquarters of OPA are in Washington,

D.C.

PRINCE EDWARD ISLAND. An eastern maritime province of Canada. Area, 2,184 square miles. Population (1941 census), 95,047 (49,228 male; 45,819 female), comprising, by racial origin, British Isles races 78,714, French 14,799, etc. Religious membership (1941 census): Roman Catholic 42,743, United Church 24,005, Presbyterian 14,724, Anglican 5,739, Baptist 5,443, etc. In 1942 there were 2,135 living births, 959 deaths, and 778 marriages. Chief towns: Charlottetown (capital) 14,-821 inhabitants in 1941, Summerside 5,034. Education (1940-41): 19,689 students enrolled in schools and colleges.

schools and colleges.

Production. The gross value of agricultural output in 1942 was \$23,379,000 (field crops accounted for \$12,834,000, farm animals \$5,291,000, milk \$2,503,000, poultry and eggs \$2,014,000). Chief field crops (1942): oats 3,500,000 bu., mixed grains 1,440,000 bu., potatoes 244,200 tons, turnips, etc. 184,250 tons, hay and clover 345,000 tons. Livestock (June 1, 1943): 100,600 cattle (including 46,300 milk cows), 65,500 swine, 56,000 sheep, 27,340 horses, 1,063,300 hens and chickens. Fur output (1941–42): 32,427 pelts valued at \$735,189. Fisheries catch (1942): \$1,639, ued at \$735,189. Fisheries catch (1942): \$1,639,-539. Manufacturing (1941): 213 plants, 1,105 employees, \$680,883 for salaries and wages, \$3,229,433 for cost of materials, \$1,347,990 was

the net value of production.

Government. Finance (year ended Dec. 31, 1942): revenue \$2,338,462; expenditure \$2,335,915; total direct and indirect liabilities (less sinking funds) \$9,594,582. The executive authority is vested in a lieutenant governor who is advised by a ministry of the legislature. In the Legislative Assembly there are 30 members elected (15 by real property holders and 15 by universal male and fe-male suffrage) for a five-year term. Four mem-bers (appointed for life) in the Senate and four elected members in the House of Commons represent the province in the Dominion Parliament at Ottawa. Lieutenant Governor, Bradford W. LePage (app. Oct. 2, 1939); Premier, J. Walter Jones (Liberal). At the provincial general election of Sept. 15, 1943, there were elected 20 Liberals and 10 Progressive Conservatives. See Canada.

PRISONERS OF WAR. See the topics listed under WAR Prisoners.

PRISONS, PAROLE, AND CRIME CONTROL. The war dominates the administration of prisons just as it does every other phase of American life. In both State and Federal institutions, every effort is being made to gear the available manpower and the available equipment to the production of war materials; every fit and eligible prospect for the army is being examined and reexamined as a possible prospect for induction; every other prisoner is being urged to prepare against the day of release in order to take his place at the machine, on the assembly line, or in some position essential to the war effort. Prisoners are putting their wages into war bonds and stamps, or contributing their blood to swell the supply which will save the life of some wounded fighter. Others are submitting to various scientific tests to develop new ways of saving ship-wrecked sailors, of meeting extremes of heat and cold, of overcoming the scourge of all armies—the

dread venereal infection.

A report issued by the Prison Industries Branch of the War Production Board in November, 1943, estimated that State prisons were producing annually approximately \$10,000,000 in war materials including assault boats, shell cases, blankets, bomb crates, bomb noses, truck bodies, tent pins, submarine nets, cargo nets, shirts, boiler suits, rope, stretchers, flags, leather insignia, and salvage work. Federal prison industries reported an annual output of \$18,789,000 worth of products of which 98 per cent were war materials including mattresses, brooms and brushes, shoes, gloves, wooden boats, canvas water tanks, bomb fins and noses, metal beds and trays, and other items. Production of food in State and Federal prisons has also increased to meet war needs. It is estimated that 25,000 State prisoners were engaged in agricultural operations in 1943, with an increase of 10 per cent over last year's acreage, and that the volume of canning and dehydration of fruits and vegetables has nearly doubled in State prisons. Federal prisons harvested nearly a million dollars worth of farm produce in 1943, an increase of nearly 30 per cent over the past year.

The value of prison production for war needs, however, is not to be measured alone in dollars. One of the most potent results of making something directly related to the war has been the effect on inmate morale. Many prisoners have voluntarily accepted longer work hours and worked in shifts to increase production. The possibilities of getting into war plants on release have encouraged prisoners to undertake vocational training supplementing their shop practice. Prison mo-

rale was never better.

Literally thousands of prisoners have volunteered for induction into military service under the new program inaugurated by the War Department and the Selective Service System, and approximately 2,000 have already been paroled and inducted into the army. Since the new policy affects ex-prisoners also, it has been variously estimated that between 25,000 and 50,000 exprisoners have been inducted into military service. The result in many prisons has been to renew the hope in prisoners minds that they too may again share in the responsibilities and the privileges of citizenship.

Hundred of prisoners have become regular donors to the Red Cross blood bank. In a recent campaign in State prisons throughout the country, prisoners subscribed \$968,000 in War Bonds, or enough to buy three fortress bombers.

One of these bombers, the prisoners requested be named "The Spirit of St. Germain." Arthur St. Germain was one of 63 prisoners at the State Prison Colony, Norfolk, Mass., who took part in an experiment to test the use of beef blood plasma in the human blood stream. St. Germain lost his life in the process and was posthumously pardoned for his sacrifice. Other prisoners are cooperating in a variety of medical experiments as human guinea-pigs for the benefit of the men in war service everywhere. During the previous wars, little or no effort was made to enlist the interest or the efforts of prisoners except under compulsion. The

outstanding fact in the present contribution being made by State and Federal prisoners toward the war in 1943 was that such effort was voluntary. This too marks a new note in the attitude of both prisoners and officers toward their responsibilities.

"Work Leaves" for War Production. Some unusual and significant practices have been adopted in some State prisons, as a result of war demands. Arizona, for example, permitted prisoners to travel over the State, from farm to farm, picking cotton, the prisoners being paid the prevailing wage for their work with the prisoners paying their guards' expenses out of their own wages. Virginia and North Carolina allowed prisoners to assist farmers in gathering the potato crop. Montana has had some 200 inmates assisting in agricultural work during the entire year. Maryland has permitted prisoners to help farmers during the harvest season. Washington adopted programs of "work leaves" for prisoners, and California established "harvest camps" from which prisoners were assigned to help local farmers harvest crops. Considerable praise and some criticism of these practices were acted in the press. In with the press. tices were noted in the press. Inevitably some mistakes were made in the choice of prisoners for such assignments and there were some abuses of the privileges granted. California harvest camps came into disfavor because of the laxness with which they were administered and Governor Warren is presently reconsidering the entire program. Such practices, however, open up new possibilities in serving sentences under community supervision and deserve the careful study of those interested in a better correctional program.

Georgia Abolishes the Chain Gang. Ceorgia has abolished the chain gang. This time the State legislature, urged to action by Gov. Ellis Arnall, passed laws prohibiting the use of leg irons, chains, and similar devices on convicts in the State of Georgia. The legislature also established a new State Department of Correction under a director who proposes to clean up the disgraceful conditions which brought the relatively new Georgia penitentiary at Tattnall into disrepute and to abolish the present system of State and county road camps which are the real source of Georgia's unsavory reputation in prison administration. The new director, who took office only during the latter part of 1943, has obtained the help of the Federal authorities and is aggressively pressing the reformation of Georgia's malodorous prison

system.

Prison Populations. Prison populations, exclusive of wartime offenders who are confined chiefly in Federal institutions, continue to decline. It is estimated that the overall population of State and Federal prisons has declined since the war from about 175,000 to approximately 125,000. The Federal Prison System has shown a sharp decrease in commitments for offenses not connected with the war, from 21,223 in 1941 to 17,966 in 1942 and 11,853 in 1943—a decline of 44 per cent since Pearl Harbor. In both State and Federal prisons, it is evident that the decline in prison populations has also been accompanied by a change in the character of the population. As the reformable, short-term type of offender is released, the tendency is for the habitual, longer-term offender to dominate the prison since the former type of criminal has been absorbed in the war effort and is not getting into prison. In Federal prisons also there is a new type of offender—the saboteur, the traitor, the Selective Service violator, and the service man convicted under military court-martial. These conditions offer new problems to the

prison official which must be met with new methods.

Wartime Offenders. Nearly one-third of all Federal prisoners committed during 1943 were wartime offenders, totaling 4,777. Of these 3,145 were violators of the Selective Service Act, approximately half of whom claimed conscientious objections to war. There were also 1,121 commitments for violations of other national defense laws, including 399 commitments for violation of the May Act controlling vice conditions around military camps, 269 for wearing a military uniform illegally, 176 gasoline and other rationing cases, 15 sedition cases, and 2 cases of treason. In 1943, there were 511 military court-martial cases received including 152 for sodomy, 62 for assault, 49 for robbery, and 40 for homicide. Approximately two-thirds of these military cases received sentences of five years or more and nearly one-third were from ten years to life.

A small group of absolutists whose objection to war is only part of a program for changing the whole social, political, economic, and cultural order, has proved a problem to Federal prison officials. Of these, two conducted a hunger strike for 82 days in protest against conditions in civilian public service camps which are operated for conscientious objectors, with one or two exceptions, by religious organizations. Two other groups comprising a total of 25 or 30 prisoners went on work strike in two Federal prisons because the prison officials would not accede to their request that they be allowed to live and eat with Negro prisoners. Seven or eight of these also conducted a hunger strike for 63 days because they objected to the application of the mail inspection policies of the Bureau by institution officials. Altogether less than 50 out of the total commitment of approximately 2,500 such conscientious objectors who have been sent to prison since the passage of the Selective Training and Service Act of 1940 up to Jan. 1, 1944, have sought to use their imprisonment as a springboard for publicity, martyrdom, or other compensation for their lack of effective action in time of crisis.

In general, the policy of the Bureau is to treat all violators of Selective Service like other Federal prisoners with allowance for individual needs and differences in accord with the accepted policy of individualized treatment. The only exception to this rule is the policy not to assign sincere conscientious objectors to industries producing war products in violation of the inmate's convictions. Ninety-eight per cent of these violators cooperate in the institution program and frequently produce outstanding results on the farm

and on special assignments.

Prison Scandals. Of prison "scandals," Illinois, Oklahoma, South Carolina, and California made the headlines in 1943. Federal Judge John P. Barnes heard a volume of testimony on conditions in Illinois prisons which he described as a "disgrace to civilization" when conducting a hearing on a writ of habeas corpus in the case of a prisoner serving a sentence of 199 years for murder. It was evident from Judge Barnes' remarks in court in dismissing the writ that while he could legally do nothing on the plea of the prisoner involved, he was personally persuaded that the prisons of Illinois needed a housecleaning. The legislature in South Carolina refused to pass any of the three bills introduced to prevent recurrence of some of the evils exposed in the State penitentiary by a three-man committee of the house in a 976-page report, and ignored the recommendation of the committee that

five former penal officials be presented to a grand jury for indictment. In Oklahoma a former governor and his pardon and parole officer are under indictment charged with conspiracy and bribery in an \$8,000 parole pay-off for which a former State legislator is now serving a seven-year sentence in the Oklahoma penitentiary. In California, the warden of the State Prison at Folsom was forced to resign as a result of irregularities connected with the assignment of notorious prisoners to "harvest camps" who then took advantage of the situation to visit friends in nearby cities.

Parole. According to the American Parole Association, approximately 92 bills on parole and closely related subjects were introduced in 29 State legislatures and the Federal Congress. The majority of these proposals related directly to the release of prisoners for service in the army or in essential industry. Some aimed to reward parolees who earned a good service record by discharge from parole, by pardon, or by restoration of civil rights usually contingent on honorable discharge from the armed forces.

In Louisiana and Virginia, independent parole boards, in Mississippi a Board of Pardons, and in Kentucky a Division of Probation and Parole created in 1942, were put into operation. In 1943 Georgia and Oklahoma established independent boards and both States have pending constitutional amendments which will give more complete powers to these boards. Bills establishing new parole units failed of passage in Colorado, Texas, and Missouri. In Indiana, Pennsylvania, and West Virginia, bills which threatened the existence of parole units already functioning were introduced but failed to pass. In California power was granted to parole inebriates to medical authorities. Several bills were introduced emphasizing proper classification of inmates as a basis for parole selection. On the whole, considerable progress was recorded during the year in the field of parole. It is also apparent that a larger percentage of prisoners have been granted release on parole than is the case in peace times. The fact that these parolees have been able to find placement in well paying jobs probably accounts for the fact that a smaller proportion of them than

usual have violated their parole.

The plans of the Selective Service System to establish special draft boards for each State and Federal prison for the purpose of accelerating the release of those who were placed in 1-A have not worked as well as it was hoped. Army regulations were broadened to permit the direct induction of paroled prisoners when the consent of the Commanding Generals of the several service commands could be obtained. This has proved an unwieldy and complicated procedure resulting in the earlier release and induction of only a relatively few prisoners. As previously stated, probably not more than 2,000 of the 125,000 men in State and Federal prisons have been accepted into the army by this

Army and Navy Rehabilitation Centers. One of the outstanding developments of the year in the field of correction has been the establishment of rehabilitation centers for soldiers convicted of various crimes by military courts-martial. To these centers are being sent men who seem to have promise of readjustment and restoration to duty. It does not matter whether their sentences are for one, two, five, ten, or twenty years; if they are found to be hopeful material, they are sent to a rehabilitation center and if they readjust there, may be transferred at the end of six months or a year again to special army units. If their record is satisfactory, the

War Department agrees to wipe out their previous sentences and once more restore them to honorable service. Such use of imprisonment as a period of discipline, observation, diagnosis, and future planning, plus a period of adjustment in a normal environment, is in line with the most progressive penological thought. Such demonstrations in actual practice will have an important bearing on postwar plans for dealing with men convicted of crime in the civil courts.

Some difficulties during the past year have arisen because of the conflict between military and civil jurisdiction which occurs when a member of the armed forces commits an offense cognoscible concurrently both by military courts-martial and the civil courts. There seems to be no method or tribunal to determine definitely whether an offense committed by a soldier or sailor on a civilian while on leave or outside military reservations should be handled by the War and Navy Departments or the civil authorities. The result is that each seeks to maintain its own jurisdiction by retaining custody of the offender or through informal and ill-defined agreements which frequently result in disposition of the case harmful alike to the offender and lawenforcement. The problem is being studied by several groups including the American Bar Association which, it is hoped, will find an answer before the year is out.

Postwar Plans for Crime Control. Indications of what the postwar program may include are seen in hearings which were held in 1943 before the Judiciary Committees of the Congress on the proposed Federal Corrections Act. This proposal would supplement the sentencing power of Federal judges with the advice of a Board of Indeterminate Sentence and Parole which would examine and report on each person convicted in a Federal court before the length of sentence is finally set by the judge. Furthermore, the plan would empower the new Board of Corrections to release any prisoner under 24 years of age at any time on such conditions as it sees fit to impose, and to establish a special correctional system for treating these youthful offenders. The proposed program is based on several years' study of the whole Federal judicial and correctional program by a Committee of the Council of Senior Circuit Court Judges and the American Law Institute.

Plans for postwar crime control are being formulated by the American Law Institute, the Council of State Governments, and numerous State and Federal officials, Such plans contemplate provisions for retraining the ex-service man for civilian life and for adjusting that marginal group of citizens who will be dislocated when the armed forces are disbanded. While such a program will doubtless be most intensive during the five years immediately following the war, the program being planned must be broad enough in scope and vision to meet social needs for many years. Opportunities in prison work will be found for many men and women who have received much valuable training and experience in discipline, leadership, personnel classification, and details of organization life. To this end, in 1943 the U.S. Armed Forces Institute has prepared a course of study in "Prison Work as a Postwar Career" for men now in military service. Construction and reconstruction of correctional organization. plant and equipment to meet modern concepts and needs in the correctional field will be included in such a program and should provide work for many ex-service men not absorbed permanently into correctional work itself. Such long-range planning will need to be based on a review of penological concepts, some of which go back 150 years. Finally, provisions in organization, plant, equipment, and personnel must be made to absorb the increase in arrests, trials, and convictions which will inevitably follow the discharge of millions of men now in military service and the subsequent dislocation of social, economic, and everyday life.

Among the group which is causing unusual concern to all students of the problem at the present time are those juveniles who have been absorbed into industry due to the manpower shortage or who have lost some of their customary social moorings due to the war. This group, mostly youngsters from 14 to 18 years of age, will need special attention as regards vocational training and other educational opportunities to make up for present lacks. The general "hue and cry" that juvenile delinquency is on the increase should not be interpreted as an excuse either for turning on repressive measures or for over-emphasis on recreational outlets so often relied on to meet the problems of youth. Sturdy, realistic understanding of the emotional and educational needs of youth and practical ways of preparing them to meet present and future problems will furnish a sound approach to this postwar problem.

It is already evident that crime control in the postwar period will depend less on material restraints through institutionalization and more on positive and constructive adjustment in the community. It is being taken for granted that more and more persons convicted of crimes will be treated under supervision in the community either by means of probation or after a period of confinement for observation and diagnosis or under some form of conditional release such as has been suggested in the Federal Corrections Program. The reaction against the construction of great penal institutions costing many millions, characteristic of the punitive approach to crime control was evident at the Annual Congress of Correction held in New York in November, 1943. The development of classified systems of correctional institutions with emphasis on minimum and medium types was recommended. Moreover, the proposition that rehabilitation is not possible through institutionalization only and that the prison must become merely a link in the whole correctional chain was accepted as the challenge to the new program which will follow the war.

PROTESTANT EPISCOPAL CHURCH. The 54th General Convention of the Episcopal Church meeting in October in Cleveland, Ohio, amid wartime difficulties and restrictions made no records for adventurous daring but courageously faced the opportunities of the day and of the peace and the postwar world. The report of the Joint Commission on Social Reconstruction, as adopted by the Convention declared that the "coming Peace must provide an over-all arrangement for international collaboration in dealing with common world problems; with supervision and control of military establishments and the creation of an international police power, with collaboration in broad world problems of finance and economics, and a renunciation of any policy

of isolationism by the United States."
The Convention adopted a budget for 1944 in the amount of \$2,615,382, an increase of \$125,000 over that proposed by National Council. Provision was made for a Reconstruction Fund to rehabilitate the Church's work and property in the Philippine Islands, China, and elsewhere after the war.

The Church's ministry to the armed forces was carried on aggressively through the Army and Navy Commission under the leadership of the Bishop of Massachusetts, Henry Knox Sherrill. More than 500 Episcopal clergy serving as chaplains, and parishes near camps and training centers, were aided by the Commission. This work was financed with special funds raised annually.

The National Council through its special Committee on Work in Industrial Defense Areas aided dioceses and parishes in strategic war work areas where there was an influx of population. Everywhere the Church cooperated with other Christian bodies to avoid duplication and overlapping and to provide the most effective ministry. In a Maine shipyard, for example, Sunday services were inaugurated on a cooperative basis and the first service was conducted by the Maine diocesan chaplain for defense workers. This is believed to be the first service of its kind conducted on the eastern sea-

A special obligation during the war period was felt to be minority groups within the United States: Chinese, Japanese, Filipinos, Negroes, Indians, and Mexicans. The Church's ministry to Japanese-Americans was continued. Special attention was

given to resettling of Japanese released from the reception centers and to aiding promising students to continue their education under the direction of the Rt. Rev. Charles S. Reifsnider, formerly a Bishop in Japan. He also is chairman of the Protestant Church Commission for Japanese Service, an interdenominational group of authorized national representatives of the interested Christian bodies.

To deal more effectively with the Negro situation, the National Council named a Negro clergyman, the Rev. Bravid W. Harris as secretary for Negro work. Today there are 63,000 Negro communicants of our Church in the United States but by far the largest portion of these-59,000-are in cities whereas the bulk of the Negro population is in the rural sections. The next few years are strategic in relation to the whole future of the Negro race and the American scene. Race riots such as those which have occurred recently may well be avoided if the Church performs her task, a task which includes not alone evangelistic, educational, and social work with the Negro but an intensified work with our white population as well.

The General Convention took no final steps in approaches to unity with the Presbyterian Church, but urged continued study.

Under existing canons, it had been expected that the General Convention would elect a new Presiding Bishop. Instead, the canon specifying his retirement age was amended and the present Presiding Bishop, Henry St. George Tucker, was continued for another triennium. Other legislation affecting the episcopate adopted by the Convention included:

1. Within six months of election, a Presiding Bishop must resign his diocesan jurisdiction. This, Bishop Tucker did immediately and on Jan. 1, 1944, ceased to be Bishop of Virginia. He was succeeded by his coadjutor, Frederick W. Goodwin. No action was taken as to a see for the Presiding Bishop.

2. Bishops are required to resign at the age of seventy-two years.

3. Suffragan Bishops, heretofore with a seat but not vote in the House of Bishops were given a vote.

4. Missionary Districts formerly allowed Suffragan Bishops (assistants without right of succession) may now have Coadjutors (assistants with right of succession).

During 1943, the Presiding Bishop's ten-year plan, Forward in Service, placed special emphasis on Christian Community Service and stressed parish surveys of community resources and parish programs. Parish conferences on the Christian Vocation, the Christian Doctrine of Man, and other subjects vital to a Christian world order after the victory were also urged.

The Presiding Bishop organized a Committee on Laymen's Work under the chairmanship of Harvey S. Firestone, Jr. The purpose of the committee is to enlist the men of the Episcopal Church in the work and worship of the Church.

The Presiding Bishop's Fund for World Relief, in 1943, increasingly was the channel through which Episcopalians gave succor and support to the millions of starving, homeless, and afflicted peoples of the world—in China, Greece, Poland, Russia—wherever human beings suffered from the overwhelming catastrophe of total war. In 1943, the Fund received more than \$100,000 which it

distributed through accredited relief agencies.

Other events of 1943 included the publication of a new Hymnal, and the gift by the women of the Church of the largest United Thank Offering in the more than fifty years that this offering has been established. The gift of \$1,119,878 will be used during the next three years to train, support, and care for in retirement women workers of the Episcopal Church throughout the world, provide needed equipment and buildings in the mission field,

and aid urgent needs created by the war.

The Dioceses of Duluth and Minnesota were merged into one diocese. The Chinese Church was granted permission to elect and to consecrate its own bishops. Formerly approval by the mother Church in England or America was required. The Episcopal Church in Japan was received into the Church of Christ in Japan. A study of the training and employment of women for work in the Church

was inaugurated.

In 1943 the total number of communicants of the Episcopal Church in 7,716 parishes and missions was 1,520,394. The baptized persons numbered 2,188,573. The clergy numbered 6,344; 207 priests were ordained. In the 5,000 Church (Sunday) schools 409,087 pupils were enrolled. Baptisms during the year numbered 77,972, and confirmations 65,495. The ratio of communicants to population stood at 1 to 90 as compared with 1 to 97 a decade earlier. The government of the Church centers in a General Convention which meets triennially. The next session, the 55th, will be held in San Francisco, in October, 1946. Between sessions of the General Convention the affairs of the Church are conducted by the National Council.

The headquarters of the National Council which is the board of directors of the Domestic and Foreign Missionary Society, is in the Church Missions House, 281 Fourth Avenue, New York 10, N.Y. The official magazine is Forth, William E. Leidt, Editor. The president of the National Council is the Rt. Rev. Henry St. George Tucker, formerly Bishop of

Virginia.

PSYCHIATRY. The outstanding event of the year was the symposium on military psychiatry, sponsored by the Surgeon Generals of the U.S. Army, Navy, and Public Health Service, that formed a large part of the program at the 99th annual meeting of the American Psychiatric Association. One complete issue of The American Journal of Psychiatry (July, 1943) was given over to this symposium, some of the salient features of which may be cited.

In his presidential address, Ruggles pointed to the need for adequate screening of inductees to eliminate the mentally unfit ("consumers of manpower rather than a strength to the army, " in the words of Brigadier Rees of the British Army), and observed that hitherto relatively little had been done to promote this important measure. He esti-mated "that under the present procedure of induction at least 200,000 young men will be discharged from the army and navy with neuropsychiatric disabilities within the next two years." He expressed the opinion that with suitable screening at least half this number could have been eliminated in advance.

To remedy this situation, Selective Service took a decisive step: Dr. Raymond W. Waggoner was appointed psychiatric consultant and with the sup port of Col. Leonard Rowntree, chief of the medical division, devised a method for securing the social history (school record, occupational achievement, previous health status, personality handicaps, family health record) of registrants prior to their appearance at induction centers. This plan was put into effect in October (Selective Service System Medical Circular No. 4, Oct. 18, 1948) and will aid tremendously in keeping out of the armed services men "whose condition is such as positively indicates physical or mental breakdown, or failure to

adjust themselves to the responsibilities of military service after being inducted." The imperative need of such a procedure was shown in a study of 2,500 veterans of World War II returned to one State before Aug. 1, 1942. Approximately 40 per cent of these men were discharged because of mental conditions that incapacitated them for military duty. The pity is that a proper screening program was not earlier instituted.

Considerable outcry was raised against the induction of the 18 to 20 year old groups. It has been shown however that chronological age at this level is not a determining factor for either acceptance or rejection; and care has been exercised to exclude or defer for recheck youths apparently immature or

It was obvious that however good the screening at induction, not all potential psychiatric casualties could be recognized. More would become evident during early training. Under the guidance of Col. Roy D. Halloran (see this section in the 1942 YEAR BOOK), chief of the psychiatric division in the Office of the Surgeon General, mental hygiene units, each consisting of a psychiatrist, a psychologist, and a psychiatric social worker supplied by the Red Cross, were established at replacement training centers throughout the country. The function of these units is twofold—to promote mental health among recruits suitable for training and to elimi-

nate as early as possible the mentally unfit.

The lessons of World War I had not been lost entirely; even before the new screening plan became effective, the percentage of rejections of po-tential misfits was considerably higher in the present war than in the former-about 7 per cent and

2 per cent respectively.

Owing to the greatly changed conditions of warfare, the ratio of neuropsychiatric casualties returning from overseas is substantially above that of the

war of 1914-18.

The most critical station through which the trainee must pass on his way to a war theater is the "staging area" where troops are assembled for em-barcation. In the symposium above referred to Lipschutz describes such a station with great realism. It represents a final pre-combat test of the stamina of the soldier; the psychiatric casualties seen here constitute an index of the effectiveness of the earlier weeding out process. As might be expected, services in which men must be more rigidly selected for their superior personal qualities—air force, paratroops-present much fewer neurotic

reactions than the army in the staging area.

The exceptional stresses to which airmen are subjected and the consequent psychiatric reactions are discussed by Kellum. Such casualties may be due mainly to predisposition (just as there are accident prone machine operators and motor car drivers in civil life), or to the effects of excessive stress and fatigue on normal personalities. Predisposed men are likely to be eliminated early in com-bat operations "either by enemy action or admis-

sion to the sick list.

The desirability of avoiding diagnostic clichés, especially for cases of temporary disability under extraordinary stress, is particularly emphasized (cf. the misnomer "shell shock" in the last war).

The extreme psychiatric consequence of war reported to date was observed in the U.S. Marine Corps during the terrible days and nights of August, 1942, at Guadalcanal. Rogers Smith reporting a study of casualties from this area admitted to the U.S. Naval Hospital at Mare Island, Cali-fornia, expresses the belief "that never before in history has such a group of healthy, toughened,

well-trained men been subjected to such conditions. . . . The strain and stress experienced by these men produced a group neurosis that has not been seen before and may never be seen again." The "neurosis" in these cases gave evidence, if such were needed, that the strongest man has his breaking-point. The nervous manifestations were simply part of "a disturbance of the whole organism—a disorder of thinking and living—or even wanting to live," brought on by the sheer weight of the ordeal of enduring without sleep and fighting against what seemed for weeks like insurmountable odds, despairing of relief or of leaving the island alive. Fear born of hopelessness, aching fatigue, downright physical exhaustion with loss of weight up to 45 pounds, tropical infections, all took their toll. The clinical picture was strikingly similar in men of all types of constitution, physical and men-tal, thus discounting any significant endogenic factor. Headache, sensory irritability, amnesias, sensori-somatic complaints, muscular hypertension, tremors, functional palsies, explosive emotionalism, panic states, fears of being regarded as cowards—such were the regularly observed symptoms in hardened warriors who had been subjected to intense, unremitting, and prolonged stress of combat under conditions as unfavorable, physiologically and psychologically, as could well be imagined.

In contrast to this picture in which the wearingdown effect of time is so important, consider the reactions of men to great stress in sudden, brief crisis. Commander Hogan of the aircraft carrier Wasp, torpedoed as she was escorting the first reinforcements to the marines in that memorable first offensive in the Pacific war at Guadalcanal, deoffensive in the racine war at Guadaleanal, describes these reactions. Following two terrific blasts as the torpedoes struck, a sheet of flame shot up the side of the ship and, augmented by ignited gasoline, enveloped men and guns. The sweep of fire and exploding ammunition spread death and destruction. "Each blast would send men, missiles and planks hurtling through the air. An ensign standing on the flight deck was sent blasted through the air landing 60 feet away and 30 feet up and the air, landing 60 feet away and 30 feet up and on the bridge structure. He suffered a fractured leg, severe intracranial injury and was unconscious for 10 days. He is now back on duty.... In a V-shaped area from the site of the torpedo hits to the hangar deck, covering four decks, every one was killed. Men on the edge of the arms of the V were seriously injured. I saw no panic and there were no reports of any. During the first few moments there was some confusion. The communication and water systems had been destroyed; men isolated were at first perplexed as to what they should do. The saving of the ship was uppermost in every one's thoughts. . . . The officers and men who were not injured worked with no evidence of unusual excitement. . . . Those who could not be of service herded together reclining on the stern of the flight deck, quiet and watching silently the spread of the fire and the destruction of the ship. Although they realized that they were directly over the fully loaded torpedo planes which might explode at any time, there was no panic or hysterical behavior. When the word all hands abandon ship' was passed, they went over the side in an orderly fashion. . . And in all this only two minor neuropsychiatric cases developed. . . . We should pay tribute to those 18-19-20 year old men who are winning the war and remaining stable."

We have thus two contrasting situations of great stress to which men of like fiber, training, and staunchness were exposed, with correspondingly

contrasting results. In the first, the cumulative effects of continuing, overwhelming adverse conditions which must be borne night and day, like dragging a lengthening chain, became evident in holistic reactions that included symptoms akin to those of extremely severe fear- or anxiety-neurosis. In the second, stress certainly no less in-tense and terrifying, but sudden and of brief duration, produced practically no psychiatric casualties.

On the basis of three years' experience as consultant in psychiatry to the British Army, Brig. J. R. Rees (Brit. Med. J., Jan. 2, 1943) describes procedures which can be carried over into peace time with no less valuable results than in war time.

Especially important were the measures adopted for handling certain of the higher grades of men-tal deficiency, the "one-job" men of low learning capacity but emotionally stable. These men have given splendid service in various occupations in the unarmed labor sections, relieving men of su-perior mentality for other work, "and in many cases doing the jobs very much better than they are naturally done by the more intelligent type of individual. . . Disciplinary troubles are almost entirely absent, and these units provide a striking indication of what can be done in the way of employment of a group in society which in prewar years had certainly been a problem from many angles.'

Another noteworthy procedure adopted by the British Army in July, 1942, after considerable preliminary experimentation, was that of general personnel selection involving all ranks. This was nothing less than a complete job-analysis of the multitudinous army activities, establishing intelligence and aptitude standards necessary for each job and thus making possible the correct post-ing of men to the several types of unit. The consequent vastly improved utilization of manpower "has set a standard which will certainly be applied in industry and in social life in the postwar world. The matching of men to suitable work is as valuable a means of psychiatric prophylaxis as anything that could well be devised." In this mass selection of men psychiatry and industrial psychology collaborate in interdependent teamwork; as they also do in the personality and character studies for officer selection-a procedure requiring two days of observation and study of candidates to determine the branch of the service for which each officer is best fitted.

In citing these measures adopted by the British Army, it should be added that procedures having the same objects in view have also been worked out in both the American and Canadian Armies; and the same is true of the German Army. Indeed the combined services of psychiatrists and psychologists in a program of personnel selection have come to play an indispensable part in the build-ing up and morale maintenance of a modern

A memorable event was the visit in November to the United States and Canada of the two British psychiatrists mainly responsible for organizing in the United Kingdom the procedures mentioned above—Brig. J. R. Rees and Lt. Col. G. R. Hargreaves. These officers conferred with the ranking army psychiatrists in Washington and Ottawa and, accompanied by representatives from both headquarters, visited training centers in the two countries. These conferences, bringing together the military authorities in the three English-speak--ing nations in this branch of war medicine, were significant not alone for the value of informa-tion exchanged, but no less from the very fact that they took place.

The literature of war psychiatry is enormous. Many of the more important articles and books will be found reviewed in the Hartford Abstracts issued from the science library of the Institute of

Living at Hartford, Conn.

In the editorial opinion of the Journal of the American Medical Association (Apr. 3, 1943), "the development of the neuropsychiatric branch of the U.S. Army Medical Department represents one of the most important achievements in the advancement of military medical science." Comadvancement of military medical science." Comparing the two World Wars the Journal A.M.A. notes that the number of neuropsychiatric rejectees at induction in 1918 was 20 per 1,000 registrants, whereas in 1942 the ratio was 75 per 1,000. The difference may be explained partly by the "increase" in mental disability in the community as shown by hospital admissions over long periods.

Prevalence of Mental Illness. A statistical estimate of this increase, based on first admissions to hospitals in New York State was undertaken by Malzberg (Psychiat. Quart. July, 1943). He found that in 20 years, 1920-40, the average number of annual first admissions increased by 89.4 per cent, while the population of the state during the same period increased by 29.6 per cent. The greater average longevity of the general population accounts for some of the increase. Thus there is a greater amount of mental illness associated with later life, notably that due to arteriosclerosis (21:100000 general population in 1920; 66:100-000 in 1940). Making allowance for all the factors that tend to confuse statistics, such as longevity, population increase, improved diagnostic and hospital facilities, and better popular attitude toward psychiatric disabilities, there still seems to be a slow increase in mental illness associated with the mounting stresses and complexities of our mechanized society.

A view at least temporarily somewhat more favorable is expressed by Hopkins (Brit. Med. Jour. Mar. 20, 1943) who reports a decrease in admission rates of mental cases during wartime. In the psychiatric observation wards of the Liverpool Municipal Hospital, serving a population above a million, he finds that during the five-year period from 1937 to 1942 the number of patients admitted dropped from 1,133 to 695; the number of cases of attempted suicide fell from 129 to 65. The milder and transient cases which formerly had received hospital care were year by year less in evidence after the outbreak of war. Hopkins suggests that the apparently reduced incidence of mental disorder may be actually a result of wartime conditions, such as increased opportunity for employment, lessened consciousness of individual isolation and strengthening of the community spirit.

Research. An encouraging sign is the vigorous research activity, continuing in many centers, dealing with the nature, causes, and treatment of mental diseases. A review of these activities will be found in "Research in Mental Hospitals—Study No. 2," issued by the National Committee for

Mental Hygiene (1942).

Psychosomatic. There is increasing attention on the part of the medical profession generally to psychosomatic problems and relationships (see 1943 YEAR BOOK). Bauer (v. Brit. Med. Jour. ed. Apr. 24, 1943) pointing out that all medicine is psychosomatic and that psychotherapy is a necessary element in all treatment, calls for utmost care in

distinguishing between psychological and physical factors in causing illness. Assigning undue importance to somatic findings in an illness that is mainly psychogenic is likely to aggravate the condition. "Watch your word" is a maxim no physician can safely disregard. The "word" may be either a therapeutic or pathogenic agent.

Sands (B.M.J. May 22, 1943) discusses the treatment of psychiatric cases in the wards of the general hospital. He found that 20 per cent of the cases on the medical wards were primarily neuropsychiatric, regardless of the initial com-

plaint for which they were admitted.

In a study of cases in army hospitals diagnosed as arthritis or allied organic conditions, Boland and Corr (Jour. A.M.A., Nov. 27, 1943) considered that approximately one-third were "incapacitated because of psychic difficulties." Detailed investigation of 50 such cases of "psychogenic rheumatism" showed no present evidence of muscle or joint disease in 32 and minor nondisabling changes in the remainder. Forty-six of the 50 had definite psychoneurotic symptoms associated with the rheumatism. Mainly because of the neurotic component the majority of these men were unsuited to military service.

Obermayer (Jour. A.M.A. July 24, 1943) calls attention to the functional or psychological factors in some of the common dermatoses, often referred to as allergic conditions. For example, a food, the ingestion of which is regularly followed by urticaria whilst the patient is at home, may have no such consequence when he is enjoying himself on a vacation. Allergy is a link between the "organic" and "functional," or presents a syn-

thesis of the two.

Asthma offers strikingly the picture of a psychosomatic disorder. Sir Arthur Hurst, who did such splendid work with the war neuroses of 1914-18 Seale Hayne Studies) describes (B.M.J. Apr. 3, 1943) the combined physical and psychological aspects of the asthma diathesis, "a congenital and often inherited constitutional abnormality... which manifests itself in a special type of personality." The "diathesis" is the conditio sine qua non. The asthmatic attack may be in one case an allergic response, in another due entirely to reflex or psychical stimuli. In the latter case the attack may assume the character of a conditioned reflex. Certain uncomfortable emotional states may bring on the asthmatic spasm. Hurst, with 48 years experience of asthma, regards the "asthma cures" of to-day and of many a yesterday as "nothing more than gross suggestion." He stresses the mental hygiene element in treatment.

The association of peptic ulcer with anxiety states has long been recognized. Thomas (Southern Med. Jour. April, 1943) found that 25 of 47 soldiers with peptic ulcer were also suffering from anxiety neurosis and responded poorly to treat-ment. In his opinion an "anxiety state incident to induction into the army appeared to be a rul-

ing factor.

The psychological-physiological relationships in these cases have been the subject of illuminating experimental work by Wolff (Science, Dec. 3, 1943) upon a patient with a gastric fistula through which, because of a scar-occluded esophagus, he had fed himself since childhood. It was possible to observe changes in gastric function associated with painful emotional states: with fear or sadness there was pallor of the mucosa, decreased acid production and decreased motility; with feelings of hostility, resentment, or anxiety occurred hyperemia of the gastric mucosa, marked increase

in acidity and muscular contractions. Moreover in the latter condition, vigorous contractions of the stomach walls were often sufficient to cause pain and also minute hemorrhages in the mucosa. It was further found that if a small erosion experimentally produced was kept bathed in gastric juice, further acceleration in acid production took place, and this in turn increased the tissue damage. Thus a vicious circle is established and peptic ulcer may result. The difference between hyperacidity and actual gastritis is therefore one of degree; and consequent upon continued or recurring emotional states of the types mentioned structural changes may occur which lead to chronic ulceration.

Among the new books presenting the psychosomatic viewpoint may be mentioned Alvarez, Nervousness, Indigestion and Pain, and Dunbar, Psychosomotic Diagnosis.

Shock Therapy. The shock therapies continue to find favor. One of the unfortunate features, so common with any new treatment that has achieved a certain vogue, is the popular demand. Pressure is brought to bear upon psychiatrists to use these methods in all sorts of conditions for which they may be entirely unsuited. Insulin remains the preferred method in cases diagnosed "schizophrenia"; electroshock in the so-called affective disorders, including "involutional melancholia." Malzberg (Psychiat. Quart. January, 1943) reviews 491 electroshock-treated cases of demential processor (a transfer used interphenesely). praecox (a term often used interchangeably with schizophrenia) in New York state hospitals and finds the results better than in cases treated with metrazol but inferior to those following insulin therapy. He confirms the efficacy of electroshock in manic-depressive cases and involutional depressions. The present status of the shock therapies is well summed up by Lewis (Bull. N.Y. Acad. Med. April, 1943) who sounds a timely note of caution in evaluating results. He points to the uncertainties both in the diagnosis of schizophrenia and in the criteria of recovery. He conservatively states: "Possibly the shock methods should be used only as adjuncts in a total therapeutic approach, including psychotherapeutic interviews with the physician, physiotherapy, occupational therapy, physical education, and a program to promote socialization.

In view of the present prominence of the electroshock method it should be mentioned that the types of apparatus most commonly in use frequently produce changes in the electroencephalogram (delta waves) such as are met with in organic pathology, and therefore may not be wholly innocuous. With a modified apparatus described by Friedman and Wilcox (Jour. Nerv. and Ment. Disease 96:56:1942), which gives compatable clinical results with much weeker correct rable clinical results with much weaker current, Proctor (Amer. J. Psychiat. January, 1943) reports greatly decreased cerebral dysrhythmia as indicated by markedly less delta wave formation. The advantages of the modified apparatus seem to be established.

Prefrontal Leucotomy. The brain operation, bilateral prefrontal leucotomy, for certain severe, longcontinuing, and intractable mental disorders is coming into quite general use. It was first introduced in 1936. Ziegler (Amer. J. Psychiat. September, 1943) surveys 19 clinics in the United States and Canada in which this operation is being done and has collected 618 cases to July, 1943. According to his report 518, or 83 per cent of the number of cases observed, showed either full recovery or definite improvement, as follows:

| Recovered (psychotic or neurotic symp-    |     |
|---|-----|
| toms disappeared)                         | 215 |
| Improved in varying degrees               | 303 |
| Unimproved                                | 62  |
| Worse after operation                     | 8   |
| Died as result of or subsequent to opera- |     |
| tion                                      | 30  |
|   | 618 |

Frontal leucotomy is a drastic treatment for desperate cases which, as the Journal of the American Medical Association (Oct. 16, 1943) remarks editorially "would appear to be beneficial in some types of psychotic patients in whom all other methods of treatment have failed and where chances of remission or recovery are remote."

In a symposium of the Royal Medico-Psychological Association on this form of surgical treatment, reported in the *Journal of Mental Science* (April, 1943) the same general conclusion was reached.

Alcohol. In connection with studies on alcohol and alcoholism it is worthy of note that Dewan (Am. J. Psychiat. January, 1943) has demonstrated the presence of an alcohol oxidation mechanism in the brain of several animal species, and it may be assumed that a similar mechanism exists in man. The ability of the brain to oxidize alcohol had not previously been established. This finding is therefore of considerable moment and Dewan suggests that the oxidizing enzyme system demonstrated "may function as a detoxicating or protective device when alcohol is used in nar-cotic concentrations"; and further "that the central nervous system is more versatile chemically than has hitherto been thought."

PSYCHOLOGICAL WARFARE. See STATE, U.S. DEPART-MENT OF. Compare Propaganda.

PSYCHOLOGY. Tests. To conserve manpower and expedite training, the Armed Forces give psychological tests at every stage of the classification process, which continues throughout each man's military career. New psychometric tests of all kinds have been devised to meet emergency needs, and psychologists have collected psychometric data on an unprecedented scale and evaluated them in

the light of subsequent performance.

Sensation. There is growing recognition of the military importance of the special senses. W. R. Miles finds that red goggles produce dark adapta-tion in a lighted room. Soviet physiologists have developed methods for expediting dark adaptation so as to secure maximum sensitivity in five to six minutes. K. Kekcheyev, N. Derzhavin, and S. Pilipchuk find that the sensitivity of an eye already maximally dark-adapted can be increased by suitable stimulation of other sense organs. H. Cadan has successfully treated color blindness with vitamins, tincture of iodine, and electrical stimulation. M. L. Johnson's histological studies of the retinas of rats suffering from severe Vitamin A deficiency show that degeneration begins in the visual cells. A remarkable degree of repair is observable after 24 hours of Vitamin A therapy, and practically complete recovery after three to four weeks of therapy. According to E. Gellhorn and H. Hailman, lowering of the oxygen tension impairs the function of the sense organs, largely through its effect on the synaptic nervous system of retina and brain. From experiments with oxygen deprivation on psychotic subjects, however, S. M. Horvath, D. B. Dill, and W. Corwin conclude that no permanent ill-effects from anoxia would be caused even by a parachute descent from 31,000 feet altitude. D. H. Russell finds evidence that poor reading habits may cause certain visual defects.

Psychology and Aviation. Rapid expansion of the air force has necessitated reduction of the formal educational requirement. In its place, screening tests are used, at least six of which are psychomotor. A group of aviation physiologists (Ph.D.'s) has been developed. Many of their investigations are in part psychological. J. E. Dougherty has discovered that excessive increases in the flying time of aviation instructors results in diminution of alertness, increased irritability toward everyone, and loss of interest in the students' progress. H. J. Rubin finds the most important causes of air sickness psychological. L. D. Carson, W. R. Miles, and S. S. Stevens have proposed changes in aeronautical design to decrease hindrances to the visual and auditory functioning of flight personnel. Among new books are Flying Men and Medicine: The Effects of Flying Upon the Human Body by E. O. Barr (Funk & Wagnalls) and Effects of Flight: Mental and Physical (McGraw-Hill).

Psychology of Military Leadership. P. S. Madigan and M. J. Farrell point out that military discipline

Psychology of Military Leadership. P. S. Madigan and M. J. Farrell point out that military discipline is a problem in readjustments. Genuine discipline, military or other, is based not on imposition of authority but on teamwork. Americans quickly adapt to military discipline thus interpreted. Psychologists have found that enlisted men associate with good leadership the following characteristics: (1) competence, (2) interest in the soldiers' welfare, (3) promptness in making decisions, (4) ability to instruct, (5) good judgment, (6) absence of undue display of authority, (7) tendency to commend good work, (8) physical strength and build, (9) "good education," "sense of humor," and "guts," (10) impartiality, (11) industry, (12) ability to give clear-cut, understandable orders. Selection of leaders depends in part upon giving leadership a chance to emerge and then having competent men judge whether it has appeared. Among new books are Personal Leadership for Combat Officers: Objectives and Methods for Leaders of Tactical Elements, Combat Teams and Fire Units by P. B. Reed (Whittlesey, McCraw-Hill); The Psychology of Military Leadership by L. A. Pennington, R. B. Hough, Jr., and H. W. Case (Prentice-Hall); and Selection of Officer Candidates by W. L. Woods, L. Brouha, and C. C. Selzer (Harvard). The Subcommittee on a Textbook of Military Psychology has been popularizing relevant psychological knowledge in a vigorous, practical style, free from the obvious parade of academic learning.

Industrial Psychology. Wartime Supervision of

Industrial Psychology. Wartime Supervision of Workers by R. S. Schultz (Harpers) reports results of a nationwide survey on human factors in production. As C. F. McPeak points out, it is to the advantage of both employees and management to see that the worker has his needs for affection, independence, security, social approval, and self-esteem satisfied in order to avoid tensions which will interfere with his working efficiency. At the inaugural meeting of the American Society for Research in Psychosomatic Problems, there was a symposium on fatigue by H. Davis, W. H. Forbes, S. A. Portis, S. H. Bartley, and W. R. Miles. Bartley emphasized conflict and frustration as basic to the fatigue condition. C. Babbitts points out certain paradoxes in time and motion studies, and recommends that workers in this field take more account of rhythm, ballistics, and momentum of

the whole body. In treating fatigue, M. B. Gerson recommends prompt and unimpeded excretory activity and a diet high in potassium salts and low in fat and protein. Among new books is An Introduction to Industrial Psychology by M. Smith (London: Cassell).

Psychodietetics. This is the psychological study of food in relationship to mental processes. Among its many aspects are the causation of mental disorders by improper feeding, inadequate nutrition due to food fads, abnormal attitudes and bad eating habits, and the application of educational psychology to nutritional problems. M. Mead is Chairman of the Committee on Food Habits of the National Research Council, which has been applying comparative anthropology and experimental psychology to the problem of changing food habits, to preserve nutritional standards in spite of wartime shortages. This committee has developed tests to be used with school children in different parts of the country to reveal food ideologies of different age levels and different economic, occupational, religious, and national groups. Among longtime researches now in progress are H. Bruch's study of psychosomatic mechanisms in obesity and allergy in childhood, and K. Lewin's study of the influence of different containers on food habits.

Rehabilitation of the War Injured. In the Medical Corps, the psychologists' duties often include the securing of case histories, assisting with EEG studies, classification, examination of mental status, supervision of occupational and recreational therapy, and preparation of case summaries for staff diagnosis. Acute emotional disturbances in torpedoed seamen of the Merchant Marine have been studied by S. Margolin, L. S. Kubie, M. Kanzer, and L. Stone. Almost every tropical disease has neuropsychiatric sequelae, according to J. L. McCartney. D. Denny-Brown states that all war head injuries show a peculiar mixture of trauma and emotional shock, and both must be considered in treatment. F. Fromm-Reichmann reports that a surprising observation during air raids in England was the immediate cure of acute emotional disturbances, partly because the victims' rage was an overt shared reaction and partly because of a changed cultural attitude toward the frank expression of anxiety, rage, and fear. Results of civilian emergency psychotherapy have been better than those of military psychiatry because the authoritarian military situation tends to prevent a spontaneous interrelationship and frank expres-sion. D. Denny-Brown reports that shell shock is as frequent in this war as in the last, although the avoidance of the term and treatment as a neurosis have greatly reduced persistent disability. Some chronic neurotics are rejuvenated by disturbances of routine and the development of the herd instinct. According to C. A. Flood, peptic ulcer in soldiers constitutes an unplanned experiment which indicates that anxiety is the basic cause of chronic peptic ulcer. C. S. Sommer and J. Weinberg point out the harm that may be done by stigmatizing language used in military discharge certificates. D. A. Thom points out that many men who went through the active phases of the previous world war successfully developed neuroses during demobilization and the economic depression following it. He contends that many neuroses were created by pushing veterans into occupational training courses beyond their abilities. D. Ross stresses the desirability of continuing the patient in work similar to his previous occupation. Rehabilitation of the War Injured edited

by W. B. Doherty and D. D. Runes (New York: Philosophical Library) is largely a symposium of

republished articles.

Mental Hygiene. According to E. Lerner, we must develop preventive mental hygiene on a worldwide scale. To this end he believes autocratic power relationships should be curbed throughout the life span and every individual given more sesure freedom, privacy, self-reliance, status, self-respect, and opportunity for team spirit. R. L. Jenkins contends that real mental hygiene will be impossible as long as psychiatrists cling rigidly to a craft-union philosophy. B. Malzberg contends that the problem of mental disease must be met by social rather than medical means. "The mental reactions which make an individual atypical in one culture may fit him perfectly for another, H. G. Canady points out. G. L. Mosby stresses the importance of viewing all therapy for psychotic patients as directed toward resocialization. A. Gralnick finds evidence that "mental illness is man's active response to markedly disturbed human relationships, and that in psychosis, sociogenesis rather than biogenesis is primary. R. deM. Kepner presents evidence of direct contagion of manic-depressive psychosis in three cases. In Release from Nervous Tension (Simon & Schuster), D. H. Fink contends that neurotic behavior is the result of conditioning. J. L. Halliday points out the high prevalence of neuroticism among British miners just prior to the war, because of chronic emotional tension. Now the growth of employ-ment and wage stabilization have alleviated frustrating socio-economic factors, rationing has created a new sense of equality, and the struggle to win the war has made life meaningful again. According to E. F. Skinner, fear is the basic emotion in every psychoneurosis.

In Behavior and Neurosis: An Eperimental Psychoanalytic Approach to Psychobiological Principles (Chicago U.), J. J. Masserman reports that interposing a barrier between an animal (cat or dog) and food results in crimeira. or dog) and food results in extinction of striving but not in experimental neurosis, but that the latter appears when the animal is subjected to conflict between hunger and fear. S. Cobb criticizes the term psychoneurosis on the ground that it confuses two very different large groups, the underreactors and the overreactors, each of which includes several clinically significant subdivisions. Persons in some of these groups are almost always useless for military purposes; those in others make

good officers and soldiers.

S. H. Kraines points out that therapy for stress may be accomplished simply by changing the situation, and therapy of attitudes by relieving the original cause of the attitude. He suggests that the most effective social therapy is satisfying work. N. Cameron believes that paranoic thinking is due to defective socialization, the paranoiac interpreting the behavior of others largely in terms of his own preoccupations. E. Weiss points out that anxiety is diminished and blood pressure lowered when inhibited aggression (chronic rage) can be turned outward. According to C. R. Rogers, the skilled therapist no longer tries to reform his client but merely to reveal the client to himself, thus facilitating the choice of more appropriate goals. The therapist should not suggest goals or actions. In An Introduction to Group Therapy (Commonwealth Fund), S. R. Slavon views the main task of therapy as removal of the patient's resistance to people who may influence him in a socially desirable direction, and to this end he recommends a permissive environment and activ-

ity catharsis. Among other enthusiastic advocates of group psychotherapy are D. Blair, A. Hauptman, and G. W. Thomas.

Contemporary Psychopathology edited by S. S. Tomkins (Harvard) is designed primarily as a source book. Introduction to Psychiatry by W. E. Biddle and M. Van Sickel (Philadelphia: Saunders) is a comprehensive guide for the nurse. Mind, Medicine, and Man by G. Zilboorg (Harcourt, Brace) is written for the layman. Among other new books are Managing Your Mind: You Can Change Human Nature by S. H. Kraines and E. S. Thetford (Macmillan); Relaxation by J. L. Rathbone (T. C., Columbia); Hypnotism by G. H. Estabrooks (Dutton); Psychosomatic Medicine by E. Weiss and O. S. English (Philadelphia: Saunders); and Survey of Objective Studies of Psychoanalytic Concepts by R. R. Sears (Social Science Research Council.)

Social Psychology. According to G. Hartmann, the chief postwar task of psychologists will be to aid in erasing animosities, to convert the victory into social benefit. Psychologists are already helping to clarify our understanding of other peoples and point out how changes can be made acceptable to them, as well as to discover directions in which our own people can be led. E. C. Tolman contends that war can be overcome only when in-dividuals identify themselves with supra-national groups more strongly than with mutually exclusive, competing national groups. R. Stagner views peace planning as a problem in the psychology of learning. He believes that in the long run rewards will be more effective than punishment in breaking down hostile nationalistic habits and building up cooperative international habits. Cooperative victories should be stressed rather than national victories, and postwar plans should be clarified now, to encourage ego-identification of weak groups with a powerful international group.

C. Bühler points out that Germans have always valued abstract ideals above human feelings. According to K. Bode, postwar resentment of defeat in Germany could be minimized by a laborsocialist government there. K. Lewin contends that a change toward democracy is not a political matter but involves a complete change in values, family, and group life. He feels that if the form of government is left to the people of war-torn Europe, power groups will impose autocracy, but that cultural changes in the direction of democracy may be introduced gradually by a hierarchy of democratic leaders training democratic subleaders through feeding and reconstruction work.

Among new books are A Social Psychology of War and Peace by M. A. May, Director of the Institute of Human Relations (Yale); The Psychology of Fascism by P. Nathan (London: Faber and Faber); The Goebbels Experiment: A Study of the Nazi Propaganda Machine by D. Sington and A. Weidenfeld (Yale); Is Germany Incurable by R. M. Brickner (Philadelphia: Lippincott); Sociocultural Causality, Space, Time: A Study of Referential Principles of Sociology and Social Science by P. A. Sorokin (Durham: Duke U.); Sociology: Principles and Problems by C. A. Ellwood (American Book); The Family and Democratic Society by J. K. Folsom (Wiley); Ballots and the Demo-cratic Class Struggle: A Study in the Background of Political Education by D. Anderson and P. E. Davidson (Stanford U.); and New Horizons in Criminology: The American Crime Problem by H. E. Barnes and H. K. Teeters (Prentice-Hall). War Over West Ham: A Report Prepared for the Fabian Society and the Ethical Union by E. D.

Idle (London: Faber and Faber) describes the effects of the blitz on health, education, recreation, etc., in a London area. The Structure of Morale by J. T. MacCurdy (Macmillan) is a study of the wartime morale of our allies and enemies. Personal Problems and Morale by J. B. Geisel (Boston: Houghton, Mifflin) is a textbook for high school.

Racial Studies. Several psychologists are studying causes and possible ameliorations of racial conflicts in the United States. Intercultural Education in American Schools by W. E. Vickery and S. G. Cole (Harper) is the first of a series of teachers' manuals designed to improve race and culture group relations in the United States. From studies of Negro children with Binet IQ above 160, M. D. Jenkins concludes that Negroes are as variable as other racial groups, but that so-ciety commonly limits the development of gifted Negro children by failure to recognize them and grant them suitable education. P. Witty and V. Theman have made a follow-up study of the educational attainment of gifted Negroes with IQ's ranging from 120 to 200, and find that they compare favorably with whites; they report the case of one Negro boy who received his Ph.D. at 18. H. G. Canady calls attention to the unfairness of testing Negroes by tests standardized on Northern whites. R. C. Woods and L. R. Martin of West Virginia find Negroes superior to whites in musi-cal ability. S. A. Beckman has studied art aptitude of superior Negro children. T. M. Abel reports that among institutionalized subnormal girls, Negroes dominated whites about twice as frequently as whites dominated Negroes. L. L. Holloman views the Negro's supremacy over whites in various athletic competitions as an effort to compensate for feelings of inferiority. R. W. Russell, testing Zuni children with the Goodenough Draw-a-Man Tests, finds no inferiority of the Zuni to white norms. P. A. Cowan, after testing In-dians in New York State, concludes that they would compare favorably with whites if they had the same environmental advantages. G. M. Stratton and F. M. Henry have compared physiological reactions to an emotional stimulus in Chinese, Japanese, and whites.

Educational Psychology. "The possibilities for human development through educative means are far greater than our ancestors supposed." This is the thesis of G. D. Stoddard in *The Meaning of* Intelligence (Macmillan). R. Allers points out that problem teachers commit two fallacies, first allowing their opinion of the child to be influenced by his background and second assuming that objectionable actions are indicative of an evil disposition. In a study of classroom disturbances of eighth grade boys and girls, M. L. Hayes found that the purpose of the disturbing behavior was usually relief from frustration. R. P. Fischer reports an experimental investigation of the role of frustration in academic underachievement. C. Pope reports a study in which all boys and girls in a high school were asked to write an unsigned essay on personal problems; 46 per cent were in the study-learning area, with teacherpupil relationships of greatest concern. E. Sylvester and M. S. Kunst find evidence that reading difficulties are disturbances of the exploratory function. They attribute the success of some tutoring not to pedagogical methods but to the fact that the tutor has intuitively met some emotional need of the child.

Among new books are Vocational Education edited by N. B. Henry (Yearb. Nat. Soc. Stud.

Educ.); Educational Measurement and Evaluation by H. H. Remmers and N. L. Gage (Harper); Measurement and Evaluation in the Secondary School by H. A. Green, A. N. Jorgensen, and J. R. Gerberich (Longmans, Green); Remedial Techniques in Basic School Subjects by G. M. Fernald (McGraw-Hill); Policies and Practices in the Improvement of Reading edited by J. J. DeBoer (Naprovement of Reading edited by J. J. DeBoer (National Council of Teachers of English); and Study Guidance: A Diagnostic Practise Book of the Principles of Learning and of Study Methods by A. E. McNelly (Chicago: Lyons & Carnahan).

Child Psychology. The Encyclopedia of Child Guidance edited by R. B. Winn (Philosophical Library) includes over 200 articles by more than

70 authorities.

In Child Behavior and Development: A Course of Representative Studies edited by R. G. Barker, J. S. Kounin, and H. F. Wright (McGraw-Hill) 42 original investigators present their work. That problems of behavior may be studied through analysis of the situations to which the behavior is a response is the central thesis of Family Situations: An Introduction to the Study of Child Behavior by J. H. S. Bossard and E. S. Boll (Philadelphia: Penn. U.). M. W. Henke and R. G. Kuhen find that a majority of boys in a summer camp gained in social adjustment but that most of the underprivileged lost. They conclude that boys of low socio-economic status are harmed rather than helped psychologically by being thrown with boys of average or superior status. Studying the effects of air raids on school children, A. G. McClure concludes that symptoms are due not so much to the raids themselves as to disturbed routine, absence of parents from home, and group psychological contagion. Increase in activity and violence were more common than withdrawal. D. Denny-Brown reports that children up to three and four years apparently do not realize what is happening during a bombing; children of six to twelve develop neurotic symptoms but these subside quickly.

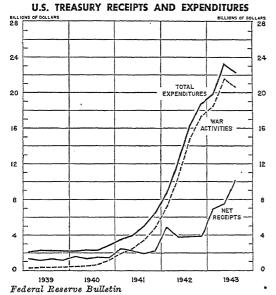

As the Child Grows by H. B. Pryor (New York: Silver Burdett) emphasizes individual variation, particularly structural. The importance of recognizing and respecting individuality is stressed by A. Gesell, F. L. Ilg, J. Learned, and L. B. Ames in Infant and Child in the Culture of Today: The Guidance of Development in Home and Nursery School (Harper). H. L. Reingold finds that babies who have been raised as only babies in a boarding home do better on tests such as the Gesell than babies who have shared a boarding home with others. S. Q. Janus finds evidence that early language at all ages from 18 to 66 months is devoted more to social manipulation than to egocentric remarks. The Neuromuscular Maturation of the Human Infant by M. B. McGraw (Columbia) correlates behavioral data with neurological data and draws educational conclusions from experimental studies. Children Can Help Themselves: The Normal Child's Health Behavior by M. O. Lerrigo (Macmillan) is intended for parents.

Books of General Interest. Psychology Through Literature edited by C. Shrodes, J. Van Gundy, and R. W. Husband (New York: Oxford) illustrates psychological principles through selections from the world's great literature. Psychology and Human Living by W. C. Langer (Appleton-Century), written for the Commission on Human Relations of the Progressive Education Association, approaches human behavior from the standpoint of needs. The Expression of Personality: Experimental Depth Psychology by W. Wolff (New York: Harper) is a report of experiments in progress since 1925 on the problem of personality dynamics. Principles of Behavior by C. L. Hull (Appleton-Century) is designed to serve as a text in advanced courses. Psychology You Can Use by W. H. Roberts (Harcourt, Brace) is for the lay reader. Chimpanzees: A Laboratory Colony by R. M. Yerkes (Yale) is intended both for the lay man and the specialist. Among other new books are Lewin's Topological and Vector Psychology by R. M. Leeper (Eugene: Oregon U.); Emotion in Man and Animal by P. T. Young (Wiley); and Autonomic Regulations: Their Significance for Physiology Psychology and Neuropsychiatry (New York: Interscience). See Juvenile Delinquency.

PUBLIC ASSISTANCE PROGRAMS. See SOCIAL SECURITY BOARD.

PUBLIC BUILDINGS ADMINISTRATION (PBA). An agency of the U.S. Government under the jurisdiction of the Federal Works Agency. It is responsible for the administrative, technical, and clerical functions incident to the design, construction, maintenance, and repair of Federal buildings. The Section of Fine Arts, formerly charged with the selection and placing of designs in public buildings and the employment of sculptors and artists, was discontinued, July 1. (See Art.) The Emergency Operations Unit builds Federally constructed schools, hospitals, and health buildings under the War Public Works Program. Commissioner in 1943: W. E. Reynolds.

PUBLIC FINANCE. The year 1943 witnessed the culmination of the American war effort in World War II so far as Treasury finance was concerned. Government spending reached a peak during the fourth quarter, showing a slightly declining tend-

ency at the year end. Cutbacks and cancellations of thousands of war contracts made it probable that this peak would not be exceeded again even if the war continued for some time, despite the fact that aircraft production and shipbuilding were still being expanded at the end of the year. Furthermore, mounting Government receipts made it virtually certain that, regardless of further

changes in the monthly rate of Federal spending, the excess of expenditures over income had certainly passed its peak.

Federal expenditures during the fiscal year ended June 30, 1943, reached the unprecedented total of \$78,179,000,000, or almost two and one-half times the amount spent during the first year of American participation in World War II. War activities accounted for all but \$6,070,000,000 of these outlays, and the rate of military expenditure was rising sharply at the end of the 1943 fiscal year. Director of the Budget Harold D. Smith stated near the end of the year that budget expenditures for war activities would reach \$89,000,000,000 in the fiscal year ending June 30, 1944, or almost \$7,500,000,000 monthly. This high rate of expenditure was, however, somewhat below the original budget estimate that \$97,000,000,000 would be required for war activities in the 1944 fiscal year, so that the indicated deficit was reduced materially from the President's estimates.

Revenues collected by the Federal Government in the fiscal year ended June 30, 1943, aggregated \$22,282,000,000, almost twice as large as the year before and more than three times as large as the revenue collections in 1920, the peak for the World War I period. These revenue collections, it will be noted, were less than 28 per cent of Federal expenditures, as contrasted with the avowed policy of the Treasury that 50 per cent of Federal outlays were to be derived from taxes. In part, however, the wide discrepancy between the Treasury's objective and its actual accomplishment reflected the time lag before the new taxes authorized by the Revenue Act of 1942 could be-

ment reflected the time lag before the new taxes authorized by the Revenue Act of 1942 could become fully productive.

The problem of staving off the threat of inflation in the face of such large Federal outlays, much less than half of which were covered by

much less than half of which were covered by tax receipts, was a major preoccupation of the Treasury. Congress was urged during the year to enact additional taxes to produce \$10,500,000,000 of added revenue. Action on a 1943 revenue bill was delayed for many months while the Administration and Congress wrangled over the terms of pay-as-you-go tax legislation, which was concerned primarily with the way in which existing taxes are to be paid, rather than with raising more money for the Treasury. Thereafter, the favor-able course of the war, the political reaction against Administration leadership, and the fact that the budget estimates of the Administration were proving too pessimistic produced a Con gressional revolt and the legislature would approve only a small fraction of the additional tax revenue asked by the Treasury. On the other hand, the Treasury encountered a much larger measure of success in its efforts to sell new issues of Government securities to buyers other than the banks. Whereas in the first War Loan drive of December, 1942, almost 40 per cent of the securities sold went to commercial banks, in the third drive in September, 1943, the banks were excluded and \$18,943,000,000 of Treasury obligations were sold to individual and corporate subscribers. Only after the close of the drive were \$3,200,000,000 of other securities sold to commercial banks for additional cash. True, commercial banks helped the success of the third War Loan drive by purchasing Government securities in the open market to add to their portfolios and by making loans to subscribers to the War Loan, but the Treasury on the whole achieved a large measure of success in making its financing program less inflationary.

Tax receipts during the 1948-44 fiscal year were materially larger than the budget estimates. This reflected the expansion in personal and corporate incomes, the productivity of the withholding of personal income taxes that went into effect in July, 1943, and larger than anticipated receipts from other imposts. The Treasury, near the end of the year, raised its estimate of total receipts from \$33,081,000,000 contained in the original budget of the President to \$41,137,000,000. The combination of reduced expenditures and increased revenues resulted in an expected deficit of \$55,000,000,000 for the year ending June 30, 1944, as compared with the original estimate of \$71,047,000,000 contained in the President's budget message to Congress.

dent's budget message to Congress.

Federal Expenditures. The outlays of the Federal Government in the fiscal year ended June 30, 1943, aggregated \$78,179,000,000. This represented an increase of \$45,782,000,000 over the total of the year before. Increased war outlays accounted for the entire increase, expenditures for war activities alone being \$46,098,000,000 more than the year before. Nonwar outlays were reduced, despite increased interest payments on the national debt. Smaller public works and relief outlays accounted for the decline in nonwar expenditures, the chief decreases occurring in sums allotted the Works Projects Administration and the National Youth Administration. Funds for these two agencies, in fact, were halted altogether by Congress, and no allowance was made for them in the budget for the year beginning July 1, 1943.

The rapid increase in the national debt nat-

The rapid increase in the national debt naturally caused a rise in interest payments. Interest on the public debt required \$1,808,000,000 in the 1943 fiscal year, an increase of \$548,000,000 over the year before. Interest outlays did not expand as rapidly as the amount of the national debt, however, because of a decrease in the average rate of interest paid on Government obligations.

The largest part of the war expenditures was represented by sums allotted the War and Navy Departments. Military outlays in the 1942 and 1943 fiscal years, and on a monthly basis during the first quarter of the 1944 fiscal year, are shown in Table I.

Expenditures for the fiscal years ended June 30, 1942 and 1943, and estimates for the fiscal year 1944, as revised by the Treasury on Aug. 1, 1943, are shown in Table II.

Federal Revenues. Receipts of the Federal Government for the fiscal year ended June 30, 1943, aggregated \$22,282,000,000, an increase of \$9,483,000,000 over the year before. Of these receipts, \$1,498,000,000 consisted of social security taxes, from which \$1,103,000,000 were transferred to the Federal Old-Age and Survivors Insurance Trust Fund. Taxes on income and profits produced more than two-thirds of all Treasury receipts, with excise taxes on alcoholic beverages, tobacco and several other manufactured goods providing most of the balance.

The chief sources of Treasury revenue for the fiscal year 1943 and estimates for the following fiscal year, as revised on Aug. 1, 1943, are shown in Table III.

Treasury Financing. The public debt of the United States increased \$64,274,000,000 during the fiscal year ended June 30, 1943. The public debt at the end of the year reached the unprecedented total of \$136,696,000,000. In addition, \$4,100,000,000 of bonds guaranteed by the United States Government were outstanding at the end of the fiscal year. The Federal debt continued to rise rapidly

In addition to the huge sum spent for war purposes by the Treasury directly, substantial outlays were made also by Government corporations, the most important of which is the Reconstruction Finance Corporation (q.v.) whose subsidiary, the Defense Plant Corporation, has taken over the financing of most of the new manufacturing facilities provided by the Government for war production. These Government agencies received \$3,555,000,000 in additional funds through the sale of their obligations to the Treasury during the year.

from month to month after the close of the fiscal year, to finance the enormous war expenditures of the Government

of the Government.

The Treasury borrowed \$64,274,000,000 during the fiscal year, of which \$55,897,000,000 was required for the budget, \$1,861,000,000 for expenditures in trust accounts and \$6,515,000,000 was added to cash in the General Fund. Of the total sum borrowed, \$2,986,000,000 was obtained through sales of special issues to social security and other Government funds, and \$15,690,000,000 by the sale of war savings bonds and stamps to

| Total public issues   | 64,083                                   | 124,509                                    |

Of the publicly-held interest-bearing obligations, \$11,864,000,000 consisted of Treasury bills maturing weekly within a three months' period, and \$16,561,000,000 consisted of certificates of indebtedness coming due within one year. In addition, \$29,200,000,000 of nonmarketable obligations, redeemable on demand, were outstanding.

A compilation prepared by the Treasury showed that within five years more than \$56,000,000,000 of marketable interest-bearing securities held by the public would fall due, or well over half the total of such obligations outstanding.

Two War Loan drives were conducted during the calendar year 1943. Repeated experience with

these drives greatly increased their effectiveness, particularly because of the huge voluntary organization that was built up to conduct these drives and the effective support of industry in the shape of contributed advertising. For the third War Loan, which produced almost \$19,000,000,000 of sales, a War Finance Division was set up in the Treasury with a national Director of Sales. State War Finance Committees were established to

whom quotas were assigned, and local War Finance Committees were organized along city and county lines. Purchasers were offered a choice of War Savings Bonds Series E, F, and G, and Series C Savings Notes as nonmarketable issues, and ½ per cent Certificates of Indebtedness, 2 per cent ten-year Treasury bonds, and 2½ per cent 26-year Treasury bonds as marketable issues. Types of securities sold in the second and third War Loans are shown in Table VI.

PUBLIC HEALTH. See under HEALTH WORK.
PUBLIC HEALTH, Inter-American Cooperative Service for.
See NICARAGUA under History.

PUBLIC HEALTH SERVICE, U.S. The war has given the U.S. Public Health Service an opportunity to test the prewar protective measures, and to see more clearly the problems which lie ahead. Despite the threat of epidemic diseases to the war effort, their prompt control has constituted but a small part of the wartime task of the Public Health Service. Ninety per cent of the Service's resources, in manpower, materiel, and money, have been channeled into direct war work. Virtually all research of the National Institute of Health has been turned to new problems arising from the conditions of global war. The few remaining studies are essential to the preservation of our continuing search for knowledge upon the diseases of mankind.

Division of States Relations. The functions of the States Relations Division during the fiscal year were (1) to administer the emergency health and sanitation program designed to establish and maintain public health safeguards in areas of military and war-industry activity, (2) to aid State health departments in developing adequate State and local public health programs through provision of technical consultation service and financial assistance under the terms of title VI of the Social Security Act, and (3) to prevent the inter-state spread of communicable disease by application of quarantine regulations and direct control measures.

A total of \$21,221,874 was appropriated for the fiscal year to cover these activities. The emergency health and sanitation appropriation amounted to \$9,702,200. The amount available under title VI of the Social Security Act was \$11,000,000. Other appropriations to carry out measures to prevent the spread of disease made up the total.

The reconnaissance surveys undertaken in November, 1940, to determine the need for public health facilities and services in vital areas were continued. On June 30, 1943, the emergency health and sanitation corps of the Public Health Service comprised 4,847 persons, including 160 physicians, 5 dentists, 380 engineers and sanitarians, 127 nurses, 123 specialists and technicians, and 3,602 nonprofessional workers. With personnel from this corps, many crowded but undeveloped localities were furnished with at least a nucleus of health organization. Basic environmental sanitation, and control of venereal and other infectious diseases constituted the major problems in such communi-ties. Applications for the construction of hospitals, health centers, water supplies, sewerage disposal, and sanitation facilities have been reviewed by the Public Health Service and those projects considered essential were approved for certification to the Federal Works Agency.

Notable among special control programs have been: (1) The control of malaria, as a result of which satisfactory control has been maintained in 94 per cent of the control areas, with a force of 3,704 persons engaged in controlling mosquito production; (2) tuberculosis control, by which 320,000 workers in 85 war establishments were given chest examinations and 60,000 migratory workers were examined before entering the United States from Mexico; (3) plague control operations in and near several western military areas where plague-infested rodents were at large; and (4) typhus fever control in rat-infested communities of the South where typhus is endemic.

To help meet the urgent need for more nurses, the Congress appropriated \$3,500,000 for the continuation and expansion of the nursing education program during the fiscal year 1943. The appropriation authorized the following types of programs: (1) Basic training for under-graduate nurses, (2) refresher courses for inactive registered nurses, and (3) post-graduate instruction in the various nursing specialties. Under this program, tuition scholarships were granted to 5,975 under-graduate students, refresher courses were given to 816 inactive registered nurses in order that they might return to active service; and post-graduate instruction in the various specialties was given to 2,285 nurses.

Under the provisions of the Bolton Act, which was passed in June, 1943, a new Division of Nurse Education has been established. The provision calls for the recruitment of 65,000 new student nurses yearly. Trainees enrolled in the United States Cadet Nursing Corps receive free tuition, maintenance, uniforms, and a monthly stipend. The Congress appropriated \$45,000,000 for the fiscal year 1944 to carry out this program.

Division of Marine Hospitals and Relief. The expended medical estimation of Marine Proposition of Marine

Division of Marine Hospitals and Relief. The expanded medical activities relating to the Merchant Marine and the U.S. Coast Guard constituted major additional responsibilities. There was an increase in the number of cases manifesting definite mental illness and in the number of women and children treated in Marine Hospitals. Over 1,300,000 patients were furnished hospital and office care in 1943 as compared to 547,000 in 1941, an increase of about 141 per cent. Personnel of the U.S. Coast Guard accounted for 64,123 patients as compared to 7,082 in 1941. The number of merchant seamen treated in hospitals decreased from 29,038 in 1941 to 26,196 in 1943. During the fiscal year 1943, approximately 60,000 eligible government employees received 200,000 treatments.

The Public Health Service Hospital, Sheepshead Bay, Brooklyn, N.Y., opened during the year, afforded medical relief to the large Coast Guard Training Station and Maritime Service Training Station on adjoining reservations. A school for pharmacist mates was inaugurated at the Maritime Station and a program was designed for training hundreds of men to serve as technically trained laymen aboard seagoing vessels. This is the beginning of a minimal medical program, which includes first aid and sanitation aboard American merchant ships.

Continuous caudal analgesia in obstetrics, developed by two members of the staff at the Staten Island Marine Hospital, received wide recognition as a distinct contribution to the practice of obstetrics. By this method trained physicians were able to accomplish safe and painless childbirth in about 90 per cent of hospitalized cases. A postgraduate school was inaugurated at the Philadel-

phia Lying-In Hospital as a cooperative program designed for further study and teaching of this method. (For a description, see MEDICINE.)

Division of Venereal Disease Control. For the fiscal year 1943, the Congress appropriated \$12,267,000 for venereal disease control. Of this amount, 81.4 per cent was allotted to the 48 States, the District of Columbia, Alaska, Puerto Rico, the Virgin Islands, and Hawaii; \$3,018,900 was ear-marked for State cooperation with the armed forces and for other war needs. The per capita amounts by State and local funds have increased from 3.2 cents per capita in 1939 to 5.6 cents in 1943. The total of Federal, State, local, and other funds spent for venereal disease control during 1943 was \$19.-368,458.

All phases of the venereal disease control program were intensified. As a result of stringent civilian control measures and the vigorous control program of the armed services, it has been possible to avert the sharp increase in syphilis and gonor-rhea among soldiers, sailors, and war workers. Such an increase has hitherto been regarded as a war-

time inevitability.

Approximately 31,000,000 serologic tests for syphilis were made in all laboratories, an increase of 53.1 per cent over 1942. Laboratory tests for gonorrhea increased 13.9 per cent. Approximately 9,000 epidemiological workers are now employed in the 48 States and the District of Columbia, on

either a full-time or a part-time basis.

Research has been carried on to determine which of the new intensive treatment schedules for syphilis are most effective and safe. The following were appraised during the year: 1-day fever plus chemotherapy, 5-day drip, the 10-20-day Schoch method, the 10-12 week Eagle, and variations of these. Sulfathiazole and sulfadiazine have continued to be the drugs of choice in the treatment of gonorrhea.

An outstanding achievement of the year is the network of Rapid Treatment Centers developed by the U.S. Public Health Service in cooperation with State departments of health and other public and private agencies. These centers have been strategically located in war areas where the venereal disease problem is a menace to the health of armed and industrial forces. To date 30 Rapid Treatment Centers have been established in the United States, the Canal Zone, Puerto Rico, and the Virgin Islands.

Division of Mental Hygiene. The Public Health Service continued to furnish and supervise the medical, psychiatric, and other technical services in the Federal penal and correctional institutions.

Research on the nature and treatment of drug addiction has been continued at the Lexington, Ky., Hospital. At the beginning of the fiscal year, the number of patients was 1,094 and at the close of the year 1,112. The treatment of the psychiatric war casualties has been a stimulating influence on the medical staff. At the Fort Worth, Tex., Hospital, the treatment of narcotic addict patients has been reduced to a minimum, while the treatment

of psychotic patients has increased.

National Institute of Health (Division of Scientific Research). The research branch of the Public Health Service undertook many investigations at the request of the Army and Navy and other war agencies. These studies are of military importance and are confidential. Among other assistance to the armed services, has been the securing of vast supplies of biological and other medical requisites for protection of the men at war. The requirements of the military forces and of foreign countries markedly increased the exercise of control

measures and the testing of products.

Research was carried on as to the distribution of physicians, dentists, and facilities for medical care. This work has included investigation of the distribution of physicians in the various States and counties in the United States just prior to the war and of the effect upon medical services in States and counties of the withdrawal of practicing physicians for the armed forces. Studies of the weekly patient load of private practitioners were made in Maryland, Georgia, and the District of Columbia. This knowledge is a prerequisite to the establishment of a rational program of withdrawal

of physicians for the armed forces. In nutrition research, it has been shown that the hyalinization, necrosis, and calcification of voluntary muscle can be prevented by L-tocopherol (vitamin E) and that the dermatitis can be cured or prevented by biotin. The granulocytopenia and anemia can be corrected by various

liver preparations.

Urgent practical aspects of military aviation have been under study. The altitude chamber constructed in collaboration with the Navy has been operated throughout the year in connection with many special studies. Altitudes from sea level to 58,000 feet and temperatures from 67° F. to 100° F. can be simulated. It is possible to simulate ascents at any rate up to 18,000 feet per minute, with corresponding changes in temperature.

In the field of cancer research, studies were carried on along the following lines: (1) Carcinogenesis, (2) characteristics of tumor tissue, (3) tumor growth, and (4) epidemiology.

The report on annual cancer incidence, based on a survey of 10 metropolitan areas in northern, southern, and western United States, was completed. Comparative rates by geographic region are given for each of the major sites of cancer by sex and color, corrected for age distribution. This report makes available for the first time observed incidence rates for comparison with secondary attack rates in cancer.

Industrial hygiene activities reached a new peak in 1942-43. Shortages of personnel and fa-cilities impeded the expansion of services to meet these needs. As a result, the resources of the Public Health Service have been concentrated upon the first objective of the industrial hygiene program-namely, the creation and maintenance of a safe and healthful working environment in the

nation's war production plants.

The development of entire new industries with plants using a great many chemical substances dangerous to workers has necessitated research work to establish maximum amounts of these chemicals to which the worker may be safely exposed. Methods for the control of industrial hazards encountered in the management of explosives have been developed. The toxicity of three new explosives was studied at the request of the Army. A study was made upon the effect of TNT on workers in a Federal ordnance plant. Analyses were made of 2,531 environmental samples from arsenals and ordnance plants.

Toward the close of the year, studies were initiated in the National Institute of Health on filariasis, schistosomiasis, and other exotic diseases

prevalent in war zones.

Division of Foreign and Insular Quarantine and Immigration. Most of the problems confronting the National Quarantine Service during the last fiscal year continued, and some increased in intensity. Airplane traffic extending into all parts of the

world increased considerably the danger of introducing into the United States exotic vectors of disease and required additional expert quarantine service at airports of entry. A standard procedure of disinsectization of aircraft was adopted which reduced markedly the delay incident to previous

During the fiscal year, 12,933 planes and 8,546 vessels were inspected. The number of persons, including passengers and crews, examined on ships and planes entering the United States was 859,520; at international border stations, 318,507 per-

sons were examined.

Division of Sanitary Reports and Statistics. On the basis of mortality and morbidity records, the health of the nation continued at a high level during 1942. The preliminary death rate of 10.4 per 1,000 population and the provisional infant and maternal rates of 4.8 and 2.7 respectively, per 1,000 live births were the lowest on record for the United States. The provisional general morths of the United States. tality figure for the first 6 months of 1943 was slightly higher than for the same period last year; the death rate was 11.0 per 1,000 population, or about 3.8 per cent higher than the rate of 10.6 for the comparable period in 1942.

For the following diseases the provisional mortality rates for 1942 were the lowest in the past 5 years: typhoid and para-typhoid fever, diarrhea and enteritis under two years, diphtheria, scarlet fever, influenza, pneumonia, whooping cough, and tuberculosis. The death rate for measles was lower in 1942 than in 1941. The rates for encephalitis and poliomyelitis were lower than those for the three prior years. The principal diseases for which a higher mortality rate was reported in 1942 than in 1941 were cancer, diseases of the heart, cerebral hemorrhage, and diabetes. See VITAL STA-

The incidence of meningococcus meningitis was 1.9 times higher during the calendar year 1942 than the 5-year median (1937-41). Early in 1943, the disease reached epidemic proportions. Up to the week ending Nov. 27, 1948, 16,256 cases had been reported. Although poliomyelitis was below the median expectancy in 1942, it became epidemic early in 1943. By Nov. 27, 1943, a total of 11,993 cases had been reported, a larger number than had been reported for any entire year since 1931 when a total of 15,790 cases was reported.

Information regarding diseases in foreign countries was very incomplete. However, the frag-mentary reports received indicate increases in some of the quarantinable diseases, especially typhus fever. In China, twice as many cholera cases were reported for 1942 as for 1941. Fourteen countries reported cases of yellow fever in 1942,

compared to 16 in 1941.

At the close of the fiscal year 1943, 597 officers of the regular Commissioned Corps and 555 Reserve Officers were on active duty. The total personnel of the Public Health Service numbered 21,927, of whom 4,662 were collaborating epidemiologists and assisting epidemiologists who receive only nominal compensation for collection of morbidity data. Detailed accounts of the activities of the Public Health Service may be found in the Annual Reports of the Surgeon General for the fiscal years 1942 and 1943.

PUBLIC OPINION POLLS. See GREAT BRITAIN and MEXICO under History; OPINION RESEARCH CEN-

PUBLIC ROADS ADMINISTRATION (PRA). An agency of the U.S. Government under the jurisdiction of the Federal Works Agency. It normally administers Federal-aid funds and emergency appropriations for road construction, cooperating with State highway departments. It cooperates with the Department of Agriculture on forest roads and supervises

the construction of national park roads.

Since the beginning of war, approval of new projects has been limited to those of direct importance to the war effort. Federal-aid funds are being used to build access roads to Army and Navy training and concentration areas and war industries, and to correct critical weaknesses in the main highways of war transport. The Administration is supervising the construction of flight strips and has cooperated in the building of the roads to Alaska and Panama. The research staff is engaged in the study of war problems and major highway projects for Commissioner in 1943: postwar construction. Thomas H. MacDonald.

See Bridges; Roads and Streets.

PUBLIC SCHOOLS. See SCHOOLS. PUBLIC WORKS. See Construction Industry; Federal Works Agency; Postwar Planning.

PUBLIC WORKS ADMINISTRATION (PWA). A Government agency under the jurisdiction of the Federal Works Agency, now in liquidation. The last appropriation was made in 1938. (See YEAR BOOK for 1940.) See RECONSTRUCTION FINANCE COR-PORATION.

PUBLISHING. See Business Review; Library Proc-RESS; LITERATURE, AMERICAN AND BRITISH, and articles on foreign literatures; MAGAZINES; NEWS-PAPERS; PAPER AND PULP.

PUERTO RICO. A West Indian Island, forming a territory of the United States. Acquired from Spain through the Treaty of Paris, 1898. Small adjacent islands, Vieques and Culebra, are included in its jurisdiction and statistics. Capital, San Juan.

Area and Population. Area, 3,435 square miles. Population, 1940 (U.S. Census), 1,869,225; 1935 (by special census of the Puerto Rico Reconstruction Administration), 1,723,534; 1930 (U.S. Census), 1,543,913. In 1940 the dwellers in places of 2,500 or more numbered 566,357; the rural population, 1,302,898. The territory had, in 1940, 544.2 inhabitants to the square mile—an exceptional density for an area dependent mainly on agriculture. Despite an excess of emigration over immigration, the population gained by 21 per cent in the ten-year period 1930-40. The estimated population on July 1, 1941, was 1,911,290 (white, 1,452,678; colored, 458,612). Living births in 1941 numbered 76 130 (39.8 per 1,000): deaths 35.551 (18.8 per 1,000). 76,130 (39.8 per 1,000); deaths, 35,551 (18.6 per 1,000). Populations of the chief cities (1940 census): San Juan, 169,247; Ponce, 65,182; Mayagüez,

Education. Out of more than 700,000 children of school age, only 293,263 were enrolled in public day schools on May 29, 1942. Of the total enrollment, 135,621 were in elementary rural schools, 124,962 in elementary urban schools, 15,757 in rural second units schools, and 16,418 in high schools. The University of Puerto Rico had 5,441 students (Rio Piedras colleges, 3,016; Mayagüez branch, 648; extension courses, 1,454; evening schools, 323). The average expenditure per pupil enrolled in public schools was \$26.08 in 1941-42, of which the Insular Government contributed \$21.53 and the municipal governments \$4.55. In a complete reorganization of the school system introduced Aug. 3, 1942, the elementary course was reduced to six grades and the secondary system divided into a three-year junior and a three-year senior high school.

Production. The island is predominantly agricultural, with about 825,000 acres under cultivation out of a total area of some 2,000,000 acres. The acreage under food crops increased from 317,000 in 1940 to 407,000 in 1942, but the population was still dependent upon imports for 30 per cent of its food. Sugar cane, the chief crop, yielded 1,146,584 tons (of 2,000 lb.) of raw sugar in 1941–42, compared with 932,164 tons in 1940–41. Estimated yields of other leading crops in 1941–42: Coffee, 14,632,700 lb. (29,593,000 in 1940–41); tobacco, 30,000,000 lb.; cotton, 47,000 quintals. Corn, beans, sweet potatoes, bananas, and rice are leading food crops. Fruits and coconuts are exported. In 1941-42 there were 828 industrial enterprises of all kinds, including agricultural industries, with 64,766 employees and wage earners whose average hourly earnings were 25.1 cents and average actual weekly earnings \$7.99. Production of electric power was 231,016,320 kw-hr in 1941-42. Since 1942 the electric power system has been entirely government-owned and operated.

Overseas Trade. Statistics for 1941-42 and 1942-48 were withheld for military reasons. For the fiscal year ended June 30, 1941, imports were \$128,-033,769 (\$120,956,780 from the United States); exports, \$87,349,204 (\$86,341,362 to the United States). See 1943 Year Book for further details.

Finance. General Fund receipts during the fiscal year 1941-42 amounted to \$37,658,861 and net disbursements to \$23,579,916, leaving a surplus of \$14,554,969. Added to the cash balance of \$6,447,-843 on hand July 1, 1941, this left a cash balance of \$20,526,788 on July 1, 1942. Offsetting this were appropriation liabilities of \$5,971,819 carried over to the fiscal year 1942–43. The bonded indebtedness of the Insular Government on July 1, 1942, was \$23,700,000 (\$26,975,000 on July 1, 1941).

Transportation. The island has about 1,441 miles

of motor roads, 922 miles of railways (including 574 miles of private lines on sugar plantations), and air connections at San Juan with Miami, Fla., and the various Caribbean and South American

Government. Under the Organic Act, as passed by the U.S. Congress in 1917 and later amended, Puerto Rico has the status of an organized territory of the United States. Its citizens are U.S. citizens. A Governor, the chief executive officer, holds office by appointment of the President of the United States, confirmed by the U.S. Senate. The popular vote elects a Legislature of two houses and a Resident Commissioner to the United States. Governor, 1943, Rexford G. Tugwell. Resident

Commissioner, Bolívar Pagán.

#### HISTORY

Struggle for Political Reforms. Important in the news of 1943 in Puerto Rico was the struggle for political reforms. In this many-sided conflict the issues ranged from statehood to complete independence. For more than a quarter of a century the Federal government had made no major change in the governmental machinery of the island. The organic law of 1917, called the Jones Act, accorded to the people the status of United States citizens

and greatly extended the scope of self-government. That Act did not define a long-range political policy and, except for a few minor Congressional revisions, it still remained the basic law.

Just as in World War I, the serious economic and military disturbances in World War II again focussed attention upon the deep-seated political problems in Puerto Rico. The effects of the effort at internal reforms by Governor Rexford Guy Tugwell and his administration (see Year Book for 1943, pp. 580-581) were reflected in a bill introduced in Congress in January, 1943. Senator A. H. Vandenburg proposed that Governor Tugwell be removed from office and a definite two-year term be fixed for all future governors. Senator Vandenburg charged that the swiftly expanding bureaucracy and the "superlatively expensive administration, with all its implicit national socialization," was a threat to the welfare of the Puerto Ricans themselves. He based his contention, in part, on the petitions for removal by the Resident Commissioner to the United States, the Union Republican, Socialist, and Unification parties of Puerto Rico, the Chamber of Commerce, the Farmers Association, and the Free Federation of Labor of Puerto Rico.

Again on April 2, Senator M. R. Tydings, Chairman of the Senate Committee on Territories and Insular Affairs, introduced another bill providing for complete independence. Enactment of such legislation, he said, would be in keeping with the attitude of the United States toward Cuba and the Philippines. This bill stipulated that there must be freedom of religion, speech, press, and assembly, and safeguards of the rights of individuals and of U.S. investments. It proposed that a tariff on Puerto Rican goods be levied beginning one year after independence at 5 per cent of the normal rate on foreign products. Duties then would be increased 5 per cent each year for 20 years when full tariffs would be reached. Similar levies would be made by Puerto Rico on goods from the United States. Final withdrawal from American control would be on the Fourth of July following the completion of all preliminary steps. In the transition period a high commissioner, appointed by the President of the United States, would protect the rights and properties of American citizens.

An independent group of eight Puerto Ricans, including three members of the Tugwell administration, drew up another bill for independence and sent it to Secretary Harold L. Ickes, Department of the Interior. This proposal, similar to the Tydings bill, would allow the Puerto Ricans a voice in the determination of the kind of government to be established and to participate in the preparation of legislation dealing with their social and economic problems. It also would allow the United States to keep the military and naval bases in the island. The proponents of this measure held that it would placate the adherents of statehood which it is said Congress is clearly unwilling to concede, and if granted would not solve the economic situation.

President Roosevelt took an active role in the movement toward governmental reform. Early in March he appointed an eight-man committee, composed of an equal number of Puerto Ricans and of continental residents, to study the problem and to make recommendations for its solution. This committee was composed of Secretary Ickes, chairman; Abe Fortas, Under-Secretary of the Interior; Governor Tugwell; the Rev. Raymond A. McGowan, Assistant Director of the Social Action Department of the National Catholic Welfare Conference; Luis Muñoz Marín, president of the Puerto Rican Senate, and president of the Popular Democratic Party; Judge Martin Travieso, Associate Justice of the Puerto Rican Supreme Court; Celestino Iriarte, president of the Union Republican party; and José Ramirez Santinbañez, president of the Liberal party. Then on September 28, when the report had been completed, the President in a special message asked Congress to grant speedy home rule for Puerto Rico, including election of a governor, now appointed by the Chief Executive of the United States. This was the first major step toward local self-determination since the acquisition in 1899.

Other provisions of the bill called for a Presidentially-appointed commissioner general who would be responsible for the execution of laws applicable to the island; a government secretary to assume the governor's functions in his absence; procedure for impeachment of civil authorities; appointment of all heads and assistant heads of executive departments by the Governor, with the advice and consent of the Puerto Rican Senate; authorization for the Legislature to create new departments and to redefine powers and duties of departments; abolition of the executive council, and its functions to be given to the Governor unless local legislation should provide otherwise; appointment of an auditor by the Governor for an eight-year term, with greater authority than under the present law; and retention by the President of veto power to prevent "enactment of laws conflicting with the security and international relations of the United States or affecting the fundamental relations of the United States and Puerto Rico."

Two days before the above message to Congress, a report of Governor Tugwell, prepared in February for the Chavez Committee of the U.S. Senate which investigated social and economic conditions in the island, was released to the public. In it he charged that although the United States was extending the good-neighbor policy to all the rest of Latin America, it had no policy toward Puerto Rico and was keeping the Puerto Ricans in "humiliating suspense, by implication neither fit to govern themselves nor to become part of the United States." The report claimed that Puerto Rico was no better off than when it was under Spanish rule in 1898 and called upon Congress to inaugurate a deliberate policy of assistance and after a few years

permit the electorate to express itself.

In the 31-page document the Governor defended his two-year administration which had been under constant attack in and out of Congress. He said that his lot did not differ from that of his predecessors but had been exaggerated by the crisis of war and the accumulation of internal ills. An editorial in The New York Times took issue with the statement that the island was no better off than when it was won from Spain. It cited a number of points in refutation: an increase in exports from \$8,500,000 in 1901 to \$85,000,000 in 1940; imports from \$9,000,000 to \$110,000,000 during the same period; the value of manufactures in Puerto Rico rose from \$36,000,000 in 1909 to \$111,000,000 in 1939; illiteracy was reduced 55 per cent from 1920 to 1940; and the population doubled, indicating that a country which can support twice its population "can hardly be said to be no better off." The editorial accused the Governor of ignoring the huge sums spent by numerous Federal agencies in the island.

Congress, too, took a hand in the struggle to achieve political reforms. Both the House and Senate sent investigating committees to the island and held hearings in Washington on several of the measures proposing changes in the government.

The Senate group spent 10 days in February investigating conditions. Four months later a five-man committee from the House went to Puerto Rico for a first-hand study of political, social, and economic conditions. In addition, hearings were held in Washington on bills to limit the tenure of office of the Governor to four years, to assist in relieving economic distress, and to investigate political, economic, and social conditions. All the evidence tended to confirm the fact that changes in the island's political status constitute a complex problem which cannot be resolved easily. Once a clearly-defined political goal is worked out, the framework for an economic, social, and cultural policy can be established.

Economic Conditions. The lack of any important war industries and the stagnation of business due to inadequate shipping and scarcity of critical materials increased Puerto Rico's need for relief in 1943. In recognition of this need, a Federal Relief appropriation not to exceed \$8,000,000 was made to carry on relief work in Puerto Rico and the Virgin Islands after the expiration of WPA on July 30. Widespread unemployment and the rise in living costs caused the Food Distribution Administration to increase its distribution of free food and the Insular Legislature to allot a total of \$16,000,000 from June, 1942, to June, 1944, for relief.

This appropriation was put in the hands of the Insular Emergency Council for direct and work relief. Its program was extremely diversified. It included the construction of rural trails to enable farmers to market their produce; allotments for reforestation and soil conservation; grants to the Department of Education for employment of workers in the Second Unit rural schools and to the Department of Health for a survey of the municipal water systems. Allotments were also made for school lunchrooms, nursery schools, and for the distribution of free milk to poor children. Insular Emergency funds were also used partly to finance the Federal Works Agency clothing project. This proj-

ect provided for the employment of idle women needleworkers, production of garments and bedding for free distribution, and the repair of garments for the Army and Navy and other war agencies.

The Emergency Council also cooperated in the construction of 400 low-cost houses in rural Puerto Rico. No critical war materials were used in the construction; the houses were built of bitudobe made of blocks of earth treated with asphalt. Grants were also made to municipalities for public works construction and repairs. An independent relief measure was carried on in Puerto Rico through the Save the Children Foundation of America. About 150 cases of clothing were collected on the mainland and shipped to Puerto Rico for distribution

to 50,000 children.

The Puerto Rico Development Company was instrumental in the opening of new businesses by private enterprise. Its purpose was to stimulate and even help financially by loans where the risks were sound. The Company arranged with the WPB for priorities for the construction of a glass factory to make bottles for the rum industry. It also assisted in plans for the construction of a factory to manufacture building board from bagasse. Bagasse is made from the fiber waste product of sugar cane and has been used elsewhere as a substitute for wood. A third project inaugurated by the Puerto Rico Development Company was a contract with local manufacturers for the production of bamboo furniture. In May, the Development Bank of Puerto Rico was authorized by the 1943 Legislature. The

authorization law provides that "in making loans or otherwise extending credit, preference and pri-ority shall be given, when all other factors are equal, to the Puerto Rico Development Company and to enterprises recommended by said Company. . . . Despite unemployment and increased relief payments the Insular Treasury receipts hit an all-time high—\$41,000,000. Much of the increase was due to higher rum revenues and to the increase in income taxes from \$7,635,000 of the previous

year to \$11,312,000. Shipping and Food. The shipping crisis at the beginning of the year and its consequent threat to the supplying of Puerto Rico's basic living commodities overshadowed all other developments in the island in 1943. Despite an increased food planting program, Puerto Rico's 2,000,000 people were still dependent upon imports from the mainland for more than 30 per cent of their food, and nearly all their clothing and other essential commodities. From the low of September, 1942, when the island received only 7 per cent of the average monthly civilian tonnage of 1940, shipping was stepped up in 1943, so that by the end of the fiscal year Puerto Rico had satisfactory surpluses of most basic commodities. This was effected through the efforts of both the Insular Government and the various Federal shipping agencies. The export picture was also brightened. Warehouses were cleared of sugar stocks, and total export tonnage was only slightly below normal

Until April, 1943, the ports of Ponce and Mayagüez had been closed to transports by the War Shipping Administration. This had caused a serious dislocation of the dock labor supply. In these two ports about 3,500 dock workers were idle and the number of dock workers in the one open port, San Juan, was insufficient. At the request of Gov-ernor Tugwell the two ports were opened by the WSA in April, with an improvement in the speed of loading and unloading ships in Puerto Rican

ports.

In May Secretary of the Interior Ickes announced a plan for clearing the cargo for small vessels plying between Puerto Rico and the mainland. These ships ranged in size from 50 to 1,000 deadweight trade, but began to aid substantially in shipping approved items to and from the mainland in the latter part of 1943.

The island itself made serious efforts to increase its production of foodstuffs. The Puerto Rico Land Authority acquired 16,000 acres of land, with a value of more than \$2,000,000, and distributed it in small parcels to more than 4,000 families. These families represented about 22,000 persons resettled

on agricultural land.

Harvesting of food crops in 1942 showed an increase of 28.4 per cent in total area planted to food crops, and planting in 1943 of corn, beans, rice, sweet potatoes, and other essentials was stepped up in several ways. The War Relief Program set up a food planting program with a grant of half a million dollars from the Insular Emergency Council. One part of the program consisted of free supplies of seeds and fertilizers to those farmers unable to buy them. Another method of increasing food plantings was through the fertilizer rationing program. Cane farmers received fertilizer rations for the usual cane plantings. Applications for additional cane fertilizer were granted only on condition that the cane farmer purchase fertilizer for food crops in an amount equal to 25 per cent of the cane fertilizer.

An indication of the substantial improvement in

the food situation in 1943 was the increase in the rice quota in May. The Food Distribution Administration and the Office of Price Administration made possible at that time a weekly quota of six pounds of rice per person, and the prospects were that this quota could be continued.

Fish has long been a staple in the Puerto Rico diet, and has been almost entirely imported. In 1943, however, the Puerto Rican Department of Agriculture and Commerce received an appropriation of \$250,000 for developing local commercial fisheries. The plan was to open Fisheries Cooperatives, construct docks and refrigerated warehouses,

and to acquire fishing equipment.

labor. Industrial disputes were frequent during 1943, due notably to the dismissal of many employees and to the drastic rise in living costs. The Department of Labor of Puerto Rico assisted in the conciliation of 71 strikes, the most notable being one in the sugar industry where a truce was accepted pending fixing of wages by the Minimum Wage Board. In May the railroad workers struck over pay increases. The workers voluntarily returned to work when the Office of Defense Transportation, under an executive order by President Roosevelt, took over the railroad, and assumed responsibility for negotiations with the workers.

In spite of work stoppages, there was more notable progress in the field of social-labor legislation during 1941-43 than at any other time during the previous 40 years of American control. Some of the legislation enacted dealt with the Land Law, the Minimum Wage Law, the laws creating the Water Resources Authority, abolition of child labor, setting an eight-hour day for the Insular Police, twelve-months pay for school teachers, exemption of homesteads valued at less than \$1,000 from taxation, and many other measures involving the protection, safety, and general welfare of workers. Widespread unemployment was combated to some extent by the migration of 900 Puerto Ricans to French Guiana for work on war contracts. Governor Tugwell initiated a movement to find employment for other workers on the mainland in defense plants.

Government Control of Utilities. Late in 1942 the Puerto Rico Railway, Light, and Power Company and the Mayagüez Light, Power, and Ice Company, Puerto Rico's two largest power companies, were taken over for operation by the Federal Government. After an investigation by the Chavez Committee of the U.S. Senate and a year-long fight to prove that the U.S. Government had acted in bad faith, the two companies sold their properties. The Puerto Rico Water Resources Authority purchased the Mayagüez Company for \$1,700,000 and the Puerto Rico Company for \$10,000,000.

The Language Dilemma. When the Senate Committee, mentioned above, returned to the mainland it was reported that they expressed disappointment over the progress of teaching English in the public schools. Whereupon the Secretary of the Interior brought charges against the Commissioner of Education for alleged failure to increase instruction in English. In reply, Dr. José M. Gallardo, Commissioner, submitted his resignation. But two months later he withdrew it at the request of Secretary Ickes who wrote that he believed both of them were agreed on the goal that practical bilingualism was desirable and could be achieved.

CHARLES F. REID.

PULITZER PRIZES. A series of annual awards established in 1915 by the will of Joseph Pulitzer, publisher of the New York World. On May 3, 1943, the following awards were made by the Trustees of Columbia University on the recommendation of the Advisory Board of the Graduate School of

Prizes in Journalism: (1) For the most disinterested and meritorious public service rendered by an American newspaper, a gold medal costing \$500: The World-Herald (Omaha, Nebraska) for its initiative and originality in planning a statewide campaign for the collection of scrap metal tor the war effort, which was adopted on a national scale by other newspapers. (2) For distinguished editorial writing, \$500: Forrest W. Seymour of *The Register and Tribune* (Des Moines, Ia.). (3) For distinguished correspondence, \$500: Hanson W. Baldwin of *The New York Times* for a report of his tour of the Southwest Pacific. (4) For a distinguished example of a cartoonist's work published in an American newspaper, \$500: Jay Norwood Darly of the New York Herald Tribune for "What a Place for a Waste Paper Salvage Campaign," published of Sept. 13, 1942. (5) For an outstanding example of news photography published in a daily newspaper, \$500: Frank Noel of the Associated Press for "Water!", published Apr. 17, 1942. (6) For a distinguished example of telegraphic reporting on national affairs, \$500: No award. (7) For a distinguished example of telegraphic reporting on international affairs, \$500: Ira Wolfert of North American Newspaper Alliance, Inc., for his series of three articles on the fifth battle of the Solomons. (8) For a distinguished example of a reporter's work, \$500: George Weller of *The Chicago Daily News* for his graphic story of how a Pharmacist's Mate under enemy waters performed an operation for

appendicitis saving a sailor's life.

Prizes in Letters: (1) For a distinguished novel published during the year by an American author, preferably dealing with American life, \$500: Dragon's Teeth, by Upton Sinclair (The Viking Press). (2) For the original American play, performed in New York, which shall represent in the marked fashion the educational value and power of the stage, preferably dealing with American life, \$500: The Skin of Our Teeth, by Thornton Wilder. (3) For a distinguished book of the year upon the history of the United States, \$500: Paul Revere and the World He Lived In, by Esther Forbes (Houghton Mifflin Co.). (4) For a distinguished American biography: Admiral of the Ocean Sea, by Samuel Eliot Morison (Little, Brown & Co.). (5) For a distinguished volume of verse, \$500: A Witness Tree, by Robert Frost

(Henry Holt & Co.).

QUEBEC. A province in eastern Canada. Area, 594,534 square miles, including 71,000 square

miles of fresh water. Population (1941 census), 3,831,882 (1,672,982 male; 1,658,900 female), comprising, by racial origin, French 2,695,032, British Isles races 452,887, Jewish 66,277, Italian British 1818s races 452,887, Jewish 05,277, Italian 28,051, etc. Religious membership (1941 census): Roman Catholic (including Greek Catholic) 2,894,621, Anglican 162,056, United Church 100,196, Jewish 65,683, Presbyterian 56,086, etc. In 1942 there were 95,031 living births, 33,801 deaths, and 33,857 marriages. Chief cities: Quebec (capital) 150,757 inhabitants in 1941, Montreal 903,007 Verdun 67,349 Three Rivers 42,007 Sher-007, Verdun 67,349, Three Rivers 42,007, Sherbrooke 35,965, Hull 32,947, Outremont 30,751, Westmount 26,047, Shawinigan Falls 20,325, Lachine 20,051. Education (1940–41): 703,856 students in schools and colleges.

Production. The gross value of agricultural output in 1942 was \$322,282,000 (field crops accounted for \$144,796,000, milk \$74,814,000, farm animals \$59,718,000, poultry and eggs \$19,322,-000, fruits and vegetables \$11,955,000, maple products \$5,098,000, fiber flax \$2,933,000, to-bacco \$1,530,000, fur farming \$1,367,000). Chief field crops (1943): oats 38,025,000 bu, mixed grains 7,032,000 bu., potatoes 562,800 tons, turnips 392,750 tons, hay and clover 6,702,000 tons, 392,750 tons, nay and clover 6,702,000 tons, alfalfa 191,000 tons, fodder corn 690,000 tons. Livestock (June 1, 1943): 1,905,100 cattle (including 1,018,900 milk cows), 978,900 swine, 574,500 sheep, 329,500 horses, 9,654,900 hens and chickens, 119,200 turkeys. Fur output (1941–42): 601,211 malter worth \$2,804,630. Ficheries 42): 601,211 pelts worth \$3,894,630. Fisheries catch (1942): \$4,194,092. Paper output (1942): 2,189,800 tons valued at \$118,614,967. The gross value of products in the lumber industry for 1941 was \$30,000,903.

Mineral output for 1942 was valued at \$104,-749,101 (gold, 1,101,533 fine oz., accounted for \$42,409,020, other metals \$19,055,076, nonmetallics \$25,280,948, structural products \$18,004,-057). Manufacturing (1941): 8,711 plants, 327,-591 employees, \$393,819,671 for salaries and wages, \$961,162,209 for cost of materials, \$815,-086,829 was the net value of production. 086,832 was the net value of production.

Government. Finance (year ended Mar. 31, 1942): revenue \$91,998,814; expenditure \$72,-153,331; total direct and indirect liabilities (less sinking funds) \$417,137,840. The executive authority is vested in a lieutenant governor who is advised by a ministry of the legislature. There are 24 members (appointed for life) in the Legislative Council, and 86 members (elected by male and female suffrage) in the Legislative Assembly (70 Liberals, 15 Union Nationale, 1 Independent; elected Oct. 25, 1939). Twenty-four members (appointed for life) in the Senate and 65 elected members in the House of Commons represent Quebec province in the Dominion Parliament at Ottawa. Lieutenant Governor, Maj. Gen. Sir Eugène Fiset (app. Dec. 30, 1939). Premier, Adelard Godbout (Liberal).

RACING. The turf enjoyed its most prosperous season in 1943, a year so profitable to the sport of kings that one hesitates to quote figures for fear of frightening our economists, some of whom surely will cry, "Inflation is here!" But any report of horse racing must be written in dollars and

cents so we're off:

Mutuel betting on the nation's tracks ran to more than \$710,000,000, a total so impressive that the year's end found Federal and State governments competing for the privilege of taxing the racing industry. The most remarkable day of the entire season was Labor Day at Aqueduct when 48,774 fans bet the world's record total of \$2,926,-702 on eight races. All along the line, the sport rolled up new highs—in attendance, taxes paid, money distributed to horsemen and funds raised for service relief and other charities. New York

State alone received \$19,050,692 in turf revenue. Racing's contributions to war relief and other funds went over \$4,000,000 even though no meetings were held at such popular tracks as Miami's Hialeah Park and Delaware Park, to mention only two. It was estimated that the sale of war bonds at tracks throughout the nation was better than \$100,000,000, "Back the Attack Day" at Belmont

Park alone netting \$30,000,000.

In this year of unprecedented turf prosperity one horse stood out above the rest. Count Fleet, owned by Mrs. John D. Hertz and 2-year-old leader of 1942, carried right on among the 3-yearolds in a campaign that opened on April 13 and ended all too soon on June 5 when he hurt an ankle in the Belmont Stakes. The son of Reigh Count and Quickly made history in his abbreviated season, becoming the first racer to capture the five big stakes in his division, the Wood Memorial, Kentucky Derby, Preakness, Withers, and Belmont. The Count, with Johnny Longden in the saddle, started in six races and easily won them all. He not only stood head and shoulders above the 3-year-olds, but was the year's leading money winner with earnings totaling the sum of \$174,055.

The juvenile and older divisions had no outstanding figures, the leaders in both groups taking turns winning to scramble the championship

ratings of their classes.

The famous Hambletonian trot, classic of harness racing, was won by Volo Song, owned by William H. Strang of Brooklyn. Volo Song proved the most consistent 3-year-old trotter of the year and leading money winner. The Goshen meeting, giving way to travel restrictions, was held at the Empire City track in Yonkers with the result that thousands of New York sports fans saw the Hambletonian for the first time.

RADIO PROGRAMS. The year 1948 in the annals of radio broadcasting was one of new programs, if not better ones. The records disclose a gain of nearly 14 per cent in the number of sponsored programs carried on the nighttime networks in December, 1943, against the same month of 1942, and an unprecedented rise in the use of radio as an advertising medium during 1943.

Listening, however, did not keep page with the growth in the number of sponsored offerings. An index of sets-in-use reveals that nighttime listening in the last quarter of 1943 ran about 5 per cent behind 1942. Daytime listening in the same quarter, however, was up by the rather narrow margin of 1 per cent. An increase in the total number of programs accompanied by a decrease in the total number of listeners inevitably resulted in an

average of fewer listeners per program.

These conclusions are based on findings by the Commercial Analysis of Broadcasting, a nonprofit organization engaged in the analysis of radio program popularity. According to the C.A.B., of the 137 rated programs in December, 1943, those that were new to sponsored network broadcasting in the summer and fall of 1943 (i.e. less than six months old) reached a total of 33, the largest number of new offerings ever to go on the air within a similar range of time; 24 per cent of the 137 were less than a year old. In the same month the low-ranking shows—those having a popularity rating of less than 10—increased 40 per cent over December, 1942. (C.A.B. ratings are expressed in percentage terms; that is, a rating of 10 means that 10 out of 100 set-owners interviewed reported listening to the program.)

RATINGS OF SPONSORED NETWORK NIGHTTIME PROGRAMS IN DECEMBER

| Rating            | No. of   | Programs |
|-------------------|----------|----------|
| (% of Set Owners) | 1943     | 1942     |
| 40% and over      |          | 4        |
| 35.0–39.9         | 2        | 0        |
| 30.0-34.9         | 4        | 5        |
| 25.0-29.9         | .7       | 4        |
| 20.0-24.9         | 11       | . 8      |
| 15.0-19.9         | 15       | 15       |
| 10.0-14.9         | 30       | 37<br>30 |
| 5.0~ 9.9          | 40<br>26 |          |
| 0.0- 4.9          | 20       | 17       |
|                   | 137      | 120      |

The broadcast year of 1943, therefore, must be appraised as a period in which sponsors and producers sought new radio talent and accepted as a due course the low ratings that are part and parcel of building radio audiences. The assumption that 1943 yielded a crop of radio lemons, because the number of listeners dropped, does not apply. The quality of the 1943 performances stacks up very neatly with 1942 and, of course, outdoes 1941 and previous years.

A comparison of programs with C.A.B. ratings of better than 10 and less than 30, the mid-range, indicates little deterioration in 1943. The midrange that signifies established and continuing audience acceptance contained 63 of the 137 network programs broadcast in December, 1943. The 1942 record for the same month found 64 shows out of

tion was effected voluntarily through the three responsible agencies—the ODT, the Interstate Commerce\_Commission, and the Association of

American Railroads.

A large-scale example of the coordination of railways was the routing of transcontinental traffic. On Feb. 1, 1943, W. F. Kirk, assistant general manager of the Missouri Pacific railway, was appointed regional director in charge of the Western Region of the Division of Railway Transport of the Office of Defense Transportation. At the first indication that a road forming a part of the route of an oil train, for example, is congested, the Office of Defense Transportation reroutes the train to some other road that can handle it expeditiously. Of course the road over which it would have moved under the original routing loses all share in the revenue. Prior to the war this would have been considered robbery; in 1943 it was recognized as necessary coordination. This arrangement was put into effect Mar. 1, 1943, and during the first month of operation the Office of Defense Transportation diverted 326 trains.

When the Los Angeles terminal showed signs of becoming congested as a result of the accumulation of empty cars Mr. Kirk ordered a 36-hour "hold back" on all but vital loads and started preferred movement of empties out of Los Angeles. As a result nearly 3,000 empties were started east out of that terminal and the threatened congestion was avoided. In the past when a road was congested with empty cars the only feasible way of getting rid of them was to load them with revenue

freight.

The ICC gave permission for railways to furnish two or three refrigerator cars for west bound loading in place of the box car that had been ordered. Only the car load rate was charged on the shipment. The movement west bound of empty refrigerator cars had for many years been an expense to the railways and an unproductive utilization of

track and equipment.

Shippers have been in the habit of using freight cars as storage space. By calling attention to fla-grant instances the Office of Defense Transportation largely eliminated the practice during 1943. With car builders strictly rationed as to materials it was impossible for railways to expand their car supply to meet war time shipments adequately. Prompt unloading of cars by consignees had the effect of greatly increasing the car supply.

Whether the railways have been superseded by highway vehicles and airplanes is a question that has been asked with increasing frequency during the last ten years. Hitler asked himself the questionable in the control of the control tion and his answer was to put available money, labor, and materials into road building. It was proved one of his mistakes. Highway vehicles were unable to move the volume of freight and passengers created by an emergency. That was for a country of 224,000 square miles. The performance of American railways in 1943 gave the answer for a country of 3,000,000 square miles. The total number of processors are included. total number of passengers carried one mile was 85 billion. There were 725 billion tons carried one

These figures are compiled in the accounting offices but what the railway operating officer actually saw was impressive. He saw a train of ten coaches, each coach carrying eighty recruits traveling at thirty miles an hour. Thus eighty men were moved a mile with the expenditure of two shovels of coal and one tenth of a train crew's time. He saw a freight train of forty flat cars, each flat car loaded with two tanks destined for the armyeighty tanks moving to the front at twenty miles an hour. This is in contrast to a bus carrying twelve passengers or a truck carrying at most forty

tons of tank parts.

To secure heavier loading of freight cars, the Office of Defense Transportation issued orders 1 and 18. No. I required specified minimum ton-nages for merchandise cars and No. 18 did the same for carload freight. The orders caused some slight delay in loading cars and considerable ex-tra expense, but the net result was a greater vol-ume of traffic moved and the orders were obeyed willingly despite the expense involved. It was thought that Orders 1 and 18, beside inducing heavier car loading, decreased the less-than-carload business.

The incentive to increase the transportation of petroleum was even greater than that for other traffic, and the railways obtained very close to 100 per cent use out of the facilities that they had. However, many railway men acknowledged that the wartime test demonstrated that railways were not the most efficacious method of transporting this commodity. A large volume of business can be moved by pipeline more satisfactorily than by

railway.

The results of railway transport of oil were nonetheless noteworthy. In the week ended Apr. 10, 1943, rail deliveries of petroleum into the eastern coast area average 925,079 barrels daily, in addition to 24,667 barrels a day reaching New England in the form of kerosene in metal drums. A year earlier that amount of oil traffic would have

been thought impossible.

Labor Supply. The men in the operating department of the railways are skilled workmen whose training has not fitted them for work in war pro-duction plants. Therefore the drain on operating department labor was not as great as that on other railway departments. Competent telegraph operators are an exception. They are in demand in war service and the loss of such men has been felt keenly. The railways established schools for teleg-raphers but were unable to turn out skilled men

fast enough to meet their own needs.

Nearly all enginemen and conductors are over draft age but increased railway traffic created a serious shortage of these men. Switchmen are mostly young men. The draft combined with greatly increased switching requirements to make railway yards a bottleneck. At Chicago many of the roads entered into an agreement with the Brotherhood of Railroad Trainmen whereby surplus yard switchmen on one road are loaned to a road having a shortage. The employee retains his seniority on his home road while working for another. Women have been employed on railways to release men for more skilled service or to re-place men drafted. They have been employed mostly in offices although some have gone into the shops. One road alone has employed over 5,000 women. The railways have to some extent alleviated the shortage of maintenance of way labor by securing Mexican labor at 45 cents an hour. See LABOR CONDITIONS.

Railroad Strike Threat. The wage demands of 350,-000 operating railroad workers and 1,100,000 nonoperating employees had been under contest throughout the year. On Dec. 15, 1943, the Big Five operating brotherhoods set December 30 as the date for the start of a progressive walkout which would halt transportation in three days. Six days later the fifteen unions representing the 1,100,-000 nonoperating workers decided to strike the

same day.

Meanwhile Congress itself had stepped into the case of the nonoperating workers and, had the session not closed abruptly for the Christmas recess, the national legislative branch would have lined up behind the rail employees, giving legislative sanction to a wage rise which the Administration held would "break the line" against inflation.

Intervening, President Roosevelt summoned representatives of the carriers and the operating brotherhoods to the White House on Sunday, December 18. The chief executive offered to serve as sole arbiter, and the Brotherhoods of Railway Trainmen and Engineers cooperated, but the Brotherhoods of Locomotive Firemen and Enginemen, Switchmen and Conductors (membership 150,000) declined. Later the nonoperating unions capitulated. On December 27, after a conference which, with apparently satisfactory awards made by the President and with the three (firemen, conductors, and switchmen's) brotherhoods still holding out, the President, not waiting for their strike deadline, ordered seizure of the railroads. On December 29, a bare ten hours before the strike was to begin, the adamant brotherhoods "postponed" it.

This action left uncompleted a resolution, sponsored by Senator Truman of Missouri and Representative Crosser of Ohio, which would certify that the wage rise of eight cents an hour for the nonoperating rail workers, agreed to by the carriers and the unions on August 7, was in full accord with the Railway Labor Act (rail labor has its own law) and other laws, and "shall be held so to be, anything in the law or laws of the United States to the contrary notwithstanding." After the Senate adopted the resolution the House Interstate Commerce committee set out to release rail workers from the restrictions of the stabilization laws, and still was working on the legislation when the railroads were taken over.

Material. Upkeep of both track and equipment was limited by the ability of the railways to obtain the needed material. There was a tendency in Washington to give steel for weapons priority over steel for rails and railway bridges, but Mr. Eastman as Office of Defense Transportation Director urged that a reasonably safe railway roadbed was a prerequisite for military supplies. The result was that the railways obtained sufficient material for their most pressing track repairs. There is an honest difference of opinion as to whether it is sufficient to provide reasonably safe track for fast, heavy traffic.

Equipment. Usually the number and type of cars and locomotives ordered is a compromise between estimated requirements and financial considerations. In 1943, however, orders showed estimates of vital needs without much consideration of the financial question. Locomotives and cars built reflected the quantity of material that could be ob-

tained.

There were 1,054 locomotives ordered in 1943 compared with 1,269 ordered in 1942. The number built in 1943 was 1,070 compared with 947 built in 1942. There were 38,958 freight cars ordered for use by the railways in 1943 compared with 22,307 ordered in 1942. The number built in 1943 was 32,726 (64,479 in 1942) but of those built only 1,135 were for export while 4,908 of those built in 1942 were for export. There were 58 passenger cars ordered in 1943 whereas in 1942 orders were placed for only 2 passenger cars. All passenger cars built in 1943 were for the army except 19 completing previous export orders. It is the consensus of railway operating men

that the cars and locomotives built since 1929, in-

cluding those built in 1943, are not an adequate replacement of equipment that was in good condition in 1929. However, building in 1943 was conditioned not by needs but by quantity of material available. Lack of material to some extent limited repairs to equipment in 1943. In general, however, it was a shortage of labor in the mechanical department that was responsible for in-

adequate repairs.

Eurnings. The earnings of the railways taken as a whole have of course been large. The distribution among individual companies however has not been based on the ability to obtain traffic, rather it has been based on the ability to handle traffic. It is an open question whether on the return of peace conditions some way may be found for continuing routing according to capacity or whether there will be a resumption of competition to obtain traffic with only secondary regard to capacity. In this connection, the question also arises as to whether the railway companies should try to buy bus lines and air lines or should try to prevent them from handling the traffic as satisfactorily as the railways. The New York, New Haven and Hartford Ry. begin in 1943 to buy air routes with the evident intention of furnishing transportation by air as well as by rail for New England; in that way it would conserve profits rather than compete for profits.

The following is an income account for the Class I railways, which include nearly all the mile-

age of railways in the United States.

Results of Operation. The customary measures of railway operation are the ton miles and passenger miles carried. Thus in 1943 the ton miles carried by Class I railways in the United States was 725 millions, compared with 638 millions in 1942.

Types of Motive Power. At a time when the greatest efforts were being made to move freight and passengers with only secondary consideration given to cost, studies were being made of the best type of motive power for railways with cost as a first consideration. The three types studied were steam locomotives (a self-contained unit) electric locomotives (dependent on overhead trolley or third rail) and Diesel-electric locomotives (a self-contained unit). The steam locomotive has been in use for a hundred years, the electric since 1895 and the Diesel since 1925. The facts in regard to these forms of motive power were brought out in a paper by A. G. Oehler and H. C. Wilcox, editors of the Railway Age. The paper was presented before the American Institute of Electrical Engineers

at their 1943 annual meeting.

In respect to first cost the steam locomotive has a decided advantage. The paper indicated that the first cost of a steam locomotive averaged \$35 per cylinder h.p., the electric \$65 per h.p. at the rail, and the Diesel-electric \$87.50 per engine h.p. It will be seen that the bases used are not the same but it was generally agreed that the first cost of the steam locomotive was about a third lower than the electric and less than half of that of the Diesel.

Where coal delivered at the tender costs \$4 or more a ton, the fuel costs of a Diesel-electric are less than those of a steam locomotive. This is for line haul. For switching work fuel costs of Diesels are less than those of steam locomotives even where coal costs less than \$4 a ton because the steam locomotive consumes fuel in the intervals between

switching movements.

The cost of repairs of steam locomotives is higher than the cost of repairs of either Diesel-electrics or electric locomotives. The damage to roadbed is greater for the steam than for either the Dieselelectric or electric locomotive. It is estimated that the life of a steam locomotive is longer than that of a Diesel-electric but just how much longer is still a question of dispute. In the matter of smoke elimination both the electric and Diesel-electric have a great advantage over the steam locomotive.

At present an effort is being made to reduce the weight of Diesel-electrics and the figure of 760,000 lb. for the weight of a Diesel-electric is the

one aimed at.

Financial Situation. In the first week of April, 1943, the average price of 20 representative railway stocks was 87.51 compared with 25.62 just a year earlier. The average price of 20 representative railway bonds was 76.95 compared with 67.53 in the corresponding week of 1942. This improvement in railway credit was due only in part to large current earnings. There is evidence that it was due primarily to the improvement that was taking place in the character of railway securities and in the improvement in the treatment accorded securities of railways in difficulties by the courts.

An instance of this is given in the readjustment of the financial structure of the Colorado & Southern Ry. The final decree approving the extension of bond maturities and modification of interest of the C & S was entered by the Federal court on Mar. 8, 1943.

This was the first plan of railway reorganization approved by the courts since the passage of the McLaughlin act, enacted in October, 1942. The avowed purpose of the act was to foster the reorganization of railway companies that were in temporary financial difficulties without the expense of a receivership (lawyer's fees and banker's commissions).

The C & S plan extends until 1955 the maturity date of bonds and notes falling due in 1944-45 and reduces annual fixed charges from \$1,971,707 to \$927,392 during the period of extension. Thus part of the fixed charges are made contingent on earnings. The contingent charges are made noncumulative, that is if the charges are not earned they are not only not paid but also they are not a

charge on future earnings.

The plan further provides that during its operation all available net income after the payment of contingent interest on the mortgage bonds must be applied to the reduction of debt or to the replacement or increase of working capital as directed by the Reconstruction Finance Corporation. Thus during the working of the plan the stockholders may not be able to obtain any dividends but they will retain their stock.

A plan such as this goes a long way to take from the bankers the power to throw a railway company into receivership arbitrarily. The Colorado & Southern reorganization demonstrated also that railway securities might be sound or unsound irrespective of which bankers offered them, and thus tended to restore confidence in railway securities as invest-ments. It eliminated the fear that railway securities were peculiarly vulnerable to manipulation. While this reasoning was that of only the more cautious investors it was a factor in the improvement that took place in the market price of railway securities during 1943.

What new financing there was in 1943 was either refunding or betterment of existing plant. Nevertheless the improvement in market price permitted this refunding or payment for betterments to be done at less cost to the railway companies than would have been possible at any time since

1929.

A revised plan for the reorganization of the Denver Rio Grande Western Ry. was made public on June 25, 1943. This plan superseded one made in 1942. Both plans were drawn up by the Interstate Commerce Commission. The 1943 plan differed from the one made the year before by increasing the total capitalization to \$155,178,127 from \$154, 521,612, and providing that new equipment is to be paid for out of current earnings. Under the 1943 plan there is no loan for new money and no note to the R.R. Credit Corp. Under the 1942 plan there was a loan of \$2,250,000 for new money and a note for \$265,194 to the R.R. Credit Corp.

The aims of the 1943 reorganizations were to reduce fixed charges to a minimum even if this involved increases of total debt. For instance if a railway company could borrow three thousand dollars by selling three \$1,000 bonds, each carrying 5 and one-half per cent fixed interest, but would have to sell four \$1,000 bonds carrying 6 per cent interest payable only if earned, the plan favored in 1943 was to sell the four income bonds rather than

the three fixed-charge bonds. Prior to 1943 it was the practice to pay out in dividends surplus earnings of extraordinarily prosperous years. Plans meeting ICC and court approval in 1948 required that surplus earnings of prosperous years be used to reduce outstanding debt or pay for additional equipment free from

Inflation. So that higher rates for transportation might not be a factor in inflation, the freight rate increase of 4.75 per cent authorized by the ICC, effective Mar. 18, 1942, was suspended for the period May 15, 1943, to the end of 1943. This suspension order of the ICC was avowedly an attempt to forestall higher prices made under the plea that "higher transportation rates had in-

creased retailer's costs. Scrap. A great effort had been made to collect scrap from railways some time before the general public became intensely interested in the subject. Prior to 1943 it was simply a matter of collecting for government use, but as the railways experienced difficulties in obtaining material for their own needs, it was found that steel which might have been turned into scrap could be welded to existing structures in such a way as to make unnecessary the replacement of the structure. Although the individual repair made in this way might be small the sum of all was very great indeed. Progress was such that the amount of ma-

terials and supplies could safely be reduced and the cost of upkeep lowered probably by several per cent.

Seatrain Competition. While railway executives willingly agreed to the rerouting of transcontinental freight in order to speed war traffic even when this involved a loss of revenue to some, they without exception opposed interchange of cars with seatrains that ran between Hoboken, N.J., and Belle Chasse, La., via Havana. The Interstate Commerce Commission had ordered the interchange of cars where the Seatrain Co. paid a dollar a day for each car.

The railways fought the order in the courts and on Oct. 9, 1943, the Federal court in New Jersey ruled that the order could not be enforced because the Interstate Commerce Commission had no power to order an interchange of cars with a carrier operating outside the territorial waters of the United States. Had the order been upheld it would have permitted the shipment of freight without breaking bulk between New York and California, in part by water, thus making it possible for a new competitor, a water carrier, to cut the transcontinental freight rate.

The list of railways that joined in the appeal gives an idea of how important it is, in maintaining the solvency of American railways, that the rate on long haul carload freight be maintained.

Neither truck nor airplane competition seriously affects the basic business of the railways. Water competition with the railways forced by law to furnish cars to shippers and then forced by order of the ICC to lease the loaded car at a dollar a day to seatrains would cut into this basic business. The court decision in the Seatrain case was therefore a major factor in continuing United States railway operations as heretofore conducted.

Railroad Retirement Board. At the end of September, 1943, there were 161,774 monthly benefits to railway employees in force and the average benefits were: \$66.20 for employee annuities, \$59.09 for pensions, \$31.87 for survivor annuities, \$35.37 for death-benefit annuities. The total tax collections under the Carriers Taxing Act for three months of the fiscal year (beginning July 1, 1943) was \$62,321,231 compared with \$48,923,759 for the first three months of the previous fiscal year. At the end of September, 1943, there was a balance in the Railroad Retirement account of \$311,-187,000. The administrative expenses of the Board for September, 1943, were \$207,000. The amounts paid in to the Board by the employing railway companies together with the amounts paid by the employed workers on the railways was sufficient to cover the benefits and also the administrative expenses of the Board. This is an unusual achievement for a government agency.

In March, 1943, a report of the National Resources Planning Board on Security, Work, and Relief Policies compared the R.R. retirement benefits with those under general social security legislation and pointed out that the general benefits were only about a third as large as those paid under the R.R. Retirement Act. In addition to paying benefits the Board acts as a placement agent. In the fiscal year ended Sept. 30, 1943, the Board placed 248,754 railway employees comparing with 91,352 placements for the year ended Sept. 30, 1942.

WILLIAM E. HOOPER.

RAPID TRANSIT. Total traffic on local passenger transport systems in 1943 reached approximately the predicted figure of 22 billions, as compared with 18 in 1942 and 14.3 in 1941. Of the 18 billion in 1942, about 7¼ were on street cars, 2½ on elevated and subway lines, 1 on trolley busses and 7¼ on motor busses. This record covers both urban and suburban services, but the suburban traffic was only 5 per cent of the total. In that year, also, the number of passengers on busses for the first time exceeded the number on street cars. One marked development of 1943 was the decrease in men employees and the increased employment of women.

The heavy traffic and intensive traffic peaks due to more riders and more rides per passenger had to be handled with relatively less equipment and fewer employees, since it was impossible to obtain the desired number of new cars and busses. The traffic and peak load conditions resulted largely from the grouping of munition and industrial plants, camps, and other war activities at many centers. Other factors were normal increase in population, the adoption of part time and doubled working shifts, and the restrictions

on use of automobiles.

As an example, at Los Angeles the total number of passengers in 1943 was 36 per cent above that of 1942, which in turn was 26½ per cent above that of 1941. Attempts to level off the traffic peaks included staggered working hours in schools, stores, and factories. But the relief was not always as great as expected, since many of those released early with the intent that they should go home preferred to do shopping or attend movie shows.

Postwar developments in local transport services will be a factor in relation to city planning and municipal improvements, with financing as a serious problem. Increased speed of transport is a main consideration, and is one reason for the use of subways in congested city districts and of street-car lines on private right-of-way in outlying districts. At Cleveland, for example, tentative plans provide for a network of rapid-transit street-car lines supplemented by interlocking bus lines. Some of the street-car lines in outlying districts will be on the surface and then diverted to the right-of-way of existing railways so as to be capable of higher speeds. The various lines are to converge in an underground loop at the center of the city.

A notable event was the opening of Chicago's first subway line, on October 17. This is the State St. north-and-south line, five miles in length, including the incline viaducts connecting with elevated railway lines at each end of the subway. It is a deep-level line, with twin tunnels having tracks 44 ft. below the street level. Station facilities are provided on a mezzanine or intermediate floor 18 ft. below the street, having stairways to the sidewalks and stairways and escalators to the train platforms. Steel cars of the elevated railways have been adapted to subway service, as new cars could not be had. Trains use the subway as a link in their through runs.

Work on the second subway (Milwaukee Ave.-Lake St.-Dearborn St.) is 80 per cent completed, but halted by priority restrictions. An extension westward under VanBuren St. to a loop terminal at the river is proposed, with possible further ex-

tension under the river to serve the west-side section of the city. Unification of the elevated and surface lines and the bus company into a single concern is still in an indefinite stage. A plan approved by the city authorities, the Federal Court, and a referendum vote has been rejected by the Illinois Commerce Commission, whose approval is required by law. The Federal Court is interested, since both the elevated and the surface-line companies are in receivership. To break the deadlock, the mayor, in October, proposed municipal ownership of the three services.

municipal ownership of the three services. In New York, the Long Island Railroad, whose traffic is largely of the suburban and commuter class, opened its 4½-mile Brooklyn subway along Atlantic Ave., eliminating 2½ miles of four-track surface line (with a score of grade crossings) and 2 miles of steel elevated line. It is of the shallow type and its roof carries a four-lane street.

A terminal for busses and taxis is included in the great office building of the War Department at Arlington, Va. (a suburb of Washington), to facilitate the movements of some 40,000 employees. It has three 20-ft. roadways and three 10-ft. platforms long enough for 40 busses and 35 taxis. By aid of an electrical dispatching system, 30,000 people can be handled in an hour. Outside are parking spaces for busses, taxis, and 8,000 automobiles. A complicated system of roads with grade separations and interconnecting loops provides for converging and diverging traffic in various directions.

In Buenos Aires, Argentina, ten miles of extensions of the underground railways have been built to connect railway terminals and to serve suburban areas. Investigation by the Argentine government of financial relations between the Buenos Aires Transport Corporation and a Spanish company building the underground lines resulted in a recommendation for merging the latter concern in the former. The underground railway of Madrid, Spain, with 14 miles of line, has built an extension; and in Moscow, Russia, a 4-mile extension of the underground railway was put into service early in 1943. Plans of the Transportation Commission of Toronto, Canada, for postwar developments include outlying street-car lines on private right-of-way and a subway system through the business section. The purpose of this combination, as at Cleveland, Ohio (noted above), is to prevent traffic congestion and expedite local transport.

In England, the London Passenger Transport Board, which serves all means of local transport within an area 40 × 60 miles, carried 3,782 million passengers in the year ending with June, 1939, since which time no traffic records have been published. The equipment of this public body includes a large number of producer-gas busses. The use of producer-gas as fuel for busses and motor trucks is on the increase in various parts of the world, owing to the limited supply of gasoline and the restrictions on its use. Many of the English busses carry signs announcing the use of this gas made from English coal. An interesting feature for popularizing the use of motor busses in England is that a group of 60 bus companies, operating 12,270 vehicles, have cooperated in the organization of a public relations committee to promote and maintain a friendly understanding with the public by various means, and especially by extensive advertising in the daily papers of the large cities.

RECLAMATION, Bureau of A bureau of the U.S. Department of the Interior, which conducts multipurpose irrigation projects in the West. Its 52 projects, 167 dams, and 30 power plants (with an installed capacity of 1,952,962 kw.) have created homes for a million people on 4,000,000 acres of irrigable land. Power and municipal water operations serve an additional 4,000,000.

During the fiscal year 1943, plants on Bureau projects produced more than 9,500,000,000 kw-hr of electrical energy. Installed capacity will reach nearly 2,500,000 kw by May, 1944, but WPB restrictions prohibit further possible expansion for the time being. Construction on new irrigation systems was virtually halted in October, 1942, but some exceptions have since been made. On recommendation of the War Food Administration, the WPB lifted stop orders so as to enable the Bureau to extend irrigation service to 600,000 additional acres by 1945. War Relocation Centers for the Japanese are located on three of the irrigation projects, and Civilian Public Service Camps for conscientious objectors on three others.

The Bureau is preparing a construction program which can be launched quickly at the end of the war to cushion the shock of transition to a peacetime economy. It includes a nucleus of 20 uncompleted projects and at least 50 new irrigation and multi-purpose projects which would provide work for a year for nearly half a million men.

Commissioner in 1943: Harry W. Bashore. See AQUEDUCTS; DAMS; TUNNELS.

RECONSTRUCTION FINANCE CORPORATION (RFC). The Reconstruction Finance Corporation was created by "An Act to provide emergency financing facilities for financial institutions, to aid in financing agriculture, commerce, and industry, and for other purposes," approved Jan. 22, 1932. These powers have been increased by subsequent legislation. The Corporation may perform all functions it is authorized to perform under law until the close of business Jan. 22, 1947, or such earlier date as the President may authorize.

The principal war functions of the Corporation, as distinguished from its normal activities, include: The acquisition of strategic and critical materials by Rubber Reserve Company, Metals Reserve Company, and Defense Supplies Corporation; the financing of defense plants by Defense Plant Cor-

poration; the making available, through War Damage Corporation, of reasonable protection against loss of or damage to property, real or personal, resulting from enemy attack; and the making of loans to businesses engaged in the production of war material. The Corporation may also make loans to public agencies, financial institutions, insurance companies, railroads, drainage, levee, irrigation and similar districts, mining and fishing industries, public school districts or other public

in Australia, New Zealand, and other points in the Southern Pacific, in Great Britain, Northern Ireland, Iceland, India, China, the Middle East, Alaska, and North Africa, and had also provided 200 leave area clubs, aeroclubs, day rooms and other "on-post" clubs and about 100 clubmobiles. Red Cross workers landed with the troops in Sicily and Italy.

The lives of thousands of men were saved by blood plasma prepared from blood collected by

RED CROSS, American National. The year 1943 was the most active in the history of the American Red Cross since its organization in 1881. Acting as the official link between the people of the United States and their Army and Navy it reached into every part of the world where American service men were on duty.

service men were on duty.

By the end of the fiscal year 1943, the Red Cross had approximately 3,000 workers overseas, with many more trained and awaiting transportation. It had established 200 clubs in leave areas

the American Red Cross at the request of the Army and Navy, which asked for a total of 4,000,000 pints during the year 1943. Through the Red Cross Nursing Service, approximately 40,000 nurses had been recruited for the Army and Navy Nurse Corps by December, 1943.

Nurse Corps by December, 1943.

According to the Red Cross annual report for 1942–43, Red Cross Field Directors, overseas and at home, assisted by camp, hospital, and liaison workers, helped solve the problems of 2,409,-220 service men or their families, and of 90,765 ex-service men and families. Home Service workers attached to the Red Cross chapters served 1,410,204 service men or families, 135,488 exservice cases, and 160,353 civilians. Red Cross Public Health nurses made 680,932 visits to or in behalf of 183,571 cases.

More than 3,800,000 workers in the Volunteer Special Services of the 3,757 chapters and 6,084 branches gave the staggering total of more than 256,000,000 hours of volunteer service. The Motor Corps, during the report period from July 1, 1942, to June 30, 1943, made 1,524,000 calls. The Canteen Corps served 13,200,000 meals. Production workers made more than 613,000,000 surgical dressings, 2,215,000 soldiers' overseas kits, and more than 17,000,000 garments. The Red Cross trained and certified 11,947 Hospital and Recreation Corps workers, 84,389 Staff Assistants, 20,057 Motor Corps members, 65,030 Canteen Corps and 1,550 Home Service Corps workers, and 65,000 Nurse's Aides.

workers, and 65,000 Nurse's Aides.

During the same period the Red Cross gave certificates to trainees in Home Nursing, 533,483; First Aid, 2,743,506; Life Saving, 72,457; Swimming, 148,757, and Nutrition, 221,959.

The Red Cross gave relief in 178 disasters in the United States, giving assistance to more than 119,000 persons. Foreign war relief sent abroad since the beginning of the war reached a total of more than \$75,000,000 worth by June 30, 1943, with more than 35,000,000 war victims aided to that date, the relief shipments being made up of Red Cross goods and supplies and goods and supplies bought with funds allocated by Congress for that purpose

gress for that purpose.

As part of the international organization of the Red Cross, the American Red Cross was able to forward 17,354,903 standard food parcels and other aid for prisoners of war, for distribution through the International Red Cross Committee.

More than 17,000,000 boys and girls, enrolled through the schools in the American Junior Red Cross took part in the wartime program.

Cross took part in the wartime program.

The President of the United States is, upon acceptance of the office, president ex-officio of the American Red Cross. Norman H. Davis is chairman of the Central Committee, composed of 18 members, of whom six are appointed by the President to represent the United States Government. See GREECE and POLAND under History.

REFRIGERATION AND AIR CONDITIONING. Food rationing and its corollary, Victory gardens, some day may be credited with giving refrigeration an enormous impetus. The public, years ago, accepted the domestic mechanical refrigerator as a necessity; more recently locker plants where large quantities of foods, especially for farmers, could be stored at low temperatures, came into prominence and now total over 4,600 plants. But more far-reaching possibilities of refrigeration were brought to the attention of Jaymen during 1943, when gardeners in unprecedented numbers were faced with the problem of preserving their harvest which flowed in too fast to consume and which, because of the shortage of pressure cookers, they had difficulty in canning. It was then that more and more people awoke to the desirability of a large refrigerated storage box at low temperatures where garden products, meats, berries, and fowl could be preserved with very little work other than cleaning when the food was frozen at (say) -20° Fahr, and then held at (say) zero. While locker plants are advantageous to farmers especially, the disadvantage is the distance he must go to place or receive his food. A home freezer is much more convenient. Furthermore the cost, both first and operating, is well within reason and the owner can show a net profit in addition to the convenience. The first cost averages about \$200; yearly costs, including depreciation, are \$50. Further, studies at Cornell University indicated that "Some cooked frozen vegetables may be as high in ascorbic acid content as are cooked fresh from the garden vegetables and higher than cooked socalled fresh market vegetables.

The foregoing, however, is a trend and this development will probably not attain its full fruition for some years. On the other hand, use of refrigeration for food preservation in the conventional sense was never in such demand as during 1943, largely because of the enormous shipments of food to all parts of the world. A fair proportion of the refrigeration industry's output was devoted to installations in merchant vessels; mobile refrigeration trailer fleets are in use in some of the tropical countries where American armed forces are

operating; frozen food plants were operating at peak output; the Army Quartermaster Refrigeration Department operated complete ice-making plants at various bases, and refrigerated railway cars were in practically continuous operation. In connection with the last, Canadian railroads during the year experimented with placing the ice overhead in refrigerated cars so as to conserve

Although some years ago there were a few refrigerating systems for air conditioning installed using ice, the vast majority of air conditioning installations are of the electric compressor type. During 1943, however, headway was made in the adaptation of the absorption refrigeration cycle to air conditioning. With this method the energy put into the system is in the form of heat. One such system is the Servel, a variation of that company's gas refrigerator, which the company announced would be available as a year-round air conditioner during the postwar period. Gas flame will be used as a source of energy to operate the refrigeration cycle for cooling the building in the summer and the same flame will be used to generate steam for heating in the winter. The unit will be available for houses. Another manufacturer will also have absorption systems ready for postwar distribution in which any source of heat, including steam, can be used, and this will be available both for the larger houses and for all sizes of commercial and industrial applications for summer or year-round air conditioning.

During the 19th century Lord Kelvin proposed that a refrigeration machine could efficiently be used for heating as well. Experimental work on the idea was continued during the early 1930's but has made little headway due to the cost of electric energy and to some technical handicaps. The advantage of this system is that most of the heat put into the building can be abstracted from the cold outside air and pumped to higher temperature levels. This heat costs nothing, but the electrical energy to pump the heat must be paid for at a high rate. It became increasingly apparent during 1943 that the increased electric generating capacity installed by electric utilities during the war would probably result in an improved rate structure after the war, thus making the heat pump a practical device for year-round air conditioning by electricity.

Probably the most striking contribution of the refrigeration industry to the war has been the development of refrigeration for purposes other than food preservation. Many of these applications are in the industrial field, such as the cooling of a fluid or batch of material. Important 1943 installations of this type included the application of air conditioning in the manufacture of serum albumin, in which refrigeration cools to 34° F. the storage room for incoming blood; chills the process room to 23° F. so as to control the temperature of the solutions, hydrogen iron concentration and alcohol concentration; refrigeration is also used in this process for cooling the alcohol solutions, precipitation mixtures, and the centrifuges. Refrigeration was applied to chill coolant on machine tools to prevent evaporation and forming of mist; and to maintain constant temperature in gage rooms where accuracies of .0005 in. or less are necessary. The reason for this is that metal will expand and contract as much as .0003 in. in a 7½° temperature range, which would make gages highly inaccurate if kept in an uncontrolled temperature.

Several testing chambers where man-made stratosphere temperatures can be maintained were installed for testing lubricants, plane parts, shells, and guns. A modern bomber rising from sea level to 40,000 feet may experience a drop in temperature of 140° in 10 to 12 minutes. This causes a terrific shock contraction of all metals so that a test chamber is desirable for a full understanding of the effect of this temperature change on plane parts and equipment. The development of these chambers raised severe insulation and refrigeration problems which have been or are being solved. The resulting data will be useful in the postwar period in studying frozen foods, destruction of bacteria, preservation of living tissue, and treatment of diseases. Further headway was made during the year in the cooling of resistance-welding electrodes. Basic reason for refrigerating welding electrodes is that the temperature of the electrode face must be held below the fusion point of the electrode metal or the electrode will "alloy" or pick up the netal being welded. (Also see Heating and Ventilating; Electrical Industries. For use of refrigeration as an anesthesia, see Medicine.

CLIFFORD STROCK.

REFUGEES. The occupation of Southern France by the Germans in December, 1942, virtually sealed the doom of the refugees trapped in Axis Europe. Clandestine exits were still open over the Pyrenees for the physically strong, who escaped even during the winter months over the mountains into Spain at the rate of 100 daily. Most of these were Frenchmen seeking egress to North Africa to join the French forces there, simultaneously to escape recruitment in forced labor in Germany. Included among them, however, were some refugees from Central and Western Europe, German and Austrian Jews, Poles, Czechs, Belgians, and Netherlanders.

These had escaped the terrors of Germany's final drive to deport non-Aryans from Western Europe to oblivion in the east. This effort was initiated in Paris in August, 1942, spread quickly to the Low Countries and Southern France and finally affected not only the refugees of Central Europe, but many Jews who were nationals of Western European countries. All but children under two years were taken, first to concentration camps and then to deportation trains, the sick and the infirm, the aged and the young. Families were separated ruthlessly and the deportees dispatched to unknown destinations in Eastern Europe with minimum supplies of food and personal equipment. By the end of 1943 it was generally conceded that most of the 160,000 Central European refugees who had sought refuge earlier in Western Europe and had been unable to escape to Palestine or overseas countries in the Western Hemisphere had been transported eastward. Some 10,000 to 20,000 found temporary surcease in the Italian occupied region of Southern France, only to face similar terrors when the Italian troops departed after the surrender of Italy in the fall of 1943.

The Allied occupation of North Africa brought new hope to some thousands of refugees of many nationalities who had managed to reach that area. Although emigration was impossible, practically all, including over 5,000 Spanish refugees, were released from internment and secured employment under the Allied armies. The Spanish refugees in North Africa were but a small contingent of the 120,000 who remained in France under the German occupation.

The deportations in Europe, underground re-

ports of mass executions and deaths from starvation in Eastern Europe, and realization that emigration from the continent to Palestine and overseas countries had virtually stopped resulted in public clamor in England and the United States for governmental action to rescue Jews from Axis control before the repeated German promise to exterminate them could be effected.

The Anglo-American Conference which met in Bermuda in April, 1943, to consider the problem, found no evidence that the Axis powers would release refugees from Europe and reported that shipping facilities were lacking to remove substantial numbers. Consideration was given to the problem of facilitating the escape of refugees to the neutral countries—Sweden, Switzerland, Turkey, and Spain—and recommendations were made to the British and American governments that the Intergovernmental Committee, formed by the Evian Conference called by President Roosevelt in 1938, be enlarged and that its mandate be extended. The Intergovernmental Committee met in London in August, 1943, and agreed to assume responsibility for all refugees, wherever found, who had been obliged to leave their homes because of danger to their lives and liberties on account of their race, religion, or political beliefs.

The hope that neutral countries might be assisted to receive further refugees was unfulfilled with two exceptions: 6,000 refugees from Denmark reached safety in Sweden after the occupation of Denmark in the fall of the year, and 1,000 Danish refugees had previously been deported to the east. Sweden had previously accepted 20,000 Finnish children, 15,000 Norwegian refugees, and

4,000 refugees from Germany.

On the surrender of Italy, Switzerland, already host to 30,000 refugees from Central Europe, received 80,000 additional in flight from Southern France and Northern Italy including some Italian military personnel. The change of status of Italy in the war precipitated a new movement of refugees in the Near East. Some 10,000 refugees from the Island of Samos and the Dodecanese group fled from German occupation to Syria and Palestine.

This new flux of refugees strained the already overburdened relief agencies in the Near East. In 1942 over 33,000 refugees from the eastern provinces of Poland had reached Teheran through Soviet Russia. Approximately 1,200 of this group finally reached Palestine by way of Karachi and Bombay, India. Some 21,000 were placed in temporary camps in East Africa and 1,500 crossed the Pacific to Mexico to await repatriation to Poland after the war.

The problem of displaced persons created lively discussion at the first meeting of the Council of the United Nations Relief and Rehabilitation Administration at Atlantic City, N.J., in November, 1943. See Relief and Rehabilitation. An estimate was presented that 21,000,000 persons were displaced from their homes in Europe, approximately two-thirds beyond the boundaries of their own countries. This estimate did not include figures of persons displaced in the western areas of Soviet Russia occupied by Germany. The largest groups identified were some five to six million forced laborers in Germany and one and a half to two million Allied prisoners of war.

The problem of war refugees in the Far East was declared to be comparable in size to that in Europe. There has been substantial movement from the eastern and central areas of China to the northwest and the southwest. Many thousands

of overseas Chinese have fled from Burma, Malaya, French Indo-China, Thailand, and the Dutch East Indies to India, Australia, and China.

The 44 governments meeting at Atlantic City recognized the postwar problem of displaced persons to be commensurate in size and complexity to the problem of relief itself to the impoverished populations of war-torn Europe and the Far East. The dangers to health and the maintenance of order, the lack of adequate transport, and the problems of reestablishing industry and agriculture for the production of sorely needed supplies were recognized as elements of an over-all problem that challenged the resources of governments and gave urgency to the effort to organize united action for relief.

See Bohemia and Moravia, Denmark, and the other German-occupied countries, and also Mexico, Sweden, Switzerland, under *History*; Leacue of Nations; Relief and Rehabilitation; United Nations; War Relief Control Board; also see interested groups listed under Societies.

GEORGE L. WARREN.

REHABILITATION. See ARMED FORCES. For Army and Navy Rehabilitation Centers, see Prisons. For Office of Vocational Rehabilitation, see under Vocational. For foreign rehabilitation programs, see separate countries under History.

RELIEF. Relief activities within the United States, which were an important feature of the prewar years, have either become unnecessary as a request of all-out production for war or have been supplanted by permanent welfare programs. The Federal work relief programs, notably the Civilian Conservation Corps, National Youth Administration, and Work Projects Administration, were in process of liquidation in 1943. Continuing Federal programs are the three types of public assistance described under Social Security Board and aid to farmers in the form of loans (see Agriculture). State and local programs continue in the field of "general relief" without the aid of any Federal funds (see the table under Social Security Board).

Private welfare activities are described under PHILANTHROPY; SOCIETIES AND ASSOCIATIONS; and articles on churches and other organizations.

Relief for war sufferers in various parts of the world continued on unprecedented scale in 1943. See the statistics under War Relief Control Board; relief groups listed under Societies; the Federal activities described under Relief and Rehabilitation; Refucees.

RELIEF AND REHABILITATION. The Office of Foreign Relief and Rehabilitation Operations, under the direction of Herbert H. Lehman, spent much of 1943 in preparing for the work ahead in areas liberated from the enemy. The organization built staff, gathered data on the needs in the various occupied countries, and did some stockpiling. It developed fortified supplemental foods, packaged medical units, and economical relief clothing. The OFRRO Committee on Health and Medical Care labored to gather and analyze available information concerning disease prevalence and important health problems in areas which may be reoccupied and other disease conditions which are likely to be an important part of relief and rehabilitation; and to estimate the amount and kinds of essential health and medical supplies and equipment which must be provided

which must be provided.

Policy turned into action when Allied troops took over North Africa and that territory became a field for relief and rehabilitation operations. A survey having revealed that milk for the children was the immediate need, distribution was begun, some 200,000 children receiving slightly under a pint of milk a day. Similar work of emergency and special relief was also undertaken, especially in Tunisia, where distribution of essential supplies to distressed civilians was executed close on the heels of Allied military operations. This distribution was for the most part not gratis but by sale through the normal channels of trade as there the situation indicated a lack of supplies rather than an inability to pay for them. In Algiers and French Morocco members of the OFRRO field mission engaged in the liberation of refugees from internment camps.

By Executive Order of Sept. 25, 1943, OFRRO became a part of the Foreign Economic Administration—along with several other agencies which were merged into FEA at that time.

On November 9 many duties and responsibilities of OFRRO were absorbed by the United Nations Relief and Rehabilitation Administration (UNRRA), which was created when the United Nations and other nations associated with them in the war—in all forty-four—signed an Agreement at the White House. UNRRA was created with a view to giving effect to the determination of these nations that, as stated in the preamble of the Agreement, "immediately upon the liberation of any area by the armed forces of the United Nations or as a consequence of retreat of the enemy the population thereof shall receive aid and

relief from their sufferings, food, clothing, and shelter, aid in the prevention of pestilence and in the recovery of the health of the people, and that preparation and arrangements shall be made for the return of prisoners and exiles to their homes and for assistance in the resumption of urgently needed agricultural and industrial pro-duction and the restoration of essential services."

On the day following the signing of the Agreement, an UNRRA Conference opened in Atlantic City. As one of its first acts, the Council appointed Herbert H. Lehman Director General. The Conference further reached agreement upon a practicable program of defined scope, formulated a plan for financing the program, devised a procedure for ascertaining and meeting needs, and organized various committees.

The headquarters of the Administration are in Washington, where an administrative staff of international experts is being brought together.

RELIGIOUS ORGANIZATIONS. According to the 1943 Yearbook of American Churches, published under the auspices of the Federal Council of the Churches of Christ in America, 67,327,719 of the 133,952,672 persons in the United States (1942 census estimate) belong to one or another of the 256 existing religious denominations. This represents a church membership of 50.3 per cent of the population and an increase of 12.9 per cent for the period 1931-42. Of the total church members, 32,247,084 belong to the larger Protestant bodies (having 50,000 or more mem-

bers), 16,858,210 to the Roman Catholic Church, and 3,341,652 to the Jewish Congregations.

The table on page 544, reprinted from the publication cited above, lists in alphabetical order the religious bodies in the United States having 50,000 or more members. The 52 churches in this list comprise over 97 per cent of the church membership in the nation, the remaining 3 per cent being divided among the other 204 bodies. For more complete statistics on the larger churches, see the separate articles in this volume supplied by an official of each. See also FEDERAL COUNCIL OF CHURCHES OF CHRIST; JEWISH WEL-FARE BOARD; and SOCIETIES AND ASSOCIATIONS under Christian Endeavor, Churches, et cetera.

RHODE ISLAND. A New England State. Area: 1,214 sq. mi. Population: 713,346 (1940 census); 699,-266 (1943 population) estimate)

266 (1943 nonmilitary estimate).

Statistics. Statistical information pertaining to each of the 48 States and the District of Columbia has been assembled in comparative tables which appear in the following articles. Acriculture; Mineral Production; Roads and Streets; Schools; Social Security Board; Taxation; Universities; and Vital Statistics. The census of manufactures has been suspended for the time being; for the latest information, see 1941 Year Book, p. 430.

Elections. See the article Elections in the United States; also, for incumbents, House of Representatives and Senate.

Legislation. See the separate article on STATE LEGISLATION.

Officers. The Governor is J. Howard McGrath

(Dem.), inaugurated in January, 1943, for his second two-year term; Lieutenant Governor, Louis W. Cappeli; Secretary of State, Armand H. Coté; Attorney General, John H. Nolan.

RHEUMATIC FEVER. See CHILDREN'S BUREAU. RHEUMATIC HEART DISEASE. See MEDICINE AND SURGERY.

RHODESIA, Northern. A British protectorate in South Africa. Area, 290,320 square miles. Population (Jan. 1, 1941), 1,381,829, including 15,188 Europeans. Chief towns: Lusaka (capital), Livingstone, Broken Hill, Fort Jameson, Mazabuka, and Abercorn. Education (1940): 20 European controlled schools and 1,914 students enrolled, and a number of noncontrolled schools. There are government schools for natives at Mongu, Mazabuka, Kasama, Abercorn, Lusaka, and Ndola, and a number of

mission schools, many of which receive government grants.

Production and Trade. The chief agricultural products are maize, wheat, tobacco, coffee, oilseeds, citrus fruits, and timber. Mineral output (1939): 215,065 metric tons of copper, 1,556 metric tons cobalt alloy, 12,899 metric tons zinc, 80,137 fine oz. silver, 4,645 fine oz. gold, 384 metric tons vanadium. Trade (1940): imports £5,639,203; exports and reexports £10,936,858. Roads (1940): 8,175 miles.

Finance. Budget estimates (1943): revenue £2,635,000; expenditure £2,890,000. Revised estimates for the year 1942 placed revenue at £2,909,000 and expenditure at £1,903,000.

Government. The Government is administered by a governor, assisted by an executive council. There is a legislative council consisting of the Governor as president, 5 ex-officio members including the secretary for native affairs, 4 nominated official members, 8 elected members, and a nominated unofficial member to represent the interests of the native African community. Governor and Commander in Chief, Sir John Waddington (appointed May 31, 1941). See Chemistry under Foreign.

RHODESIA, Southern. A British self-governing colony in South Africa. Area, 150,333 square miles. Population (June 30, 1941), 1,448,000, including 1,372,900 natives, 68,954 Europeans, and 6,521 Asiatics and colored. Chief towns: Salisbury (capital), with suburbs, had 51,761 inhabitants (1941 census); Bulawayo, with suburbs, 40,433; Umtali; Gwelo; Gatooma; Que Que; Eiffel Flats, Shabani, Selukwe, Bindura, Fort Victoria. Education (1941): 125,000 students in schools of all kinds.

Production and Trade. Maize, wheat, cotton, to-bacco (32,195,000 lb., 1942–43), groundnuts, and fruits are the chief agricultural products. Livestock (1941): 2,633,536 cattle, 285,831 sheep, 150,581 pigs. Butter manufactured by the creameries during 1942 totaled 1,149,000 lb. (1,351,000 lb. in 1941); cheese 496,000 lb. (361,000 lb.). In 1941 the sale of oranges and lemons amounted to 158,462 cases. Mineral output for 1942 was valued at £9,377,166, the chief minerals were gold (760,030 ounces valued at £6,384,255), silver (£16,063), chrome, asbestos, mica, coal, tungsten, tin, and nickel; base metals represented £2,976,848 of the total. During 1943 bauxite deposits estimated at 2,500,000 tons were discovered near Penhalonga, Southern Rhodesia.

The census of industries in 1941 showed £10,-

1ne census of industries in 1941 showed £10,-641,000 as the value of gross output, £5,460,000 as the cost of materials and fuel purchased, and £5,181,000 for the value of net output; there were 42,380 employees (including 5,185 Europeans), total salaries and wages paid amounted to £3,797,000. Trade (1940): total imports £9,550,-701; total exports £13,399,357.

Communications. In 1940 there were 1,361 route miles of railway and 1,588 route miles of supplementary road motor service in operation; 12,557 miles of roads; and 2,769 route miles of airways linked the principal towns.

linked the principal towns.

Finance. Budget estimates (1942–43): revenue £7,050,500; expenditure £9,736,269, including £4,106,105 for war expenditure. The budget (1933–34) provided for an expenditure of £14,948,000, of which more than £9,000,000 was for war expenditure and £3,000,000 for a loan, free of interest, to the British Government. On Mar. 31, 1942, the net public debt outstanding was £19,-293,849 (£10,308,150 of this amount represented external debt).

Government. The Government is headed by a governor, assisted by an executive council. There is a legislative assembly of 30 members elected for a five-year term by British subjects over 21 years of age, subject to certain qualifications (23 Unionists and 7 Laborites were elected on Apr. 14, 1939). In October of 1937 a law (authorized by the constitution) was passed providing for the establishment of native councils in native reserves, representative of the local chiefs and native residents, to advise the Governor and manage certain local affairs. Governor and Commander in Chief, Sir Evelyn Baring (app. July 28, 1942): Prime Minister, Sir Godfrey M. Huggins.

History. Early in 1948 the Prime Minister of

History. Early in 1948 the Prime Minister of Southern Rhodesia, Sir Godfrey Huggins, looking ahead to conditions in Africa after the end of World War II, gave his opinion that the Rhodesias and Nyasaland should be grouped, and that the East African territories might form another group. He explained that a gentleman's agreement existed between Rhodesia and the Dominions Office in London by which both agreed not to discuss controversial issues during wartime, but at the end of the war the question of Rhodesia's future would require settlement. See Asbestos; Great Britain under History.

#### RHODIUM. See PLATINUM.

RICE. The rice crop of the United States in 1943, as estimated by the U.S. Department of Agriculture, was a record yield of 70,025,000 bu., exceeding the 1942 high of 64,549,000 bu. by about 8 per cent and the average crop by 48 per cent. This bumper crop was produced on 1,500,000 acres at the average rate of 46.7 bu. per acre versus 1,450,000 acres in 1942 and 44.5 bu. per acre. According to preliminary figures, the seasonal average price per bushel received by farmers in 1943 was \$1.774 and the estimated value of production was \$1.24,243,000 compared to \$1.626 and \$104,957,000 in 1942. The accompanying table lists the four rice producing States in 1943.

| State              | Value                    | Acres<br>Harvested                       | Production (bushels)                                 |

was largely in maintenance and repair, especially on routes subjected to war traffic much heavier than that for which they were designed. New roads were mainly for access to war plants and camps. While the total number of vehicles on country roads declined considerably (especially automobiles), the number and weight of motor trucks increased, so that many roads were damaged beyond normal maintenance limits. But

shortage of men, money, and materials prevented heavy repair or reconstruction. Much damage was attributed to lax enforcement of load limit regu-

lations for trucks.

There is little information as to the amount and character of highway freight traffic, but a study by the Public Roads Administration in 1940 indicated 59-billion ton-miles, with 80 per cent on main roads and 20 per cent on local roads. With fewer vehicles and heavier loads these figures may apply for 1943. Main roads represent 12 per cent of the mileage and carry 72 per cent of the vehicle-miles, but average 883 vehicles daily as against 46 for local roads. The Federal speed limit of 35 miles an hour was exceeded by 53 per cent of cars timed. Automatic recorders of vehicles passing 600 counting stations showed an approximate decline of 30 per cent from the number in 1942.

ber in 1942.

Work of the Public Roads Administration for the fiscal year 1943 was almost entirely on road construction and services directly connected with war activities, the regular Federal-aid program being practically suspended. Only 8,445 miles were built, as against 10,178 in 1942. They included 4,148 miles on the Federal-aid system, 1,056 in elimination of railway grade crossings, 2,836

miles of access roads to war industries and camps, 168 miles in the national forests and 131 miles of miscellaneous construction. There were 187 railway grade crossings eliminated and 196 were protected by signals or other devices. The total cost of all completed work was \$274,801,799, of which the Federal government paid 72 per cent. Of new projects, only 5,861 miles were approved, the lowest in many years, and all but 1,108 miles were for access roads (as above). At the end of the year 6,154 miles of road and 144 grade-crossing eliminations were under construction, at an estimated cost of \$306,423,945.

The latest available statistics on highways in

the United States are shown below.

Work on the 1,530-mile Alaska Highway in 1943 has consisted of widening to a 24-ft. gravelled surface, reducing critical grades, and building permanent bridges to replace temporary structures carried away by ice or floods. Civilian traffic has been excluded on account of war conditions and lack of gasoline stations. Both the United States and Canada are planning connections with this highway from the south and east. Work is in progress on the last link in U.S. Highway 95, to form a continuous route between the Canadian and Mexican frontiers.

<sup>&</sup>lt;sup>a</sup> As of Dec. 31, 1942, unless otherwise noted. <sup>b</sup> Rate changed from 2 cents to 3 cents, Jan. 1, 1942. <sup>c</sup> Taxicabs included with trucks. <sup>d</sup> Weighted average rate.

In 1943, Congress and nearly every State considered legislation affecting highway development, but there was little definite action. State authorities were reluctant to assume great expenditures until there was assurance of adequate funds, since reduction of income has resulted from the reduced number of cars licensed. Shortage of labor led to a limited use of prison labor, and North Carolina proposed the reopening of prison camps.

Highway construction will be a large factor in the postwar employment problem, especially in its wide use of semi-skilled and unskilled labor. But it must be planned for necessary improvements and not as a relief program. It is important that the preliminary work on plans, legal affairs, and financing should be completed well in advance, so that contracts may be let promptly, in order to have work ready for the men released from the fighting forces. A PRA program for postwar construction consists largely of relieving traffic on routes through and around cities, and improving sections likely to form links in a broad system of highways. Projects aggregating 2,500 miles have been approved, and it is expected that Federal funds matched by State funds will permit of a \$500,000,000 construction program. Five States in 1948 initiated constitutional

changes to prohibit the use of funds from road taxes for any but the original purpose of road improvement. In Texas, plans are reported complete for \$26,000,000 of road work that can be put under way within 30 days; this is about 25 per cent of the total road work needed in that State. A Vermont law prohibiting billboards on highway right-of-way was upheld by the State Supreme Court. The original line of the Southern Pacific Railway around the north end of Great Salt Lake, abandoned after the building of a direct line across the lake, has been utilized as a highway; the rails were removed as scrap and plank flooring was placed on the old bridges. In Florida, the 85-mile road to Key West, on the abandoned line of the Florida East Coast Railway, has been completed.

As a contribution to war work, flight strips along public roads, but not necessarily paralleling them, have been constructed in several cases. They serve for military use, to provide route markers, and to provide facilities near small towns having no airports. They may be developed later as aids to civil aviation. In general they are about 8,000 ft. long and 500 ft. wide, with paved runways 4,000  $\times$ 150 ft. Nearly all State highway departments have laboratories for testing materials and for experi-mental work, and much research has been carried on, particularly as to surfacing and subgrade conditions. The great value of a strong base or founda-tion is shown by the way in which old roads in England have stood up under the severe conditions

of war traffic.

City streets will require much postwar attention, as they have suffered severely in many cases from excess of heavy traffic, heavy loads, and inability to obtain men and materials needed for maintenance, repair, and repaving. Changes in and extension of street layouts, as well as street widenings, will be involved in improving city plans and in the clearing and rehabilitation of slums and blighted areas. Similar work will be included in new housing and subdivision projects, where street plans are sometimes on the rectangular block system, but perhaps more often on an irregular layout, with curved streets, depending somewhat on the topography of the site. The Federal Housing Administration (q.v.) is interested in such projects, since it insures housing mortgages. Therefore, it has issued general recommendations as to layout of major and minor streets, and also as to street and sidewalk paving. These last provide for roadways 26 ft. wide between curbs and 50 ft. between lot lines.

Projects for high-speed roads with few crossroad intersections (known as express-ways, freeways, super-highways, limited-access roads, or arterial streets) are becoming numerous, but mainly in relation to traffic in and near cities. Long-distance projects, similar to the 160-mile Pennsylvania Turnpike, are mainly in the preliminary stages. In relation to streets, however, these projects are special features designed to provide rapid and uninterrupted movement of traffic that must needs pass to and from main highways or through the city. These include depressed and elevated streets and separation of grades at intersecting streets, together with a minimum of points of access to the high-speed street.

At Detroit, it is proposed to extend the outlying "industrial express-way" across the city. Chicago has plans for several radial super-highways (elevated or depressed) having 8-lane road-ways; these would aggregate 70 miles at a cost of \$205,000,000, of which the initial stage would be 32 miles. Denver is building a 5-mile line having two 32-ft. separated roadways and two 2-lane parallel roads for local service. Cincinnati is building a 2½-mile depressed line to Lockland along the bed of the old Miami & Erie Canal, with two 24-ft. lanes and a 4-ft. separating strip. At Baltimore, the new Patapsco River bridge is part of a planned 8-lane express-way through the city to form a link in the Atlantic States Super-

highway.

At Pittsburgh, an express-way now being built is to extend northward about 7 miles, with two 24-ft. lanes and 6-ft. dividing strip on an 80-ft. right-of-way. That city has also the Duquesne express-way extending along the Allegheny River and passing under all the river bridges; parallel with it, on the land side, are two 30-ft. roads for local traffic, separated by a viaduct carrying the Pennsylvania Railroad. At Philadelphia, a com-bined city and State program for 1944 includes wide streets to the municipal airport and the South Philadelphia industrial district, with later plans for improved routes to the Navy Yard and the Delaware River bridge. Included in the postwar plans at New York is the landscaping and gardening of new links in the Brooklyn-Queens system of parkways, which is exclusively for passenger travel.

In Canada, the U.S. Army is building a road from the Peace River (in Alberta) to the mouth of the Mackenzie River on Great Slave Lake, in connection with the supply of Canadian oil for Alaska. The 153-mile closing link in the Trans-Canada highway, between Hearst and Geraldton, Ontario, was completed in July. There are no gasoline stations as yet, so the road is not open for tourist travel. Another Canadian project is a 156-mile road from Champlain, New York, to the Quebec Bridge, by-passing all towns to provide for rapid travel between Quebec and New England points. A curious project is for a road on a causeway or embankment across Canso Strait to replace existing ferry service between Cape Breton Island and the mainland of Nova Scotia.

On the Central American section of the Inter-American highway, from the Mexican border south to the Panama Canal, the U.S. Army has stopped work on its 250-mile stretch in Costa Rica, having more important work elsewhere. When the war began, there was obvious advantage in an overland route to the Panama Canal, avoiding the risks of the sea route. Of the 1,570 miles, about 1,000 miles were completed, but in disconnected sections and of various types. For the necessary links, Congress agreed to pay 66 per cent of the cost—the Army to build them rapidly as pioneer trails, and the Public Roads Administration to finish them as permanent roads. Under present conditions, such a road seems to have no emergency value, but the PRA will continue its work, assisted to some extent by the several countries. The Trans-Isthmian Highway, parallel with the Panama Canal, was completed in 1943.

Mexico is completing a modern road from Nuevo Laredo, on the Rio Grande boundary, to the Guatemala frontier, and has a 420-mile project for roads connecting Torreon and Durango with the Pacific port of Mazatlan. On the South American section of the Inter-American Highway there has been little progress, but the PRA has planned some 525 miles of lateral or branch roads. In Venezuela, a 750-mile road was opened, with concrete paving for 150 miles and the remainder to be so paved within four years. Bolivia plans a 400-mile road from Cochabamba (Elev. 8,600 ft.) to Santa Cruz (Elev. 1,200 ft.) to link an existing railway between the Pacific port of Arica and Cochabamba, with another railway from the Atlantic port of Santos, Brazil, now being extended to Santa Cruz. This highway link will be built in less time and at less cost than a railway in mountain country.

In Colombia, a 512-mile road is planned from Bogota to Carreno, on the Orinoco River, to open up forests of rubber trees. With the expected early completion of a 500-mile road north from Lima, Peru, across the Andes to Pucalpi, head of navigation on the Ucayali River, the time of transport from Lima to Iquitos, on the Amazon, will be reduced from 30 days to 5 days. These projects indicate, by their lengths, the needs of intercom-munication throughout South America, but their development will be slow.

The Burma Road being blocked by Japanese invaders at its western end, the United States forces are building a jungle link from a point in Assam southeast to reach the Burma Road and thus open an emergency route from India to Chungking, temporary capital of China. A new link in the road from Chungking to Kwangyuan (Sze-chuan), opened in March, shortens the distance from 580 miles to 386 miles.

See Bridges; State Legislation; Tunnels. For highway mileages and new construction, see the various foreign countries, under Transportation.

Compare Motor Vehicles.

E. E. RUSSELL TRATMAN.

ROCKEFELLER FOUNDATION, The. Chartered in 1913 for the permanent purpose of "promoting the well-being of mankind throughout the world." The present program of The Rockefeller Foundation is concerned with certain definite problems in the medical, natural, and social sciences, the humanities, and public health. For work in these fields the Foundation appropriated in 1943 approximately \$7,685,000.

Medical Sciences. In the medical sciences the Foundation's interest centers mainly on research and teaching in the field of nervous and mental diseases and on the improvement of medical services. Its appropriations in 1943 for work along these lines included \$96,000 to Harvard Univer-

sity, \$50,000 to New York University, and \$150,-000 to McGill University for the development of teaching and research in psychiatry; \$190,000 to Johns Hopkins University for research in psychiatry; \$20,000 to the American Psychiatric Association for expenses of its Committee on Psychiatric Nursing; \$17,000 to the Judge Baker Guidance Center toward support of a children's psychiatric consultation center; \$8,200 to the American Association of Psychiatric Social Workers toward the maintenance of a War Service Office to handle personnel problems; \$16,440 to the Pennsylvania Hospital for studies on apraxia and related phenomena in children; \$9,750 to the University of Cincinnati for research in neurophysiology; \$20,750 to the University of Edinburgh for research in neurosurgery, neurology, and phychiatry; \$30,000 to Medical Administration Service, Inc., New York City, a voluntary association established to study and promote methods and plans for more economical and effective mediand plans for more economical and elective medi-cal prevention and care; \$50,500 to Group Health Cooperative, Inc., New York City, toward the development and operation of medical insurance programs; \$100,000 to the University of Chicago for research in industrial diseases and health conservation plans; \$15,000 to Harvard University for the development of legal medicine; \$25,-000 to introduce teaching of hospital methods into hospitals of the Eighth Service Command, Dallas, Texas; \$20,000 to the American Library Association for a survey of the Army Medical Library.

Natural Sciences. The program in the natural sciences is concerned mainly with experimental biology. Among the appropriations in this field in 1943 were \$30,000 to the University of Pennsylvania for work dealing with evolutionary changes in Sciara insects; \$7,500 to the University of Wisconsin for research in immunogenetics and \$19,-500 to Iowa State College for research in physiological genetics; \$43,500 to Columbia University for investigating problems of intermediate metablished olism; \$9,775 to the Institute of Andean Biology, Lima, Peru, for studies on animal fertility in the high Sierra regions; \$44,000 to the Jackson Memorial Laboratory for establishing and maintaining a Mammalian Stock Center and for research in the transference of living ova; \$20,000 for the expenses of putting into effect an agricultural program in Mexico; \$30,250 to the Ministry of Public Health in Uruguay toward construction and equipment of a laboratory for the Research Institute of Biological Sciences; \$20,000 to Washington University for research in general physiology and experimental embryology; \$9,000 to the University of Illinois for researches on the biochemistry of amino acids; \$13,300 to the California Institute of Technology for investigations of the structure of antibodies and the nature of immunological reactions; \$9,500 to Duke University for research on the physical chemistry of the proteins. Grants were also made in the field of mathematics.

Social Sciences. In the social sciences studies of international relations and war and postwar problems are receiving major emphasis. In general aid is given to projects contributing to the understanding of important social problems and to the development of personnel and methods. Some of the 1943 appropriations were \$150,000 to the Social Science Research Council; \$100,000 to the Foreign Policy Association for its nation-wide program of education and research in international relations, \$56,000 to the Institute of Pacific Relations, \$64,800 to the Royal Institute of Interna-

tional Affairs, \$50,000 to the League of Nations, \$48,600 to the National Institute of Economic and Social Research, \$22,680 to the University of Oxford, and \$15,000 to the Escola Livre de Sociología e Política de São Paulo, for research activities; \$20,000 to the National Research Council for studies of war and postwar problems in ethnogeography; \$45,000 to Stanford University for a flexible wartime research program in its Food Research Institute; \$105,000 to the National Institute of Public Affairs for recruiting and training personnel for the Federal services; \$70,000 for work in economics at the Institute for Advanced Study; and \$24,000 to Columbia University for a study on the theory of public utility rates.

Humanities. The program in humanities is concerned with studies in language and foreign culture tending toward better international understanding, with regional studies in the United States and Canada, and with such means as drama, radio, motion pictures, libraries, and museums for raising cultural levels of contemporary society. Grants made during 1943 included \$85,000 to the American Council of Learned Societies for developing personnel and resources for teaching modern languages, and \$10,000 to the same institu-tion for a center of English study in the Escuela Normal Superior, Bogotá, Colombia, \$10,000 to Cornell University for intensive summer courses in Russian civilization, \$5,000 to Oberlin College for Far Eastern studies, \$17,650 to the Library of Congress for expanding its Archive of Hispanic Culture and \$12,000 for organizing and developing its collections of Slavic materials; \$15,000 to the University of Saskatchewan, \$14,500 to the University of Chicago, \$8,500 to the University of Kentucky, and \$50,000 to the University of Minnesota for regional American studies; \$40,000 to the Library of Congress for preserving motion pictures, \$6,000 to the National Film Society of Canada, \$12,150 to the American Council of Learned Societies for special microfilming projects; \$8,910 to the National Central Library in London, \$27,500 to the American Library Association for developing a library school in São Paulo, Brazil, and \$13,000 for a union catalogue of library holdings in Mexico City, \$70,000 to the National Institute of Anthropology and History, Mexico, for reorganizing its library resources and developing its teaching and research program, and \$20,000 to the Pan American Union for preparing its files of Latin American newspapers and art materials. Grants were made for the development of special university programs of instruction in the humanities and for protecting cultural treasures in war areas.

Public Health. The Foundation appropriated \$2,200,000 for the work of its International Health Division in 1943. This work included research on a number of diseases, among them, yellow fever, malaria, influenza and other respiratory diseases, typhus, rabies, diphtheria, syphilis, and hookworm; demonstrations in the control of certain of these diseases in their environments; cooperation with governments in the organization or improvement of important services of central or local health departments; and the development of public health education. Considerable attention is given to nutrition surveys. In addition, \$250,000 was appropriated for the use of the International Health Division in supporting the activities of The Rockefeller Foundation Health Commission in connection with war emergency problems.

Officers. The executive officers of the Foundation in 1943 were Walter W. Stewart, chairman of the board of trustees; Raymond B. Fosdick, presi-

dent; Thomas B. Appleget, vice president; Alan Gregg, M.D., director for the medical sciences; Warren Weaver, director for the natural sciences; Joseph H. Willits, director for the social sciences; David H. Stevens, director for the humanities; Wilbur A. Sawyer, M.D., director of the Interna-tional Health Division; Norma S. Thompson, secretary; Edward Robinson, treasurer; George J. Beal, comptroller; Thomas M. Debevoise, counsel; Chauncey Belknap and Vanderbilt Webb, associate counsels. The offices of the Foundation are at 49 West 49th Street, New York City.

ROWING. Although the Poughkeepsie and Yale-Harvard regattas, rowing's biggest races, were not held, college and club oarsmen enjoyed a fairly good campaign in 1943. Navy, Penn, Columbia, Harvard, Princeton, Cornell, M.I.T., and Rutgers California kept the sport going on the Pacific coast, where the Huskies from up Washington way won their annual dual regatta with the Bears.

Harvard took the Adams Cup for the sixth year in a row by defeating Navy and Penn. Cornell, a guest starter in the race, finished third ahead of the Quakers. The Childs Cup sprint, contested by Princeton, Penn, and Columbia annually since Civil War days, found two guest crews—Navy and M.I.T.—dominating the competition on the choppy Severn. Navy took an early lead to triumph easily, with M.I.T. second, but the historic trophy went to Princeton, which came home third.

A real college champion was hard to pick, for the honors seemed to shift almost as often as the tide. Cornell, for example, trailed Navy on the Schuylkill, but later defeated the Middies at Annapolis. Columbia and Rutgers each won once in their two dual meetings

The senior championships of the National Association of Amateur Oarsmen were held in Philadelphia, with Art Gallagher of the Penn A.C. making a one-man show of the regatta. Gallagher com-peted in five races and was returned a winner five times. He took the single sculls, quarter-mile dash, Association singles, paired with Charles Mc-Intyre in the doubles, and stroked a victorious Penn A.C. four. The Wyandotes of Michigan won the title for four-oared crews with coxswains. The Barnes Trophy went to the Fairmount Rowing Association of Philadelphia.

RUBBER. The story of the 1943 synthetic rubber program will, in years to come, stand as a great, if not the greatest, monument to American ingenuity and industrial achievement. It was made possible by the pooling of secret practices and formulas hitherto guarded as the life blood of the rubber, chemical, and petroleum companies. Its military necessity is reflected in the data that a large bomber contains over 1,200 pounds of bulletproof rubber in its gasoline tanks; a battleship requires over 100,000 pounds; a medium-sized tank, 500 pounds; and army trucks, used in excavations, may have tires 9.5 feet in diameter totaling 3,000 pounds per truck.

The following statistics were reported in Chemical and Engineering News for Sept. 25, 1943, by Bradley Dewey, who on September 29 replaced William Jeffers as Rubber Director. The Baruch Committee in September, 1942, had advised the production of 1,037,000 long tons of synthetic rubber in the United States, and 37,000 long tons in Canada. The September, 1943, program had a rated capacity of 850,000 long tons of synthetic rubber, 79 per cent of the committee's recommendation. This compares with a natural rubber consumption in 1941 of 800,000 long tons.

This miracle of American industry represents a growth, in a little over two years, of an entirely new chemical industry worth three quarters of a billion dollars. In peacetime to have achieved it in fifteen years would have been astounding.

By the end of 1943 there had been made avail-

By the end of 1943 there had been made available to essential drivers 5,000,000 synthetic tires, 7,000,000 new tires from frozen stocks, 1,000,000 reclaimed "Victory tires," and 4,000,000 tires turned in under the "idle tire purchase plan." In 1944 essential civilian travel will require a mini-

mum of 30,000,000 tires.

The final rubber program for the United States and Canada calls for 850,000 long tons (100 per cent) of synthetic rubber annually. This will include 735,000 tons (86.5 per cent) of Buna S; 75,000 tons (8.8 per cent) of butyl rubber from isobutylene; and 40,000 tons (4.7 per cent) of neoprene from calcium carbide. On Nov. 10, 1943, Director Dewey pointed to the successful completion of the neoprene program, but indicated that the butyl rubber production for inner tubes had been disappointing—only 35 per cent complete. Especially bad was the fact that the rayon cord for heavy duty tires would not approach full operation for another year.

Buna S or (GR-S). The Buna S production, constituting 86.5 per cent of the total rubber program, will be divided as follows: 83,000 tons (9.8 per cent) from thermal cracking of petroleum; 82,000 tons (9.6 per cent) from butane; 317,000 tons (37.3 per cent) from butylene; and 253,000 tons (29.8 per cent) from alcohol. The scheme calls for a number of "standard unit" plants of 30,000 tons annual production each. By Septem-

ber, 1943, 50 per cent of the rated capacity of butadiene was finished and ready for operation, 80 per cent of the styrene, and 90 per cent of the copolymer. The amazing growth of these plants during 1943 is shown in the increase of production from 38,000 tons of synthetic rubber during the first half year, to 45,000 tons during the month of December alone. The low point in the country's stockpile of crude and synthetic rubber will be reached early in 1944. (GR-S stands for "Government Rubber-Styrene.")

Butadiene. Most dramatic chapter in the 1943 Buna S synthetic rubber program is the fantastic undertaking to produce 688,500 tons of a chemical, butadiene, which a few years ago was an expensive curiosity on the laboratory shelves of a few specialized chemists. This represents 263,000,000 gallons of butadiene, a volume twice the yearly production of ethyl alcohol or ten times the toluene output in 1939. The methods by which butadiene can be produced will now be reviewed.

butadiene can be produced will now be reviewed. The aldol process worked out in Russia, has presumably been the chief process by which the Germans manufacture their butadiene. In this process, lime and coke made into calcium carbide produce acetylene, which is hydrated in the liquid phase, using a mercury salt catalyst to produce acetaldehyde. The acetaldehyde is then converted into butadiene by the steps outlined below. Or the acetaldehyde may be obtained from ethyl alcohol by dehydrogenating in the vapor phase at 200–350° C. over a copper-zinc oxide catalyst. Ninety per cent yields are achieved. The acetaldehyde so produced is converted to aldol at 0° C. in the presence of dilute alkali; again, 90 per cent yields are obtained. The aldol is easily hydrogenated over a nickel or copper catalyst in aqueous solution at 80–90° C. and a hydrogen pressure of 1,500–3,000 pounds per square inch; yields of 85 per cent are reported. The final step, conversion to butadiene, is most difficult; it is carried out under a phosphate-sulfonic acid catalyst at temperatures below 400° C.; a yield of 90% is realized.

The alcohol process is important in Russia. Ostromyslenskii (1915 and 1942) succeeded in fermenting ethyl alcohol directly to butadiene in two steps: dehydrogenation followed by dehydration. Subsequently (1932–42) the Polish scientist, Lebedev, developed a one-step process based on passing the alcohol over a mixed dehydrogenation-dehydration catalyst at 400° C.; employing aluminum oxide and aluminum hydrosilicate for dehydration, and zinc oxide for dehydrogenation. The Lebedev process is capable of wide modifications, which are being applied by Carbide and Carbon Chemical Corporation and Publicker Commercial Alcohol Company. The Office of Rubber Director has approved a 10,000-ton plant; a yield of 5 to 5.9 pounds of butadiene per bushel of grain is estimated. In peacetime alcohol at fifteen cents a gallon, from molasses, could compete with petroleum in producing butadiene.

The glycol process developed by the Northern Regional Research Laboratory was considered in the Baruch report. By selectively fermenting corn starch to 2,3-butylene, which can be polymerized at 500° C., this process produces 7 to 7.5 pounds

of butadiene per bushel of corn.

A chlorination-dehydrochlorination method, not used in the Government synthetic rubber program, involves the addition of chlorine to butenes, followed by dehydrochlorination.

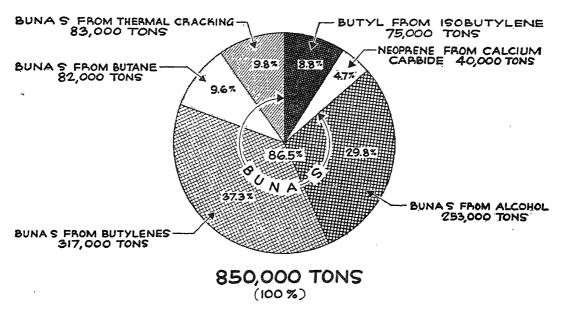

Petroleum processes are several. Projects for high-temperature cracking, at one time scheduled to produce more than 100,000 tons of "quick

butadiene," were canceled by the Rubber Director in the early fall of 1943, as the following more desirable processes swung into full production. In one new process, butenes are converted directly to butadiene over a catalyst made by the Standard Oil Development Company. Several other petroleum companies have provided additional butene from butane, by processes contributed by the Universal Oil Company, Phillips Petroleum, and the Houdry Catalytic Development Company. Although little technical information has been released on these processes, all of them require reactivation of the catalyst as it becomes covered

with coke from the petroleum.

Natural Rubbers. Meanwhile, of course, full production of plantation crudes in Ceylon, Africa, and South America are being realized; but the Latin American countries will contribute less than 50,000 tons of crudes during 1944, and negligible

liams Company have produced Kempol from in-edible domestic vegetable oils. It holds promise as an extender for many rubbers with which it is compatible. Koroseal, familiar polyvinylchloride prewar synthetic, can be bonded directly in order to line tanks. Postwar uses for it include insect screens which may be rolled up like window shades, flexible water pipes for homes, washable and grease-proof wallpaper coatings, and outdoor furniture seats. It is now used as crash padding in tanks; and, recently, as a sponge rubber substitute. Marvinol, the thermoplastic vinyl substitute for rubber, is being manufactured by the Glenn Martin Company into inner tubes, surgical gloves, and molded goods. They require no vulcanization. Norepol, the rubber-like material synthesized from soybeans and other vegetable oils by the U.S. Department of Agriculture's Northern Research Laboratories, went into production in 1943 at a vol-

amounts will be obtained from cryptostegia and

nounce will be obtained from cryptosegia and guayule plantings in the United States.

New Rubbers. What's what in the synthetic rubber field, has been compiled by Halliman in informational letter #7242 entitled "Synthetic Rubber" and published by the Bureau of Mines. This reports the various types of synthetic rubber, their manufacturers, processes, and characteristics of finished products.

An alphabetical list of the new rubbers or new developments which were announced in 1943 follows. Agripol, a synthetic rubber from soybeans by Reichhold Chemicals, Inc., will reach an annual production at the end of 1943 of 25,000 tons. It is inferior to natural rubber in tensile strength and abrasive resistance, but its static properties are superior to other products. It is obtained when fatty acids from soybean oil are polymerized with ethylene glycol, obtained from dehydrated ethyl alcohol. Ameripol (see YEAR BOOK for 1941, p. 107) has been produced this year in a form which remains flexible even at -70° C. Sherwin-Wilume of 12,000 tons. Its stretch is only one-third and its tensile strength only one-sixth that of natural rubber, but it is used for shoe heels, gaskets, and other uses requiring resistance to abrasives.

Paracon is a war baby elastomer delivered by the Bell Telephone Company. It is prepared by the condensation of dibasic acids with glycols or by condensation of hydroxyacids. It differs from other ester rubbers such as Norepol, Kempol, etc., in the method of vulcanization, and in being made from relatively pure intermediates which permit higher degree of condensation, with corresponding favorable gains in tensile strength and elongation. However, the intermediates are too special to compete with butadiene rubber; and Paracon will, therefore, remain a specialty product. With long-chain dibasic acids, products with very low brittle points are obtained; with short, highly polar acids, elastomers with remarkable resistance to oils are produced. Its poor electric properties, low resistance to acids, alkalies, and steam limit its application,

Reilly Tar and Chemical Corporation is now producing the pyridine analog of styrene, 2-vinylpyridine, whose copolymers with butadiene and/ or styrene were investigated. Sponge rubber using synthetic instead of natural rubber, is replacing the "air foam" now produced by Goodyear for military purposes. R-196—Syntoflex, developed by Felt Products Manufacturing Company, is being applied as a synthetic rubber strip in fuel tanks wherever a high resistance to water compression and abrasion are required. Uskol was announced by the U.S. Rubber Company. Witcogum, developed from vegetable oil by Wishmich-Tumpeer, shows promise as a chemurgic rubber which may be used independently or blended.

Reclaim. The reclaim industry more than quadrupled its capacity during the year. Heavy duty tires for trucks for military combat still require 10 to 20 per cent crude rubber, and authorities were unanimous in stipulating the use of a rayon in place of a cotton tire cord for heavy duty service.

Postwar Rubber. Will it be natural or synthetic? Synthetic rubber at 15¢ a pound at least will peg natural rubber to a low price. Synthetic rubber can be tailor-made, with temperature and ingredients controlled to give a desired set of properties; natural rubbers differ widely in properties made as they are in the tree at the mercy of wind, sun, and rain. Synthetic rubber is inferior to natural rubber in some respects, but these differences are diminishing. After the war, however, some natural rubber will still be required in heavy duty tires. In a year's time, each factory worker can produce 100 tons of synthetic rubber while the oriental gathers a single ton of natural rubber; this is an interesting angle to the question of wages. Preparedness may dictate synthetic plants in readiness at all times. These are a few of the many aspects which will finally determine whether the new synthetic rubber equipment will remain after the war.

See Brazil, Costa Rica, Honduras, and other tropical American republics under History; CHEM-ICAL INDUSTRY; CHEMISTRY under Petroleum and Petroleum Gases; National Bureau of Stand-ARDS; UNITED STATES under Production; WAR PRO-DUCTION BOARD under Substitution.

RUMANIA. A monarchy of southeastern Europe. Capital, Bucharest. King, Michael I, who ascended the throne Sept. 6, 1940, upon the abdication of his father, Carol II.

Area and Population. As a result of successive territorial cessions made during 1940, the area of Rumania was reduced from 113,884 square miles to about 74,884 and the population from an estimated 19,422,600 to 13,493,000 at the census of Apr. 6, 1941. The recovery of Bessarabia (area, 17,100 sq. mi.; pop., 3,200,000 in 1939) and Northern Bukovina (area, 2,300 sq. mi.; pop., 500,-000 in 1939) in July, 1941, as a result of the German-Russian war gave Rumania a total area of about 94,284 square miles and a population officially estimated at 17,018,000 in October, 1941. A decree of Oct. 18, 1941, incorporated in Rumania a part of Russia proper east of the Dniester, including the city of Odessa.

The territories permanently ceded by Rumania were Northern Transylvania (area, about 19,300 square miles by Rumanian estimate; population, 2,385,987) and Southern Dobruja (area 2,982 square miles; population, 378,344). Northern Transylvania was ceded to Hungary on Aug. 30, 1940, and Southern Dobruja to Bulgaria on Sept. 7, 1940. About 1,150,000 Rumanians and 1,200,-000 Magyars and other non-Rumanians were estimated to have been ceded to Hungary with Northern Transylvania, while Bulgaria obtained an estimated 78,000 Rumanians and 300,000 non-Rumanians in Southern Dobruja. Rumanians comprised an estimated 85 per cent of the kingdom's total population in 1941 as against 72 per cent prior to the 1940 partition. Minority groups in 1942 included about 507,000 Germans, 528,000 Magyars, and 183,000 Slavs. In the territory left to Rumania after the 1940 partition, the live birth rate was 24.3 per 1,000 inhabitants (preliminary) in 1941 (26.5 in 1940); death rate, 18.7 per 1,000, probably excluding war losses (19.2 in

Estimated populations of the chief cities on Jan. 1, 1989, were: Bucharest, 648,162 (nearly 1,000,000 in April, 1941); Chisinău (Kishenev), 112,500; Cernaŭti (Czernowitz), 109,698; Iasi (Jassy), 104,471; Galati (Galatz), 102,232; Cluj (ceded to Hungary), 100,272; Timisoara (Temesvar), 89,872; Oradea-Mare (ceded to Hungary), 80,872.

Education and Religion. Infant and primary schools of all types in 1938–39 numbered 19,394, with 2,623,000 pupils; secondary schools, 925, with 204,254 pupils in 1937–38. Adult primary schools had 669,187 enrolled (1938-39). Besides various special and vocational schools, there were three universities—at Bucharest, Iasi, and Cernauti—with 30,771 students in 1937–38. The university of Cluj was tranferred to Hungary in 1940. According to a 1938 estimate, there were 13,200,000 Orthodox Church members, 1,426,813 Greek Catholics, 1,500,000 Jews, 1,200,000 Roman Catholics, 720,000 Reformists, 400,000 Lutherans, 260,000 Moslems, and 75,000 Unitarians.

Production. About three-fourths of the population are engaged in agriculture. The kingdom normally produces an export surplus of cereals, livestock, produces an export surplus of cereals, investock, and animal products. Production was (in metric tons): Wheat, 2,455,000 in 1941; barley, 548,500 in 1940; rye, 91,700 in 1940; oats, 481,800 in 1940; corn, 4,625,000 in 1941; beet sugar, 77,000 in 1940-41; rapeseed, 14,800 in 1942; linseed, 15,100 in 1941; hempseed, 29,700 in 1941; rapeseed, 15,000 in 1941; hempseed, 29,700 in 1941; rapeseed, 15,000 in 1941; hempseed, 29,700 in 1941 sunflower seed, 222,100 in 1942; soybeans, 21,500 in 1942. The 1939 wool clip was 25,500 metric tons. Livestock in 1941 included 1,102,596 horses, 2,841,638 cattle, 1,655,241 swine, and 7,861,582 sheep.

After Russia, Rumania is Europe's leading petroleum producer. Output declined from the peak of 8,700,000 metric tons in 1936 to an estimated 5,460,000 tons in 1941 and 5,000,000 tons in 1942. Of the 1941 production, 1,821,600 metric tons were consumed in Rumania and the remainder exported, mainly to Germany. Other mineral and metallurgical output in 1940 (in metric tons) was: Lignite, 2,386,000; coal, 257,000; iron ore, 130,000; pig iron, 140,000; steel ingots and castings, 267,000 in 1939; manganese ore, 40,000; copper, 600; lead, 5,200; bauxite, 40,000; molybdenum ore, 160; silver, 15.6. There were 3,512 industrial establishments with 278,919 workmen in 1937. Flour milling, brewing, distilling, and oil refining were the principal manufacturing lines.

Foreign Trade. The following figures are in millions of lei (1 lei equaled \$0.0054 at official rate in 1941). Imports, 27,411 in 1940 (22,846 in 1939); exports, 36,780 (26,809). For the chief import and export items and distribution of trade

in 1940, see 1942 YEAR BOOK.

Finance. For the fiscal year ended Mar. 31, 1943, budget estimates placed ordinary revenue and expenditure at 71.2 and 72.5 billions of lei, respectively. Extraordinary war expenditures, to be met chiefly by loans, were estimated at 134 billions (21 for the army and 113 for state-owned enterprises engaged in war production). In 1941-42 ordinary expenditures were about 44.8 billion lei and war expenditures 90 billions. The cost to Rumania of supporting German troops quartered in the country was reported at about 12 billion lei annually.

The announced public debt declined from 103,-344,200,000 lei on Mar. 31, 1940, to 100,148,-000,000 (internal, 36,991,000,000; external, 63,-157,000,000) on Mar. 31, 1941. Currency notes in circulation (millions of lei): 48,800 on Dec. 31, 1920, 64,840 on Dec. 11, 1940, 96,650 31, 1939; 64,849 on Dec. 31, 1940; 96,650 on Dec. 31, 1941; 122,095 on May 31, 1943. Average exchange rate of the lei: \$0.0071 in 1939, \$0.00502 in 1940, \$0.00486 in the first half of

Transportation. The state railways in 1940 had 9,505 miles of line. Double tracking of the main lines to speed the movement of supplies to Germany and the construction of feeder lines opening up new mineral and raw material resources were reported under way in 1943. Traffic statistics for the state railways in 1942: Passengers, 47,384,-000 (31,780,000 in 1941); freight, 23,703,000 metric tons (24,743,000 in 1941). The increase in passengers in 1942 was due to the relaxation of travel restrictions. Highways extended 67,330 miles. The state operated regular steamship services on the Danube and Black Sea, and also an air network connecting the principal cities. The German air network also took in Bucharest.

Government. The position of King Carol II became untenable in the autumn of 1940 as a result of the Russian annexation of Bessarabia and Northern Bukovina and the hostility of Germany and the pro-Nazi Iron Guard in Rumania. On Sept. 4, 1940, the King released Gen. Ion Antonescu from prison and appointed him Premier. The following day Carol suspended the authoritarian constitution of Feb. 27, 1938, dissolved Parliament, and gave Antonescu almost complete governing powers. On September 6 Antonescu forced the King to abdicate. Carol proclaimed Crown Prince Michael as his successor and fled abroad. Michael immediately confirmed Antonescu as Head of the State and Premier; the King retained only the right to grant decorations and amnesty, command the army, and control coinage. King Carol's Front of National Regeneration, which in 1938 replaced all political parties, was succeeded by the pro-Nazi Iron Guard on Sept. 15, 1940, when Rumania was proclaimed a National Legionary State. Following the crushing of an Iron Guard revolt in January, 1941, Premier Antonescu formed a new Cabinet Jan. 27, 1941, with army officers holding most of the portfolios. His regime became increasingly a direct military dictatorship dependent upon German support. A decree-law of Sept. 23, 1942, signed by every member of the Cabinet, declared Antonescu to be the only law-making authority and transferred to him from the Supreme Court the power to promulgate a new constitution.

Under Antonescu, Rumania adhered to the Three Power Pact (Axis military alliance) on Nov. 23, 1940, and to the Anti-Comintern Pact on Nov. 25, 1941 (see Axis Powers). It joined Germany in the attack upon the Soviet Union June 22, 1941, and declared a state of war with the United States Dec. 12, 1941. For war declarations against Rumania, see table under WORLD War. See below for developments during 1943.

#### HISTORY

Rumania in Axis Toils. The international position and internal condition of Rumania was already desperate at the close of 1942 (see 1943 Year Book). During 1943 it became increasingly hopeless. Following the debacle of German and Rumanian armies before Stalingrad in December, 1942, the Axis forces in southern Russia were driven steadily westward. December of 1943 found the advancing Red Army within 150 miles of the Rumanian frontier.

The Rumanians had been thrown into the arms of Hitler by the Russian seizure of Bessarabia and Northern Bukovina in June, 1940. They joined the German attack upon Russia a year later primarily to regain these lost territories. Now it was plain that Marshal Antonescu had gambled unsuccessfully upon a German victory; that Bessarabia and Northern Bukovina were already lost; and that the remainder of the kingdom faced invasion and probable devastation by the Russians, whom the great majority of Rumanians hated and feared.

The kingdom seethed with growing war weariness, defeatism, and political unrest. Yet it remained bound to Antonescu's discredited military dictatorship and the German alliance for lack of a practical alternative. To overthrow Antonescu and establish a pro-Allied regime would merely invite open German military occupation and a Hungarian attempt to seize Southern Transylvania. Moreover it would probably facilitate the dreaded Russian invasion. To continue in the war meant not only growing danger from Russia but also from Anglo-American air forces, which in the autumn acquired bases in southern Italy within easier striking range of Bucharest. The American air raid of August 1 upon the Ploesti oil refineries (see World War), which destroyed nearly 50 per cent of their productive capacity, gave clear warning of the danger lurking over Rumanian cities and towns. With Turkey moving closer to war, Allied landings in the Balkans and naval operations in the Black Sea loomed as growing possibilities

On the other hand the combined police power of the Antonescu dictatorship and the German Gestapo formations in Rumania stood ready to pounce upon any move toward capitulation or withdrawal from the conflict. Hitler held constantly over Antonescu two threats—to replace him with Horia Sima, leader of the abortive Iron Guard revolt of January, 1941, and to support Hungary in the bitter Rumanian-Hungarian quarrel over Transylvania. The Fuehrer employed these weapons to raise his demands upon Antonescu for more Rumanian fighting men and greater quantities of oil and food to help Germany carry on the struggle with Russia.

Hitler-Antonescu Negotiations. While Rumania was still stunned by the news of the disaster at Stalingrad, a political crisis of some sort developed early in January. According to reports reaching other countries, the police discovered and broke up an Iron Guard revolutionary plot, making numerous arrests. Other sources insisted that the plot was manufactured by the Germans as an excuse for

eliminating opposition elements.

The reports of the plot coincided with the reported arrest in Italy of Sima while on his way to Bucharest to initiate the uprising. Since Hitler had been holding Sima in reserve in Germany as a club over Antonescu, the story of his "escape" was received with scepticism. At any rate, it was announced that the Italian police had turned Sima over to the German authorities in Italy on January 6. A few days later Antonescu arrived at Hitler's headquarters for a conference, at which he was said to have asked an explanation of the German attitude toward Sima.

The principal issue discussed at this conference, however, was apparently the Rumanian demand for a German guarantee against Hungarian threats to invade southern Transylvania. Instead of concessions, Antonescu received new German demands for troops, oil, and food. At the same time Hitler tightened his grip on Rumania by placing responsibility for maintaining order on the German military commander there and appointing a German Elite Guard officer as head of the Rumanian secret police. To offset the hostility aroused in Rumania by these developments, a large German goodwill delegation arrived in Bucharest in mid-February. Meanwhile the Rumanian Government had ordered the evacuation from Bucharest and other large cities of all "nonessential civilians."

Antonescu and members of the Rumanian General Staff had another two-day conference with Hitler and the latter's chief military and diplomatic aides on April 11-12, when unspecified political and military issues were discussed. Indications were that Antonescu agreed to supply a limited number of additional troops for service in Russia but insisted on keeping the bulk of his forces at home as a precaution against both a Hungarian attack and an Axis collapse in Russia. Meanwhile Rumanian casualties, estimated at some 400,-000 early in the year, continued to mount. Up to mid-June the Rumanian press had published the names of 25 generals and 41 colonels killed on the Russian front. Meanwhile desertions in the army had become so numerous that the Premier took severe measures to check them.

Peace Feelers. Early in June former Prime Minister George Tatarescu and an associate, Constantine Barsan, were arrested on charges of making contact with British and American agents in Turkey and Syria. They were transferred to a German prison following the arrival in Bucharest in mid-June of Reich Minister Heinrich Himmler's righthand man in the Gestapo, Dr. Ernest Kaltenbrunner, who was placed in charge of all Rumanian police forces. Kaltenbrunner's appointment accompanied reports of growing anti-German sentiment and unrest in Rumania. Marshal Antonescu was said to have dismissed a number of officials for expressing hostility to German control of his regime. According to Allied sources, Antonescu himself had made overtures to the Anglo-American powers for a separate peace.

The Rome radio on July 6 announced that the Rumanian Premier was there conferring with Mussolini on problems of joint interest. However, Mussolini's overthrow on July 25 ended whatever hopes Antonescu may have placed in him to help

solve Rumania's dilemma.

Withdrawal from Russia. Growing apprehension and panic swept Rumania as the Russian summer offensive continued on its victorious way. Largescale evacuation of occupied areas in Russia and of Bessarabia and Northern Bukovina began in

September. In the same month a number of prewar Premiers and party leaders met and reportedly urged the immediate withdrawal of all divisions from Russia for the defense of Rumania's frontiers. In a joint letter to Premier Antonescu they protested against "the anti-British and anti-American character you have given to the war." They declared that once Bessarabia and Northern Bukovina were "reunited with the mother country," mania had no motive for continuing the war.

The last three months of 1943 brought numerous indications that even the pro-German members of Antonescu's regime were eager to withdraw from the war in Russia in preparation for the impending domestic storm. Civilians were ordered to surrender all their arms by October 30 under penalty of death. In mid-November Antonescu again conferred with Hitler at the latter's headquarters. Immediately afterward the Germans took over the military administration of Odessa at Rumania's request and Antonescu began to withdraw the seven or eight divisions still serving in Russia. Several of these divisions were reportedly trapped in the Crimea.

Germans Tighten Hold. American bombing raids on Sofia, Bulgaria, during November spurred the evacuation of nonessential civilians from the principal Rumanian cities. The British Ministry of Economic Warfare stated on November 24 that Rumania had completely scrapped its food-rationing program and ended all restrictions on the public consumption of oil. There was a quiet exodus of Germans occupying unofficial positions. At the same time German military and police officials clamped a tight hold upon the kingdom. The Rumanian armed forces were purged of anti-German elements. German troops assumed responsibility for guarding public buildings and essential serv-ices and the Gestapo proceeded to round up numerous persons suspected of pro-Allied sympathies.

To add to the growing confusion, Rumanian army circles reflected an intensifying determination to settle accounts with Hungary and seek to regain that part of Transylvania ceded to Hungary in 1940 by the Vienna Award. Meanwhile a syndicate of corrupt Rumanian officials and others in close contact with King Michael and the Antonescu regime were said to be enriching themselves by monopolizing scarce commodities and levying heavy tribute on Rumanian business concerns. Their activities served to intensify the inflationary spiral, which by the end of 1943 had increased prices on most commodities from five to eight times the prewar level. They also were charged with extorting large sums from those Jews who had escaped deportation or slaughter.

Carol Tries Comeback. The prospect of the impending collapse of the Antonescu regime led former King Carol of Rumania to renew his efforts to obtain entry into the United States from his Mexico City refuge (see 1943 Year Book). On October 22 he announced that he had retained an American public relations firm to present his case to the American people and thus secure revoca-tion of the State Department edict barring him

from the country

Carol accepted an invitation to broadcast a fiveminute address explaining his position over the Columbia Broadcasting System on November 23. However the Office of Censorship in Washington rescinded its previous approval of the broadcast a few hours before it was to have been delivered. The former King attributed the cancellation to "maneuvers coming from interested circles." Free Rumanian movement in the United States led by Carlos Davila, former Rumanian ambassador to Washington, was hostile to Carol's efforts to associate himself with the movement. RYE. The United States rye crop in 1943 was estimated at 30,781,000 bu. by the U.S. Department of Agriculture compared with the 1942 crop of 57,673,000 bu. and the 1932–41 average production of 38,589,000 bu. The acreage harvested for grain in 1943, 2,777,000 acres, was a drop of 28 per cent from the 3,860,000 acres in 1942 and 16 per cent below the average production of 3,293,000 acres for the ten years 1932–41. The acreage of rye, which for the past several years has been expanding for soil conservation purposes, this year was reduced toward the level of acreage usually grown on the thinner soils. The acreage yield per acre was 11.1 bu. in 1943 compared to 14.9 in 1942 and 11.4 for 1932–41. The season average price per bushel (preliminary) received by farmers was 97.0¢ and the value of production was estimated at \$29,870,000 in 1942. The following table lists the leading rye States in 1943.

| State .                              | Value  | Acres<br>Harvested   | Production (bushels)   |

ST. CHRISTOPHER. Same as St. Kitts, see Leeward Islands.

ST. HELENA. A British colony in the South Atlantic, consisting of the island of St. Helena (47 sq. mi.)

and its dependencies—Ascension Island (34 sq. mi.) and the smaller Tristan da Cunha group (Tristan da Cunha, Gough's, Inaccessible, and Nightingale Islands). Populations (1940 estimates): St. Helena, 4,710; Ascension, 169; Tristan da Cunha, about 163. The figures do not include British garrisons. Capital, Jamestown on St. Helena (1,381 inhabitants in 1931). New Zealand hemp is the chief export product. Some vegetables and fruit are raised for local consumption. Shipping (1940): 276,778 tons entered and cleared. St. Helena and the dependencies are administered by an executive council consisting of a governor and five official members. There is an advisory council of six appointed unofficial members. Governor, Maj. William Bain Gray (app. Mar. 18, 1941).

It was announced by the War Department in Washington in 1943 that United States armed forces had landed on Ascension Island Mar. 30, 1942, and built an airport which was used for antisubmarine patrols and for the delivery of United States planes to Allied forces in Africa.

#### ST. KITTS. See LEEWARD ISLANDS.

57. LUCIA. An island colony in the Windward Islands group of the British West Indies. Area, 233 square miles. Population (1940 estimate), 71,-222. Capital, Castries, 12,000 inhabitants. Vital statistics (1940): 2,204 births, 1,091 deaths, and 319 marriages. Education (Jan. 1, 1941), 45 schools and 10,896 students enrolled; also, there were 2 secondary schools and an intermediate school. The principal products are sugar (8,794 tons, 1942), copra, limes, cacao, and bananas. Trade (1941): imports £362,285; exports £153,-636 (sugar £93,344). Shipping (1940): 1,261,-998 tons entered and cleared.

Government. Finance (1940): revenue £103,403; expenditure £115,662. Public debt, Dec. 31, 1940, £104,681. St. Lucia is governed by an administrator (subordinate to the Governor of the Windward Islands), assisted by an executive council. There is a legislative council over which the Governor presides. Administrator, Arthur Alban Wright (app. June 10, 1938).

ST. PIERRE AND MIQUELON. A French colony comprising two small groups of islands near the south shore of Newfoundland. Area: St. Pierre group—10 square miles; Miquelon group—83 square miles. Total population, 4,175. Capital, St. Pierre. Fishing is the chief industry (804,595 kilograms of fish were caught during 1942). Trade (1940): imports 28,614,000 francs; exports 16,475,000 francs (official exchange rate of the franc for 1940 was \$0.0288). Textiles, wines, salt, and dried) and fish products were the principal exports. Budget (1940): 13,738,690 francs. The islands are under the control of the French Committee of National Liberation in Algiers. An administrator, assisted by a consultative council, heads the local government. Administrator, Alain Savary.

#### ST. VINCENT. See WINDWARD ISLANDS.

SAKHALIN. An island northeast of Japan, in the Sea of Okhotsk. Area, 28,597 square miles. The northern part (north of 50° N.), 14,662 square miles, belongs to the Union of Soviet Socialist Republics. Karafuto (q.v.), the southern part, 13,935 square miles, belongs to Japan. See Japan

and Union of Soviet Socialist Republics under History.

## SALES TAX. See TAXATION.

SALVAGE. See WAR PRODUCTION BOARD, especially under Salvage; Civilian Defense, Office of; also, Aluminum; Iron and Steel; Paper and Pulp; Railways; Tin.

SALVATION ARMY, The. The global scope of The Salvation Army became clear to millions of Americans for the first time in 1948: U.S. troops landing overseas found Salvationists operating 2,000 canteens and clubs in Ireland, India, Iceland, Alaska, Africa, Australia, and other fronts. In 1948 the Salvation Army, an international organization with 27,000 officers, continued to serve humanity in 97 territories of the world, and, accompanying the invasion forces, resumed operations in the 98th country, Italy, where it had been banned during the Fascist regime.

In the United States emergency war services doubled in 1943. The number of Salvation Army mobile canteens, stationary canteens, clubs, dormitories, hospitality houses, and convalescent homes rose to 210. As a member agency of the United Service Organizations (q.v.) the Salvation Army also staffed and operated 201 additional service men's units where, with the aid of volunteer helpers, 29,686,299 individualized services were

rendered.

The year was marked by increased efforts to meet rising child delinquency needs, overcrowding of the 178 lodging places, and increased strain on some of the 42 maternity homes and hospitals. The rehabilitation of inebriates, prison parole activities, salvage work, and all the other far-fitung social services continued in 1943 without let-up, in spite of added war services.

More than 200,000 workers in 1,867 organized centers in the United States united in a national evangelical campaign. Visitation of the sick and bereaved, and the giving of cheer baskets increased. Earnest attention was given to returning veterans, to families of service men, and to fami-

lies of women industrial workers.

The vast amount of clothing, made by the Women's Home Leagues, was increased to support the postwar plan activated in London by Gen. George L. Carpenter, International Leader of the Salvasion Army. The program calls for building up reserves of clothing and other supplies throughout the countries of the world least ravaged by war, and the training of Salvationists from many lands to join the efforts of 5,000 Salvation Army officers, still in Europe, at the earliest moment militarily possible.

The administration of work in the United States is conducted from four territorial centers, and coordinated at the National Headquarters, 120 West 14th Street, New York City. On Dec. 31, 1943, Commissioner Edward J. Parker, after 58 years of selfless service, retired as national leader, at the age of 74, and Commissioner Donald McMillan

was entrusted with his responsibilities.

SAMOA. A group of 14 islands in the mid-Pacific just below the equator and 4,150 miles southwest of San Francisco. The islands of the group east of 171°W. longitude, called American Samoa, belong to the United States; those west of that line are administered by New Zealand under a mandate of the League of Nations and are known as Western Samoa.

American Samoa. American Samoa includes the island of Tutuila on which the U.S. Naval Station is located; the Manua group, consisting of the islands of Tau, Olosega, Aunuu, and Ofu; Rose Island; and Swain's Island. These islands, with the exception of Swain's Island, were acquired on Dec. 2, 1899, through a tripartite agreement with Great Britain and Germany. Swain's Island was not obtained until 1925. All but Rose Island, which is an uninhabited coral atoll, are of volcanic formation. The total area is 76 square miles and the estimated population on July 1, 1941, was 14,458, mainly Polynesian. The seat of government is at the village of Pago Pago, Tutuila, which has the finest harbor in the South Seas. Prior to World War II the population of the naval reservation was about 300; of Pago Pago, 1,000.

The islands are under the control of the Navy Department and are administered by a Naval Governor. Native participation in government consists of a Samoan Council called the Fono which meets annually. Its jurisdiction is limited to advisory functions. Samoans are not citizens of the United States, but owe allegiance to the American flag. Law and order is maintained by the Samoan Guard composed of 36 natives who are enlisted members of the U.S. Marine Corps. This Guard, called the Fita Fita, was reviewed by Lieut. Gen. Alexander A. Vandegrift, U.S.M.C., in the fall of 1943.

In 1941–42 the average public school enrollment

In 1941–42 the average public school enrollment was 2,500, attendance being compulsory for children between the ages of 6 and 15. The Pastors' or private schools admit pupils at 3 years of age and have a somewhat greater attendance. English is the medium of instruction in public schools and the Samoan language is used in the private schools. Illiteracy in 1930 was lower in American Samoa than in any other U.S. territory—6.3 per cent. Copra, dried coconut meat, is the most important crop. In 1940–41 a total of 862 tons were shipped at a value of \$23,557. Trade (year ended June 30, 1941): \$263,703 for imports and \$93,839 for exports. In an Executive Order of Feb. 14, 1941, President Roosevelt announced that after May 15, 1941, no unauthorized aircraft or vessels would be permitted within three miles of the Samoan Islands of Rose and Tutuila. The U.S. Congress during March, 1941, approved funds for defense aviation facilities at Samoa. Governor, Capt. Lawrence Wild, U.S. Navy, who assumed office, Aug. 8, 1940.

Western Samoa. West of American Samoa, less than 100 miles, lies Western Samoa, another group of islands of which the two largest are Savaii and Upolu. Racially and culturally they are similar to American Samoa. Area, 1,133 square miles. Population (July 30, 1941), 62,391, including 58,643 Samoan natives (Polynesians). Capital, Apia, on Upolu. A common indigenous culture and common folkways and mores form the foundation of society in both American and Western Samoa. The natives are Christians of different denominations. There were 12,225 pupils enrolled in the schools in 1941. Copra, cacao, rubber, and bananas are the chief products. Trade (1940): Imports, £165,453; exports, £221,733. For the year ended Mar. 31, 1941, government receipts were £107,980; expenditures, £110,000. During 1940, 100 vessels of 69,475 tons entered the port of Apia.

Following the outbreak of war between New Zealand and Japan on Dec. 8, 1941, the United States and New Zealand Governments took joint measures for the defense of all the Samoan islands. The Governor General of New Zealand inspected the defenses of Western Samoa in June, 1942. Later

it was revealed that a large U.S. air base had been constructed on the island of Upolu. The islands are administered by the New Zealand Minister of External Affairs, acting through an Administrator in Apia. On Feb. 24, 1943, A. C. Turnbull was appointed Administrator by the New Zealand Government.

CHARLES F. REID.

SAMOS. See Greece under History; World War under The Balkans.

SANITATION. This classification covers sewerage, treatment and disposal of sewage and industrial wastes, collection and disposal of garbage and rubbish, stream pollution, and measures for protection of public health. The war period adds sanitary facilities for camps and war industries and provisions for postwar municipal develop-ments. With numbers of men returning sick, wounded, and weak, care must be taken to prevent spread of disease.

Sewage treatment plants in the United States, early in 1943, totaled 7,000, including 500 at army camps and defense areas. Of 6,191 plants serving 61,000,000 people, 4,718 were relatively modern. Expenditures on municipal plants were \$43,000,000 in 1942 and may reach \$73,000,000 in 1943. A new problem is sanitary control of trailer parks for travelers and for emergency housing of workers in war industries. The great sewage treatment plants at Chicago are still uncompleted, owing to priority restrictions on needed materials. After long experiments, the flash-drying process has been adopted for treating the sludge, which is first de-watered in vacuum filters. Much of the dried sludge is sold as fertilizer.

Safe and effective operation of such plants requires technical knowledge and skill, but with the draft of men for the army and for management of military plants, the supply of competent men for civilian plants has been greatly depleted, so that it has been necessary to give brief intensive instruction to assistants—men and women —to provide reasonably safe operation. Simple methods and equipment are employed for army plants, in view of the shortage of skilled men. Their type depends largely upon local conditions, and their operation is on the same high plane as at municipal plants. As a rule, the only industrial waste to be considered is that of the laundries. Grease removal, however, is a major trouble. Army posts have from 5,000 to 40,000 men.

Research and experiments have been continued, one development being the vacuum flotation process for removing grease and scum from sewage and wastes. There is also the Hays system of submerged-contact aeration, now used in several army camps and in cities of 500 to 40,000, while the Mallory oxidized sludge process is on trial at Ann Arbor, Mich. A sewage treatment process adaptable for small towns has been developed at an ordnance plant working 4,500 employees in three shifts. The Wisconsin Circuit Court, in September, held that the city of Kenosha need not handle industrial wastes that prevent proper operation of the sewage treatment plant; the companies must provide preliminary treatment of their

As grease is so needed in many war industries, much attention is given to methods of its recovery from sewage, scum, and sludge. Study of the poliomyelitis epidemic in 1943 showed that the virus survived even in sewage sludge after treatment, and that special means are required to remove it from water supply. Use of sewage sludge as fertilizer on lawns and flower and vegetable crops is being revived, but further tests are necessary to determine its value and safety, although it is said that no case of sickness has been traced to the use of digested or activated sludge.

Disposal of garbage and rubbish is mainly a local problem, no general method of being efficient or economical under all conditions. A survey at Philadelphia showed a decrease in volume of garbage, due to more careful use of food in war time. Collection by municipal forces rather than by contract is increasing, and charges are sometimes made for this service. Grinding garbage and delivering it to sewers for combined treatment at the sewage works is not increasing. It is rarely economical, but may be more satisfactory where solids are digested and the resultant gas is utilized. A few towns have allowed the use of domestic or kitchen grinders, with discharge to the sewers.

Refuse that goes to the incinerators at army camps contain about 75 per cent of dry material, as against 35 per cent in municipal rubbish, which has caused some trouble at army plants designed on the 35 per cent basis. In the land-fill or sanitary-fill method of garbage disposal, now used increasingly since it requires no special plant, the stuff is dumped in layers, horizontally or on the slope of a dump, and each day's de-posit is promptly covered with earth. There is little odor, and the temperature is too high for rats or fly larvae. At New York, this method has been used on a large scale for filling and reclaiming marsh lands, but suit has been brought by L. M. McCarthy for infringement on his patent on the process. Although it has been used successfully for some years at San Francisco, much of the actual garbage there is fed to hogs, so that the dumped material is largely dry refuse. Some States, and also Canada, require that garbage for hog food must be cooked, and this has checked the use of this method.

Stream pollution becomes more important as populations increase and communities have to go farther afield for additional water supply. Philadelphia is to reopen an old suit to stop pollution of the Schuylkill River by culm or waste from coal mines. Cleaning this river and the Delaware from sewage and other pollution is estimated to cost \$140,000,000. In its attempt to check pollution of the south end of Lake Michigan, whence its water supply is drawn, Chicago has brought suit against the State of Indiana and four cities responsible for such pollution.

Cooperative action of the State of Michigan and 13 communities north of Detroit will aid in preventing the pollution of streams flowing into Lake St. Clair and the Rouge River at Dearborn. A tunnel will intercept the sewage flow and deliver it to the Detroit sewers for treatment at the disposal works, only storm water passing into the streams. Half the cost will be paid by the Federal government, and the remainder by revenue bonds to be retired by sewer service charges.
